With Stalin's death we gradually moved toward a much broader interpretation of the world contest. As Mr. Khrushchev, threatened to "bury" us economically rather than militarily, we became less concerned with the previously assumed inevitability of a military struggle, and more and more alarmed over the Soviet rate of growth.

Our newspapers outdid one another graphically in portraying the burgeoning Soviet economy and editorially in worrying over how we could stay ahead.

Although this broader view of the challenge was a long step toward reality, it still left the American citizen in the role of an anxious, but not yet directly involved, bystander. Economic problems, like military problems, appear infinitely complex. They seem to belong to the great corporations, the great labor unions, and to the distant Federal Government.

So the world contest remained remote and impersonal to most Americans.

Unless I am sadly mistaken we are now rapidly developing a broader view. We are beginning to suspect that the future may not be settled by the nations which can set off the most rockets or produce the most bathtubs.

We are beginning to understand that the contest goes beyond both guns and butter to the fundamental issue of the relative worth of our society compared with others around the world.

In its broadest and most realistic sense it is between two widely varying interpretations of the meaning of life; one which believes in the inherent dignity of the human individual, the other which believes that man was born to serve the state.

Consequently, our attention is shifting from the question of how our society can survive, to what we Americans have to offer. Without neglecting the mechanics of survival, the pertinent question is not simply how, but why.

III

As we consider the new frame of reference in which national policy will increasingly be considered, we have, I believe, grounds for a cautious optimism. The pertinent questions which we must ask ourselves concern the role of the individual in American society, and our history gives us grounds for considerable confidence in what the individual can accomplish once he is alive to what faces him.

In this regard, I think it is proper for me to suggest that history will probably be more tolerant toward your parents' generation than many of you have been.

After all, we were totally untrained, your parents and I, for the kind of world we have had to live in and even help manage.

With all due respect to Yale University, I can remember little that I or my fellow students learned there that was relevant to the world in which we were to live our adult lives. Nor was there anything in the roaring twenties into which most of us graduated to prepare us for the economic collapse and social dislocations of the thirties, or for world involvement again in the forties.

But in spite of our unreadiness in terms of what history required of us, I think our record will stand up well under scrutiny.

My generation broke with 130 years of tradition to put isolationism behind us in world affairs. My generation took action, born of economic and social distress, to give new depth and meaning to our national unity. My generation pioneered in the postwar world with the bold, creative concepts of the Marshall plan, NATO, and point 4, and the mutual security program.

Indeed, some of our more economically timid members view some of our technological achievements with considerable alarm. Our cows, they say, give too much milk, and our new machines produce too much steel.

Unquestionably we have been inadequate to many of the tasks which demanded attention, including the rather obvious one of putting the world's hungry children in touch with the extra milk.

Nevertheless, on behalf of your parents and the rest of our generation, I hope you will not be too severe on us. We rose, unevenly and fitfully it is true, but we rose to tasks which were historic, and let us hope we continue to have the will and capacity to rise to additional tasks in the years ahead.

IV

Yet let's face it: In perhaps the most crucial area of all, our performance has been dangerously weak. In our efforts to deal with a vast agenda of new and unfamiliar problems, we have neglected the cultivation of those very human values which are basic to the health and vigor of our American society.

We have not only condoned the slick operator and cynical manipulator. In a backhanded sort of way, we have glorified them. Indeed, we have adopted the semantics of materialism and manipulation to explain some of our most admirable actions. It is as though we have felt it necessary to justify decency by proving that the real reasons for our actions are not as decent as they might seem.

Thus we argue that the time has come to grant our Negro citizens first-class citizenship, not because they have been waiting for 180 years since the Declaration of Independence asserted that all men are created equal, but because the colored majority of mankind is said to be breathing down our necks.

In order to win public support for urgently needed scholarships for our colleges and universities, we call the legislation the National Defense Education Act and fit it out with anti-Communist disclaimers and loyalty oaths.

Instead of proudly presenting our foreign aid program for what it is—an earnest effort to help new nations ease poverty, illiteracy, and disease so that they can remain free within their own cultures—we explain that our real purpose is to buy friends and supporters in the United Nations, or to keep restless people from asking hard questions, or to fill empty bellies on the cynical assumption that well-fed foreigners will more easily tolerate the injustices and harassments of the feudal societies in which they live and thus join us in support of the status quo.

Even if we set out to do the wrong thing in world affairs—like hiking the tariffs on British bicycles or foreign clothespins—we explain that we are taking these actions in the interests of national defense.

Through our fears and frustrations of this disorderly New World, we have come to act as though our chief national purpose is not to maintain and extend our basic American commitment to human dignity, but to thwart the Russians in whatever they decide to do.

And while we strive to outfox the Communists abroad, we concentrate on keeping up with the Joneses at home.

Politicians, journalists, businessmen—even college professors—increasingly give the most cynical reasons for their most high minded activities.

We smile with a knowing self-assurance when we are told that scandals in high places and the misuse of positions of national trust simply go to prove that politics is politics.

Office seekers who deeply favor guaranteeing Negro Americans the right to vote, assure their fellow politicians from another section of the country that they vote as they do only because of the political pressures back home.

Businessmen contributing to boys summer camp funds and hospital building drives rush to cover up their decent motivations by pointing out that it is good business to do what they are doing.

We nod our heads in understanding when Charles van Doren tells us that he continued his fraudulent TV presentation because the whole academic teaching profession had such a stake in his continuing his brilliant performance that he did not want to let his fellow teachers down.

We shrug our shoulders when 600 of Mr. van Doren's students at Columbia take the pains to state that they would have done the same thing, that they admire him for his slick performance, and that they cannot for the life of them see how it effects his usefulness as a teacher of liberal arts.

In our effort to appear sophisticated, we suppress our initial shock over our official mishandling of the U–2 flights and conclude that it is right to spy, and wrong only to be caught; right to lie, and wrong only to admit it. After all, weren't the Russians just as bad?

V

This brings me to my central point: At the very moment in history when the true nature of the world contest is coming into focus, we find ourselves faced with a crisis in values in which the standards we teach our children are increasingly irrelevant to a world of official spying and lying, of payola and quiz scandals, of tax evasion and false expense accounts, of fake advertisement, the thumb on the scale, the adulterated product, and the exploitation of violence as entertainment.

In our national effort not to seem gullible, not to seem to be suckers, not to seem vulnerable to criticism from any quarter, to avoid controversy, and to prove that we are realists who do not go off half-cocked, we have developed a moral gap between beliefs to which we subscribe and our actual day-to-day performance.

This moral gap in its own way may become as dangerous to our survival as a free, dynamic society as the missile gap itself.

This is particularly true if the cold war continues indefinitely. I am deeply concerned whether an open society like ours, which a college like Smith so effectively reflects and sustains, can endure indefinitely against the military, technological, and psychological requirements of 20th century nuclear terror.

At some point—maybe in the year 1980, maybe 1975, maybe 1970, maybe even sooner—the point will be reached where the continuation of America as an open society under the relentless pressures of the cold war may become impossible.

Already there are many among us who are happier under the simple terror of the cold war than under the prospect of any relaxation in tensions.

Such people seem determined to prove again and again the prophecy of William Butler Yeats: "The best lack all conviction, while the worst are full of passionate intensity."

This kind of mind is unhappy about complexities, about shades of gray, about difficult choices, about the necessity to pursue various alternative policies at once, about the requirements in the modern world for balance, dexterity, and nerve.

It is always simpler to march off in a straight line in one direction even if the obvious destination is Armageddon. However, those who think in such terms are good people to keep out of the control rooms in the age of pushbuttom war. In the good old days of bayonets and machineguns, they were dangerous enough; in today's nuclear world, they have the cataclysmic touch.

So much for the formidable challenge that we face. How best can we cope with it?

VI

Let us start with the fact that we live in an open society and must strive not only for survival but to maintain the right of future generations to continue to live in open societies.

The point about an open society is that it is an open society, not a vacant one. It is open for inventiveness in statecraft as well as in science, for controversy in public as well as in private, for competition in ideas as well as in goods, for incentive for leadership as well as for leisure.

An open society faces obvious disadvantages in a world where it coexists with closed societies, particularly so when those closed societies may wish to demolish it. But an open society is the kind of society we want and if we are to keep it, we must see that our individual, family, college, and professional lives are freer, more constructive, and more active than the lives we might lead if we lived in a closed society.

For people do manage to live in closed societies. Long before the Soviet Union and Communist China, hundreds of millions of people had lived their full span of years in closed societies. Unhappily, such societies have been the rule, not the exception.

The risks are enormous in a closed society for no one knows when the police in a police state will come to life themselves to snuff out other lives in a sudden burst of terror. We may marvel at their ability to do so, but the fact remains that millions of people manage somehow to live lives under conditions which appear to us suffocating.

If we were free to ask them, and they were free to tell us, what differences would there be which both we and they would recognize?

Three meals a day, hard physical work, the bare essentials of life, uncritically believing what the newspapers say, avoiding controversy, sticking resolutely to safe thoughts and simple comments, concentrating on the safe and the unspectacular, never probing, arguing, writing, speaking—these we might agree are the common lot of most of the 800 million people who live under Communist rule.

Now how can we, as members of an open society, successfully compete with a closed society of this kind? Only by living by significantly different values and for significantly different goals.

We must learn to make use of the freedom that our open society provides to do the things others cannot do because of their closed one.

We must accentuate the use of that marginal element in our lives which really is different from theirs—that goes beyond the essentials of eating, sleeping, and keeping alive, to the individual, distinguishing element that enables us to be different.

We must concentrate as free individuals in making use of our margin for living free lives, the margin which the threat of fear, eavesdropping, secret police, and regimentation stifles in the closed society.

VII

What is the outlook? Much, of course, depends on the cold war which, as I have suggested, encourages the negative forces in our own society. Yet I am heartened because I think that our temptations toward lethargy, apathy, and a cynical retreat into simple pleasures have once again nearly run their course.

For one thing, my informants here at Smith and elsewhere tell me that our campuses are wakening up again. They think that the first stirrings occurred in your freshman year with the bitter news that 32,000 young Hungarians had died in the streets of Budapest in an effort to achieve the kind of open society which we take for granted.

Another surge of campus involvement in the world came when stories reached us of brave young Tibetans fighting to remain free from the Communist grip.

Even more recently, many of you have demonstrated your sympathy and support for the sit-in movements in our own American South, knowing that what is morally right and deeply established in the very fabric of American democracy must win out in the end.

Although many of my generation may not agree, I suggest that such actions are part and parcel of what keeps an open society alive and free. For this is a major distinction between a closed society and an open one: the closed society makes no pretense of relating its private to its public morals; the open, democratic society must do so continually.

Most impressive of all, the call for a new dedication of American young people, seems to be coming from the students themselves. An editorial in your own Smith newspaper, the Sophian, has been widely quoted. It even found its way into the CONGRESSIONAL RECORD. You may remember what it said:

"So sometimes we write home to mummy and daddy about the world situation, and occasionally we mention it to dear ol' Joe. Dear Joe smiles and asks us to dance.

"We think of the money America spends on beer and cigarettes and we worry about the economy, and democracy, and things, when we see another TV antenna go up across the street. We remember 'The News of the Week in Review' as we reread Vogue. We frown about our culture and its values as we tip the Negro waiters, and we promise we'll talk about the image of America sometime to somebody when we tour Europe this summer.

"We're the very picture of American youth. We gaze at the wide horizons of the world before us, with a questioning mind, filled with faith, hope and charity. We forget that challenge, like charity, begins at home."

Home—whether the homes from whence you came, or in those which you will found—is a place where American women have a special role. In this sense, women today have an opportunity for creativity and allegiance to enduring values which is temporarily greater than that of men.

The men's world, and the women's too—to the increasing degree that you share in it—are caught up in all the pressures we have described. I have never been in favor of the sheltered housewife, nor of the isolation of the home from the world. But I freely admit, and encourage you to consider making the best use of, the relative freedom from false values which the home still is in a position to preserve.

Unless America's national purpose is to disappear altogether, we must begin to rebuild our shaken world. And any attempt to do so must start in the American home and school and church where the American woman is the vitalizing element.

Essential to the process of rebuilding is a clear understanding of the revolutionary changes which are taking place in the world beyond our own shores, and a vigorous communication of this understanding to our children. They must be helped to see that their future cannot be left completely to the generals, admirals, politicians, and so-called experts.

For the conflict between the closed Communist societies and our own open one is now far more than a conflict between rival defense establishments, rival economies, rival espionage systems, and rival summit negotiators. It is a conflict that touches directly the lives, the energy, the sense of purpose, and the faith of each one of us.

The task of working the world out of its cold war impasse may, of course, prove to be beyond human capacity. At best, much of it depends on influences and events beyond our control.

Yet the capacity of all of us Americans, Brazilians, Indians, Russians, and Chinese to achieve a meaningful existence rests squarely on the basic and elemental human forces inside both closed and open societies and on their capacity to generate sufficient power to assert themselves constructively.

Is it possible that behind the ruthless, totalitarian leadership of Communist China, humanistic sparks may still be smoldering and that out of the ashes may again arise the creative genius which made possible the long miracle of Chinese civilization?

Can the Kremlin open the laboratories of the Soviet Union to the inquiring young minds necessary for scientific achievement while still denying the right to think about, and absorb, the great truths of human history?

But whatever we do, let us not become so preoccupied with the forces and counterforces within China and Russia, that we neglect to do the great and good things we are able to do among the majority of mankind for whom communism is still an unappealing foreign ideology.

All of the major civilizations of the non-Communist world have been built on the proposition that man is more than a chemical accident. We are all commited to the concept that man is surrounded by belief and lives for a purpose.

This is the promising kind of world into which my generation was born—a world where, on three continents, Ghandi, Wilson, and Sun Yat-sen represented triumphant moving forces of wider freedom and more significant life. In your parents' and my lifetime, this world has been put on the defensive by two World Wars and the revolutionary forces which have accompanied them.

Today two-thirds of the people of the world are in the throes of the greatest revolution of all time: A revolution of rising expectations, expectations of new dignity and expanding economic opportunities for men and women once doomed to endless poverty, misery, and disease.

America is now challenged to understand the nature of this revolutionary world to explore the forces at work in Communist societies, and to put itself in touch with the aspirations of the people in between—the men and women and children of Asia, Africa and Latin American who see our planet as more than an arena for an increasingly reckless and increasingly futile Soviet-American conflict.

If we can meet this challenge, we will be well on the road to recovering the vision that we were born to a nobler destiny than that of a commonplace cold war participant.

As Woodrow Wilson once told the graduating class at Annapolis: "There have been other nations as rich as we; there have been other nations as powerful; there have been other nations as spirited; but I hope we shall never forget that we created this Nation, not to serve ourselves, but to serve mankind. * * * No other nation was ever born into the world with the purpose of serving the rest of the world just as much as it served itself."

And it is the recapture of that vision, at all levels of American society, which will help restore to us today the quite wisdom of that ancient faith which has come down to us through the ages in Romans 5: 3–4: "We glory in tribulations; knowing that tribulation worketh patience; and patience, experience; and experience, hope."

Dr. Alfred T. Hill of Council for Advancement of Small Colleges Delivers Significant Address at 72d Annual Commencement of Salem (W. Va.) College; Receives Honorary Degree With Other Distinguished Men; President Hurley Is Commended

---

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. RANDOLPH. Mr. President, when Salem College at Salem, W. Va., held its 72d annual commencement on May 27, 1960, four distinguished gentlemen were awarded honorary degrees during the same ceremonies which honored the 1960 graduating class.

Dr. George D. Heaton, minister in industry, Charlotte, N.C., received the degree of doctor of humanics; Dr. Frank V. Langfitt, a Clarksburg, W. Va., physician and surgeon and former president of the West Virginia State Medical Association, received the degree of doctor of humanities; Philip H. Willkie, of Rushville, Ind., chairman of the board of the Council for the Advancement of Small Colleges, received the degree of doctor of laws; and Dr. Alfred T. Hill, of Washington, D.C., executive secretary of the Council for the Advancement of Small Colleges, received the degree of doctor of pedagogy.

As a graduate and director of Salem College, situated in the community in which I was born and reared, and as a member of the advisory council of the Council for the Advancement of Small Colleges, I felt especially privileged to have presented Dr. Hill for his honorary degree, which was conferred upon him by Dr. K. Duane Hurley, energetic and youthful president of both Salem College and the Council for the Advancement of Small Colleges.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my remarks in presenting Dr. Hill.

There being no objection, the remarks of the senior Senator from West Virginia

were ordered printed in the RECORD, as follows:

REMARKS BY SENATOR JENNINGS RANDOLPH, DEMOCRAT, OF WEST VIRGINIA, PRESENTING FOR A DEGREE DR. ALFRED T. HILL AT THE COMMENCEMENT SERVICES OF SALEM COLLEGE, SALEM, W. VA., MAY 27, 1960

President Hurley, members of the board, faculty members, ladies and gentlemen, and students, returning to Salem College, particularly at commencement time, always brings with it the warm reflections of other times. The four wonderful and eventful years spent here furnished me with a deep reservoir of memories and happy associations. Therefore, it gives me an especially keen pleasure to present for a deserved honor a new friend to this community in which I was born and reared and have loved so well.

A person in public life is called upon to offer many presentations and introductions, some of which are merely part of the ritual of American life. A few are genuinely meaningful experiences. Seldom have I been given the opportunity, however, to present a citizen who brings such uniquely appropriate qualifications to the occasion as in this instance.

Most of Dr. Hill's adult life has been in the service of education, either as a teacher or administrator, in preparatory schools and small colleges. And as a graduate of Brown University, with postgraduate degrees from Harvard and Columbia, the recipient of this recognition is thus widely experienced in the field of learning, at every level, and in virtually every kind of private institution.

Yet his energies for many years have been devoted laregly to the welfare and improvement of small private undergraduate colleges such as Salem. Such a liberal arts college is a uniquely American experiment in education, and judging from the results, it is an experiment which has long since verified its worth.

It is no accident that these colleges have found in Dr. Hill an energetic and effective champion. And it was a timely period, indeed, when Dr. Hill was enlisted in this cause. The larger private institutions receive a proportionately ever greater share of the private voluntary contributions, and with the public institutions advancing at such a rapid pace, our small colleges will face difficult times ahead—as, of course, they have in the past.

As executive director during the past 4 years of the Council for the Advancement of Small Colleges, this gentle and scholarly man has worked diligently and devotedly to increase the support for small colleges and to help individual institutions to achieve regional accreditation. As a product of his experience in this field, especially during recent years, Dr. Hill published last year his authoritative book on the problems and potentialities of small colleges, "The Small College Meets the Challenge."

Among Dr. Hill's rarer qualities is one that is virtually unique in the world today. He is a man diligently trying to work himself out of a job. For the aim of the council is to possess accreditation for all of its members and thus be dissolved in 5 years.

I present one who represents the best of combinations in the academic world, a gentleman equally effective as teacher, administrator, and scholar, Dr. Alfred T. Hill.

Mr. RANDOLPH. Mr. President, the commencement address was delivered by Dr. Hill, and his challenging remarks were timely and appropriate—"The College and the Community."

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the inspiring speech, including the well-deserved testimonial to President Hurley, in the form of a resolution adopted by the Council for the Advancement of Small Colleges and read by Dr. Hill in the introductory portion of his address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE COLLEGE AND THE COMMUNITY—SALEM (W. VA.) COLLEGE COMMENCEMENT ADDRESS BY ALFRED T. HILL, MAY 27, 1960

INTRODUCTION

President Hurley, members of the board of trustees, faculty, distinguished guests, friends, and members of the graduating class, I bring you the greetings of the Council for the Advancement of Small Colleges. With these greetings I present to you the following resolution:

"DEAR PRESIDENT HURLEY: The Council for the Advancement of Small Colleges has asked me to transmit through you to Salem College the following resolution. This resolution was adopted unanimously by the board of directors of the council in regular session at the meeting held on May 18, 1960:

" 'Whereas Dr. K. Duane Hurley has served faithfully as the president of the Council for the Advancement of Small Colleges for 4 years;

" 'Whereas his wisdom, leadership, and unselfish efforts have been largely responsible for the success of the council to date in service to its members;

" 'Whereas Salem College has contributed generously to the welfare of all members of the council through the sacrifice of making the time and energies of its president available in the interests of a group of small but significant colleges: Be it

" '*Resolved*, That the council hereby acknowledge a large debt of gratitude to Dr. K. Duane Hurley and to Salem College and herewith present to Salem College in token of its appreciation a complimentary membership in the council from July 1, 1960 through June 30, 1962.'

"Cordially yours,

"JOHN Z. MARTIN,
"Vice President, Council for the Advancement of Small Colleges."

THE COMMUNITY OF OUTER SPACE

In my first draft of this talk to you this morning, I started by apologizing for the fact that I could not think of any way in which to relate a small college in West Virginia to the community of the universe in an age of outer space. I felt hopelessly out of date because frankly I could see no relation between Salem College and the various sputniks, muttniks, luniks and other manmade satellites racing crazily around in space these days, to say nothing of Venus, Mars, Jupiter, Saturn, and a multitude of other well-known characters in the sky.

However, only a short time ago I visited a small college campus where one of the feature attractions was an astronomical observatory used as an official "moonwatch station" to track these artificial satellites. The young astronomy professor who demonstrated this piece of equipment to a group of visitors said, "You are now looking into outer space." He rather scoffed at the idea that there was anything new or worthwhile on the far side of the moon. And he said, "The first man to go up in a spaceship will be very much disappointed. He will be able to observe the universe only through a tiny 6 by 6 window, whereas here on this hilltop we are observing the universe around a horizon of 360° and through an arc overhead of 180°. In fact, we are traveling this minute on the best spaceship ever invented and we have been all our lives. All we have to do is to look up to see infinitely into the community of outer space." That it was—the community of outer space. As I looked around me, I realized that the 50 or 60 other observers were not the local neighbors and farmers I had supposed them to be. They had taken on a new dignity and a new stature. They were all 10 feet tall. They were spacemen. In just a few words this young professor had related the people of his rural community to the community of outer space and he had done it through the agency of a little old-fashioned telescope in a small church-related college. But he was a young man with a liberal arts education. Although he knew a great deal about the distance, movements, and composition of the stars, he was not so much concerned about these trivialities as he was about the meaning and purpose of the universe. He was a living example of what President Sills of Bowdoin once said, "Excellent teaching in wooden halls is better than wooden teaching in marble halls." So I have crossed out the apology in my first draft for not being able to see how a small college could relate itself to the community of outer space.

THE INTERNATIONAL COMMUNITY

In my earlier draft of these remarks I also apologized for the fact that I could not define community in terms of the world in the international sense. However, after my recent visit I had to cross out that apology, too. In the evening I attended a concert in which a chorus of 300 students, alumni, and teachers were on the stage. The performance was being broadcast and listened to by a radio audience of 1,000 people within a radius of 50 miles; but, in addition to this, it was being taped and the tapes were being sent to 135 radio stations all across the country and all over the world. On a tour of the campus I visited the language laboratory where students with the latest electronic equipment were being instructed in French, German, Spanish, and Italian. That evening the president showed me his pictures taken during a 3-month trip around the world—not just a sightseeing tour—but a trip visiting educational, religious, and medical centers in which alumni of his college were serving in important posts. And so, you see, it became dramatically clear to me that even a very small college because of its influence and active participation, could realistically claim citizenship as a member of the world community.

THE NATIONAL COMMUNITY

Now that I am getting down from the sky and back from the international scene, I am beginning to feel more at home as I describe the small college in relation to a much smaller community—the Nation. Let me describe the picture for you briefly. There are about 2,000 colleges of all types in the United States today. Some 200 of these have fewer than 500 students. American colleges range in age from Harvard founded 324 years ago to the University of South Florida, which has a president, half a dozen deans, a faculty, and some buildings—but no students. This college has been in the making for over 2 years. It expects to open next fall with 1,500 students and have an enrollment of 10,000 by 1970. Today there are slightly over 3 million students in college; this number will double by 1970. Today there are 7.5 million degree holders in the United States—2 million more than there were 10 years ago. Today the total plant value of higher education is $17.5 billion and the total operating cost is $5 billion. Between 1956 and 1970 the Government estimates we will have to spend over $17 billion on plant and facilities in order to meet the demands of higher education. In 1900 4 percent of the college age population attended college; by 1956 this percentage had increased nearly nine times to 35 percent; by 1970 it is estimated that 50 percent of all college age youth will be in college.

This raises the question of why young people want to go to college at all. I am

reminded of the pretty freshman co-ed in a small women's private southern college. She appeared in the dean's office one day in tears. "What's the matter?" asked the dear, kind old dean. "Don't you like your roommate?" "Oh, yes," sobbed the child. "She's w-w-wonderful." "Well then," said the dean, "perhaps you don't like the food." "Oh no," wailed the child. "It's delicious." "Well now let me see," said the dean. "Are you failing in any of your courses?" "No, no," weeped the girl. "I'm getting all A's." "Then what in the world is the matter?" asked the dean. "The trouble is," said the little darling, "I came here to be went with but I ain't."

Now you can see that young lady had the wrong idea about going to college in the first place. In fact, her case was almost as pitiful as that of the football hero whom the coach found sitting on the chapel steps on the morning of commencement day in the unmanly act of crying his heart out. "Why, Joe," said the coach, "what in the world is the matter with you, aren't you happy?" "N-n-no," sobbed the hero, "I'm not." "Well, why not?" said the coach. "Look at you. You were captain of the football team in your senior year. You were president of the senior class. Today you will be graduating with honors. Your family and friends are here to celebrate your achievement, and all year you've been dating the prettiest girl on campus. What on earth do you have to feel sad about?" "Oh, I know; that's all true," wailed the boy, "but here it is commencement day, and Oh, Coach, if I had only learned to write my name." Now, you see, he had the wrong idea about going to college too.

A lot of people go to college these days because the word is around that at age 30 a college graduate earns twice as much money as a noncollege graduate and at age 40 he earns three times as much. As far back as 1952, 84 percent of the top corporation jobs went to college graduates, and the percentage certainly must be even higher today.

Now against this broad background what is happening to the private colleges and particularly to the small college? The figures tell the story. In 1900, 61 percent of all student enrollment was in private colleges; in 1958, 42 percent of the students attended private colleges; in 1970, the estimate is 35 percent in the private colleges. In other words, in the short span of about three generations the enrollment picture will have been completely reversed so far as the ratio of public and private education is concerned in the United States. And what does this do to the small private college? It puts it at the crossroads. Will it gradually dwindle in importance as well as in enrollment and money? A hundred years from now will it be an insignificant feature of higher education? Or will the small college define a new role, clarify its public image, and increase the effectiveness and importance of its service to society?

And what is the place of Salem in the national community? You have had a long history. Your alumni include Governors, Senators, clergymen, educational leaders, influential people in all walks of life. However, you may not realize that in the last 4 years Salem—largely through the leadership of its president—has come onto the national scene in higher education. It was President Hurley, who first pointed to the role of what he described as "the forgotten college," and called this institution and scores of others like it to the attention of the Council for Financial Aid to Education, the Ford Foundation, the United States Steel Corp., the General Electric Co., and the influential educational associations across the country. It was because of his inspiration and leadership that CASC was formed. And it was through CASC that the story of Salem and its sister colleges was told to over 3 million readers last fall through the publication of a special supplement in the New York Times and the publication of a book on small colleges. It was the organization which your president leads which 2 weeks ago called a national conference on "The Small College in the Sixties." On this occasion Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare was the luncheon speaker on "The National Interest in the Small College." Two of your outstanding alumni on this platform, Senator JENNINGS RANDOLPH and Gov. Cecil H. Underwood participated in the program. Philip H. Willkie, the national chairman of CASC, whom you have just honored, bestowed a special citation upon Vice President NIXON and named him "The Small College Man of the Year." If this does not reflect the influence of a small college upon the national scene, I can think of no better illustration.

President Hurley, because of the improvement in the Salem College program and in recognition of the points I have just made, I have the honor to deliver to you this check for $1,000 from the United States Steel Foundation. This is a token of their recognition of the achievements of Salem College and a gesture of encouragement for the continuation of the good work. You will note that this is transmitted to you with the good wishes of the Association of American Colleges.

THE TOWN OR LOCAL COMMUNITY

Let us turn from the role of the college in the national community to the role of the college in its local community. In order to illustrate the importance of the college to a small town, let me describe the difference between two situations. Suppose, on the one hand, you have a State with a university of 20,000 students. In this case you have a great concentration of brainpower and wealth all in one spot. You have drained the best students, the best professors, and the most money from all over the State. Perhaps 500 or 1,000 small communities have contributed their talent to this central enterprise and are individually that much poorer for their sacrifice. Now suppose, on the other hand, you have 20 colleges with 1,000 students each. This is distribution and decentralization. You now have 20 small cultural centers all over the State. This keeps the best students, the best professors, and the money at home. It provides for 20 different units of leadership. In this case you no longer have a huge cultural oasis in the midst of an intellectual desert; you have instead a fertile land nourished with a multitude of local springs each one of which is capable of expanding, decreasing, adjusting, or changing its course in response to local needs. Furthermore, in these days of easy transportation and communication your 20 small colleges have a potentiality for cooperation and pooling of resources which in effect make them a sort of network of culture or in a rather loose sense a university spread all over the State. This is the way to preserve freedom, promote diversity, and develop initiative. This is the way to keep higher education where it belongs—in the hands of the people and away from the control of the self-styled professionals and free from the redtape of colossal bureaucracy.

Let's take a look at two sides of the same picture from a little different angle now: the cash value of a college to its community and the cash value of a community to its college.

About 2 years ago George Fox College in Oregon—a CASC college with about 150 students—estimated that its total local spending by staff, faculty, and students contributed $125,000 annually to its small town. A conservative estimate among other Oregon colleges indicated that the value of a college to its community was about $1,000 per student annually. I understand that Salem has conducted a study indicating that it brings about $850,000 a year to this area. Furthermore, a college of this sort is a stable industry. It is hard to kill. Salem is 72 years old. It has survived two world wars and several minor ones, to say nothing of one major and several minor economic depressions. And still furthermore, it is bound to grow in size, quality, and importance in the future.

Now the reverse side of this picture shows that a city in Iowa with a population of 5,000 raised $73,000 for its college; a city in Wisconsin with a population of 4,500 raised $120,000; and a city in Indiana with 40,000 people raised $380,000 for its college. I know that this community is doing a lot for Salem, too, and I mention these figures merely to show you that you are in good company all over the country.

However, President Hurley, a local community sometimes can stand a little encouragement from the outside and leadership from the national level. Therefore, it gives me great pleasure to present to you at this time a check from the Kennecott Copper Co. in the amount of $5,000:

"DEAR MR. HILL: For a number of years this company, in addition to its program of scholarships and fellowships, has offered a measure of support to liberal arts colleges because of the importance of liberal arts training to our educational system and to American industry.

"This support consists of a total of $30,000 appropriated yearly, divided into six parts of $5,000 each which are awarded on a nonrepetitive basis to six selected liberal arts colleges. Various criteria are used in the selection, including scholastic standing, geographical location, and excellence of the job being done.

"In each year among the colleges selected there has been one that has been nonaccredited. This year the nonaccerdited school is Salem College, Salem, W. Va.

"We take pleasure in transmitting herewith a check for $5,000 as an unrestricted gift to Salem, for transmittal by you to K. Duane Hurley, president of Salem with best wishes for the fine work he is doing.

"Sincerely,

"JOHN D. EAST."

Although the money itself is important, the symbol of interest and encouragement from a major corporation to the people of your community should give them greatly increased incentive to try harder and do more for Salem and thereby help themselves both financially and culturally.

THE CAMPUS OR COMMUNITY OF SCHOLARS

Now let us consider the campus as a community of scholars. What is a college campus? Is it an area of so many acres of land? Is it a collection of buildings designed for different purposes? It is both of these things, but even more important it is a group of people, young and old, assembled for one main purpose: To combat ignorance. I recently heard a speaker say that it was a mistake for a college president to address his student body in an assembly with these words: "The college is here to serve you." This smacks too much of the Madison Avenue approach. Perhaps the corner drugstore, or the Hilton Hotel chain, or the Broadway Theater is here to serve you; but that is not the main purpose of a college. The purpose of a college is to transmit the best elements of the heritage of our past to succeeding generations and to advance the frontiers of knowledge through research and experimentation. The trustees, faculty, and administration are all dedicated to these ends. They are the trained and experienced leaders of a campus community, and the students are invited to join them in a fellowship of learning. In this sense the entire group be-

comes the servant of society. This is the proper function of a college.

In the words of Dr. Thomas E. Jones, former president of Earlham College, "The role of the president is that of head of the community. Be he young or old, he and his wife become the parents of the college family. It is his responsibility to lead the community beyond the legal and philosophical relationships. He must help it both intellectually and spiritually. Through the types of atmosphere developed he must help education to be caught rather than taught. Such education enkindles the imagination, maintains an openness of mind, inspires a sense of vocation, creates compassion, and invigorates the will. It makes possible "a society of learning and pioneering that continues to be a community of understanding whatever the prejudices and confusion of the world about it may be.'"

And while I am talking about the campus as a community, I wish to underscore the importance of the role the graduates of a college can play in creating a community of support for their alma mater. In order to drive home this point to your graduating class, and indeed, to all of your alumni, I have sent a letter to each of the 65 living honorary alumni of Salem College inviting them to join me in a matching and incentive gift program. In 1959 Salem had about 10,000 alumni; the college solicited one-quarter of them—2,500; one-fifth (20 percent) of those solicited made a donation; the size of the average donation was $25; the total was $13,600. I personally will pledge to Salem College $1 for every point of increase in percentages of effectiveness of solicitation you achieve among your regular alumni for the year July 1, 1960 through June 30, 1961. If you should achieve the impossible and go up by 80 percent, I would owe you $80. I invited all the other honorary alumni to join me in this same way, and I am now pleased to report my results: I have three checks and pledges totaling approximately $500 to present to you as a challenge gift.

THE COMMUNITY OF INNER SPACE

When Dr. Hurley asks me to do a job, I try to be thorough. Therefore, having started you off in outer space and brought you by easy stages down to earth, then to your country, then to your local community, and then to your campus, I feel it is now only fair for me to conclude my remarks by relating the college to the community of inner space, namely, you, the members of the graduating class.

Your 4 years at Salem have given you a better understanding of your own heart, and mind and soul. Thus the college has become related to the community of inner space. It has helped you to clarify your goals and appraise your strengths and weaknesses. It has helped you to decide what things you will stand for and what things you will not stand for. It has helped you to acquire information, develop skills, refine your tastes, and sharpen your critical and creative powers. In this way the college has helped you to explore the far reaches of inner space which are just as vast and just as important as the universe of outer space.

You have attended a great college. A college is great not because of the size of its campus or the magnificence of its buildings, but because of the substance of its academic program. A college is not great because of the salaries of its professors, but because of the scholarship, character and dedication of its faculty. A college is not great because of the number of courses in its catalogue but because of the traditions of patriotism, scholarship, religion, and public service it has upheld. A college is not great because of the achievements of its famous alumni or trustees, but because of the intellectual and moral content of its program. These things are the seeds of greatness. The aim of all education is the pursuit of goodness and wisdom. Or to put it another way it is the pursuit of truth, beauty, and goodness—not in terms of Plato's slave state of 2,500 years ago, but in terms of American democracy today. The worth of a college must be measured by the degree to which it helps the individual and society to a maturity in the realm of ideas and ideals. This is what I mean when I say you have attended a great college.

And now as your chart and compass to guide you through the communities of both inner and outer space which lie ahead of you, I leave you with the words of St. Paul:

"Whatsoever things are true, whatsoever things are honest, whatsoever things are just, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things * * * and the God of peace shall be with you."

B'nai B'rith Dates Back to 1843

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 7, 1960

Mr. HALPERN. Mr. Speaker, in yesterday's Washington Evening Star, columnist Ralph McGill devoted his column to a description of B'nai B'rith, the 117-year-old organization which has dedicated its efforts since its inception to the spiritual and human welfare of Jews and of the country in which they reside. In the long upward struggle for human dignity and decency, for freedom and equality, B'nai B'rith has consistently played a leading role. "Benevolence, brotherly love, and harmony" has been its motto. Charity has been its watchword.

Today there are B'nai B'rith lodges in 38 nations, each active in the field of youth work and adult education, as being aspects of the basic objective, human and spiritual welfare.

Mr. McGill's tribute to this outstanding organization is indeed well merited. I commend him on his fine article and under unanimous consent I include it in the RECORD at this point in my remarks:

B'NAI B'RITH DATES BACK TO 1843—FOUNDERS WERE HUMANITARIANS; BOTH SIDES AIDED IN CIVIL WAR

(By Ralph McGill)

Because it takes a firm public stand on the side of social justice and law, B'nai B'rith (sons of the covenant) is a favorite whipping boy of ignorance, maliciousness, and hate. Most of the Citizens Councils attack it with hysterical and irrelevant charges because B'nai B'rith has declared the Supreme Court orders must be recognized as law lest anarchy replace judicial procedures. The professional anti-Semitics rant and rage against it. The various KKK community cancers or klaverns, also join in the slanders.

If one examines into the weird pamphlet product of the various mentally disturbed persons and groups, one makes a significant discovery. None of them has the vaguest idea that B'nai B'rith also had as its major purpose the bringing together of the various Jewish groups which were coming to this country and were, too often, separated by their orthodoxy, or lack of it, and by their cultural backgrounds.

The first meeting was held in 1843 in New York. Twelve men, two more than necessary for a quorum of prayers, met in a small, poor room to form an organization to cope with the problems they saw about them.

The founders wrote out their objective. It purported to unite all Jews "in the work of promoting their highest interests and those of humanity." This goal has remained unaltered. The organization devotes itself to the spiritual and human welfare of the Jewish race and of the country in which they reside. The start was difficult. There were various interpretations of orthodoxy. Languages were a barrier. There were Zionists and non-Zionists. But each had the rich heritage of the Jew—of the law and tradition. B'nai B'rith advocated no doctrine and espoused no political controversy. It never has.

German Jewish immigrants were the founders. They first chose the name "Bundes-Brueder," a German-Yiddish term for "Band of Brothers." Later "Independent Order of B'nai B'rith (Sons of the Covenant)" was chosen. It has been shortened to the last two words. A motto was selected. It has remained unchanged. "Benevolence, Brotherly Love, and Harmony." Charity was and is a major activity.

By 1850 the first community center had been opened in New York. In 1860, when President Lincoln's call for volunteers was made, B'nai B'rith recruited and equipped with rifles and uniforms an entire company of Jewish soldiers. (The Confederate Army also had a number of Jews who distinguished themselves in the army and government.) The first citation by our Government to a civilian organization for patriotic war service was to B'nai B'rith.

B'nai B'rith also earned other citations for its charity and relief work given to all distressed persons in the disasters of the San Francisco earthquake, the Baltimore fire, and other emergencies in the United States. It was so engaged 13 years before the Red Cross was established. The order maintains two nationally known hospitals, both nonsectarian. One, in Denver, is for tuberculosis. The second, the Leo Levi Memorial, is in Hot Springs, Ark.

In 1913 B'nai B'rith set up the Anti-Defamation League to combat organized anti-Semiticism in this country. Similarly, U.S. Roman Catholics founded an organization to combat anti-Catholic propaganda. Both have done splendid educational jobs. These, in particular, anger the hate groups.

There are today B'nai B'rith lodges in 38 countries. They are active in the field of youth work and adult education as being aspects of the basic objective—human and spiritual welfare.

Statement by Dr. Richard J. Russell Before Committee on Science and Astronautics

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 6, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD a statement delivered before the Committee on Science and Astronautics on June

2 of this year by Dr. Richard J. Russell, director of the Coastal Studies Institute of Louisiana State University and dean of the graduate school.

Dr. Russell is a member of the committee's panel on science and technology and participated in the recent roundtable discussion on scientific and technological problems held by the committee and the panel June 2 and 3. He is an eminent geographer and the paper which he presented before our committee on the earth and its geologic makeup will, I am sure, be of interest to many.

Dr. Russell's statement follows:

We know very little about the crust of the earth. We await better knowledge of the shape of the earth to know where oversea places actually are located. In North America we need repeated geodetic surveys, better knowledge of the distribution of gravitational forces, many refined tiltmeter observations, and other geophysical data to know how and at what rates the earth's crust is being deformed. Coastal California creeps northward at a rate of some inches per year in comparison with the Sierra Nevada, parts of the northeastern United States rise appreciably in comparison with regions some distance away, and we roughly know many other cases of crustal movement at rates sufficient to justify a continuing inventory.

The composition of the outer part of the earth's crust is only imperfectly known. We need a chemical-balance sheet and much more exact knowledge of both distribution and volumetric abundance of elements, minerals, and rocks. We lag far behind the Russians here. For many years they have been drilling, in geometric pattern, holes to the basement rock in all parts of the Soviet Union. Our own ideas are based on mine shafts and wells drilled in search of petroleum. Practically all of our information comes from exceptional places so that we have only distorted information, in comparison with that which would be obtained by spacing holes geometrically, without regard to known economic goals, so as to get informative, random sampling.

The water content of the earth's crust is insufficiently known. We are woefully ignorant about permeability and porosity of rock at depth, and hence about rates of water movement. Even at shallow depth, where ground water is one of our most essential resources we are acutely ignorant about abundance, flow characteristics, and rates of flow. In most places we seek ground water for its purity, but in a few for its impurity, for salts of commercial value. We are now contaminating both surface and subsurface water at rates that may threaten continuing habitation of some densely populated areas. But, this readily available supply of water is only part of waters in the earth's crust. Within recent years it is becoming apparent that crustal deformation is related to water at greater depth. Volcanic phenomena, frequency of earthquakes, regional tilting and subsidence, and many other crustal phenomena will be more adequately understood only after our knowledge of water in the crust is improved. With these investigations will come better understanding of movements of fluids and gases that will greatly enhance our knowledge of ores and ability to locate essential mineral resources.

Heat transfer values are poorly known. We have only crude data concerning the conductivity of rocks. It is amazing to find that the value of the vertical temperature gradient in the crust most commonly cited in texts and tables is one determined in Paris, shortly after Fahrenheit invented the thermometer. In considering questions such as widespread use of the earth's internal heat as a source of power, we have little basis today for estimating depletion rates.

This short list of areas of fundamental ignorance is by no means exhaustive. It points up our need for inventories, for gathering facts that are readily obtainable, provided that we supply necessary effort.

After observation we come to matters of interpretation in the development and application of any science. Observations must pass from emphasis on qualitative to quantitative fact. Abilities to interpret are at hand but the interpreters badly need something like a handbook of geological constants that can be compiled only after our observations are much more adequate. We are quite illiterate today about questions as simple as how an unconsolidated sediment becomes a hard rock. The basic mechanics of rock deformation await more adequate understanding of elastic and plastic properties of rock at depth.

It is commonly said that observation and interpretation mean little until one has a theory to test. Geologists have been fertile in providing theories, but have lacked adequate means for testing them. It is high time that we make more meaningful efforts.

For more than a century geologists have been mapping actively the distributional pattern of various rocks and structures. More recently, as a parallel activity, geophysicists have been observing many things, such as currents of electricity in the rocks, distribution of magnetic fields, residual magnetism in geologically ancient minerals, characteristics of travel of various types of waves in the crust, and the force of gravity at various places. Both geologists and geophysicists formulate theories concerning the crust and its deformation. One group rather commonly disputes the conclusions of the other and both have advanced to the point where a showdown is necessary. A few areas that have been mapped in extreme detail by geologists should be subjected to a variety of sophisticated geophysical tests to discover areas of agreement and find where conclusions may be faulty, on the basis of more refined observations and interpretations.

Have I wasted the time of the Committee and Panel in listing some areas of ignorance among earth scientists? I think not. I will attempt now to outline briefly some practical results, with emphasis on what I believe are matters of public impact, should some of our deficiencies be remedied.

Relationships between geology and public health are rapidly looming in significance. Correlations between fluorine content of water and tooth decay, limestone and incidence of goiter, or the presence of supplies of deadly ground water in certain areas have long been known. An association between minute amounts of selenium and sterility appears to be real. High incidence of cancer has been related to polluted water supplies, and possibly to natural radioactivity of rocks. A penetrating study in the State of New York by a geologist, statistician, and epidemiologist distinctly relates incidence of maldeformations at birth to the geologic map. With increasing pollution of ground water and increase in abundance of dangerous isotopes that did not exist before we began dealing with fissionable materials in a modern way, our needs for more detailed knowledge have become acute. While the public is alert to the dangers of atmospheric fallout, and possibly over-alarmed, it is now blissfully ignorant of what may be far more serious problems arising from pollution of both ground water and soil. We may expect the rate of production of substances such as strontium 90 to double every 12 years, in keeping with our increasing need for energy. We must know how to dispose of these dangerous products in the safest possible way.

Geologists traditionally have been finders of mineral fuels. With coal, problems were relatively simple and our deposits are quite well known. Petroleum and natural gas passed more rapidly through an evolution from easy to hard-to-find reserves; from production in domes and anticlines to requirements for locating shoestring sands and pinchouts. The discovery of new reserves has been so successful that we have developed unwarranted complacency about future supplies. Though executives of several oil companies have expressed highly optimistic views, most experts agree that the peak U.S. production will come within a decade, and possibly within 5 years. It will not only be necessary to improve methods of recovery, as was pointed out to the Committee at our last meeting, but also to test every possible chance of locating reserves in places that are now considered as unfavorable.

Fissionable materials provide some electricity now and there is every reason to believe that they will do so in rapidly increasing amounts within the near future. For most of the United States at present the block is economic. Costs appear to be on the order of twice those of processes employing conventional fuels. This is most fortunate for the reason that it is providing time for the discovery of methods of safely disposing of associated high-level waste. But the tomorrow is probably not far away when technological breakthroughs occur that will lower costs and promote a mad rush toward utilization of fissionable materials as fuel and a terrific public demand for much cheaper electricity. Geologists will not only be active in disposing of wastes but also may be seeking new mineral fuel sources as intensively as people with Geiger counters were searching for uranium a few years ago.

A new element in the mineral resources picture is the fact that many rare minerals of no known commercial value suddenly become highly necessary resources when new technological demands arise. The Russians have several large institutions engaged in finding new uses for minerals. We lag pitifully, but we have done fairly well in finding new techniques for the discovery of metals. It has been found that certain minerals act as scavengers for picking up minute amounts of metallic trace elements and that the quantities they contain are highly variable from place to place. Here appears to be a key for placing mineral prospecting on a new, highly scientific basis. Most mining camps are located in places where rock is widely exposed at the surface, as in mountains, deserts, or arctic regions. Trace element techniques in all probability will lead to discoveries in types of areas that heretofore have defied prospectors, as below thick overburdens of soil or "soft" rock. The leadtime between discovery of techniques and realization of practical results in matters such as ore discovery could be shortened tremendously if the scientists concerned were more favorably supported. The invention of the transistor and development of other electronic equipment, discoveries in metallurgy, and other technological advances create heavy demands for substances that were not long ago regarded as worthless. We have little idea about the most urgent mineral needs of the future, but they are certain to change rapidly, and there is no question about the necessity for training people capable of solving each new demand as it arises.

What point is there in bringing questions of this type before your committee? I presume it needs background information. And I also presume that the Congress will from time to time become involved in matters such as I am attempting to bring into focus. Various governmental agencies are engaged in fostering the development of solid earth sciences, and probably most of them could accelerate their programs effectively if given the opportunity.

The Coast and Geodetic Survey, Geological Survey, Bureau of Standards, and various

other agencies are well established and are capable of increasing their efforts. The National Science Foundation, Office of Naval Research, some other defense agencies, and have keen interests in specific parts of any program designed to increase our knowledge about the earth and capabilities for using its resources.

Many of our most fundamental discoveries are being made by organizations such as the Carnegie Institution of Washington and Rockefeller Institute for the reason that they have keen appreciation of the value of basic research. It has been proposed that institutes be established for services such as providing chemical analyses of rocks and minerals, age determinations of rocks, discovering new uses for minerals and rocks, and for collecting data on magnetism, radioactivity, gravitational forces, and rock deformation. A special standards institute is needed for providing reference samples of rocks and minerals with known analytical, radioactivity, and spectroscopic properties. It should be equipped with instruments so highly specialized and costly that they are out of reach of universities and comparable research institutions. The National Science Foundation and Office of Naval Research could serve as sponsors of these institutes, as might the Geological Survey or probably several other governmental agencies.

It is essential in meeting public needs that more satisfactory methods be devised for continuing financing of important research activities, with less emphasis on fiscal years, so that projects may be carried out more effectively and more economically. Better methods are needed for cooperation with universities, the traditional source of new ideas and mainstay for supplying to government, industry, and themselves capable and highly trained personnel. The idea should never be minimized, however, that if research institutes, governmental and private research agencies, and industry provide opportunities so attractive that universities are no longer able to retain their most talented people and provide adequate support for basic research, the entire program of national development and survival will short-circuit and fail. Several of the proposed research institutes should be located in universities but be supported nationally for the reason that their services are primarily national in scope.

While it is highly desirable from many angles to raise the educational level of the masses, it must be realized that the most pressing questions of development and survival are not related to broad, general programs of education. For its own protection, what the public needs most is scientific and technological advances that will result from the efforts of a comparatively small number of extremely talented individuals. These must have highly specialized training such as will be available only in a small number of institutes and universities, each of which must be provided with intellectual and material resources that it would be unwise, indeed impossible, to duplicate at many places.

Why Send Economic Aid to Trujillo?

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, May 27, 1960

Mr. PORTER. Mr. Speaker, in the past I have objected to military assistance being sent to dictators, especially those like Batista who used our resources to kill and maim his own people. However, I have not been against the giving of economic assistance because I felt that the conditions of misery and ignorance which helped totalitarian governments should be mitigated as much as possible and as soon as possible.

However, I made it clear that I did not favor economic assistance that allowed a dictator to identify his corruption and cruelty with the program and hence made it look as though the United States was friendly to him.

Recently the United States cut off about $150,000 worth of economic aid to Cuba. In my opinion, this is aid to the Cuban people, not to Castro. You can as well ask, "Why continue to give economic aid to Trujillo?"

If the economic aid in the Dominican Republic is used to make some of the Dominicans believe that the United States has any respect, much less affection, for Trujillo, then that program is self-defeating and should be ended.

For fiscal 1961 we have $280,000 obligated for economic assistance in the Dominican Republic. If the administration is going to be consistent, they must end the economic assistance program to Trujillo, now that they have ended the program to Castro.

Otherwise, they must resume the program with Cuba, make certain that it is not associated with Castro, and go ahead with the attempt to use our resources to assist the Cuban people.

The people of Puerto Rico are almost unanimous in their disgust with Trujillo and his government. Under unanimous consent I am including hereafter a translation of an article that appeared in the San Juan El Mundo, on March 29, which contains interesting references to my constituent Gerry Murphy and to Professor Galindez:

OTILIO MENDEZ AQUINO DESCRIBES "TORTURES" TO WHICH PRISONERS HAD BEEN SUBMITTED IN THE DOMINICAN REPUBLIC[1]

(By Bienvenido Ortiz Otero)

A series of tortures, to which the prisoners of the revolutionary uprising in the Dominican Republic in June 1959 had been submitted, was revealed yesterday afternoon by ex-Capt. Otilio Méndez Aquino.

Mr. Méndez Aquino had deserted from the Dominican Military Air Force and flown to Puerto Rico. He is living in Santurce, with his sister, Odina Méndez de Montes de Oca.

He also referred to the disappearance of the Basque Prof. Jesús de Galíndez and the death of the North American pilot, Murphy, and to the man who was accused of having murdered him.

Méndez Aquino alleged that there had been "massacres of prisoners" in the Dominican Republic. He said that "the worst of it was that, before killing them or letting them bleed to death, the officers of the armed forces submitted them to tortures, using stilettos (or bayonets, or ice picks) and lighted cigarettes, and then threw them into the dungeons to die."

He said that he had learned about the majority of those incidents from the officers themselves, who had been talking about the tortures as though they were normal events; and he stated that he had been an eye witness to one of those cases.

[1] Translated by Elizabeth Hanunian, Apr. 27, 1960.

THE LARANCUEN CASE

Later the ex-officer told about the "torture and death" of the radio announcer Larancuen, who had lived at Aguadilla for several years. He said that, "Larancuen was taken, as were all the prisoners, to the San Isidro Airbase and stabbed several times with a stiletto (bayonet or ice pick). The announcer died hours later."

He stated that he had heard various officers tell what they had done to other prisoners, whom they had placed aboard planes, "with their hands and feet tied together and practically turned into a ball." He stated that those prisoners "were dumped down on the pavement from the door of the plane, and that some of them died instantly of a broken neck or of skull fractures."

He said that all those tortures had been ordered by Gen. Rafael (Ramfis) Trujillo and a group of high-ranking officers; and, immediately thereafter, he said that Ramfis had been present at most of the tortures and executions.

"The faces of some of the officers registered satisfaction when they spoke of their evil deeds," he said, "but others showed repulsion. Almost all of the prisoners whom they had taken, after being tortured at the San Isidro Air Base, those who had not died, were taken to the academy of the base where, by order of the command, they were shot to death, one by one, in the presence of those who were awaiting the same end."

He stated that the shooting was done by the cadets of the academy by orders of the high officers. "Those cadets are between 17 and 22 years of age, and it seemed that they were obliged to carry out those executions so as to inure them to the system of the regime, or to compromise them."

EXECUTED NEPHEW

Méndez Aquino revealed the case of an officer who was forced to execute his own nephew. The officer was a member of the corps of military aides. "When they ordered him to shoot the boy, the officer cocked his gun, ready to fire, and then his nephew said to him: 'Well, I don't believe that you are going to shoot me,' and the officer trembled and turned white. He again cocked the gun, pulled the trigger, and shot his nephew in front of Ramfis and the other officers."

Méndez Aquino said that in the outskirts of the city "there are houses which apparently are private homes but which are in reality torture centers, in which there are electric chairs to make the prisoners talk." "Some of those villas are owned by Ramfis," he said, "and many prisoners have died of electric shock, and others have become mentally deranged. The villas are being used by the military intelligence service."

"One of those villas is about 7 kilometers from Ciudad Trujillo, on the road which leads from that capital to the town of San Pedro de Macoris. That, I know, is owned by Ramfis. There is another one close to Avenida Tiradentes,.on [or in] San Juan de la Maguana. That villa is owned by Capt. Ney Lluveras, who killed Gen. Ludovino Fernández, but was afterwards murdered by General Fernández's chauffeur."

He also revealed that, as the soldiers did not seem very happy with the slaying of the insurgents, Trujillo ordered them liquidated by the foreign legion which is composed of Germans, Greeks, Hungarians, and Italians. "Those who were hard to capture were given to understand by Trujillo that several members of the Organization of American States were in Ciudad Trujillo and were studying their case," Méndez Aquino said; and added that, "when they were taken to San Isidro and asked where the OAS members were, they were told that what was here was the FUS, which meant to say that they would be shot to death."

GALÍNDEZ

Relative to the Galíndez case, he said that he had heard the army officers tell that he had been kidnaped upon leaving Columbia University in New York, and that he had been taken by members of the Dominican Intelligence Service, in an ambulance, to a plane piloted by Murphy.

"They said that in the ambulance they had given him an anesthetic so that he would not cause any problems. He was then taken to the Dominican Republic and brought before Trujillo. The dictator told Galíndez, when he had recovered from the effects of the drugs: 'Keep on writing.' Afterward he ordered the professor tortured and executed," acording to what he had heard the officers say.

"I also heard tell that Murphy was murdered and that the ex-air force captain, Octavio de la Massa, was to be made to confess the murder; but as he did not confess, they tortured him and liquidated him."

ARE UNITED

On the impression that he had when he arrived in Puerto Rico, ex-officer Méndez Aquino said that he was surprised to find that the Dominican exiles on the island had formed different groups, with different leaders, and that they were totally disunited. "In the Dominican Republic all anti-Trujillistas are united," he indicated.

"I find it hard to believe that after all those years that the exiles have been in Puerto Rico they should not yet have understood that union is an absolute necessity in order to be able to achieve the prompt overthrow of the dictator Trujillo. I think that the opposition in the Dominican Republic is better organized than here, in spite of the fact that there the danger is much greater."

Research Fundamental to the Space Program

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. DADDARIO. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD a statement presented to the Committee on Science and Astronautics on June 2 by Dr. Fred L. Whipple, Director of the Smithsonian Astrophysical Observatory and professor of astronomy at Harvard College Observatory.

Dr. Whipple is a member of the committee's panel on science and technology and was a participant in the recent roundtable discussion held by the committee and the panel on June 2 and 3 on scientific and technological problems.

Dr. Whipple is very well known in his field, and the paper he delivered before our committee will, I am confident, prove interesting and instructive to many who did not have the opportunity to attend our public sessions.

Dr. Whipple's statement follows:

RESEARCH FUNDAMENTAL TO THE SPACE PROGRAM

Chairman BROOKS, members of the Committee on Science and Astronautics, ladies and gentlemen, at our first meeting I presented bashfully a germ of thought concerning certain types of essential research programs that tend to be neglected in our present national system of scientific support. At that time my ideas were not clearly enough formulated for a proper presentation. Now I can expand the picture a bit in the directions where my own experience and observation may be of significance.

The type of research or research engineering that I have in mind will generally be a cross-discipline type of activity. It will rarely fall entirely within any of the known major disciplines and rarely will an individual scientist or engineer have sufficient breadth to plan or conduct the research alone. Frequently, too, the nature of the research will be such as to fall between the purviews of recognized sources of appreciable research funds. To particularize the discussion, I shall now choose an example, which may or may not be entirely representative of the various factors I have just mentioned. Nevertheless, the problem of the nature of the lunar surface, both the point of view of lunar science and the engineering point of view for lunar landing is significant and illustrative. No one on the planet knows (of course, I think I do) whether the moon surface is covered with a considerable thickness of dust or is a fairly rigid, hard surface suitable for supporting substantial structures. Nor will a few hard or soft landings with limited equipment necessarily give us a general answer to this question. Obviously the question is of the greatest importance theoretically and practically. I believe that this problem can be answered in the laboratory at about 1 percent the cost of a rather simple lunar probe and with adequate certainty for the engineering requirements.

We know, at least within limits, the physical environment that affects the moon's surface. We can vary our experimental conditions and assumed chemical composition over an adequate range to cover all of the likely and most of the possible situations that may obtain there. The time scale can be speeded up by an enormous factor so that the experiment need not stretch out unduly. To my knowledge no adequate experiment of this sort is underway, although it is possible that I am not informed.

Our space program has demonstrated a rapidly growing tendency of modern times, namely, that real progress can be made only when the "purest" of scientists and the "most practical" of engineers work shoulder to shoulder along with men of all intervening degrees of theoretical and practical experience. The moon-surface experiment illustrates in a limited fashion this need. The experiment is not one truly in astrophysics, in geology, in chemistry or in physics but it embraces all of these subjects as well as demanding laboratory skill in high vacuum techniques, in "conrosive" ion propulsion, in electrostatic control, and in various techniques for handling pulverized material. There are a considerable number of laboratories over the country where all of these skills and sciences could be brought to bear upon the problem. Also, I believe that there are a sufficient number of research men who would be interested in conducting the experiment if they were encouraged by the promise of proper support. But who would give the support? The project is too large for a university and for all but the greatest foundations to support. It hardly rates as an experiment essential to defense, although it certainly bears upon it. It is not exactly a problem in basic research for the support of the National Science Foundation. Possibly if an investigator pushed hard enough, he might find a committee somewhere that would approve a limited grant for a "study" of the problem. Perhaps it falls closest to the purview of the National Aeronautics and Space Administration and perhaps, indeed, NASA is doing something about it. The latter, however, is suffering from financial malnutrition because of the expected-unexpected increase in cost of conducting the experiments to which it is committed.

My guess is that the moon-surface experiment will be carried out inadequately, that rather large expenditures will be made to answer the question mostly from the moon itself, and in the end we will, by good luck, come out with an answer that is close enough to the truth, engineeringwise, that no disaster will occur.

I mention another example not in the field of my own specialty. This is related to the first example and concerns studies of the planets, including the moon, by seismic methods, moonquakes. Here is an old field of research on the earth and of the earth, which has received only a modicum of support, except in a few specialized problems such as oil prospecting. Seismology received a mild "shot in the arm" because of the International Geophysical Year. Yet, at enormous expense, we will place simple recording seismographs on the moon and planets. Our purpose is to learn about these bodies and certainly something will be learned from exceedingly simple experiments. When we consider the cost of the space science experiments compared to the backup research in seismology on the earth, we find that the ratio is like the ratio of value to earnings for a modern electronic stock. The basic research in seismology has been conducted by a handful of faithful devotees for a number of decades and the support is so small as to keep progress at a highly efficient but actually at a low level. Our lack of knowledge in this field has proved highly embarrassing internationally with regard to the detection of atom bomb tests. Note that we still cannot predict earthquakes, e.g., Chile. I put the question that was presented to me by one of our most able seismologists: "Do we know enough about seismology and the interior of the planet Earth to plan a proper experiment for the Moon, Mars, or Venus?" I do not know the answer to this question, but I am certain that a much more positive answer would be forthcoming should we find a way actively to support the backup seismological research that is obviously needed.

At our last meeting Sverre Petterssen discussed the brilliant possible future of meteorology on this planet and on others and pointed out the fact that "since the end of the last World War meteorology has been a neglected scientific field." Clearly the remarkably successful Tiros experiment has demonstrated that future meteorological satellites can provide a "completely new horizon" in meteorology and atmospheric sciences and in the practical matter of weather forecasting. A number of leading meteorologists have been pressing for the organization of a National Institute of Aeronautical Sciences. The creation of such an institute would be a milestone in the progress of meteorology and, among its other important contributions, would provide the essential backup to our space science program, both for the meteorological satellites about the earth and for our meteorological experiments above and in the atmospheres of other planets. Metecrology, I believe, embraces all of the physical sciences and perhaps some of the biological. Until the active research workers in the major subsections of meteorology are brought together "under one roof" and given an opportunity to interact scientifically, I do not believe that we will attain the degree of progress that is abundantly promised and urgently needed in the near future. Only with such an organization can our enormous expenditure in meteorological satellites and planetary atmospheric research be able to reach its full potential. At the moment I do not know whether or how the National Institute

for Aeronautical Sciences is to be financed, but my impression over the last year or two is that its future is highly uncertain.

In the highest part of the atmosphere and in space sciences one of the least expensive and valuable backups to the space program is the high altitude balloon. I will not elaborate on the problems here except to say that the scientific balloon program is essentially a homeless orphan except for the limited but highly effective support given particularly by the Office of Naval Research and to some extent by the Air Force. This matter of responsibility for the potentially precious balloon program should be settled at the earliest possible moment and supported adequately. Dollar for dollar it should pay off at somewhere between 10 and 100 to 1 over satellites and space probes in terms of space science results. Furthermore, the balloon program involves generally a much smaller and less rigid scientific effort than the space program, with much simpler problems of coordination, guidance, tracking, etc. Hence, it is much better suited for the university researcher than is the satellite program. This is very important as it still seems to be true that most of the major scientific progress comes from within the universities and research organizations closely associated with universities. Incidentally, the tendency of our present space program away from the university impresses me as a step in the wrong direction.

I should enjoy expanding on problems in the field of my own specialty; viz, meteoritics, but will spare you the details of this effort except to attach as a possible appendix to this discussion a paper I wrote for the National Academy of Sciences on this subject about a year ago. I will summarize the paper by saying that the ground based activity to back up our space engineers in the field of meteoritics is still operating at a snail's pace compared to its proper rate. By saving a few hundred thousand dollars a year in meteoritic research, we may lose hundreds of millions of dollars in our space program.

There are other aspects to the problem. One concerns a backup program that is extremely powerful, radio astronomy. This field is covered extremely well in this country except for the division of radio meteors. Nevertheless, there are some extremely serious problems in keeping the critical radio lanes open for radio astronomy. Even the satellites impinge upon these bands sometimes and it is possible that the House Committee on Science and Astronautics can assist in protecting the very excellent effort which is now underway in radio astronomy.

Without going into detail I will mention another area in which I am certain ground-based developmental engineering could be extremely important to our space program, that of the remote-controlled robot. The idea is that a robot in space can do everything that a man can, at far less expense, weight and emotional concern, if there is television contact with and controlled by a man on the ground. A major problem in space is reliability of equipment. Once the remote-controlled robots are multiplied and are sufficiently subtle in their operation to repair each other as well as the equipment, the problem of reliability will have been essentially solved, at least to distances where communication by television is practicable.

I will not attempt to make a listing of other neglected fields of research that fall into the category of my discussion. Generally speaking, as an astronmer, I am embarrased by the large number of reasonable questions about the moon, planets and interplanetary space that astronomy cannot answer. In defense of the astronomer, however, I can point out that the total cost of launching and tracking one earth satellite is adequate to build the observatory with the greatest telescope on earth, the 200-inch Palomar reflector. In answer to the criticism that even with proper funds there are not enough astronomers to expand the astronomical frontier adequately to provide a proper foundation for lunar, planetary and space science, I can only say that the astronomers have always welcomed other scientists as colleagues and have depended upon the engineers to help us with our most important equipment. Also we are training young men rapidly and have facilities to train many more than are available. Various programs of the National Science Foundation are of great assistance in this matter.

Indeed, until very recently astronomical financing has been at an unbelievably low level. I grant that astronomers have not been aggressive enough in their demands for adequate support. Within the decade I sat in a formal discussion where three of the leading astronomers in the country argued that a million dollars a year was an excessive amount of Government support for proper astronomical progress. Astronomers, I may point out, are a bit more ambitious today. Nevertheless, I consider the funding of astronomical research to back up the space science program as broadly inadequate except in the field of radio astronomy (and there barring radio meteor astronomy).

To generalize, it is my thesis that much of our national space program is inadequately backed up by fundamental research and development essential to its proper growth and execution. Probably this neglect of background research results from the fact that no organization within this land having sufficient funds for this backup research has the authority and the assigned mission of supporting it. Now I do not wish to imply that a space experiment or project executed on a crash basis with inadequate foundation studies, is necessarily bad. We all realize the enormous importance of early experience and research to our national welfare and future, so that an expensive, calculated risk can oftentimes be justified as a better investment than a less expensive but delayed result. Oftentimes, too, the intuitive judgment of an inspired scientist or engineer may surpass a conservative development by a mediocre "research group." I am not criticizing those who have worked tirelessly to develop quickly much needed experimental equipment, rocket propulsion systems or other techniques essential to our early mastery of space. My plea is for the proper support of the space programs that are now envisaged, for which we have time, by acting quickly, to improve the end result markedly without great cost, measured either in dollars or in delay of fulfillment.

The problem is not to be solved simply by adding more funds in total, but rather by guaranteeing that a modest fraction of the research and development funds be made available for the basic work that needs to be done. The problem is similar to that of protecting research funds when they are combined with research and development funds. As is well known, and happens yearly throughout our R. & D. budgets, a squeeze or reduction in the budget never strikes the small 10 percent item of research at the same fractional level that it strikes the large item of development. In practice, the cuts are taken more or less equally from both, until the research funds are largely eliminated. In some cases, a frantic scrambling recovers some of the research money so that its research support does not die completely. This background support for the space program bears a similar relationship to the heavy engineering expenses of propulsion units, launching fields, tracking systems and other large expenses which inevitably are underestimated because they themselves are new developments in unproven territory.

As a concrete concept to spur our thinking, I suggest that an individual or group with a separated protected budget be set up, possibly in NASA or in NSF, with the mission (a) to study the problem of backup research for the space program, (b) to encourage research in critical backward areas, and (c) to fund research programs as required when they do not fall easily in the normal disciplines or categories of funds. Clearly a heavy responsibility in scientific and technical vision would lie on the shoulders of such an individual or group. Staffing would be a most critical problem.

Perhaps some other type of solution would lead to a better result. I mention this one simply to try to "start the ball rolling." The problem is real and urgent.

Thank you, gentlemen, for this opportunity. I hope that you will, with your much broader understanding of governmental and financial aspects, be able to find a solution to this real and urgent problem.

Award of Contract to Mitsubishi Co., of Japan

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. LEVERING. Mr. Speaker, on March 26, 1960, I requested the Secretary of Labor to conduct an official investigation into the matter of unemployment in two of the counties in my district, namely Richland and Ashland. I asked for this survey in connection with my efforts to secure for the Plymouth Locomotive Works the defense contract to supply some 39 locomotives to the Panama Canal at a cost of some $4 million. I regret to say that the contract was awarded to the Mitsubishi Co., of Japan on May 12.

The Department of Labor has just advised my office that Richland and Ashland Counties, aforementioned, on the basis of its investigation are labor surplus areas.

Mr. Speaker, I have this day written to the Honorable Wilber Brucker, Secretary of the Army, as follows:

With regard to the recent award of the towing locomotive contract for the Panama Canal to Mitsubishi, I am of the firm opinion that the present strong feeling in Japan against a mutual security treaty with the United States indicates the need for a complete reappraisal of this contract award.

We cannot overlook the gravity of the present anti-American feeling in Japan if we are to insure the timely availability and delivery of this equipment so vital to the canal's operation. This situation, in my opinion, clearly makes it mandatory that the low domestic bidder, the Plymouth Locomotive Works, be called on to supply all, or certainly a significant portion of this essential equipment.

On June 6, 1960, I received a report from the Department of Labor, Bureau of Employment Statistics, which indicates that a serious condition of labor surplus now exists in the Plymouth area. In the case of the Plymouth Locomotive Works, this concern so essential to national security, has already been forced by foreign competition and other factors to cut back to a 4-day week, in addition to laying off 10 percent of its working force during recent weeks.

The recent deterioration in world political conditions, and our own economic con-

ditions at home, dictate that steps be taken before the situation becomes untenable to insure the continuing operation of this vital canal facility.

Mr. Speaker, had the Panama Canal contract been awarded to Plymouth, it would have meant some 3 years of employment or about 1,117,200 man-hours of work.

And as I have contended repeatedly, Mr. Speaker, while the Japanese bid on paper was $913,000 lower than the Plymouth bid, the Government actually lost money by awarding the contract to Mitsubishi. In addition to the $500,000 which would have been paid to Uncle Sam in taxes by Plymouth Locomotive, the Government would have collected some $438,000 in the form of income taxes from employees of our domestic firm. We could also add to this the taxes and man-hours lost to U.S. suppliers and their employees.

Mr. Speaker, I am convinced that if American industry and our standard of living are to survive against the onslaught of foreign competition, we must reexamine the definition of fair and free competition, which our Government says is the basis upon which foreign imports are received and foreign bids accepted, in the light of such acts as the Fair Labor Standards Act and the Walsh-Healy Public Contracts Act, neither of which applies to such countries as Japan. How can domestic industry possibly prevail if conditions that represent burdensome production costs are imposed by law upon one competitor and not upon another?

Mr. Speaker, I am alarmed by the slow-down in our industrial plant, especially in such basics as steel. As important as good international relations are, current trade policies to win friends and influence people abroad is placing several domestic industries and the security of our workers in jeopardy. I am satisfied that this situation will deteriorate further unless we eliminate current policies which are entirely contrary to the intent and purpose of the Buy American Act, and to restore trade programs which are adequate to deal with present day circumstances.

The American Family

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. DAVIS of Georgia. Mr. Speaker, one of the interesting but pathetic aspects of the Communist menace, which appears to surround us on all sides at times, is the concept of the state family as practiced in the Soviet Union. Unlike American parents, who take for granted the joy of raising their own children, many Soviet parents find the raising of their children a state-controlled function including prescribed courses of education accented with political indoctrination, all of which is to perpetuate the communist line.

With such awesome prospects to contemplate it is refreshing to be reminded of the individual freedoms which Americans enjoy, not the least of which is the right to raise one's own children in a manner thought best by the child's parents.

The American family unit is the bedrock upon which our great Nation is built. Watching one's children grow and mature into fine upstanding adults with all the attending joys, sorrows, frustrations and rewards is an intimate part of every family. No family is immune, nor upon thoughtful reflection would any want to be. I recently received an article entitled "The American Family" which is an amusing reminder of what many parents will recall from firsthand experience. As a contrast to the Soviet state family I commend it to the Members of this body. Pursuant to unanimous consent I insert this article herewith:

THE AMERICAN FAMILY

(By Mrs. Thomas P. Swift)

"Four boys is such a nice family," people comment. I thought so, too, when I was an innocent bystander and not an active participant.

Tommy 13, David 10, Craig 4, and Brian 9 months are the names I have dutifully recorded in the family Bible. At my last entry, I noted with interest that one page is completely filled and I have no compulsions about filling the second. If I did, I am sure it would read something like this—Bill, Jim, Joe, and Tim. As much as I would like to see the little deductions, I am realistic enough to know I would not have the time to make the entries nor the 19 cents to buy the ink. I call the children deductions because I find them quite taxing.

People also comment: "You must feel like a queen among so many males." If a queen feeds the hungry males, keeps peace among the subjects and washes the dirty linen, then I might say "yes"—I live like a queen (a queen that would frequently like to abdicate).

My husband goes to work 6 days a week and to Scout meetings for relaxation. This should continue for another 15 years at which time he will be nearing 60, but a cane will come in handy on 15-mile hikes.

System is essential to a well-run household. Five days a week after seeing the two oldest boys off to school, it is a time for decision. Which should I do first—beds, dishes, or diapers? I find the most profitable attack on this point is a third cup of coffee.

Having a husband and being a mother of four boys has its occupational hazard. From keen observation (never in time), I note that the john seats are always up. If I can live to a ripe old age without a broken spine, I will feel that though outnumbered, I have at least won the Battle of the Bath.

On occasions, I have fancied myself doctor, seamstress, chef, psychiatrist, secretary, chauffeur, teacher, mechanic, veterinarian, and interior decorator. (Our furniture is early childhood.) Mostly, I just feel like a girl with bedroom eyes who grew into a woman with dishpan hands.

Being early starters and late stoppers in the game of propagation, our childrens ages are spaced. We laughingly call this planned parenthood. At any rate, it takes real talent to mentally switch to the various age levels. In the course of an hour I frequently switch from lullabys to nursery rhymes to answering questions on space travel to junior high homework. The transition is strenuous, and to think that an Academy Award was won for portraying only "Three Faces of Eve."

The regular grocery list for the week includes baby food, fish food, hamster food, dog food, bird food, and chicken food. The last is for a blue Easter chick now grown up which no one seems to know what to do with. Craig, 4, used to like to walk around with Chick on his shoulder but being a fastidious child, now resents Chick not being toilet trained.

Tommy, 13, owns a snake which we don't buy food for. Snake eats an occasional live frog after which he cannot be disturbed for a week. Life Scout Tommy knows all about such things and he says that Snake will "urp it up." I used to not like snakes but now I have been told that people who dislike snakes are simply ignorant, so I am crazy about snakes.

Cub Scout David, 10, is a real TV fan and fiend. He tells time by saying it is 10 minutes before "Topper" or 15 minutes past "Gunsmoke." His real passion is the big give-away programs. If he won a million dollars, he says that he would buy a swimming pool, a Cadillac, a helicopter, and that he would save the rest for something he really wanted. It is gratifying to see that I have instilled in him a thrift to save.

Brian is still too young to have made any contribution to posterity. He has raised the grocery bill $5 per week and the humidity seems higher.

Four children can just about murder one's social life. With one child we were acceptable in most circles even with the child since he was half way civilized. We never found it hard for two adults to subdue one small child. With two children we could still make the rounds if we picked couples whose children were congenial with ours. With three children the invitations were for about 8:30 on the assumption we would leave the offspring with a baby sitter. With four children, I haven't had any dinner invitations to repay.

Having four children of the same sex has many advantages. The bicycles can be handed down and so can clothes. Also I pick friends who have a child just older than one of mine and let it be known I am not too proud to accept outgrown clothes.

If one child had been a girl, we would need another bedroom but another set of bunks and beds will be much more economical. Every silver lining must have a cloud and the most noticeable of these is the diminishing enthusiasms and flood of gifts that appear after each child. No. 1 was duly showered and No. 2 did almost as well. With No. 3 the gifts came to me. There was candy, gowns, flowers, and though no actual cards of condolence, the air reeked with it. No. 4 was practically ignored, especially by relatives who probably wondered if this trip was really necessary.

According to the old saying, I have made my bed and now I should have to lie in it. As a matter of fact, I can't find the time to make my bed, much less lie in it.

People about 80 say: "My dear, they will be grown before you know it." As I see it, after 35,000 meals, scores of sleepless nights, at least one major crisis a day, and after belonging to the PTA for 26 years, they won't grow up before I know it.

Second U.S. Army Corps

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Army Reserve program is

quietly at work in this Nation, providing the training we must have if we are to be assured of an adequate number of trained "civilian soldiers" in terms of emergency.

An article in the July 1960 Army Information Digest discusses the operations at Headquarters, Second U.S. Army Corps, at Camp Kilmer, N.J. This installation, known to millions of Americans who stayed there briefly during World War II, now has an important mission, and this mission is described in the article written by Maj. Gen. Raymond W. Curtis.

The final paragraphs give details on the community relations activities of the Second U.S. Army Corps in New Jersey and elsewhere. Many New Jersey residents have been, I am sure, impressed by Operation Youth at Camp Kilmer.

Mr. President, I ask unanimous consent for the article to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

II U.S. ARMY CORPS—WHERE RESERVISTS PREPARE FOR M-DAY MISSIONS

Camp Kilmer, located just outside New Brunswick, N.J., is perhaps best known as the center where, between 1942 and 1945, some 5 million troops were processed en route to or returning from oversea duty. Today that same installation—now designated an inactive post—houses Headquarters, II U.S. Army Corps. As such, it is undoubtedly the most active "inactive" post in the Nation.

The II Corps is numerically one of the largest U.S. Army Corps in the country, comprising an area where roughly one-eighth of the Nation's populace lives and works. The corps is the heart of a vast and diversified operation in the Army Reserve program. In structure and function, it is representative of the 14 Army Corps, which are assigned responsibilities for the Army Reserve and ROTC within continental United States.

Fundamentally, the mission of the Army Reserve is to establish and maintain a strong and ready force that can be rapidly mobilized and expanded when and if war should come. The aim of II Corps is to have a force of dedicated, well-trained "civilian soldiers" who are capable of fulfilling their responsibility on a moment's notice.

In civilian life these reservists follow a range of pursuits that reflect a cross-section of community life. One night a week they don their uniforms for training, and supplement this by weekend exercises and 2 weeks of annual active duty for training. In effect, they constitute a force of well-trained 20th century minutemen—citizen soldiers whose heritage goes back to Revolutionary War days.

ORGANIZATION

Created in 1958 by merger of the Military District of New York and New Jersey, II U.S. Army Corps now supervises the training, supply, and administration of an Army Reserve population of 32,871 officers and 258,226 enlisted members organized into 614 units. Its Ready Reserve strength is 21,505 officers and 104,114 enlisted men. Of these, 5,522 officers and 34,439 enlisted men are assigned to troop program units; all others are members of either nontroop program units, Ready Reserve, Standby, or retired control groups.

The Corps also provides direction and supervision to approximately 16,000 students enrolled in Reserve Officers Training Corps (ROTC) programs in New York and New Jersey.

With the establishment of II Corps, a direct line of authority was created from Department of the Army through Continental Army Command, First U.S. Army to II Corps. The commanding general, II U.S. Army Corps has direct command of ROTC instructor groups and U.S. Army Reserve advisors in the two-State area. Also under his direct command are geographical sector commands, which direct the Reserve program through subsector commands; and nine major commands, each with its own subordinate units.

ROTC ACTIVITIES

Reflecting the importance of ROTC affairs, an office of Deputy Corps Commander for ROTC Affairs was established in II Corps in October 1959.

Currently II Corps ROTC activities extend to 20 senior ROTC units in colleges and universities, 4 military schools, 1 junior ROTC school and 7 National Defense Cadet Corps units.

Purpose of the senior ROTC program is to procure and train college students so that they may qualify upon graduation as commissioned officers in the U.S. Army. A typical ROTC unit at one university has an enrollment of approximately 800 students, supervised by a lieutenant colonel of the Active Army with the status of professor of military science and tactics.

The military science course taught by the ROTC instructor staff includes such subjects as American military history, marksmanship, drill, map reading, small-unit tactics, troop movement, communications and leadership. In addition certain colleges offer branch material programs which include practical work with the major items of equipment authorized that branch. Also available is a flight training course for qualified seniors preparing for entry into the Army aviation program.

The ROTC program includes frequent inspections, a fall review, an annual field day and a ceremony for award of Regular Army commissions to outstanding cadets.

Besides providing invaluable leadership experience for civilian as well as military pursuits, ROTC training fosters team spirit that is most important in athletic participation and campus life. In one university 84 percent of all campus leadership positions competitively available to male students are filled by ROTC cadets.

SECTOR COMMANDS

Under the commanding general, II U.S. Army Corps are three sectors—northern New York, southern New York, and New Jersey—each of which directs the operations of Army Reserve activities within its area. Sector commanders through subsector commands, supervise the activities of U.S. Army Reserve centers, including preparation of USAR units for the 2-week annual active duty for training period.

Center facilities are leased or donated, Government-owned, or constructed. Those built according to standard plans and specifications vary in size from one unit modified (100 man) to five unit (1,000 man). With a few exceptions, such centers include classrooms, administrative space, unit storage space, locker rooms, showers, rifle ranges, kitchen, dayroom, assembly hall, maintenance shop, parking area.

USAR CENTERS

Reserve centers have staffs of 5 to 35 officers and noncommissioned officers who advise and assist units with their training, both at the center and in the field.

As an example of complex function, the SFC Nelson V. Brittin USAR Center, Camden, N.J., administers a Reserve program that encompasses both rural and urban sections. Within its area are more than 1,100 farms and 600 industries whose products range from fountain pens to atomic submarines. Approximately 1,000 Reservists employed in farming, shipbuilding, manufacturing, teaching and civil service use its facilities.

Through reserve duty training assemblies and annual active duty for training, the units of this center—as all in II Corps—are concentrating on training programs which will permit units to initiate appropriate basic or advanced unit training after mobilization. At the same time these units are developing administrative self-sufficiency for peacetime operations. Key personnel, in addition to their regular responsibilities, attend Army service schools and participate in Army extension courses and other military education programs.

MAJOR USAR COMMANDS

Besides its three sectors, II Corps encompasses nine major or General Officers USAR Commands. While the programs of these commands generally parallel those of other units within the sector commands, their scope and size are far greater. For example, the 77th Infantry Division, with headquarters in New York City, is one of the 10 Army Reserve combat divisions in the country. Its 10,000-man membership is drawn from an area extending from Poughkeepsie in the north to Staten Island in the south and Hempstead, Long Island, to the east.

The necessities of medical training and supervision give the 818th Hospital Center, New York City, a structure distinct from the other major commands in the II Corps. In direct command of all 34 nondivisional medical units within the two States, the Hospital Center supervises the activities of 4,224 reservists. Units receive training at Reserve Centers in their communities, but their training programs, based on II Corps directives are developed and directed by the 818th Hospital Center. The Hospital Center also conducts periodic inspections of hospital units at Reserve Centers and active duty training sites.

As an example of the realistic training received, the 364th Army General Hospital, Albany, N.Y., cared for the sick and injured accrued from more than 17,000 National Guard, Army Reserve, and Regular Army personnel present during the unit's 2-week annual active duty for training at Camp Drum last summer.

The 818th Hospital Center is developing a specialized training program to broaden the medical experience of its personnel. Dentists will be given instruction in first aid, resuscitation, anesthesia and minor surgery, and nurses will receive training in treatment of mass casualties and in assisting medical and surgical teams. One major objective is to train all enlisted personnel in basic medical subjects, regardless of duty assignments.

A unit unique in the major commands and the Reserve troop lists of the U.S. Army is the 410th Engineer Command (Amphibious Support), with headquarters in New York City and with organic elements located from Long Island to upper New York. Its mission is to perform combat and combat-support operations in offensive and defensive actions on beaches and along shorelines. With amphibious training facilities at Dobbs Ferry, N.Y., and Camp Drum, N.Y., this unit currently is preparing for a combined operation with the U.S. Navy in August.

COMMUNITY RELATIONS

Since Army Reservists take part in all phases of community life, it is natural that community relations form a vital part of the program of II U.S. Army Corps.

Civic organizations throughout New York and New Jersey regularly meet at Reserve installations when the Centers are not being used for Reserve activities. Boy Scouts meet at Reserve drill halls, and community gun clubs engage in firing practice at Reserve indoor ranges. Reserve units frequently

provide speakers at civic functions, take part in local parades, and give demonstrations before youth clubs, parent-teacher associations and other community groups.

In addition, reservists participate in fundraising drives and blood donations. The 310th Field Hospital in Poughkeepsie has given demonstrations of first aid survival techniques, and the unit adviser of the 464th Engineer Unit in Schenectady has instructed the New York State Police in the use of mine detector equipment.

Staff members of various Reserve units and centers often hold public service positions in the community. The commander of the southern New York sector, for example, is honorary chairman of the New York City Cancer Committee of the American Cancer Society; the commander of the James W. Wadsworth USAR Center, Rochester, N.Y., is a member of the National Defense Committee of the Rochester Chamber of Commerce.

Some centers sponsor annual community projects. The 1st Lt. James McConnell USAR Center, Syracuse, N.Y., sponsors an orphanage Christmas party each year and sends orphans to camp during the summer. The Elihu Root USAR Center, Utica, N.Y., adopts two needy families each Christmas season and provides them with food, clothing, and toys.

As the home of the II U.S. Army Corps, Camp Kilmer is vitally concerned with community relations. Each summer its doors are thrown open to children in Operation Youth. Last summer 10,000 children, sponsored by approved organizations, enjoyed outdoor activities and recreational facilities at Camp Kilmer, and even more are expected this year.

FINANCING II CORPS

In terms of dollars, II Corps is big business. With an annual operating budget of approximately $11,250,000, II Corps pays $2,100,000 a year in salaries to its 480 civilian employees. Annual costs for leased space and maintenance of constructed facilities total another $1,200,000. An additional $7,427,893 are allocated for annual active duty for training pay of Army reservists in New York and New Jersey. These funds find their way into almost every civilian community throughout the two States.

As an example, the James W. Wadsworth Center, Rochester, N.Y., and its subcenters, are used by 28 Reserve units comprising approximately 2,000 reservists. It has a staff of 6 officers, 10 sergeant advisers and 16 civilians. Initial cost of the center itself was $576,700, and annual maintenance runs approximately $23,000. Clothing and equipment issued to units and individuals at the Wadsworth Center and its subcenters totals $328,000. The annual payroll for reservists, Active Army and civilian personnel approximates $708,000.

The dedicated spirit and readiness of II Corps Reserve units has earned the respect of local communities—a feeling that is reflected in articles, editorials and statements appearing in newspapers and magazines throughout the area.

THE PUBLIC AND THE RESERVE

The U.S. Army is a reflection of the entire Nation which it serves and from which it springs. As Secretary of the Army Wilber M. Brucker has emphasized, the Active Army, the Army National Guard, and the Army Reserve are elements of a dynamic One Army team, each member an indispensable link in our national defense structure.

In II U.S. Army Corps and elsewhere throughout the Nation, reservists, with their individual skills and collective unity, form a most important part of America's visible deterrent strength. Drawn from every community, these 20th Century Minutemen are dedicated to the establishment of a firm, enduring world peace—a peace based on honor, freedom, justice, and the dignity of man, and safeguarded by unceasing vigilance.

The Story of Chief Joseph: From Where the Sun Now Stands—Part IV

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I wish to present the fourth article of the story of Chief Joseph, leader of the great Nez Perce Indian tribe.

This story, written by Mr. Bruce A. Wilson, editor of the Omak Chronicle in Omak, Wash., located in the Fifth Congressional District of Washington which I have the honor of representing, has received wide acclaim and I will insert additional articles of this story in the next few days.

The fourth article follows:

THURSDAY, AUGUST 9, 1877

Natalekin, an elderly Nez Perce, emerges from his tepee into the faint dawn. For a moment he warms his hands at a fire. Then, grunting, he throws himself astride a large iron-gray horse staked nearby and rides slowly toward the pony herd on the hillside. Natalekin's eyes are failing. He leans forward on the horse, trying to make out what is before him. The world explodes in his face as three volunteers a few feet ahead fire at him simultaneously. Natalekin lurches crazily to the ground. Somebody shouts, "Hit them hard." An ear-splitting volley crashes into the sleeping camp. Yelling and shooting, soldiers splash across the river. Dogs bark. Crazed horses jerk loose their tethers. Squaws scream as they run with papooses. Naked warriors burst out of tepees, some with rifles, others forgetting everything in their dazed compulsion to get away.

Clouds of bullets rip through the tepees. To 9-year-old White Bird, a nephew of the great war chief, they seem to patter like raindrops as they rip through buffalo skin walls just above his head. His mother takes him by the hand to run. A shot tears off the squaw's middle finger and the young boy's thumb. The barrage reminds the warrior Two Moons of a summer hail. With the poles of his tepee splintering about him, he finally reaches his rifle and runs outside. Pahit Pakit, 12 years old, huddles under his blanket as a soldier leans inside the tepee to fire at the boy's yapping dog.

Wahlitits, whose desire to avenge his father's murder had sparked the war in Idaho, throws himself behind a rotten log. Here Capt. William Logan's company is advancing. Wahlitits shoots a soldier. Logan fires. Wahlitits rolls dead. The warrior's wife, already wounded, seizes his rifle and triggers a shot that kills Logan. Seconds later she also is killed. The troops have reached the village and are firing in every direction. Braves, shrieking squaws and children slump to the ground. In the dim gray light, every moving thing becomes a target.

Many Indians, gasping with fear, plunge into the willow thickets bordering the same river crossed a few minutes before by the soldiers. They offer the only cover within reach. From the willows Rainbow, Wahchumyus, Elotoht, and other proven warriors, most of them naked except for ammunition belts thrown over their shoulders, begin shooting back. Husis Owyeen fires; a soldier drops. Next moment a bullet chips Owyeen's skull. He recovers to continue fighting, unaware that his 2-year-old baby, toddling through the melee, has been shot through the hip and his wife, snatching up the child, shot through the back.

Squaws and children wade hip deep into the river, ducking under the water when fighting explodes near them. Rainbow, one of the greatest Nez Perce warriors, nearly collides with a soldier in the willows. Both throw up their rifles. Rainbow is quickest but his gun clicks. The soldier's bullet splatters blood across Rainbow's chest.

The eastern sky brightens to disclose a swirling turmoil of soldiers and Indians half hidden by rolling clouds of crimson-stabbed smoke. A group of volunteers, sent to drive off the pony herd, is turned back by a desperate outburst of firing. Nez Perces including barefooted Chief Joseph, wearing only a shirt and blanket, succeed in moving the herd outside the battle area. Twenty minutes have passed since the attack began. Gibbon's men occupy two-thirds of the corpse-strewn camp. Already troops are trying to set fire to tepees. But the buffalo skins and canvas are too damp, and burn only fitfully.

Whenever before white soldiers have surprised an Indian camp at dawn, resistance swiftly collapsed in panic and confusion. This time it does not. The high courage and superlative fighting abilities of individual Nez Perces begin to make themselves felt. Fortunately for the hostiles, part of Gibbon's plan has misfired. His left wing, disorganized when it stumbled through the willows, lost heart when Lt. James H. Bradley was killed, and drifted toward the center.

Now a solid core of resistance develops in the lower part of the camp still controlled by the Nez Perces. Where this area fuses into the occupied portion, battle-crazed men fire pointblank into each others' bodies, swing rifles to crush skulls, roll on the ground wrestling for throats. The soldiers also find themselves exposed to a blistering fire from the river brush. Gibbon's losses mount steadily. He decides to seek cover.

Carrying their wounded, the troops abandon the camp, stumbling heavily through the brush and across the stream. Nez Perce sharpshooters melt off to the flanks of this scrambling retreat, maintaining a heavy fire. The troops struggle up a slope into heavier timber and dig in. Like hornets the Nez Perce surround them, shooting uproariously. One brave wildly charges the embattled whites. He is Five Wounds, Rainbow's warmate. These two great warriors had sworn to die on the same day as their fathers coincidentally had before them. Now Five Wounds, having grieved over his friend's body, is shattered by half-a-dozen bullets.

Shrieks drift through the blue smoke of battle as other Nez Perces reoccupy their camp to discover the bodies of more than 50 of their men, women, and children sprawled about. Under the steady Joseph's guidance, the Indians pull down smoke-singed tepees, gather scattered supplies, and after burying their dead in shallow graves move off downstream.

Half-a-mile upstream, a separate action breaks out. Gibbon's only piece of artillery, left behind when he struck out to surprise the village, is just arriving, with six mules in harness and a seventh carrying rifle ammunition. About 30 Nez Perces kill or drive off 6 soldiers accompanying the piece. None of the Indians can operate a howitzer, so they roll the trunnion wheels down a gully and make off with 2,000 rounds of .45 caliber ammunition sorely needed by Gibbon's besieged command.

All afternoon and into the night, the Nez Perces fire sporadically into the grimy huddle of whites. A searing thirst adds to the soldiers' misery. Hunger, cold, and fear touch their vitals. Some can be heard sobbing. But many of the warriors, their families now safe, leave the battlefield to ride after the caravan. Near dawn only a hand-

ful are left under the leadership of Ollokot. When they hear the shouted where-are-you's of someone approaching (an advance scout for Howard, who after crossing the Lolo Trail is trying to catch up with Gibbon), the Nez Perces guess reinforcements are at hand and wearily depart. They can feel no triumph in the sickness of their losses.

In the battle of the Big Hole, the Nez Perces almost unbelievably had rallied in the face of a surprise dawn attack to drive their enemy out of the village and to the brink of annihilation. Despite this, for the Indians it was the beginning of the end. For the first time they had suffered considerable losses, between 70 and 90. About 30 of these were warriors including Rainbow, Five Wounds, and others who would be sorely missed in later battles. Other braves had lost their heart for fighting because of squaws and children who now were dead.

It was a grim and far less confident cavalcade which a few days later recrossed the Continental Divide to retreat southeasterly through Idaho toward Yellowstone Park. While 33 of Gibbon's command had been killed and 40 wounded, some critically, the Nez Perces knew their old enemy Howard again was close behind.

Leadership now had passed from Looking Glass, whose dawdling set the stage for the Big Hole disaster, to Poker Joe, an undersized halfbreed with a booming voice. Poker Joe pushed the caravan along, sometimes traveling from two in the morning until ten at night. With the wounded dragged on travois poles, though, it was slow going. The drive was punctuated by savage attacks on several farmhouses and wagon trains. Since Big Hole, when some of the Bitterroot valley settlers who had made peace with the Nez Perces appeared as volunteers to attack their camp, all whites were considered enemies.

General Howard had arrived at Big Hole 2 days after the battle. He was disgusted with his Bannock scouts for digging up Nez Perce corpses to scalp them and about as irritated, though not so outspokenly, with Gibbon for having let victory melt into defeat. Howard resumed the pursuit. As usual, he was beseiged by problems. What if the Nez Perces should double back into central Idaho? And the flow of messages, increasingly caustic, from the War Department. Howard continued to express hope that someone for a change might effectively block off the Nez Perces until he could close with them. But he received such advice as, "General Sheridan in all kindness asks me to suggest to you to be less dependent on what others, at a distance, may or may not do, and rely more on your own force and your own plans."

Pushing on, Howard at last evolved a plan. Reports from terrified settlers pretty well indicated the Nez Perces were heading for Thacher's pass (now the western entrance to Yellowstone Park). On August 17, Howard dispatched Lt. G. R. Bacon with 40 cavalrymen by a more direct route to block off the hostiles' retreat by occupying the pass. Two nights later the main command went into camp at Camas meadows, a grassy pasture offering vast relief from the mottled green sagebrush and volcanic rock desert the troops had been passing through. Howard cautiously posted two circles of pickets around the camp and the grazing area for 200 pack mules and cavalry mounts.

Fifteen miles beyond, the Nez Perces suddenly devised their only positive strategy of the campaign. The inspiration was typically Indian. A wounded warrior, Black Hair, had a dream or vision in which General Howard's horses were captured. Hearing of it, Poker Joe proposed a raid on Howard's camp just before dawn. Twenty-eight fighting men rode slowly toward Camas meadows, arguing about whether the attack should be made on horseback or foot. Presently Ollokot pointed out dawn was about to break and headed for the camp. Others followed. Some, dismounting, slipped between the sentries and began cutting picket ropes.

This lark was interrupted by a gunshot. One of the Indians had fired too soon. Had a white commander been in charge, he probably would have called off the raid to convene a court martial. But the Nez Perce way of thinking was different. One exclaimed, in effect, "Who the hell did that?" Others laughed at the culprit and began kidding him.

The shot must have lifted the slumbering troopers a foot out of their blankets. There was a wild scramble for clothing and guns. In the midst of this the mounted Nez Perces whooped through the herd, driving everything loose ahead of them. Soldiers boiled out of their tents, firing at shadows. Finally the shaken Howard managed to get three companies of cavalry off in pursuit.

The Nez Perces, clattering into the red volcanic rock, soon had enough light to see they had stolen only a few horses but were chasing along about 170 mules, nearly all of Howard's baggage train. As the whites approached, the raiders found ideal cover behind jagged lava ridges. Splattered by bullets, two of the dismounted cavalry companies were forced to withdraw. This placed the third under a wicked crossfire. Pursuit was abandoned. With 10 casualties (the Nez Perces had none) and only 20 recovered mules, the cavalry returned to camp, whereupon Howard's cup of despair generously overflowed.

Lieutenant Baker arrived from Thatcher's Pass having seen no sign of Nez Perces. Howard's main command lurched frantically toward the critical defile only to learn from scouts the hostiles had crossed into Yellowstone soon after Baker's departure. The general camped near Henry Lake to rest his troops while he rode to Virginia City for supplies and horses. In a despondent wire he reminded General of the Army William T. Sherman that some of his cavalry had been campaigning continuously for 1100 miles. From the East, Sherman replied: "If you are tired, give the command to some young energetic officer." His Presbyterian blood boiling, Howard resumed the chase.

Surely no tourists have ever been more astonished than seven men and two young women from Radersburg, Mont., who in late August of 1877 were fishing for trout and viewing geysers in Yellowstone (only 5 years after the sprawling wilderness had been declared a national park). Cooking breakfast, they looked up to find a party of painted, heavily armed Indians staring stonily at their camp. The horrified tourists were escorted to the main body of Nez Perces. After some indecision, their supplies were taken but the visitors were released.

Inexplicably, a few Nez Perces opened fire. One of the campers, George Cowan, was wounded in the thigh and shot across the head to finish him off. A few hours later he regained consciousness just in time to be shot in the shoulder by a passing Nez Perce horseman. After three days of crawling through the park on hands and knees, the indestructible Cowan was rescued by two of Howard's scouts who had come to bury him.

Traveling slowly through rugged, unfamiliar country, the tiring Nez Perces were about 2 weeks in Yellowstone Park before emerging from the northern boundary into Montana near the present site of Billings. The Military Division of the Missouri knew the hostiles were coming and Colonel S. D. Sturgis with eight troops of the 7th Cavalry—Custer's old command—had rushed into the area from his post on the Tongue River. But Sturgis was handicapped because he did not know where General Howard was and he did not know where the Nez Perces were.

The Indians were now methodically shooting all the travelers they came across for fear some might be scouts or messengers (at least two of their victims were carrying dispatches from Howard to Sturgis). Consequently Sturgis learned nothing for sure until he came across a 100-yard-wide trail made by hoofprints and travois poles, indicating the hostiles intentionally or by accident had slipped past him along Clark's fork of the Yellowstone River.

After wrestling his wagon train over a 9,000-foot divide, Howard emerged from the mountains in high hopes the Nez Perces were trapped between him and Sturgis. Instead Sturgis ruefully joined Howard the night of September 11. Again the enemy had escaped. Sturgis' boiling oaths mingled with Howard's exasperated sighs in the biting night air of early autumn.

Next day Sturgis resumed the chase, adding 50 of Howard's cavalry and two howitzers to his own command. Howard, pausing to rest his troops, did something even more important. He wrote a letter to Col. Nelson A. Miles at Fort Keogh, 150 miles east, suggesting there was an outside chance Miles still might cut off the wily Nez Perces.

Northward through the rolling tableland of central Montana, broken by rocky bluffs and gashed by twisting dry water courses, the Indian caravan pushed towards Canada. After Big Hole, the Nez Perces realized armies would attack them as long as they remained in the United States. They continued to spare no whites, killing two loggers one day, three prospectors another, even capturing a stagecoach and treating themselves to a ride with their war ponies tied behind.

The Nez Perces crossed the Yellowstone River and started up a dry streambed (Canyon Creek) which rose to a narrow canyon about 10 miles north. Here Sturgis caught up. He sent a mounted battalion to seize the canyon but Nez Perces firing from bluffs beat them off. Sturgis still felt the hostiles could be forced into a pitched battle. So he dismounted the rest of his troops. This cost him his chance. Most of the Indians remained mounted, hurrying their pack train through the canyon while a few sharpshooters, ducking behind broken rocks, kept the command at bay. The loudest noises at Canyon Creek were made not by Sturgis' howitzers (one fired a single shot) but by the heavy caliber Sharps rifle, a 15-pound buffalo gun Poker Joe had been packing along. Each shot was accompanied by a cannonlike boom and a huge cloud of black smoke. Poker Joe used the last of his cartridges there and buried the gun a night later.

As the last of the hostiles' rear guard disappeared into the canyon, the troops gathered their casualties—3 killed and 11 wounded. About a hundred worn Indian ponies had been captured. Sturgis chased the Nez Perces fruitlessly for 2 days, then waited for Howard at the Musselshell. Their cavalry mounts were played out. Several had been eaten because of short supplies. Neither officer believed there was a ghost of a chance of catching the Nez Perces, who now were far ahead with only 150 miles of open country between them and Canada.

Nez Perce casualties at Canyon Creek had been limited to three wounded. This seemed to hurt less than a discovery that Crow Indians—"They are like brothers to me," Looking Glass had said—were fighting under Sturgis' command. It seemed like the whole world, whites and Indians, had turned against the Nez Perces. Crows continued raiding the Nez Perce herd for 2 or 3 days. But the caravan shook them off.

On September 23 the Nez Perces crossed the Missouri, helping themselves to generous portions of coffee, bacon, flour, beans and sugar from a lightly-guarded army supply depot. By now, many of the Indians

were beginning to unwind. Howard was at least 2 days behind, Canada only a few marches ahead. Instead of continuing to force the pace, why not camp early, depart later, restore strength, shoot a few buffalo for the winter's food supply? So argued disgruntled Looking Glass. Poker Joe gave in—"I think we will be caught and killed"—and Looking Glass, with a vast majority in grateful agreement, restored the 8-hour day.

Traveling leisurely, the Nez Perces halted at noon September 29 to make camp in a small barren valley cradled in the northern foothills of the Bear Paw Mountains. Brush was scanty, but plenty of buffalo chips promised good hunting and warm fires to fend off the frosty night air. A crescent-shaped cutbank about 25 feet high faced one side of the valley. Steep coulees interlaced the ground. Squaws threw up the few tepees salvaged from the Big Hole attack. Braves drove the ponies to pasture about 2,000 yards north. The Nez Perces planned to move on next morning. They were within 2 days' easy travel of Canada.

Twelve days earlier a fagged rider had loped into Fort Keogh, where the Tongue River empties into the Yellowstone, and presented Colonel Miles with Howard's umteenth request for aid. Ardently desiring a brigadiership, Miles figured a slim chance for glory was better than none at all. Next morning he led a fresh army into the northwest—383 cavalry, mounted infantry and Cheyenne and Sioux scouts with 30 days' supplies and two cannon. After 6 days of whirlwind travel Miles reached the Missouri. He still hoped to nail the Nez Perces before they crossed the big river. So he dismissed a small steamer he happened to meet and prepared to follow the south bank.

Just then three wild-eyed whites appeared in a rowboat. They had seen the hostiles across the Missouri 60 miles to the west several days earlier. Miles took one look at the steamer disappearing around a bend and ordered his Napoleon gun swung into firing position. Several shells slammed into an embankment downstream. The steamer took the hint and returned. Swiftly Miles ferried his command across. A pack train was organized so wagons could be left behind. Without losing a minute Miles resumed his diagonal route to the northwest, throwing scouts far ahead and forbidding his men to fire a single shot at the abundant game for fear of alerting the hostiles.

For 4 days the command rode from early-dawn to late-evening, following the eastern flanks of the Little Rockies (the Nez Perce route was just west of the same range). When the Little Rockies dwindled into foothills, Miles swung westward. Early in the morning of September 30, a cold, overcast day, he came across the wide swath of the Indian trail. By 8 a.m. Cheyenne scouts had spotted their village.

Miles ordered an immediate frontal attack by his battalion of 7th Cavalry with infantry in support. The 2d Cavalry would slip around to capture the pony herd, depriving the Nez Perces of their only chance to escape. Miles' forced march had paid off. He was certain the last hour of the war was at hand.

Iowa Employment Security Commission

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1960

Mr. WOLF. Mr. Speaker, the Iowa State Employment Security Commission has experienced extreme difficulty in meeting during fiscal year 1960 the costs of administering the State's employment security program. There are several reasons why these difficulties have been encountered, and they have been explained fully to the Bureau of Employment Security, U.S. Department of Labor, Washington, D.C. These difficulties can be briefly enumerated as follows:

First. Enactment of an amended Iowa employment security law, which complicated the workload for the Iowa agency in this fiscal year.

Second. Significant rise in Iowa's unemployment rate during January-March period.

Third. All State of Iowa employees, including employees of the Iowa Employment Security Commission, participated in a general salary increase, which increased administrative costs $157,000. (Approved by the Bureau of Employment Security, Washington, D.C.)

Fourth. The Iowa agency estimated that it would process 333,600 continued claims. Because of heavy unemployment, by June 30 it will have processed approximately 450,000 claims.

Fifth. Installation of electronic data processing necessitated training people in the new procedures which made it possible to meet the target date of April 1, 1960, for putting contributions work on the computer.

In spite of these reasonable and valid explanations for the need of a supplemental budget of $51,978 to meet the increased cost of administering the amended benefits law, the agency's request was reduced to $7,520.

I would like to insert into the Appendix of the RECORD a statement by the Bureau of Employment Security, Washington, D.C., on the "Funds Granted by the Federal Government for the Administration of the Iowa Employment Security Commission," and a "Refutation of that Statement by the Iowa Bureau of Employment Security:"

FUNDS GRANTED BY THE FEDERAL GOVERNMENT FOR THE ADMINISTRATION OF THE IOWA EMPLOYMENT SECURITY COMMISSION

1. Several questions have recently been raised concerning the funds granted by the Federal Government to the Iowa Employment Security Commission for the administration of the State's employment security program.

2. The Federal Government provides all the funds for the administration of the employment security programs of all the States. The Congress makes a lump sum appropriation to the U.S. Department of Labor for this purpose. The Department is responsible for determining and granting the amount needed by each State for the proper and efficient administration of its employment security program.

3. For fiscal year 1960, the President requested $328,684,000 and the Congress appropriated $315,819,000.

4. The amount of the grant to each of the State employment security agencies is based on the workloads performed and the time required to perform such workloads. Recognition is also given to differences in administrative costs resulting from differences in the number of workers and employers covered by the State's unemployment insurance law, differences in State salary scales, and the like. This system of budgeting is designed to provide each State, within the limits of the total appropriation made by the Congress, with the funds needed to do its job properly and efficiently and to achieve the greatest possible equity among the States.

5. There is no requirement in Federal law, nor does Federal law contemplate, that the amount of the grant to any State should bear a relationship to the Federal unemployment taxes paid by employers in the State. Proposals have been made to return to each State 100 percent of the Federal unemployment taxes paid by its employers, but no such proposal has been enacted by the Congress.

6. One more aspect of the budget system for State grants should be mentioned. Each State is provided with a "base" budget which will finance a specific workload level. If benefit workloads exceed that level, the additional workloads are financed from a "contingency fund" provided in the appropriation. This contingency fund is also used to pay for the administrative costs of State law changes which are made during the year and for salary increases of general application.

7. During the current fiscal year workloads in most States, including Iowa, have been somewhat higher than was anticipated, and, the contingency funds available are not sufficient to pay in full for these added workloads. State agencies were advised of this development by the Bureau of Employment Security in a letter dated January 28, 1960. The shortage amounted to about $5,300,000 or 1.7 percent of the total appropriation. After careful consideration and after consultation with representatives of the State agencies, it was decided that the shortage was small enough that it could be absorbed and that a supplemental appropriation should not be requested.

8. A uniform method of making the needed downward adjustment in the total budget of each of the State agencies was developed. It was found, however, that the application of the uniform downward adjustment hit a few States harder than the other States. Consequently, smaller downward adjustments were made in these States. In two States, of which Iowa was one, no downward adjustment whatever was made. This gave the Iowa agency about $52,000 more than it would have received if it had been treated like most other States.

9. After these adjustments, each State was notified on March 7, 1960, of its final budget for the current fiscal year and that it would have to adjust its operations so as to keep within its funds.

10. The Iowa agency has been granted $2,869,978 for fiscal year 1960, which is $131,000 more than it was granted for fiscal year 1959. The 1960 grant was based in part upon an estimate that 333,600 continued claims for unemployment insurance benefits would be filed in Iowa as compared to the 1959 experience of 369,000. Iowa's grant was determined under the same uniform rules applied to all State requests. Moreover, as pointed out earlier, Iowa's grant was exempted from the downward adjustment made in most State grants.

11. Despite this preferential treatment, the Iowa Employment Security Commission indicated that it would have a fiscal year 1960 deficit of $43,000. (Since then an additional allocation of $7,520 has been approved and recommendations for savings of $11,400 have been made to the Commission.) The deficit is primarily the result of overstaffing in the July-October 1959 period.

12. The Bureau of Employment Security has been advised that there are presently about 450 employees in the Iowa agency and that to stay within available funds this number would have to be reduced to about 415 for the April-June quarter.

13. The grants to the Iowa agency for fiscal 1960 would support, on an average, 482 positions. Since in June of 1959 the agency

reported using 502 positions, it was necessary to reduce employment by 20 positions to be within the average for the year.

14. A further reduction in the number of positions was actually called for because the agency installed new operating methods utilizing electronic data processing equipment. In securing approval for the installation of this equipment, the agency submitted a plan for reducing the number of employees by 35 by April 1, 1960 because the work formerly done by these people would now be done by machines.

15. If the agency had made the reduction of 55 positions explained above, it could have financed an average of 447 positions for the April-June 1960 quarter. However, staff was not adjusted commensurate with workload in the July-October 1959 period, as indicated above, so that this overspending remains to be balanced. For example, the Iowa agency could normally expect to have 16 percent of its yearly claims filed in the July-September quarter. Therefore, its staff in that period should be below the average for the year. It might reasonably have been expected that staff in that quarter would have averaged about 450 positions. However, actual experience was the reverse of what might have been expected. The agency used an average of 488 positions for the quarter or about 38 positions more than could be justified by the anticipated workload. This overstaffing of 38 positions created a deficit of about $41,600.

Furthermore, the agency did not even experience the workload anticipated for the quarter. If 16 percent of the budgeted workload had fallen in the first quarter of the year, there would have been about 55,500 continued claims filed. In fact, less than 48,000 such claims were filed, about 86.5 percent of what was expected.

16. The regional office of the Bureau of Employment Security at Kansas City, Mo., has made intensive efforts to influence the Iowa agency to recognize its problems and to adjust its 1960 spending plans to avoid a deficit. These efforts began on June 23, 1959, and have continued at frequent intervals to date. The regional office emphasized to the Iowa agency that if the staff adjustments were made early in the year the number of people laid off could be kept to a minimum.

17. In July 1959, the regional office was assured that the deficit would be made up by not filling positions as they became vacant. Yet, between July 1 and October 15, 1959, the agency filled 49 of the 54 positions which were vacated. This occurred in a period when its workload was at a low level.

18. On December 1, 1959 the agency submitted an operating plan for avoiding a deficit. This plan called for reducing staff from 471 in December to 413 in the April-June 1960 quarter. The regional office again pointed out the desirability of earlier action so that the smallest number of people would be affected, but the agency insisted on acceptance of its plan.

19. The Iowa Employment Security Commission in a letter dated March 23, 1960, has now advised the Bureau of Employment Security that it will not reduce its staff below the 450 presently employed. It has also advised that if its budgetary deficiencies cannot be resolved, all employees will be given a 1-week, nonpaid budgetary furlough.

20. This year the Bureau of Employment Security initiated an intensified program to get the States to do a better job of financial management. A Bureau letter dated July 31, 1959 advised all States: "No upward adjustment in the allocations will be made at the close of the year unless an agency has taken all steps within its power to avoid deficit spending." State employment security agencies, generally, support this position.

THE IOWA EMPLOYMENT SECURITY COMMISSION'S REFUTATION OF THE BUREAU OF EMPLOYMENT SECURITY'S ARTICLE: FUNDS GRANTED BY THE FEDERAL GOVERNMENT FOR THE ADMINISTRATION OF THE IOWA EMPLOYMENT SECURITY COMMISSION

Paragraphs 1–4 (paragraph numbers refer to Bureau of Employment Security's statement attached): The first four paragraphs restate the Bureau's budgetary principles. The Iowa Employment Security Commission has no quarrel with these principles. Had they been followed, we would not be in trouble. They make no particular mention of the fact that in fiscal year 1960 they did not follow these principles. In our answer to paragraph 6 we will point out one of the ways in which these principles have been ignored.

The Iowa agency believes that during the current fiscal year the Bureau has not given proper recognition to workloads performed by the Iowa agency nor to the increased time which was needed to perform our workloads under the amended Iowa employment security law.

The Iowa agency recognizes that the Department of Labor is responsible for granting the amount of money needed by each State. Our agency has made every effort to secure economy of operation by introducing revised procedures such as mail claims, group benefit rights, interviews, and selective application procedures. Our agency has made every effort to apprise the Bureau of the problems we encountered in administering the amended Iowa Employment Security Law. The agency does not feel that the Bureau has given proper consideration to the complexity of the amended law.

In our correspondence with the Bureau on April 29, 1960, the Iowa agency asked for $51,978 for increased cost for the amended benefit law. We were advised that our asking was reduced to $7,520. In our letter of April 29 we asked several questions regarding the Bureau's method of computation. By letter dated May 13 the Iowa agency was advised that:

"Substantially all of the questions have been answered, either in discussion or correspondence. For that reason, and for the additional reason that our Bureau headquarters has asked us to emphasize that no additional allocation will be forthcoming this year, we are not, at this time replying to your several questions."

We do not feel that these questions have been answered satisfactorily. We sense a reluctance on the Bureau's part to answer them in writing.

Paragraph 5: We do not know if the Federal law contemplated " * * * that the amount of the grant to any State should bear a relationship to the Federal unemployment taxes paid by employers in the State." The Iowa agency does know, however, that the employers in the State of Iowa did not contemplate that their tax payments would be used to meet increased administrative costs of other States and at the same time not be allowed for increased administrative costs of their own employment security law.

Paragraph 6: The base budget requested by the Iowa agency for fiscal year 1960 was $2,900,727. The base budget approved by the Bureau was $2,584,206. (This reduction represented a disagreement on the part of the Bureau with our workload estimates, plus an additional arbitrary reduction of $80,672 which they called a horizontal budget cut.) Had the Bureau paid us according to the standard contingency workload rules, this disagreement on estimates would not have mattered and we could have finished the year without financial trouble, because the contingency payments are meant to reimburse if estimates are exceeded.

The Iowa agency feels that the Bureau abrogated their own contingency rules in Fiscal Letter No. 438. By the terms of this letter, contingency earnings for fiscal 1960 were paid at a reduced rate on an estimate not an actual workload in January of 1960. We exceeded our estimates in every category because Iowa's unemployment rate rose significantly during the January-March period.

Paragraph 7: Representatives of the Iowa agency were not consulted regarding our need for continguency earnings prior to being advised on March 8 that its contingency earnings had been reduced. The January 28 letter referred to merely asked for an estimate of contingency earnings without indicating that the Bureau was abandoning payment on actual workload. The consultation with State agencies referred to took place in an Interstate Conference Committee on grants meeting but individual States were not polled on this point.

Paragraphs 8 and 9: Special treatment or not, this $52,000 is some $70,000 less than the $112,000 we compute as our earnings under the Bureau's former contingency rules. This does not take into account the requests we felt justified in making for changes in the law.

Paragraph 10: The Bureau makes much of the fact that Iowa received $131,000 more than in fiscal 1959. Effective July 1, 1959, the employees of the Iowa Employment Security Commission participated in a general salary increase for all State of Iowa employees. This increase, approved by the Bureau, cost $157,000.

The Bureau states that our budget was based in part on an estimate of 333,600 continued claims. Our estimate was for 448,500 continued claims. The Bureau reduced this to 346,800 and then applied a horizontal cut bringing the number down to 300,000 claims. To date, May 1, 1960, we have processed 400,659 continued claims. We anticipate that by June 30 we will have processed 450,000 claims. We know our estimate was more accurate than the Bureau's.

Paragraph 11: We reject the notion that our troubles were caused by overstaffing in the July–October period. During that time we were perfecting our procedures on the new law, completing the training of personnel on the new law. During much of this period, many of our staff were using their accrued vacation time. Those on duty did not process claims as quickly then as they do now, because of the unfamiliarity with the requirements of the new law. Even so we made considerable reduction in the size of our staff. This will be described below.

We feel that the Bureau's recomendation to save $11,400 by reducing travel to a minimum is false economy. We are following this recommendation, but a number of people, the performance of whose jobs depends upon travel, are working on work normally done by lower paid workers. We are not giving our field offices the attention and supervision they warrant. We are not serving our employers by helping them with their tax returns. We are accumulating a backlog of overdue field audits. We are not making some of our tax collections according to schedule.

Paragraphs 12 and 13: The Iowa agency reduced its staff more than 10 percent during this fiscal year. We doubt very seriously if the Federal Bureau in Washington has made a comparable reduction to help meet the budgetary shortage.

Paragraph 14: On March 1, 1960, the Iowa agency was slightly ahead of its schedule in staff reductions due to economies effected by electronic data processing. However, due to a heavier than normal claims load and the technical and highly complex nature of planning for use of electronic data processing, we did not meet target date (April 1, 1960) for putting our contributions work on the computer. This necessitated retaining five bookkeeping machine operators longer than expected.

The Bureau's delay in approving the installation of electronic equipment for 2 months beyond the expected installation date created many problems for our data processing people in that it postponed this difficult transition period into the busier part of the year.

Paragraph 15: Again the Bureau disregarded the fact that the Iowa agency was called upon to administer an amended benefits law as of July 4, 1959. The Iowa agency was granted additional funds because of the change in the law, but the grant was less than one-third of the amount which the agency determined by actual time study to be necessary for the extra work involved in this change.

Handling of claims under this new law was much slower during the July–October period because of unfamiliarity of the personnel with the new law. We have demonstrated to the Bureau by studies that in the later quarters of the year, our handling of claims was much reduced in time.

Paragraph 16: The Iowa agency believes that the Bureau of Employment Security at Kansas City, Mo., is sincere in their efforts to reduce administrative costs. However, we feel that a more open minded, better informed, and interested attitude on the part of Federal officials in management problems of the Iowa agency is needed rather than the critical attitude dictated solely by budgetary considerations.

Paragraph 17: The Bureau has made this mistaken assertion repeatedly. Someone in the Bureau does not understand how to analyze our payroll. Our payroll includes many people working on State retirement positions paid out of State funds in whom the Bureau has no interest. Under merit system procedures people going from emergency to provisional or probational status are shown as being terminated 1 day and rehired the next. Some of our employment security people were transferred to vacancies in the State retirement section. We can best answer their misconception by showing payroll count on June 30, 1959, and September 30, 1959:

June 30 (exclusive of State retirement)	507½
Sept. 30 (exclusive of State retirement	484½
Net decrease	23

The agency did add 10 temporary employees in October because of the steel strike, but all had been released by October 31, 1959.

Paragraphs 18–20: The Iowa agency has followed a policy of keeping the Bureau advised of its staffing plan and their reasons for such a plan. The Bureau representatives have not been particularly interested in discussing our reasons. Their sole concern is making the agency conform to a predetermined budgetary amount, regardless of workload and service.

The Iowa agency is not asking for an upward adjustment of its base allocation. It is asking for part payment on contingency workload accomplished, for adequate recognition of changes in the law and for extra legal allowances covered under Bureau regulations.

Jobs After 40

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. HOSMER. Mr. Speaker, it is necessary that discrimination against hiring older workers in this country be replaced by the principle of hiring on merit. The key facts are these:

That more older workers must be employed if we are not to experience a slump in the rate of growth and productivity of our economy.

That as the percentage of older workers is increasing, their employment is decreasing.

That is why Labor Secretary James P. Mitchell is preaching this doctrine more persistently than ever before:

America's older workers possess one-third of the skills and one-third of the production potential. It seems to me that if we continue to waste their skills and their potential for no good and honest reason, then we are squandering a striking opportunity to build an even better and richer life than our country knows today.

Jaycee's 40th Anniversary

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, I should like to call to the attention of my colleagues the 40th anniversary of the junior chamber of commerce. This organization has continuously worked for civic betterment and, while pursuing this great work, has helped to mold the leaders of our Nation.

It was 40 years ago in 1920 when a group of young men from different cities met in St. Louis to form the U.S. Junior Chamber of Commerce.

Although the need for such a young men's organization is readily apparent today, this was not the case during the early twenties. The Jaycees, as they are commonly referred to, found the early going rough with their first decade marked with a slow but steady growth.

The depression of the thirties compounded the Jaycee's problems. Although small, they were determined. They realized that they must grow if they were to survive. And grow they did, gaining tenfold in chapter strength before their second decade came to an end.

As the 1940's approached, the junior chamber was one of the first organizations that took a definite stand favoring the controversal compulsory military conscription bill—even though they knew it would hit their 21 to 36 age group the hardest and might even be the deathblow to their organization.

Membership and chapter strength, as expected, dropped drastically during World War II. The few jaycees who remained behind, however, were able to keep the movement intact until their fellow members returned from the service. The organization was small yet strong in 1945. This served as a basis for the phenomenal postwar growth of the junior chamber of commerce.

Today, with 4,500 chapters and 350,000 young men scattered through 89 nations of the free world, the junior chamber movement ranks as one of the world's leading civic organizations.

One of its outstanding members is Tom Ruffin, of Shreveport, La., currently a national vice president and a candidate for president of the organization.

Tom joined the Shreveport chapter 13 years ago at the age of 21. Working very actively on many local projects he moved rapidly on up the ladder to the State level and subsequently to the national level. Serving this period in many capacities, he has become thoroughly familiar with every phase of jaycee activity and its functions in our American way of life. Having a reputation for always getting the job done, he brings into his campaign a proven record of experienced leadership.

As the jaycees return to their birthplace, St. Louis, for their 40th anniversary convention, let us wish them the best of luck as they continue to train future leaders through civic activities.

Commencement Exercises of the National Cathedral School for Girls

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. COLMER. Mr. Speaker, today the National Cathedral School for Girls, an outstanding educational preparatory school here in the city of Washington, held its annual commencement exercises. These exercises were of particular interest to those of us here on Capitol Hill because among the 61 graduates of this splended institution were Miss Lera Thomas, the daughter of our distinguished colleague and friend, Congressman ALBERT THOMAS, of Texas, and Miss Sara Patsy Miller, the daughter of our efficient and accommodating Doorkeeper of the House, "Fishbait" Miller. The complete list of the graduates of this the 60th anniversary year of this fine institution are as follows:

CLASS OF 1960

Sibley Anne Auchincloss, Harriet Carson Bass, Julia Sherman Beal, Barbara Lawrence Betts, Maureen Frances Black, Katherine Anne Boswell, Diana Carol Bulloch, Matilda Lou Butler, Julia Edison Cavan, Persis Jane Rhodes Charles, Elizabeth Pope Christenberry, Katharine Mary Clum, Ann Moore Cutler, Candy Helen Daniel, Deborah Davenport, Bertha Effingham Lawrence Newton Davison, Elizabeth Mason Denny,[1] Ysabel Dumouchel de Premare, Mary Susan Dick, Carolyn Engel, Lois Aileen Everett, Elizabeth Davison Fisher,[1] Nancy Ellen Geiger, Jean Marie Gladding, Wendy Gunn, Nancy Channel Hobart, Patricia Ann Hurston, Patricia Jean Jenkins, Lelia Symington Kauffman, Lucy Cage Kennerly, Craig Kerkow,[1] Jeanie Elizabeth Kinney, Beth Lee Kline, Mom Rajwongee Putrie Kritakara, Catherine Eleanor Krug,[1] Mary Susan Lanphier, Elizabeth Lynne Long, Mary Leighton McGavern, Ellen May,[1] Sarah Patsy Miller, Elina Rose Mooney, Alyson Moore, Christina Morris, Mollie Elizabeth Odom, Kate Grayson Oliver,[1] Dorothy Mann Olson,[1] Rebecca

[1] Cum laude.

Rivers Owens,[1] Mary Boyd Poindexter, Julia Porcher Wickham Porter,[1] Stephanie Raushenbush,[1] Joan Scott, Millicent Baltz Scrivener, Anne Bird Shenefield, Barbara Ann Smiley, Barbara Karen Sprague, Elizabeth Steele, Lera Thomas, Mabel Stuart Upchurch,[1] Elizabeth Wayne Van Leer, Penelope Webb,[1] Marcia DeFord Yingling.

The Very Reverend Francis B. Sayre, Jr., D.D., L.H.P., dean of Washington Cathedral, very appropriately read from chapter 55 of Isaiah.

The Right Reverend Angus Dun, D.D., S.T.D., bishop of Washington, delivered the commencement address. The bishop's address follows:

Members of the class of 1960, I shall talk to you this morning about pictures, especially about your pictures of yourselves. One of my best teachers wrote years ago that man is an animal that makes pictures. More striking still—he makes pictures of himself. These are of many kinds—scratched on the walls of caves in southern France, carved in wood or stone, painted on canvas, snapped on a camera film. To the pictures which are given shape and color in visible form must be added the word-pictures which man makes of man—a series of portraits that range all the way from the ancient picture of Adam and Eve in the Garden of Eden to the latest attempt of the psychologists, sociologist, and anthropologist to portray man as he really is. And behind these outward pictures lie the unseen images in the mind's eye, your idea of yourself and of your fellows and of the fascinating being you both are, called man.

Many things could be said about man's pictures of himself and of his fellows. I have time to speak of only one, the importance of the setting or the background. The candidates for high public office like to be taken with their families or even kissing babies. It gives a reassuring impression of domestic virtue. The judge is painted with his judicial robes, the doctor with his microscope, the mother with her children. The setting helps to indicate who and what this person is.

So it is with the images of man in general. The setting makes all the difference. We have only to compare the picture of man in Michael Angelo's creation—man reaching out his hand to receive life from the Creator God—with typical modern murals of man in the midst of his machines—man the doer of mighty works, or man threatened and shrunken before the monstrous things he has fashioned.

Among the great pictures of man is Christ's. It is a picture sketched in words, suggested in parables, reflected in His dealings with men, plainly carried in His mind as He met men. It is part of our inheritance from Him, which we seek to treasure here.

We might indicate His angle of vision by saying that Christ took a God's-eye view of man. He saw us against divine background. He looked on man as one who saw behind the veil the high and holy One who inhabiteth eternity, whose name is holy.

I have long had an Arundel print of Peragino's Crucifixion. I once saw the original in Milan. It is a triptych. In the central panel is, of course, the cross, and one kneeling figure. In each of the side panels are two figures, one standing and one kneeling. Take the central panel away and the picture is plainly meaningless. It is not merely that the panels are parts of a total design; the positions and attitudes and expressions of the men and women in the side panels become pointless without Christ in the center. Adoration would then be left without any object of adoration, humility without any humbling presence, grief without a cause of grief. In the same way, Christ's picture of man is meaningless without the central presence. For man is not in the center of His picture. The mysterious reality he suggests by the great word—symbols—"the Father in Heaven," "the King," "the Lord of the Vineyard," "God"—is in the center. Man is a subordinate figure who draws his meaning from the central presence and purpose. The whole look and attitude of man is changed by the recognition of the central presence. Man is in the wings, brought to his knees, broken in spirit by the demands of perfect love, exalted by the same presence that humbles him.

No one can look upon Christ's picture of man without being impressed with the worth He saw in man, a worth so far outrunning any obvious attractiveness or excellence. In both the teaching and the action of Christ there is a paradoxical emphasis on the worth of the worthless. As though to stress the fact that His scale of worth is something quite other than the common scales by which men are weighed, He shows an almost perverse preference for the poor, the weak, the simple, the immature, even for the moral failures.

There is much talk in our American tradition of the inherent dignity of man and the supreme worth of the individual. This is too often vulgarized to mean that every man has an inherent right to accomulate the biggest pile he can of the common wealth and do with it as he desires. (Believe me, my young friends, that doctrine has little appeal for the hungry, deprived millions of our world.) The inherent dignity seems to be more widely recognized if the skin is white. But leaving these distortions aside, what is this mystical worth of personality?

A distinguished British scientist declared to the British Academy of Science some years ago: "Man is just beginning to know himself for what he is, rather long-lived animal with great powers of enjoyment, if he does not deliberately forego them."

If that is the last word in man's self-portrayal it is difficult to summon up any profound respect for the central figure in the picture.

The truth is that man's worth and dignity are not inherent, not something he possesses as an isolated being. The worth of man is a derived worth. The glory of man is a reflected glory.

Man, the rather long-lived animal, exercising his unusual powers of enjoyment, may be, on occasion, a pleasant or an entertaining sight; he is not as such a being to call out the sacrificial labor of saints or of the servants of justice; he is not a being for whom Christ dies. But man seeking to ensnare in lines and form a beauty that has captured him; man pursuing a truth that humbles and eludes him; man as the unselfish servant of the American dream; man cleansed and clothed in adoration finds high meaning in his own life and in the lives of his comrades. Man's worth and dignity come from beyond himself, and unless he can picture himself and his fellows in a setting that gives profound meaning to his life, a mood of futility possesses him. He has no antidote for his self-despair and his despair of his fellows.

Christ's care for men sprang from the fact that He saw them as belonging to God. He bore within Himself the vision of a love from on high reaching out toward men and conferring on them by pure grace a worth they cannot claim by any right. And He saw that they can only rise to their dignity as sons by yielding themselves to the claims of that love.

To men as the objects of that love He gave the name of "sons." To men as knit together by their common participation in that love, He gave the name of "brothers." This sonship and this brotherhood He pictured as at once something given, and unbreakable and inescapable fact, and something waiting to be realized, as hope held in trust for us by the giver of life.

This picture of man is not the picture of some abstraction called man. It is Christ's picture of you. The least of you is honored by it. The most honored has no honor that compares with it. It matters greatly whether you can accept this picture of yourselves, for we all tend to grow into the likeness of the image of ourselves which we hold deep within.

As you go from this good place carrying so much given here I pray that you may carry this picture with you into the hidden years that lie ahead. Then they can be full of promise, and even of glory.

Unjust 10-Percent Wartime Excise Tax on Automobiles

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 31, 1960

Mr. CHAMBERLAIN. Mr. Speaker, recent world events point up the vital urgency for stepped-up economic growth in the United States and the free world, in order to meet the increasing competition of communism in this area.

At the same time, it seems incredible to me that the United States continues policies which stab such economic growth in the place where it is most equipped to advance: the automobile industry.

Mr. Speaker, I refer to the continuation of the highly unjust 10-percent wartime excise tax on automobiles.

Year after year I have repeatedly brought its unfairness to the attention of the Congress and to the attention of the American people.

I would like at this time to include in the RECORD a statement made before the Ways and Means Committee 7 years ago on this subject by Mr. A. E. Barit, then chairman of the Automobile Manufacturers Association's taxation committee. While the statistics used in 1953 are obsolete, the arguments which he advances are as valid today as they were then.

And no remarks, Mr. Speaker, can remain timely and truthful for 7 years unless they are saying something highly significant to a large segment of the Nation's population.

In 1953 Mr. Barit opposed the extension of the automotive excise tax because, first, it was unfair to a wide segment of the American people, including lower income groups; second, it discriminated against manufacturers and against owners who use their cars and trucks primarily as a necessity; third, it impeded the free flow of commerce by highway; fourth, it represented multiple taxation at its worst; and, fifth, it constituted a threat to price, demand, and employment in automotive and related industries. These reasons all remain valid today.

I think Mr. Barit's speech deserves careful analysis and consideration as we are about to act on the legislation which

once again extends this discriminatory temporary wartime tax. The speech follows:

PRESENTATION BY A. E. BARIT, PRESIDENT, HUDSON MOTOR CAR CO., AND CHAIRMAN, TAXATION COMMITTEE, AUTOMOBILE MANUFACTURERS ASSOCIATION, TO HOUSE WAYS AND MEANS COMMITTEE, AUGUST 1953.

Mr. Chairman, my name is A. E. Barit. I am president of the Hudson Motor Car Co., and chairman of the taxation committee, Automobile Manufacturers Association.

Without going too far afield from your consideration of excise tax rates, I should like to recall the law of inertia—the tendency of a body to remain as it is.

As you know, our industry has produced and distributed to the public the 53 million vehicles which daily overcome intertia and go forth on an endless round of necessary jobs.

Under the circumstances I suppose it is natural that we should be concerned about anything which smacks of inertia—even tax inertia—and certainly this is an apt description of the excise tax situation in this country. The nature of the emergency which put these excises on the statute books in the first place may have changed, or, indeed, may have ceased to exist at all. But the tax persists. From an initially temporary role, it has gradually taken on a semipermanent appearance, and has become virtually an integral part of the tax base. Since 1932, that, in brief, has been the history of automotive excises, which we refer to in this statement as embracing the manufacturers' tax on automobiles, trucks, buses, and replacement parts and accessories for all three types of vehicles; tires and tubes; lubricating oil and gasoline.

Since 1932, Federal excise taxes have been imposed on vehicles and parts as follows:

[Percent]

	Cars	Trucks, buses, and trailers	Parts and accessories
1932	3	2	2
1940	3½	2½	2½
1941	7	5	5
1951	10	8	8

We have been living with excises on and off since 1917, and at increasing rates since 1932, and the experience has proved to us—and congressional reports have concurred—that these highly selective taxes are objectionable, and were so regarded when they were enacted in 1932 as temporary measures to meet the depression, when they were increased in 1941 because of defense needs, and when they were further revised upward after the Korean outbreak. We think it is basically inequitable to perpetuate, through this thing I call tax inertia, a tax that can be justified only on a temporary or emergency basis.

We firmly believe these taxes should be canceled in their entirety. If, in spite of the evidence which we are presenting in this brief, pointing overwhelmingly to the unfairness of these taxes, you cannot see your way clear to such cancellation now, we respectfully urge that you at least examine into the situation to determine whether by reason of the very inertia I speak of, the Government is collecting less money through the present excise tax law than it otherwise would.

By this I mean that the current excise tax on automobiles is so large as to almost overshadow the retail price structure. In fact, recent market experience shows that a price segment considerably smaller than that represented by the excise tax will have a serious effect upon the size of the public demand for automobiles.

In other words the current automobile market is very sensitive as to price and it promises to become increasingly sensitive as we approach and pass the peak of Government spending for defense.

Because the Government shares, through its taxes, in the result of a rise or fall of public demand for automobiles, we respectfully suggest that Congress should give serious thought to reducing the excise tax and thus encouraging large-scale revenue from this source.

Quite possibly the Government would derive greater revenue by this action than by continuing the present program. This is because sustained or increased demand for automobiles means not only the collection of excise taxes on the automobile itself and on the tires and gasoline consumed, but also income taxes on the earnings of manufacturers and dealers.

Now we propose in this presentation to show that automotive excises are objectionable for the following reasons: (1) They are unfair to a wide segment of the population, including lower income groups; (2) discriminate against manufacturers and against owners who use their cars and trucks primarily as a necessity; (3) impede the free flow of commerce by highway; (4) represent multiple taxation at its worst; and (5) constitute a threat to price, demand, and employment in automotive and related industries.

AUTOMOTIVE EXCISES UNFAIR TO MILLIONS

The present automotive excise taxes are unfair to the lower income group who comprise more than 75 percent of passenger car owners. These 32 million people of small resources make up a group whose welfare you gentlemen have constantly in mind. Members of this lower income group, like practically all other automobile owners, bear an extra burden of taxation because they have found it necessary to use cars for getting back and forth to work, or for other essential travel.

Travel surveys reveal that more than half of all passenger car mileage is necessary, with 77 percent of all trips connected with earning a living or other economic activity. About 95 percent of the country's 43 million passenger cars are used wholly or partly for essential purposes.

Essentiality, too, prompts a substantial number of lower income people to buy used cars, but these purchasers escape only the initial excise charge on new units and this only because the excise tax was paid when the cars were new. But these buyers pay the 8-percent tax on spare parts, which is a tax on misfortunte, and the excises on tires, oil, and gas.

The present automotive excise taxes are unfair to farmers, the largest class of truck-owners, who have more than doubled their dependency on trucks in the last decade. Today farmers use nearly 2,500,000 such units. Because trucks are used so extensively in hauling products from farms, automotive excises become a direct charge against the cost of food.

Present automotive excises also are unfair to another large group of people who, like the farmer, have to depend almost entirely on the automobile and the truck. They are the 6 million persons living in 2,140 towns where there is no streetcar or bus service. In other words, they are subjected to a tax inequity because they happen to live where they do.

DISCRIMINATORY AGAINST MAKERS AND OWNERS

Excise taxes levied on cars, trucks, and automotive parts discriminate against the manufacturers and against the users because the tax is so highly selective. Indeed, it represents a serious departure from the accepted tax policy of uniformity of treatment.

As for the manufacturer, the tax does not become any less discriminatory merely because it is passed along to the consumer as a higher cost of doing business. The discrimination remains, due to the competitive relation between automotive manufacturers and makers of other transportation equipment, including streetcars, subway, freight and passenger trains, trolley coaches and aircraft; and between manufacturers of farm implements, tractors, and combines. None of these products is subjected to the Federal excise tax; yet none of them can be said to be more essential, either in peace or in war, than the passenger car, the truck, and the parts needed for their maintenance and repair.

The excise tax burden becomes cumulatively heavy on the operators of automotive vehicles, first as purchasers of new equipment, and later as users of parts, tires, oil and gas. But competitive forms of transportation are free from such taxes, yet who can say that such competitive transportation is more essential.

Similarly, trucks and passenger cars rank with the most necessary of industrial equipment, but machine tools, conveyors, hoisting equipment and packaging machinery are free from the excise tax. The same thing can be said in the construction industry where the truck is indispensable along with the bulldozer, tractor, crane, and cement mixer. But none of this construction equipment is taxed except the motortruck.

AUTOMOTIVE EXCISES IMPEDE COMMERCE

Because our existing excise tax laws discriminately single out one type of transportation equipment for general tax purposes, they automatically penalize that part of commerce borne by motor vehicles. These carry about three times as much freight as the combined total hauled by all other forms of transportation. But the class taxation of motor transportation is a burden from which competing forms of transport are free. To put it another way, there is no comparable excise tax on other freight carrying units, yet no one contends that the motor truck is any less essential. As a matter of fact, the services of the Nation's truckers, different from the services of other freight haulers, are depended upon to a large degree for the efficient operation of other freight carriers.

As carriers of freight over the highways, motor trucks, traveling an estimated 100 billion miles a year, continue throughout their active life to carry a punitive tax load. Like passenger cars, their Federal tax burden doesn't stop with the manufacturers' excise on each new unit. Their future use after purchase is a continual round of excises when they consume other automotive products. Basically, there is no difference between a tax on automotive and aircraft parts; between truck tires and railroad wheels; between gasoline and locomotive fuel. No difference, that is, except that only the automotive items are subjected to the tax.

LEVIES REPRESENT MULTIPLE TAXATION

Federal automotive excises represent multiple taxation at its worst because they are super-imposed on a special group of users already paying more than two score special taxes to State and local governments—all automotive taxes. These include state gasoline taxes and registration fees, and special city and county charges and levies on motor vehicles.

On a $2,000 car readied for driving, the Federal excise tax—superimposed on all other Federal, State, and local taxes which also are reflected in the vehicle's initial cost—amounts to $146, including the tax on the car, plus the heater and radio. The total taxes on such a car delivered to a resident of Michigan, for example, amount to $583, or 29 cents out of each dollar spent.

In general, highway users paid $5.292 billion in special motor vehicle taxes in 1952, more than two and one-half times the

amount paid 10 years earlier. Federal automotive excise taxes amounted to $1.854 billion the same year, including $601,092,000 on cars and motorcycles; $108,400,000 on trucks and buses; $174,251,000 on parts and accessories; $787,657,000 on gasoline; $47,813,000 on lubricating oil; and $134,429,000 on tires and tubes.

Coupled with the $3.438 billion in special motor vehicle taxes imposed by State, county, and local governments, these constitute not only a multiple tax but a burden of huge proportions on the use of a commodity that has proved to be universally essential.

THREAT TO DEMAND AND EMPLOYMENT

The universal essentiality of motor vehicles among all income groups in the United States is nowhere better illustrated than in the high rate of use—one passenger car for every four persons, or one for every 1.1 families. This rate of use in itself means that a tax of the size of Federal excises constitutes over a prolonged period a threat to price, demand, and employment in automotive and related industries. The users of our 53 million vehicles are extremely conscious of price trends affecting cars and trucks. There are 48,000 dealers who, along with the manufacturers, are supersensitive to demand fluctuations. Close to a million employees working in vehicles, parts, and tire manufacturing, plus almost 9 million more in highway transport industries, depend for a livelihood on a healthy automotive economy.

Such an economy in turn exerts an actual and potentially powerful influence on commerce and industry generally. To illustrate: One business in six is automotive, 1 out of every 5 retail dollars spent is automotive, and one out of every seven persons employed works in some phase of automotive transport.

Moreover, the automobile industry is responsible in normal years for a large proportion of employment in other industries. For example, in a typical prewar year it bought 17 percent of all steel, 80 percent of all rubber, 69 percent of all plate glass, 65 percent of all upholstery leather, 35 percent of all lead, 9 percent of all tin, and 10 percent of all cotton sold in the United States.

But this widespread consumption at such a rate depends upon continued high automotive demand, production, and employment. To a large degree, the future of these three depends on the factor of price, and the key to price right now, when the automobile market is very sensitive price-wise, may well be the Federal excise tax.

CONCLUSION

In recapitulating, I have tried to emphasize that the present discriminatory automotive excises are unfair to all vehicle users, particularly the lower-income group and the farmer; that they also discriminate against essential manufacture and transportation; impede highway commerce; represent multiple taxation; and threaten vehicle demand and employment. This means to me, in summary, two things: (1) that at existing levels these taxes weaken our mobility to a startling degree, and mobility, provided it is unimpaired, is the one basic and distinguishing advantage we have over other countries in peace and war; and (2) that the tax tends to limit the use of, and the demand for, an instrumentality which in itself generates activities, creates income, and thereby provides wider and more abundant sources for tax revenue.

For these reasons we respectfully urge that the public be granted prompt relief from the current burdensome automotive excise taxes.

If complete relief is not possible at this time there are, of course, other methods open to you, such for instance as the one uncovered by the Joint Committee on Internal Revenue Taxation, upon the occasion of the last tax bill, involving a general manufacturers' excise tax exempting foods, medicine, and shelter, which would produce considerably more revenue than the present excise tax law.

However, we refrain from suggesting the method which should be pursued to accomplish relief since we do not feel that we are qualified to undertake the detailed formulation of our Government's tax policies. We prefer to rest our case upon the very evident need for relief and the fact that the Government can, in accomplishing such relief, help its own fiscal problem.

In closing permit me also to pass along the information, which I have had checked by the Library of Congress, that practically all major countries except the United States currently levy either a general sales or a general manufacturers' excise tax.

Time and Life Challenges Summerfield

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. PORTER. Mr. Speaker, in our hearings recently the executive vice president of Time, Inc., inserted in the record of the hearing "some questions and answers on post office matters." He challenged Postmaster General Summerfield to deny the facts contained as premises in these questions and the flat affirmations or negations contained in the answers.

Chairman TOM MURRAY, of the House Post Office and Civil Service Committee, granted my request that the Postmaster General be asked to comment on these questions and answers and that his comments be made a part of the hearing record.

The questions and answers are included hereafter under unanimous consent:

OFFICE MATTERS

1. Did Deputy Postmaster General Stans testify before this committee in 1957 that there are costs aggregating millions of dollars (examples given alone totaling over $200 million) spread across first-, second-, and third-class mail which should only be charged to first-class mail? Yes.

2. Did Mr. Maurice Stans subsequently see to it that the proper accounting procedures be instituted to rectify the errors? No.

3. Does the Post Office use the concept of out-of-pocket costs and less than fully allocated costs when it appears before other Government agencies? Yes.

4. Has the Postmaster General publicly recognized that the principle of out-of-pocket costs must be considered in connection with second-class mail? Yes.

5. When supplying you with figures on individual publications in second-class mail, did the Postmaster General take into consideration the out-of-pocket costs of such publications? No.

6. Exhibit 1–B, page 21, of the 1959 Cost Ascertainment Report shows a breakdown of the various subclassifications of second-class mail in which expenses are termed "actual." Are they "actual"? No.

7. Does the cost ascertainment system allocate costs only to the general classes of mail and therefore is the breakdown of the subclassifications of second-class mail based solely on statistical averages and not on solid cost accounting? Yes.

8. Does the statistical breakdown of the second-class subgroups give full credit to those groups where more complete advanced preparation of the mail is more feasible and is performed? No.

9. Does the use of statistical averages misallocate whole cost categories such as millions of dollars of city delivery carrier costs to free-in-county mail which by definition cannot receive such service? Yes.

10. Does the Post Office Department have a cost system which provides for the costing of individual publications? No.

11. Did the Post Office use simple average cost statistics for all of second class when attempting to compute the individual costs of handling Life? Yes.

12. Did the use of simple averages substantially overstate the cost of transporting Life in the mails? Yes.

13. Did the use of simple averages substantially overstate the cost of delivering Life on rural routes? Yes.

14. In spite of the obvious conclusion by any competent analyst that the handling and sortation of pieces is the primary cost element in mail costs, did the Postmaster General ever testify to this fact prior to this year? No.

15. Is this fact clearly highlighted in the recently released "Survey of Postal Rates" and did we not testify to this very fact in 1957? Yes.

16. Is it a fact that the larger the circulation of a magazine the more complete the advanced preparation of mail before entering can be made? Yes.

17. Is it a fact, therefore, that the average cost per piece of handling a larger circulation magazine with complete advanced preparation is less than the average cost per piece of handling a small circulation magazine which cannot effect substantial advanced preparation? Yes.

18. Was this important fact given effect to in the Post Office calculations of handling Life? No.

19. Since the cost per piece is the most important element, is not the second-class rate structure which is based almost entirely on weight discriminatory against heavier pieces? Yes.

20. Does the recently released "Survey of Postal Rates" point up this fact on page 57 by stating that a disproportionate share falls on the heavier weight publications? Yes.

21. Does the "Survey of Postal Rates" state that the rates on 40 percent of second-class mail have not been changed since 1925 and the rates on 20 percent have not been changed since 1879–85? Yes.

22. Did the Post Office advocate and testify in 1957 that second-class mail should pay 50 percent of the costs allocated to it under their present methods of cost ascertainment? Yes.

23. Did the Post Office advocate and testify in 1957 that third-class mail should pay 75 percent of the costs allocated under their present methods of cost ascertainment? Yes.

24. Has the Post Office followed up its advocacy by peparing a consistent set of cost figures and releasing them at all times to the proper committees of Congress and to the press? No.

25. Do the Post Office figures show that free-in-county mail in 1959 furnished zero revenue and cost the Post Office $15,444,933 to handle? Yes.

26. Does the Post Office assert that the only public service cost for this category is $830,000? Yes.

27. Does the Post Office leave the balance of $14,600,000 as a deficit in second-class mail to be assessed in theory against the other users of second-class mail? Yes.

28. Does the Postal Policy Act state that the entire loss should be removed as a public service cost? Yes.

29. Does the Postal Policy Act state that no user or group of users of the mails should

be compelled to pay for an intended subsidy of this nature? Yes.

30. Is the Post Office contradicting both the law and reasonable logic when it handles costs in this way? Yes.

31. Do the Post Office figures for 1959 show an excess of expenses over revenues for exempt publications of $60,126,922 and does the Post Office assert that only $3,094,000 is a public service cost leaving the balance as a part of the second-class deficit to be paid for by other users? Yes.

32. Do the questions and answers Nos. 28, 29, and 30 apply to this case as well? Yes.

33. Do the Post Office figures for 1959 show an excess of expenses over revenues for exempt classroom publications of $3,757,631 and does the Post Office assert that only $224,000 is a public service cost leaving the balance as part of the second-class deficit to be paid for by other users? Yes.

34. Do the questions and answers Nos. 28, 29, and 30 apply to this case as well? Yes.

35. Have the McKinsey report conclusions that additional postal rate increases can be easily passed along or absorbed been confirmed by the mail users who have testified here? No.

36. Do the indexes quoted by McKinsey on paper and hourly wage increases take any account whatsoever of efficiencies put into effect by industry to help to offset such increases? No.

37. Is the Consumers Price Index up less than 10 percent from 1953 to 1959 and is the Post Office cost for handling a first-class letter up over 33 percent in the same time? Yes.

38. Can it be said that Post Office efficiencies compare at all favorably with the progress of the private economy? No.

39. Has the Post Office testified before you that its operation is still essentially manual and very few modern machines even exist today? Yes.

40. Since the handling of first-class mail is a granted monopoly should the mail users and the Congress demand greater cost efficiencies so that constant increases of postal rates is not the only method to balance the postal budget? Yes.

On the Firing Line

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. BOLAND. Mr. Speaker, one of the most respected newspaper columists and editorial page pundits in New England, Darrell N. Toohey, completed his 25th year of authoring the "On the Firing Line" column in the Springfield Union on Monday.

Darrell N. Toohey has never missed writing his column, which has been widely quoted during that quarter century. He has a real newspaperman's knack for putting together words and ideas in pungent and humorous short paragraphs, pointing up an issue in a minimum of space.

Mr. Speaker, I want to take this opportunity to wish Darrell Toohey many more years of useful and productive service as the author who signs himself "D.N.T." in the Springfield Union. At this time I ask unanimous consent to have printed with my remarks an editorial in the Springfield Union on Monday, June 6, entitled "D.N.T.'s Silver Jubilee" and Mr. Toohey's "On the Firing Line" anniversary column:

[From the Springfield (Mass.) Union, June 6, 1960]

ON THE FIRING LINE

(By D. N. T.)

"'Nobody wants to start at the bottom any more,' the editor of a national magazine complained to me recently."—Isabelle MacRae Hoover.

PRECEDENT

In green beginners, more and more,
The foreman's coming to the fore,
Their motto being: "Start out rich."
They will not play if they can't pitch.

To them the bottom seems to be
A place for anyone "but me";
The legion, not the pampered few,
Believe a lofty spot their due.

They spurn the oldster who explains
That someone has to grease the planes
As well as take them through the sky;
They tell him, "Someone else, not I."

This is deplorable, I think.
The world will soon be on the blink.
All chiefs, no Indians, is a state
Man can't achieve at any rate.

There's something reminiscent in
The boys today, when they begin
And vow they'll shun the bottom rung.
(They're like ourselves when we were young.)

Twenty-five years ago this morning the Springfield Union printed the first column that we wrote after taking over "On the Firing Line." It does not seem like yesterday.

A helpful hint says that "winter shoes should be stored with care to preserve them." And that's a pretty hard goal to attain when you have to store one on your right foot and one on your left foot each morning.

President Eisenhower has added Alaska and Hawaii to the list of places he will visit on his tour later this month. There is no doubt about his receiving a rousing reception in each State, provided he does better than most of us and remembers which is the 49th and which the 50th.

Some 2,000 teenagers fought a pitched battle with police squads during a recent jazz concert in a London park. The London bobby manages to handle the thoughest of customers, but only if the customers are old enough to shave.

[From the Springfield (Mass.) Union, June 6, 1960]

D. N. T.'s SILVER JUBILEE

Today begins the 26th consecutive year in which the Union's editorial page column, "On the Firing Line," has been written by Darrell N. Toohey, whose initials appear in the column's heading. Every issue of this paper since June 6, 1935, has contained a "Firing Line," and every one has been Mr. Toohey's own work.

That figures out to more than 7,500 original columns without a break. The author has never resorted to substitutes, guest columnists, or any of the other gimmicks that his colleagues in the same field of work so often use. When he has had to be away from the job he has prepared columns in advance or sent them in daily.

Without any consideration of the nature of the product, the turning out of a daily column without a lapse over so long a period must be a record, but in addition Mr. Toohey has maintained always an exceptionally high quality of writing. The fact that his comments on man and man's works, always pungent and witty and tolerant, and often profound as well, for years have been widely quoted—often, alas, without credit—all over the country, is evidence of the excellence of his work.

We congratulate D. N. T. on the silver jubilee of his columning, and we are sure that a great many of the Union's readers will join us in the sincere hope that he will keep it up for many years to come.

Craig: Electronic Architects for Defense, Business

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article concerning a Craig Systems, Inc., of Lawrence, Mass., an electronic systems engineering company in my congressional district. The article appeared in the First Annual Electronics Review section of the Boston Sunday Herald of June 6, 1960:

CRAIG: ELECTRONIC ARCHITECTS FOR DEFENSE, BUSINESS

Net earnings of Craig Systems, Inc., for the 6 months ended January 31 were $285,000 on $7,110,000 of sales, equal to 37 cents per share on 764,662 shares. Net for the corresponding 6 months period ended January 31, 1959, was $232,000 on $5,347,000 sales, equal to 31 cents per share on 758,862 shares.

Erick Kauders, president, predicted that the trend of increasing earnings shown in the first 6 months would continue. Earnings for this fiscal year are expected to 50 percent greater than last year, he said.

Recent operations have been highlighted by the increased acceptance of the company's commercial and military products and the further diversification of the business by the manufacture and sale of Fiberglas pleasure boats and the marketing of the world's first diesel outboard.

The Craig Helicop-Hut, a proprietary item developed by Craig's research department, continues in volume production and is being adopted for a wide variety of electronic systems. This lightweight but rugged aluminum shelter has uses ranging from tactical communication and navigation centers to missile firing, sighting, and checkout stations.

Other items in production are a new line of telescoping masts, submersionproof consoles for single sideband radio equipment, and mobile automatic radiating testing trailers for checking out fire control systems of the F-100 series of fighter planes.

In the commercial half of the business, the LeFebure Corp., Craig's subsidiary with a plant at Cedar Rapids, Iowa, continues to expand its product line and services for the bank and business fields. Several large bank installations were completed recently and others are in progress. An increasing number of banks are purchasing account coding services from LeFebure's service division.

STEADY GROWTH

LeFebure has experienced steady growth in sales and profits since its acquisition by Craig in 1956. It is currently operating at full capacity, and LeFebure President Ken-

neth Watts recently announced an expansion program which includes as its first step the construction of an additional plant to be in operation in early 1961.

Progress with the new marine operation has been decidedly encouraging, Kauders reported. The Fiberglas pleasure boats and diesel outboard motors have been popularly received at boat shows and private showings by the public as well as the trade. Some marine dealers have already been franchised to handle these products and more and more applicants are being screened.

Since Craig only recently started in the Fiberglas boat and engine business, it does not expect to have these lines reflected substantially in sales and earnings this fiscal year ending July 31. But Fred Kauders, brother of Erick and executive vice president and treasurer of Craig, stated that "next fiscal year it should result in a sizeable increase." He added that Craig looks for total sales of around $14 million in the current fiscal year, compared to $12.1 million last year.

Announcement of its entry into the Fiberglas boat and diesel outboard field was made by Craig Systems in January, under an agreement with American MARC of Inglewood, Calif., makers of pleasure craft and small lightweight marine diesel engines. The diesel outboard offers numerous features, including greatly reduced fuel consumption and cost, and lessened fire hazard.

Growth of the company has been sure and continuous since it was founded in 1941 in Danvers by the Kauders brothers—Erick was coinventor of the cone projectile used in the bazooka. Notre Dame graduate Cornelius J. Kvasnak subsequently joined the top management team as vice president. The company contributes importantly to military needs, but it also emphasizes the development and production of commercial products. With its wholly owned subsidiary, LeFebure Corp., Craig Systems now employs some 1,000 persons.

AN "ARCHITECT" OF SYSTEMS

A basic function of Craig Systems is that of an electronic systems engineering company—in the words of Erick Kauders an "architect of military and navigational systems, mostly mobile." Presented with a complex problem relating to electronic communication, transportation, missile guidance, and even business office management, Craig and LeFebure design and put into operation a modern electronic system and other equipment that offers a solution. Responsibility of meeting the problem is handled by the companies from initial study stages through completion of the project. The layout is engineered by Craig and LeFebure, as well as being constructed and tested.

In an analysis of the company, a noted investment service called Craig "virtually uncontested leader in the design and construction of custom-built equipment for housing various types of military electronic systems." Craig Systems not only builds the shelters, but also designs and installs the varied equipment systems that go into them. The huts, easily transportable by plane or helicopter, serve as mobile communications centers for the pentomic army.

They provide protection for tracking and control equipment at missile sites. Alone, they can provide all of the material necessary to operate Air Force fields. Numerous commendations have come to the company from the military for its work in this field. One such installation, a turntable radar set, is estimated to have saved the Nation $15 million.

A MAJOR ACHIEVEMENT

A major achievement on the commercial side has been made with its equipment and system for cycle billing, making possible the automatic billing of customers on a weekly, monthly, or other-interval basis. Most of Craig's commercial enterprises are handled through its subsidiary, the 60-year-old LeFebure Corp., which is devoted to improving the productivity of accounting and recordkeeping systems and equipment for business. With a major concentration on banking, the company plans and installs entire systems for recordkeeping, much of it automated.

LeFebure (and thus Craig) pioneered in introduction of the new signature verification device for savings bank operations, based on the invisible imprint of the customer's signature on his passbook. The signature is verified by placing the passbook into a small machine which makes it visible for comparison. This system will have additional application in practically all situations where speedy signature verification is important.

"We look for continued, planned growth," says Erick Kauders.

Letters Supporting Amendments to the Basic Law of the National Aeronautics and Space Administration

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, the amendments to the basic law for the National Aeronautics and Space Administration come up for consideration in the Congress this week. One of the important changes in the basic National Aeronautics and Space Administration law refers to section 305 of the act which deals with property rights in inventions. I have received a number of communications on this subject and two of the important letters favoring the new change covering patent laws and the reasons given for this position come from the Boston Patent Law Association and the American Patent Law Association. As they are important letters and the subject is well expressed in them, I commend them to the careful consideration of the Members of the House of Representatives.

The Boston Patent Law Association letter is dated April 1, 1960, and is as follows:

APRIL 1, 1960.

The Honorable OVERTON BROOKS,
Chairman of the Committee on Science and Astronautics, House of Representatives, Washington, D.C.

DEAR SIR: The Boston Patent Law Association is a professional association of approximately 170 patent lawyers serving New England industries, a great many of which constitute "small businesses" as conventionally defined.

Soon after passage of the National Aeronautics and Space Act, the Boston Patent Law Association, recognizing the serious implications of section 305 of the act relating to property rights in inventions, formed a committee to study the act and make recommendations to the association. Since that time this committee on Government relations to patents has studied the act in detail and has analyzed the numerous amendments to the act that have been proposed. Presentations by committee members have been made at hearings on the NASA waiver provisions and at the hearings before the Mitchell Subcommittee on Patents and Scientific Inventions.

The committee has carefully examined the recent report of the Mitchell subcommittee and its proposed amendment to NASA section 305. As a result of its study, the committee has formally adopted a resolution expressing its support of the Mitchell subcommittee report.

Your adoption and support of the Mitchell subcommittee proposal and recommendations are respectfully solicited. It is believed that amendment of the Space Act, as proposed by the subcommittee, will constitute and important step toward restoring incentives to our space program that are so important at this time.

Respectfully,

Committee on Government Relations to Patents, Boston Patent Law Association: David A. Rich, Chairman; Walter Kunz, Chairman, Subcommittee on NASA; Committee Membership: Stanley Belsky, G. Eugene Dacey, Albert P. Davis, Harry E. Finke, William Goodwin, Elmer J. Gorn, Oliver W. Hayes, Richard L. Hobbs, R. J. Horn, Jr., Harold A. Levey, Jr., Clarence S. Lyon, P. J. McFarland, Abraham Ogman, Alfred H. Rosen, Francis I. Sullivan.

The letter from the American Patent Law Association is dated March 30, 1960, and is as follows:

AMERICAN PATENT LAW ASSOCIATION,
Washington, D.C., March 30, 1960.

The Hon. OVERTON BROOKS,
Chairman, Committee on Science and Astronautics, House of Representatives, Washington, D.C.

DEAR MR. BROOKS: As you are undoubtedly aware, the American Patent Law Association, of which I have the honor to be president, has been vitally interested in the study made by the Subcommittee on Patents and Scientific Inventions ably headed by ERWIN MITCHELL, Esq. A representative of the association testified at the hearings of the subcommittee and various members likewise appeared and presented their views. In addition, Mr. MITCHELL, Mr. QUIGLEY, and others attended a seminar which we held on the subjects being considered by the subcommittee.

On behalf of our association, I want to congratulate you, Mr. MITCHELL, and all of the members of his subcommittee on the manner in which the important subject matter entrusted to the subcommittee was handled and on the report which has now been rendered. Mr. MITCHELL and his committee were quite willing to hear the viewpoints of others and quite anxious to do everything necessary to get all enlightenment possible in regard to the important matters under consideration. The report shows on its face the tremendous job which has been done by this committee.

Again, I want to express our appreciation of the reception accorded this association and its members and other groups interested in the subject. If at any time we can be of any assistance, we trust that you and the other members of your committees will not hesitate to call upon us.

With kindest regards and best wishes to you and all of the members of the Mitchell subcommittee, I remain.

Sincerely yours,

WILLIAM H. WEBB,
President.

What About the B–70?

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 26, 1960

Mr. ROBISON. Mr. Speaker, as one of many of my colleagues who have been disturbed and troubled over the ultimate wisdom of the deep cutback in funds to develop the Air Force's projected B–70 superconic bomber, I believe it worth while for us to consider the following article by Malcolm S. Forbes as published in Forbes magazine under date of June 1, 1960, which I include under leave to extend my remarks:

THE NATION'S AIR FORCE
(By Malcolm S. Forbes)

The prime mission of the U.S. Air Force is deterrence—to prevent any aggression against this country and its allies by having ready the power to well-nigh obliterate any country which launches an assault against us. To maintain this ability, for the past several years we have been spending 28 cents out of every annual tax dollar. With an annual budget of about $18 billion a year, the Department of the Air Force is indisputably the biggest business in the free world. Since the creation of the Air Force as a separate department in 1947, American citizens have invested the sum of $184.8 billion in it. The Air Force has missiles, planes, supporting hardware and real estate worth an estimated $68 billion.

For this almost incomprehensible expenditure do we have our money's worth?

In a broad basic sense the answer is plainly, "Yes." Neither the United States itself nor the nations to whom we are committed within the wide borders of the free world are under military assault by the Communist powers. Had the U.S. Air Force failed to keep ahead, or at least abreast, of the Reds, neither highminded words nor moral indignation would have contained Communist aggression against great, vital areas of the globe.

Despite the many and varied cries of alarm which daily ring out from assorted sources in Washington about our current military power, I met no one in the Air Force in a position of real responsibility who had one iota of doubt of the Air Force's ability to devastate the country from which a strike against us might come and to do so in a matter of hours. This confidence was not of the braggadocio sort, relying on will rather than ways and means. It was based on coldly professional informed analysis and calculation. The recent dreadfully timed reconnaissance flight shot down over Russia did reveal to the world that our intelligence about Russia's capabilities is more soundly based than perhaps most Americans had heretofore believed.

But because decisions must be made today that will determine what weapons systems we will be relying on 5 and 10 years from now, there is indeed a deep disparity of views as to what will be our military power position vis-a-vis Russia and Red China from 1965 onward.

The fact is that our Air Force today has many strengths. It likewise has some critical problems.

Unquestionably its greatest strength is in its management. Its keymen in the Pentagon and in the field, at home and abroad, with rare exceptions, are men of vast capability in their areas of specialization. And this is true not only of today's top men. Experience, capacity, and the exercising of responsible judgment is several echelons deeper in the top commands of the Air Force than in any large corporation with which I am familiar. Here the Air Force has a management flexibility unshared by the other services. Men can rise to the top within the command areas; a topnotcher in research and development is not required also to have exercised command in SAC or TAC.

The Air Force, too, has taken giant strides in solving the ever-present military service problem of maintaining morale and high reenlistment in the ranks. Forty-six percent reenlisted last year. In fact, the Air Force will not accept reenlistment unless increasingly higher standards are met. Such a maintenance of standards is very vital in an organization where complex technology demands longer training and higher skills in greater and greater numbers.

There is much room for argument about numbers as it pertains to missiles, aircraft, and other essential hardware. But there is amazing unanimity throughout the Air Force about the quality of what it has in the way of hardware.

The Air Force appears to have its missile program well in hand. There are operational Thor and Jupiter IRBM's abroad, plus an ever-increasing number of Atlas and Titan ICBM's at home. And the Minuteman appears to be the answer to a missileman's prayer. The Minuteman is relatively less costly to make. It is inexpensive to house in a hole underground where only a direct hit could knock it out. Present plans call for great quantities of these to dot the land. Additionally, other Minutemen will be on the move on specially constructed trains in ever-changing locations. As the Minuteman and submarine-carried Polaris come into operation, it is inconceivable that any initial enemy strike could prevent us from launching a totally destructive retaliation.

Along with its present pluses, however, the Air Force is faced with some critical problems.

Its ability to participate in an effective, sustained way in limited wars appears to be alarmingly inadequate. More and more people are coming to the conclusion that we will not be faced with an all-out atomic war so long as the Air Force is capable of devastating nuclear retaliation. But there will be an increased possibility of military aggression of a limited type—Chinese "volunteers" into Laos, for example. Armed Red-supported "revolution" in South Vietnam. Possible conflict with East German forces as a result of the Berlin deadlock. Such small-war aggression will require immediate military support from this country and may not involve the use of nuclear weapons. These relatively small military beginnings might conceivably grow into an almost Korean-sized war before either side made the fatal decision to use thermonuclear weapons.

In this type of conflict the U.S. Air Force seems unprepared for what would be its vital support role. Supersonic fighters, bombers, an interceptors don't readily lend themselves to frontline strafing missions, or napalm-bombing in support of struggling frontline troops. As one important Air Force general put it, "It doesn't make much sense to use a $1 million airplane to drop a 500-pound iron bomb." These infinitely complicated electronic machines are so expensive as to make it impractical to build them in the numbers necessary for the attrition-type use involved in limited wars.

There is another critically important spot where the Air Force is short of planes. The Military Air Transport Service has the job of supplying airlift for the tough assignment of transporting and then supporting infantry in action in far places. MATS simply does not have what it needs. It needs to order today large numbers of modern transport and cargo planes if it is to play effectively its important role. Civilian airlines, with Capitol Hill know-how and extremely limited vision, have been dangerously successful in denying appropriations and legislation of critical importance to MATS.

The Air Force's future capability has also been seriously affected by the too-deep cutback of the B–70 program. This 2,000-mile-an-hour bomber delivers sensational manned aircraft performance far beyond that of the incoming B–58 Hustler. Few still feel we need the originally contemplated large numbers of B–70's now that Minuteman is on the near horizon, but there seems little doubt that we should have a reasonable, if lesser, number of B–70's as soon as possible. The present appropriation, supposedly enough for two B–70 prototypes, I am told, will probably not cover the cost of even one. To do the needful here would not cost an excessive amount. Failure to do it may cost us much in prestige as well as in military capability.

There is yet another area where the Air Force has a need for more money. SAC Boss Thomas Powers' widely misinterpreted request for an airborne alert should be planned for now. General Power explained to Forbes that preparation for such a program had to get underway now if SAC is to be capable of introducing and maintaining an effective airborne SAC fleet in 1961 or 1962. The funds requested by the administration were far from adequate but, fortunately, Congress has upped the figure.

Currently the Air Force's most hopeless assignment is in the hands of the Air Defense Command. The present "state of the art of war" would permit a reasonably effective but vastly expensive defense of this continent against strikes by manned aircraft. But there is at present simply no positive known method of destroying incoming ballistic missiles. Doubtless, some type of defense eventually will be evolved. This is certain to be of immense cost. Meanwhile, spending many billions more for expanding defense against manned aircraft doesn't seem to make too much sense. The Air Force has recognized this in recommending a sizable cut in funds for this program.

So, along with its magnificient capability to perform its prime mission of deterrence, the Air Force has its problems. To use a time-honored cliché, there is simply not enough money for all the things that all the services would like to have, to better perform their missions.

But—to give two concrete examples—there is certainly enough more money to help the Air Force expand its support capability and to implement more effectively its B–70 program.

Final Report of the Assembly on Africa for Illinois Teachers

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 7, 1960

Mr. DOUGLAS. Mr. President, in view of the growing importance of the emerging nations in Africa and their relation with the free world, I ask unanimous consent that the thought-provoking final report of the Assembly on Africa for Illinois teachers sponsored at the University of Illinois by the North Central Association of Colleges and Secondary Schools, Foreign Relations

Project, February 28–March 1, 1960, be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

FINAL REPORT, ASSEMBLY ON AFRICA FOR ILLINOIS TEACHERS, ARRANGED BY THE NORTH CENTRAL ASSOCIATION FOREIGN RELATIONS PROJECT

At the closing plenary session, the participants in the Illinois Assembly on Africa, at Allerton House, Monticello, February 28–March 1, reviewed as a group their discussions of Africa and of United States policies pertaining thereto and adopted the following statement. Although there was general agreement on the final report, it must not be assumed that every participant subscribed to every recommendation contained therein.

PREAMBLE

Africa is a continent in ferment. It is undergoing revolutionary change. Throughout the past decade, one after another African territory has achieved statehood and independence. The end is not in sight. With independence, each State is confronted with new problems of major proportions and each finds that it has great need for outside assistance.

Africa is a continent of great physical diversities. Ethnically, its people are many and varied.

The Illinois Assembly concentrated its attention on the sub-Saharan region but it did give some consideration to the area of North Africa as that area intruded into the discussion.

It is our firm belief that the peoples of Africa are well on their way to independence. It will not be long until each African political entity will be in a position to work out its own relationships with non-African states and with other African states. It is important in this formative stage that the United States win the confidence of the peoples and governing regimes in the newly formed states.

We are convinced that the United States should develop policies designed to assist the African peoples to achieve self-government, to build viable economies and enduring political entities. The United States should continue to support the principle of self-determination and should welcome each new African state as it achieves independence.

The Illinois Assembly believes that as racial relations in the United States improve we indicate to Africa and to the world that such problems are soluble.

POLITICAL PROBLEMS

The assembly recognizes that some of the European allies of the United States have very significant stakes in Africa. Suddenly to sever the ties between those allies and their African territories could seriously weaken our Western allies and could be most destructive of the collective security system we and they have constructed. On the other hand, if the European allies are too adamant in their resistance to inevitable change, they will be weakened by continuing civil strife.

The United States should continue to advocate the adoption of the principle of self-determination and should press for recognition by its European allies of the necessity of moving toward self-government for the African peoples. At the same time, the U.S. Government should seek to promote, wherever possible, the continued interdependence of the European States and the emerging African States. We should press to preserve the economic ties which make for strength both in the European allies and the new African States.

Americans must recognize that the emerging forms of African political and economic orders will not be identical to those of the West. Such forms must and should be African in character and should emerge from African cultures. Nevertheless, the United States should encourage the development of institutions which provide for and preserve the widest possible participation in the government of all African States, which protect minorities and preserve the right of dissent. We should also encourage developments which enlarge the scope for free enterprise in their economies.

ECONOMIC PROBLEMS

The new African States stand in need of economic development. Capital must continue to flow into their economies in order that a rapid development may continue. Wherever and whenever possible the need should be met from a variety of sources, particularly from private investment. The U.S. Government is urged to develop with the new African governments ways and means for developing attitudes and the building of a climate which will encourage private investment.

To promote the investment of private capital it is necessary that the U.S. Government guarantee the convertibility of earnings of American investors and to take steps to reduce to a minimum the risk of confiscation of private property.

Private capital may be expected to support developments in mining, in general industry and even in agriculture, provided the necessary public works are financed by governments. To finance the necessary public works, the new African States will require intergovernmental loans and grants. Such loans and grants will be needed for the building of railways and other modes of transportation, for the construction of port facilities, for the building of hydroelectric plants, irrigation systems, etc. Unless such public works are built, private investment could be seriously handicapped and, therefore, not readily available.

It is recognized that Africa needs and requires technical assistance on a wide front. We recommend that the U.S. Government make every effort to see that such assistance is rendered by (a) United Nations agencies; (b) other multilateral efforts; and (c) by the U.S. Government.

Technical assistance can do much to assist the African States to increase productivity, to build their economies on a sound basis, to produce diversification and generally to promote viable economies. It must be recognized that there are limits beyond which technical assistance cannot go unless development assistance is also given. For this reason we commend an expanded program of financing African development plans.

In some cases, development loans made by an international agency will be more acceptable to African States. We recommend that the United States participate in the formation of an international development loan fund to finance African development plans.

We urge the U.S. Government to promote, whenever it can, the financing of African development plans by our Western allies.

We urge that a larger share of foreign-aid appropriations be made available for African States.

We commend private efforts, such as those of CARE, to utilize excess American production to aid African peoples.

EDUCATION

We find that the American people, including those in our schools and colleges, know far too little concerning Africa and its peoples. To better the situation, we urge the expansion of academic programs so as to include more instruction in African subject matter. We recommend the establishment of African area study programs in more American colleges and universities.

It is evident that the expansion of education in the new African States is crucial to their development and their welfare. This applies to education at all levels—primary, secondary, and college—but it is particularly important in technical education. It is our belief that U.S. Government aid to education should have as its highest priority the strengthening of African institutions which train technicians and teachers for the primary and secondary schools. Our program of technical assistance should provide for expanded programs of (a) aid to African educational institutions and (b) educational exchange.

Because the new governments desperately need trained administrative personnel, we urge the U.S. Government to expand its technical assistance programs so as to include major programs for assisting the new states to train personnel in public administration and allied fields.

We feel strongly that there is an unfilled need for adequately trained American personnel to serve as field representatives of the United States in the African States. To meet this need we urge the establishment of training programs in American universities designed to train for African service a corps of persons competent in language, technical fields, and knowledge of African cultures.

We commend the radio, television, and newspaper industries for the dissemination of information concerning Africa and events transpiring therein and urge that even more adequate coverage be provided.

We believe that the U.S. Information Service and all African channels of communication should be used by the United States to disseminate information about the United States throughout Africa.

Platform of Midwest Democratic Conference

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 7, 1960

Mr. HART. Mr. President, the Midwest Democratic Conference held its annual meeting in Detroit, March 24–27. After 3 days of excellent discussion, in which many of the Democratic Party's most outstanding leaders were involved, the conference prepared a series of recommendations on solutions to some of the major problems facing the nations.

These papers, entitled "Goals for America," have been inserted in the CONGRESSIONAL RECORD by midwestern Senators and Representatives. The subjects they cover are: "Peace," "Civil Rights," "Human Welfare," "Agriculture," "Economic Growth," "Metropolitan Problems," "Natural Resources."

I believe these papers represents a wise and democratic approach to the critical problems we face. If they were implemented by legislation, we could overcome the obstacles which now thwart a full realization of America's potential.

The excellence of these papers is not surprising, Mr. President, when their source is known.

From the list, it is apparent that the States represented in the conference have, in their political ranks, many of America's most distinguished leaders.

The Democratic Midwest Conference intends to urge the party's national convention to incorporate the views con-

tained in these papers into the Democratic platform for 1960. I believe that our platform would be one all Democrats would be proud to sponsor were it to contain the recommendations of the conference.

I am pleased to join several of my congressional colleagues in the introduction of conference material into the CONGRESSIONAL RECORD. I ask that the list of participants and the Preamble to "Goals for America" be printed in the Appendix of the RECORD.

There being no objection, the platform was ordered to be printed in the RECORD, as follows:

The Democratic Midwest Conference is a formal organization of Democratic Party officials from the 14 States designated in the national committee rules as the middle western group of States.

These States, which will have 458, or 30.1 percent, of the 1,521 delegate votes at the 1960 Democratic National Convention, are: Illinois 69, Indiana 34, Iowa 26, Kansas 21, Michigan 51, Minnesota 31, Missouri 39, Nebraska 16, North Dakota 11, Ohio 64, Oklahoma 29, South Dakota 11, West Virginia 25, and Wisconsin 31.

This 14-State area with 31.8 percent of the Nation's population in 1959, is the heart of America economically as well as geographically. Well known for its farm belt, this 14-State area in 1958 harvested 62 percent of the acreage of the nation's 55 principal crops and had 54.1 percent of the cattle, sheep and hogs.

The 14 States also contain 58 of the 174 metropolitan areas in the United States. Over 62 percent of the people in these 14 States live in urban areas. In 1956 the area produced 38.4 percent of the value added by manufacture.

Under the constitution adopted at the March 1959 meeting in Milwaukee, membership in the midwest conference includes those persons in the 14 States who have held in the past, or currently hold, statewide elective positions in their respective State parties or on the national committee. Voting privileges in the conference are limited to four representatives from each State, the State chairman, State vice chairwoman, national committeeman and national committeewoman. Members may vote by proxy.

Officers of the midwest conference elected at the September 1959 meeting in Kansas City are: chairman, Frank Theis, Kansas chairman and national committeeman; vice chairman, Mrs. Marguerite Benson, Wisconsin vice chairman; secretary, Mrs. Ruby Harris, Kansas vice chairman; and treasurer, Ray Hemenway, Minnesota chairman.

The 14 States of the conference currently have 10 Democratic Governors, 15 Democratic Senators and 75 Democratic Congressmen. They and the party officials from each State are:

Illinois: Senator Paul H. Douglas. Congressmen: William L. Dawson, 1st District; Barratt O'Hara, 2d District; William T. Murphy, 3d District; John C. Kluczynski, 5th District; Thomas J. O'Brien, 6th District; Roland V. Libonati, 7th District; Daniel D. Rostenkowski, 8th District; Sidney R. Yates, 9th District; Roman C. Pucinski, 11th District; Peter F. Mack, Jr., 21st District; George E. Shipley, 23d District; Melvin Price, 24th District; Kenneth J. Gray, 25th District. Party officials: Chairman, James A. Ronan (Illinois has not yet designated a vice chairman of the opposite sex as a voting member of the conference); national committeemen, Jacob M. Arvey; national committeewoman, Mrs. Elizabeth A. Conkey.

Indiana: Senator R. Vance Hartke. Congressmen: Ray J. Madden, 1st District; John Brademas, 3d District; J. Edward Roush, 5th District; Fred Wampler, 6th District; Winfield K. Denton, 8th District; Earl Hogan, 9th District; Randall S. Harmon, 10th District; Joseph W. Barr, 11th District. Party officials, Chairman, Charles E. Skillen; vice chairman, Mrs. Lawrence Arnsman; national committeeman, Paul M. Butler; national committeewoman, Mrs. Kenneth J. Luckett.

Iowa: Gov. Herschel C. Loveless. Congressmen: Leonard G. Wolf, Second District; Neal E. Smith, Fifth District; Merwin Coad, Sixth District. Party officials: Chairman, Donald A. Norberg; vice chairman, Mrs. James Dunbar; national committeeman, Donald J. Mitchell; national committeewoman, Mrs. Alberta Metcalf Kelly.

Kansas: Gov. George Docking. Congressmen: Newell A. George, Second District; Denver D. Hargis, Third District; J. Floyd Breeding, Fifth District. Party officials: Chairman and national committeeman, Frank G. Theis; vice chairman, Mrs. Ruby Harris; national committeewoman, Mrs. Georgie Neese Gray.

Michigan: Gov. G. Mennen Williams. Senator Patrick V. McNamara and Senator Philip A. Hart. Congressmen: Thaddeus M. Machrowitz, 1st District; James G. O'Hara, 7th District; Charles C. Diggs, Jr., 13th District; Louis C. Rabaut, 14th District; John D. Dingell, 15th District; John Lesinski, 16th District; Martha W. Griffiths, 17th District. Party officials: Chairman, Neil Staebler; vice chairman, Miss Adelaide Hart; national committeeman, Thomas H. E. Quimby; national committeewoman, Mrs. Margaret Price (alternate national committeewoman, Mrs. Mildred Jeffrey).

Minnesota: Gov. Orville L. Freeman. Senator Hubert H. Humphrey, Senator Eugene J. McCarthy. Congressmen: Roy W. Wier, Third District; Joseph E. Karth, Fourth District; Fred Marshall, Sixth District; John A. Blatnik, Eighth District. Party officials: chairman, Ray Hemenway; chairwoman, Mrs. Geri Joseph; national committeeman, Gerald W. Heaney; national committeewoman, Mrs. Douglas P. Hunt.

Missouri: Gov. James T. Blair, Jr. Senator Thomas C. Hennings, Jr., Senator Stuart Symington. Congressmen: Frank M. Karsten, 1st District; Leonor K. Sullivan, 3d District; William J. Randall, 4th District; Richard Bolling, 5th District; W. R. Hull, Jr., 6th District; Charles H. Brown, 7th District; A. S. J. Carnahan, 8th District; Clarence Cannon, 9th District; Paul C. Jones, 10th District; Morgan M. Moulder, 11th District. Party officials: chairman, Wilbur F. Daniels; vice chairman, Mrs. Marjorie Roberts; national committeeman, Mark Holloran; national committewoman, Mrs. Willa Mae Roberts.

Nebraska: Gov. Ralph G. Brooks. Congressmen: Lawrence Brock, Third District; Donald F. McGinley, Fourth District. Party officials: Chairman, Russell Hanson; vice chairman, Mrs. Ethel Kirwin; national committeeman, Bernard J. Boyle; national committeewoman, Miss Mary Cunningham.

North Dakota: Congressman Quentin N. Burdick, at large. Party officials: Chairman, Abner B. Larson; vice chairman, Mrs. Agnes Geelan; national committeeman, David G. Kelly; national committeewoman, Mrs. Daphna Nygaard.

Ohio: Gov. Michael V. DiSalle. Senator Frank J. Lausche, Senator Stephen M. Young. Congressmen: Thomas L. Ashley, 9th District; Walter H. Moeller, 10th District; Robert E. Cook, 11th District; Robert W. Levering, 17th District; Wayne L. Hays, 18th District; Michael J. Kirwin, 19th District; Michael A. Feighan, 20th District; Charles A. Vanik, 21st District. Party officials: Chairman, William L. Coleman (Ohio has not yet designated a vice chairman of the opposite sex as a voting member of the conference); national committeeman, Albert A. Horstman; national committeewoman, Mrs. Helen Gunsett.

Oklahoma: Gov. J. Howard Edmondson. Senator Robert S. Kerr, Senator A. S. "Mike" Monroney. Congressmen: Ed Edmondson, Second District; Carl Albert, Third District; Tom Steed, Fourth District; John Jarman, Fifth District; Toby Morris, Sixth District. Party officials: Chairman, Gene McGill; cochairman, Mrs. Grace Hudlin; national committeeman, James H. Arrington; national committeewoman, Mrs. Bertrude (cq) Fields Cummings.

South Dakota: Gov. Ralph Herseth. Congressman George S. McGovern, First District. Party officials: Chairman, James Magness; vice chairman, Mrs. Katherine Kuhns; national committeeman, C. L. Chase; national committeewoman, Mrs. Murman Jensen.

West Virginia: Senator Jennings Randolph, Senator Robert C. Byrd. Congressmen: Harley O. Staggers, Second District; Cleveland M. Bailey, Third District; Ken Hechler, Fourth District; Elizabeth Kee, Fifth District; John M. Slack, Jr., Sixth District. Party officials: Chairman, Hulett Smith; associate chairman, Miss Esther M. Heil; national committeeman, John E. Amos; national committeewoman, Mrs. Nunley Snedegar.

Wisconsin: Gov. Gaylord A. Nelson. Senator William Proxmire. Congressmen: Gerald T. Flynn, First District; Robert W. Kastenmeier, Second District; Clement J. Zablocki, Fourth District; Henry S. Reuss, Fifth District; Lester R. Johnson, Ninth District. Party officials: Chairman, Patrick J. Lucey; vice chairman, Mrs. Marguerite Benson; national committeeman, Herman F. Jessen; national committeewoman, Mrs. Vel Phillips.

GOALS FOR AMERICA—A PREAMBLE

We, the members of the Democratic Midwest Conference, assembled in Detroit, offer for the consideration of Democrats throughout the Nation the program papers developed by the committees of this conference, and refined in the thoughtful and thorough panel discussions in which we have here engaged.

The papers propose programs for action. They face up to some of the basic issues of our time. They represent one consensus of goals for America and of the steps which can be taken under Democratic leadership to carry them out.

Taken together, these Midwest Democratic declarations express in new terms and apply to new conditions the liberal and progressive sentiments of the 14 States which constitute this conference.

We pledge to put to work in the months ahead the enthusiasm and momentum for programatic politics generated by this conference.

We resolve to continue the excellent regional cooperation here established. The spirit of liberal kinship which has characterized these proceedings can mark the resurgence of the Midwest as a cohesive force for progressivism in American politics.

We resolve to bring to the attention of the platform-drafting committee of the Democratic Party the statements on economic growth, human welfare, civil rights, agriculture, urban problems, conservation, and the overriding issue of our time—peace.

We resolve to continue our efforts to achieve common language in areas not here included, such as education, employment opportunities, and similar questions of national concern; and to unite behind liberal programs in the platform of the Democratic National Convention.

To this end, we continue the steering committee which brought the statements of the Detroit conference to fruition. We ask that the steering committee develop program papers in such other areas as are

needed, and disseminate for discussion to the leaders and members of the Democratic Party throughout the nation the sense of this conference and of the papers hereto attached.

These goals for America, we believe, reflect the deepest sentiments of the American people, point the way to better tomorrows, and presage a sweeping victory for our party and its candidates in the balloting of next November.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Tennessee Valley Authority Financing

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 8, 1960

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared relative to Tennessee Valley Authority financing.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEFAUVER

My attention has been called to a statement in the 1959 annual report of the Long Island Lighting Co., an electric and gas utility operating in New York State, entitled "Apathy and the American Free Enterprise System." My immediate concern with this statement is that it contains a gross distortion of the action of the Congress last year in passing an amendment to the TVA Act authorizing TVA to finance additional power facilities through sale of electric revenue bonds.

Of course, the statement of a relatively small utility is not important in itself; it is significant in that it represents a settled policy of a large segment of the electric utility industry to persistently attack and misrepresent TVA and other projects established in the public interest.

Of TVA the Long Island Co. says:

"TVA won a victory at the last session of Congress in the enactment of the so-called TVA bond bill. We have in the past pointed out the dangers to the public at large in the unbridled authority granted to TVA by this measure—the ability of TVA to finance its operations without the usual check and supervision of Congress, to expand the scope of its operations, and to extend the period for repayment of the Government's investment in the project."

The most charitable view that can be taken of this gross misrepresentation of the facts is that the company has relied solely on the power trust's propaganda and has failed entirely to read the long and detailed bond amendment which it purports to interpret.

Far from unbridled authority, the bond amendment surrounds the TVA operations and issuance of bonds with many checks and safeguards. The amendment specifies in detail the conditions under which the bonds are to be issued. It requires the approval of the Secretary of the Treasury as to the time of issuance and the maximum rates of interest to be borne by the bonds. It also provides that "the corporation shall advise the Secretary of the Treasury as to the amount, proposed date of sale, maturities, terms and conditions and expected rates of interest of the proposed issue in the fullest detail possible and, if the Secretary shall so request, shall consult with him or his designee thereon." The amendment specifically provides that the bonds "shall not be obligations of, nor shall payment of the principal thereof or the interest thereon be guaranteed by the United States." It sets the terms of such bonds at no more than 50 years. It makes income from the bonds subject to Federal income taxes.

The amendment declares that "the principal and interest on said bonds shall be payable solely from the corporation's net power proceeds" and it carefully defines the term "net power proceeds." Under the definition, such proceeds consist of "the remainder of the corporation's gross power revenues after the costs of operating, maintaining, and administering its power properties * * * and payments to States and counties in lieu of taxes but before deducting depreciation accruals or other charges representing the amortization of capital expenditures, plus the net proceeds of the sale or other disposition of any power facility or interest therein."

The amendment specifies the priorities of the claims upon the net power proceeds—first the obligations as to interest and principal on the electric revenue bonds, then payments into the general fund of the Treasury. These payments to the Treasury include a repayment of the appropriation investment plus a return or dividend on the outstanding balance. Finally, remaining net power proceeds may be used for reinvestment in the power system or further reduction of the amount of appropriations investment or bonded indebtedness.

In order to protect the interests of the bondholders and the Government's appropriations investment, the amendment requires that TVA's repayments to the Treasury and its reinvestments of proceeds in the system in any 5-year period shall at least equal provisions for depreciation and any other charges representing the amortization of capital expenditures, plus the proceeds from any sale of power facilities during the period.

The statement that the bond amendment permits TVA to "extend the period of repayment for the Government's investment" omits half the story and thereby twists the facts; what is omitted is that the amendment places on TVA a new requirement for payments to the Treasury in addition to repayment of the investment. Under legislation nullified by the amendment, TVA was required to repay the appropriations investment in the system, amounting at June 30, 1959, to $1.2 billion, over a period of 40 years. The new legislation requires that TVA repay $1 billion of this investment over a maximum period of 54 years; it also requires that TVA pay to the Treasury a return or dividend on the outstanding Government investment in the power system at the average rate of interest paid by the U.S. Treasury on all its marketable public obligations.

What the change means is simply this: Under the former legislation, TVA would have paid the Treasury $1.2 billion in 40 years; under the bond amendment, assuming an average Treasury interest rate of 3 percent (which is below the current rate), TVA will repay $1 billion of investment plus some $1.2 billion in dividends—a total of $2.2 billion or more in 54 years.

The Long Island company goes precisely contrary to the fact when it asserts that the bond amendment permits TVA to "expand the scope of its [power] operations." The bond amendment placed a strict territorial limitation on the TVA, far more stringent than existed before. Prior to the bond amendment, TVA was empowered to sell electricity within "transmission distance," perhaps 200 miles, of its hydroelectric projects on the Tennessee River and its tributaries. Prior to adoption of the bond amendment TVA could have served a very large area not included in its service area which, as a matter of historical fact, has remained virtually constant over the last decade and a half. As opposed to this, the bond amendment limits TVA service to the area being served on July 1, 1957, plus "such additional area extending not more than 5 miles around the periphery of such area as may be necessary to care for the growth of the corporation and its distributors in said area." In other words, it provided for minor line extensions where necessary. It further stipulated that the total of new area served could not exceed 2,000 square miles, with no more than 500 square miles in one State. The Congress also specifically excepted from the limitation several municipalities within the present service area or on its fringes which had expressed serious interest previously in contracting for TVA power at wholesale, and to certain Federal defense installations.

Thus the bond amendment, contrary to the claim of the company, placed on TVA power operations a large number of limitations, requirements, and responsibilities in accordance with the will of the Congress. Furthermore, the TVA and its financing activities are—as they have been in the past—under the continuing close scrutiny of the Congress. The new amendment specifically requires that in its annual reports it shall provide "a detailed statement of the operation of this section during the year." TVA and its power operations are, of course, subject to close examination in the annual hearings before the appropriations committees of the Senate and the House, when TVA Directors and officials may be closely interrogated as to their operations and their plans.

Clearly the facts completely refute the claim that the bond amendment, or legislation of any kind in the past, gave TVA "unbridled authority." TVA has been, and continues to be, subject to the fullest control of the Congress which created it.

Are Tax Laws Killing Them?

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of my colleagues an editorial which appeared in the St. Louis Globe Democrat on May 31, 1960, containing the latest available figures from the Federal Trade Commission on corporation mergers and acquisitions for mining and manufacturing firms:

ARE TAX LAWS KILLING THEM?

Congressman THOMAS B. CURTIS, Republican from Missouri's second district, has put

his finger on a critical flaw in our income tax laws. At a dinner meeting of the Farmers Club of St. Louis, he pointed out that the present tax laws encourage large firms to swallow up smaller ones, and for that reason should be revised.

Few Americans realize how rapidly the pace of mergers and acquisitions has stepped up in recent years. These latest available figures from the Federal Trade Commission on corporate mergers and acquisitions for mining and manufacturing firms show the alarming trend:

	Mergers and acquisitions
1950	219
1951	235
1952	288
1953	295
1954	387
1955	525
1956	537
1957	490
1958	457

Sound Federal tax policies would encourage the growth of business firms, rather than their disappearance via the merger and acquisition route. Representative CURTIS' reminder that it's time to take a fresh look at our tax laws is very apropos—now that a prospective surplus makes tax revision possible next year.

Maj. Gen. George W. Hickman, Jr., Judge Advocate General of the Army, Delivers Impressive Memorial Day Address at Grafton National Cemetery, Grafton, W. Va.

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 8, 1960

Mr. RANDOLPH. Mr. President, the Judge Advocate General of the U.S. Army, Maj. Gen. George W. Hickman, Jr., delivered the Memorial Day address at the annual ceremony held in the National Cemetery at Grafton, W. Va., on May 30, 1960. It was a most meaningful message, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered printed in the RECORD, as follows:

MEMORIAL DAY ADDRESS BY MAJ. GEN. GEORGE W. HICKMAN, JR., JUDGE ADVOCATE GENERAL, U.S. ARMY, NATIONAL CEMETERY, GRAFTON, W. VA., MAY 30, 1960

Being a native of Kentucky, I am especially privileged to take part in Memorial Day services with West Virginians. Your great State and mine both grew out of the same mother Commonwealth—Virginia. We share the same traditions; we look back with common pride to the exploits and achievements of Virginians like George Washington and Patrick Henry; each of our States has in her own right carved out impressive niches in the history of our Nation.

West Virginia, indeed, has always placed herself in the vanguard when the United States finds herself in danger. Sixty thousand West Virginians saw service in World War I. Almost 200,000 of your sons flew to the defense of the country in World War II. Thirty-six men of Taylor County alone made the supreme sacrifice in World War II. Ninety-five thousand West Virginians were in the armed services during the Korean war, with almost 1 out of 100 losing their lives.

Fifteen citizens of this State have been awarded the Congressional Medal of Honor—the highest decoration for valor that our country bestows on its fighting men. The first Medal of Honor winner from West Virginia was Cpl. Leonidas H. Inscho of Charleston. I will read the citation. It is sort of brief, like Lincoln's Gettysburg Address:

"Corporal Inscho, while a member of Company E 12th Ohio Infantry, at South Mountain, Md., on September 14, 1862, did, alone and unaided and with his left hand disabled, capture a Confederate captain and four men."

The last West Virginian to be so honored was Pfc. Ralph E. Pomeroy, a resident of Kingwood (some 40 miles north of Grafton). His citation, in General Orders 97, Department of the Army, dated December 30, 1953, reads as follows: "By direction of the President * * * the Medal of Honor for conspicuous gallantry * * * is awarded posthumously to Pfc. Ralph E. Pomeroy, U.S. Army, a machinegunner with the 7th Infantry Division, who distinguished himself, near Kumhwa, Korea, on October 15, 1952. While his unit was consolidating a critical piece of terrain, Pomeroy manned a machinegun on a forward slope to protect his platoon's flank from surprise attack. When the enemy attacked his position, Private Pomeroy immediately opened fire on the advancing troops, inflicting a heavy toll in casualties and blunting the assault. At this junction, the enemy directed intense concentrations of artillery and mortar fire on his position in an attempt to neutralize his gun. Despite withering fire and bursting shells, he maintained his heroic stand and poured crippling fire into the ranks of the hostile force until a mortar burst severely wounded him and rendered the gun mount inoperable. Quickly removing the hot, heavy weapon Pomeroy cradled it in his arms and, moving forward with grim determination, raked the attacking forces with a hail of fire. Although wounded a second time, he pursued his relentless course until his ammunition was expended within 10 feet of the foe. Then, using the machine gun as a club, he courageously closed with the enemy in hand-to-hand combat until mortally wounded. Private Pomeroy's consummate valor, inspirational actions, and supreme sacrifice enabled the platoon to contain the attack and maintain the integrity of the perimeter, thereby reflecting lasting glory on himself and upholding the noble traditions of the military service."

I know that you citizens of Grafton take pride today in the deeds and activities of your sons and daughters who right now are serving the Nation at home and abroad. I am personally acquainted with your "adopted" son, Maj. Gen. Joe Potter of the Army Corps of Engineers, General Potter, currently serving as Governor of the Canal Zone, met and married his wife, Ruth (who is a Grafton girl), while he was stationed here during the building of the Grafton Dam.

Rear Adm. Frederick Warder, one of the most highly decorated naval officers on duty today and a distinguished member of the submarine fleet during World War II, is one of your home "boys."

Your recently selected "daughter of the year" in West Virginia is Grafton's own Judge Mary C. Barlow, a distinguished Federal judge in Washington, D.C. I understand that when she was appointed to the Federal bench about 10 years ago, people marveled that she could be such a good judge and look so young.

I feel sure that on any Memorial Day and while discussing the famous people of Grafton we should always pause to pay tribute to another famous daughter of your city, Miss Anna Jarvis, acknowledged everywhere as the originator of Mother's Day.

Yes, Memorial Day causes us to have some long thoughts about our obligations to our country.

Recently a young American soldier, let's call him Recruit John Doe, was offered the startling choice of earning an honorable discharge or taking a dishonorable discharge and going home.

This offer was made by a young lieutenant and lawyer from the Defense Appellate Division of my office. But the lieutenant's client came forth with a flat "no," and signed a notarized affidavit to that effect. Recruit Doe had been convicted by general court-martial of desertion and was sentenced to be dishonorably discharged from the U.S. Army.

However, because of a change in the law in a companion case of *United States* v. *May*, decided by the U.S. Court of Military Appeals, this soldier was given another chance to clear his record of the dishonorable discharge. Because of this companion case, he was given a fresh opportunity honorably to serve his country and wipe out the stigma of his military and national misdeed. But he chose the dishonorable discharge. He was asked why he wanted, and why he was willing, to accept dishonorable discharge from the U.S. Army. His answer was, "I don't know, I just want out, and I don't care how."

Let's compare this unusual attitude and lack of feeling toward his country and himself with that of the men to whom we are paying tribute this morning. Recruit Doe apparently feels nothing toward America. The honored dead here, however, have made the greatest contribution possible to their Nation. Their sacrifice clearly indicates their attitude toward America. A comparison between the action of Recruit Doe and the men we are honoring today illustrates the opposite ends of the democratic spectrum. Of course, Recruit Doe's choice is not a typical one and represents only a small fraction of American thinking. However, the fact that there is even one man in this country willing to take a dishonorable discharge is to me frightening and disturbing.

The United States can maintain its position of world leadership only by paying for this position of trust on a day-by-day basis. You and I as citizens of the United States must daily help pay for our national strength. History is clear in recording that no nation has ever succeeded all at once, nor has a nation failed all at once. A nation keeps strong because bit by bit its citizens willingly, yes and spontaneously, make the payments needed for national prestige and survival.

The contributions of these honored dead are the very essence of the strength we need. Their efforts were not wasted. Their devotion to duty and sacrifice to our country have directly contributed to the perpetuation of our Nation. They have provided you and me with a challenge and have given us guideposts to follow. You and I as citizens of this country have a responsibility to uphold our democracy in the tradition of their sacrifice. Their actions cry out to us to make sure that we do our part in our time as they have done their part in their time.

The men we honor here died to support democracy. Democracy connotes the mandates of the many, not the whims of the few. It is embodied in the feeling of privacy in the voting booth, the feeling of communion in the library, the feeling of vitality everywhere. It's the belief that man can worship God any way and any where he desires.

To put it another way, democracy is a situation that gives us all the best chance to develop the best that's in us. Some people grab the chance, and some miss it, but each generation gets a new try at it, and that is

saying a great deal. These men served that you and I might have our chance to aid and enjoy democracy.

Our role as citizens is clear. The men we are honoring this morning laid down a challenge for us, a challenge that is not easy to accept. Fortunately, the John Does are in a very small minority, and these soldiers, some unknown, are in the vast majority. It is our job to keep it that way, and as long as we do this, our country has nothing to fear. We must rededicate ourselves to freedom.

Not too long ago, I heard a creed for America and for Americans. It goes something like this: We as American citizens do not choose to be common men. We have a right to be uncommon if we can. We seek opportunity, not security; we do not wish to be kept citizens, humbled and dulled by having the state look after us. We prefer to take the calculated risk, to dream and to build and to fail and to succeed. We prefer the challenge of life to the preempted existence of the police state or the communal farm, the thrill of fulfillment to the stale calm of an ordered universe. We will not trade our freedom for beneficence nor our dignity for a handout. We will not bow before any master, nor bend to any threat.

We have a grand heritage to stand erect, proud and unafraid; to think and act for ourselves and to share in the benefits of our own creation, and to face the world boldly and say, this, we have done. All this is what it means to be an American.

It's an honor for me to stand here beside you today and pay tribute to a distinguished group of Americans of whom we are all justifiably proud. This memorial service shows that this country has the kind of men that can keep our Nation strong. I earnestly hope that you and I are able to meet the high standards of sacrifice shown by these men that we are honoring today and that we can in this generation and our sons in the next carry their significant work forward.

Bipartisan Front Shattered—"By Recognizing and Facing Up to Mistakes of the Past We Can Chart a More Effective Course for the Future"

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. EVINS. Mr. Speaker, it has been well and aptly said that politics should stop at the seashore, and once again we are reminded of this in the discussions which have followed the recent crisis in our international relations. Mr. Edward T. Folliard, the very able reporter for the Washington Post, reviewed the recent history of bipartisanship in foreign policies in a recent article in that newspaper. This article should be of interest to our colleagues and others.

Under unanimous consent I insert this article in the Appendix of the RECORD.

The article follows:

POLITICS IN POLICY—BIPARTISAN FRONT SHATTERED

(By Edward T. Folliard)

Bipartisanship in the field of foreign affairs, meaning an informal agreement to have American politics end at the water's edge, appears to have been shattered again as a result of the U–2 affair and the flop of the Paris summit conference.

The last great breach in bipartisanship occurred 10 years ago, not long after President Harry S. Truman ordered American troops to Korea to thwart a Communist aggression.

The arguments that arose in that summer of 1950, and flared up again in the presidential campaign of 1952, sounded remarkably like those that are reverberating across the land in 1960.

There is a difference, of course, a big one, and it lies in the fact that it was the Republicans who were on the attack in 1950 and 1952.

It was on August 13, 1950, that Republican members of the Senate Foreign Relations Committee issued a statement denouncing the Truman administration for being caught off guard in Korea. The Republican Senators assailed President Truman and his predecessor, the late Franklin D. Roosevelt, for their "blindness" to Russian designs since 1945, and said:

"The American people will not now excuse those responsible for these blunders."

They were not criticizing Mr. Truman for intervening in Korea, but for what they said was a blundering Far Eastern policy that resulted in the Reds' attack in Korea. Even Senator Robert A. Taft, of Ohio, Republican leader of the Senate, said that he would have voted for intervention had it been put up to Congress, although he later began to call the conflict "Truman's war."

Former Senator Tom Connally, Democrat, of Texas, who was chairman of the Foreign Relations Committee when the Republican outburst came in 1950, tried to preserve bipartisanship, saying:

"The best way to get international peace is to have unity at home, and not pettifogging attacks on the administration."

That is pretty much what the Republicans are saying now as they assail those Democrats who are jumping on the Eisenhower administration for the U–2 business and the collapse of the Paris conference.

Former Senator H. Alexander Smith, Republican, of New Jersey, had this answer for Connally in 1950:

"We feel that by recognizing and facing up to the mistakes of the past we can chart a more effective course for the future."

If that sounds familiar, it is because it is the same argument that many Democrats are making now in justifying their attacks on the Eisenhower administration.

In that summer of 1950, the Republicans hoped that their excoriation of President Truman in connection with the Korean war would give them control of Congress in the fall. It didn't. But 2 years later, when Gen. Dwight D. Eisenhower was the Republican nominee for President, Korea was an even hotter issue. And this time it was an important factor in the big GOP landslide.

General Eisenhower agreed that once the Communists invaded South Korea, President Truman had no alternative but to resist with American forces. He did not agree with Gen. Douglas MacArthur that the United States should have started bombing Red China after the Chinese forces joined the North Koreans to hurl Americans back from the Yalu River.

Nevertheless, the soldier-candidate went after Mr. Truman in all-out fashion in what was called his kick-off speech, delivered in Philadelphia on September 4, 1952.

"Seven years after victory in World War II," he said, "this administration has bungled us perilously close to world war III."

He promised that he would bring "the kind of peace that can be kept."

"We will win this battle for peace," he said, "only after we have won the battle for Washington."

The late John Foster Dulles, who was to become Secretary of State, criticized Mr. Truman for being too much on the defensive, for merely conducting rearguard actions.

"We are accustomed to having the initiative," Dulles said, "and being the Nation which originated the impulses which swept through the world."

Senator RICHARD M. NIXON, of California, the Republican nominee for Vice President in that 1952 campaign, roamed the country blasting at the Truman foreign policy and saying:

"We should throw out the men who made that policy."

He said that "Ike won't be fooled by Stalin," and added:

"We need a big man as President because we have had a little man for the last 7 years."

He said that the Truman administration cannot be trusted to get us out of war in Korea or keep us out of future wars.

The following year Vice President NIXON addressed the American Legion and said that Mr. Truman's decision to fight in Korea was right. He said that the Communists had to be stopped in Korea and Mr. Truman deserves credit for making that decision.

Senator LYNDON B. JOHNSON of Texas, Democratic leader of the Senate, is something of a hero to Republicans right now because he is warning his party not to make an issue of the U–2 affair and all that has flowed from it. He says that foreign policy should not be made a target of petty party politics.

No Republican of comparative stature arose to defend Mr. Truman in that way in 1952. The GOP attack on the Missourian was justified on the ground that those who take credit for the sunshine cannot complain too bitterly if they are blamed for the rain.

The Silver Purchase Repeal Bill

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, June 8, 1960

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the June 1960 issue of Banking magazine entitled "Silver Again," written by Herbert Bratter. This article will, I trust, be of interest to my Senate and House colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SILVER AGAIN—NOW CONGRESS IS BEING ASKED TO DO SOMETHING ABOUT—NOT FOR—OUR HUGE HOARD OF WHITE METAL

(By Herbert Bratter)

A silver purchase repeal bill has been introduced in the House by Representative EDGAR W. HIESTAND, (Republican, of California), and in the Senate by Senators GREEN, BUSH, DODD, and PASTORE, all of New England. The latter region is especially interested in the industrial consumption of the white metal.

This bill, for which Senator GREEN forecasts Senate Banking and Currency Committee hearings, goes farther than any previous silver repeal measure. It not only would terminate the goal of the 1934 Silver Purchase Act—now a dead letter—calling for the building up of U.S. monetary stocks

of silver; it would reverse that goal by authorizing and directing the Treasury to dispose of practically all silver now in its vaults and hence not in monetary use.

Today most small-denomination currency notes are silver certificates, backed 100 percent by standard silver dollars or their equivalent in bullion.

The new bill takes cognizance of the fact that there is almost no public demand for redemption of silver certificates in dollar coins and permits the Treasury to hold against the certificates a proportional reserve for redemption purposes.

The bill also authorizes the issuance of $1 and $2 Federal Reserve notes, should it be desired to substitute them for silver certificates. Moreover, the fast-dwindling supply of free silver from which the mints now supply demand for subsidiary coins will be greatly augmented should this bill be enacted.

Externally based on gold, the U.S. dollar internally is a managed currency. The chief circulating medium is the Federal Reserve note. Yet we lead the world in the amount of silver in our monetary stock. Much silver circulates as coin: dimes, quarters, halves, and wartime 5-cent pieces. Much more circulates only by proxy of the silver certificate and actually lies idle in Treasury vaults. If all the silver held in the Treasury were cast into a cube of sterling fineness it would measure about 62 feet in each direction.

The composition of our currency stock (in millions) on November 30, 1959, was:

Gold	$19,565
Federal Reserve notes and Federal Reserve bank notes	29,057
Subsidiary silver coins	1,513
Other silver	2,739
U.S. notes (greenbacks)	347
Other	601
Total	53,823

Nominally, at the beginning of our Government, we adopted gold-silver bimetallism. That system proved impossible to maintain and was legally abandoned over a century ago. Silver was forced into the monetary system, starting in 1878, to make an artificial market for the product of newly developed Western mines, the silver certificate being devised then since the public showed distaste for cartwheels—standard silver dollars. The silver inflation weakened the dollar, and 15 years later, under President Cleveland's leadership, the purchases were ended.

A 40-YEAR INTERVAL

Apart from World War I legislation (the Pitman Act) it was not until the great depression that the silver interests in the Senate were again able to get the Government to "do something for silver." In 1933 Congress agreed to accept war debt payments in silver. At London during the world economic conference Senator Pitman, although quite without authorization, negotiated the London Silver Agreement, which President Roosevelt in December 1933, put into effect by proclamation. There followed the Silver Purchase Act of 1934, which Senator Hayden of Arizona has described as designed to help the American miner. Later laws of 1939 and 1946 increased the subsidy to newly mined domestic silver.

It is to the measures of the 1930's primarily that silver owes its present prominent position in the U.S. currency system. Those measures, in the enactment of which the silver interests had the powerful support of inflationist pressure groups and speculators in the metal, accomplished the subsidization of U.S. silver producers at enormous expense, for most of the silver purchased by the Treasury came from abroad. The chief beneficiaries were foreign sellers. Before the 1934 act, silver was still the standard of value in China, Hong Kong, and Macao. As a result of our program, those countries were able to abandon the silver standard at our expense. Today, outside of the Red bloc, 55 countries make no provision in their coinage systems for any use of silver. This is true of the new currency law of India, once known as "the sink of the precious metals." China, Hong Kong, the Philippines, Indonesia, and such mining countries as Bolivia, Peru, and Spain use no silver coins today. From all the world, including the U.S.S.R., silver has been swept into the U.S. Treasury.

Of the 3.1 billion ounces of silver acquired by the Treasury since 1933, only 28.5 percent has been newly mined domestic silver. All the rest was acquired as a monetary camouflage of the domestic subsidy. Most amazing is the unimportance of the industry which obtained this subsidy, now continuing in perpetuity, unless the law is changed. Silver is economically unimportant even in the so-called silver States. To the Nation as a whole, when the silver subsidy was launched in 1933, silver was less important than the production of hay, soap, string, or envelopes. Chewing gum, linoleum, nuts, lemons, and strawberries all were of greater economic importance than silver.

In all 48 States in 1937, after several years of silver subsidy, the value of the Nation's silver output was only eight one-hundredths of 1 percent of all accountable income; and even in the seven chief silver-mining States it was only eighty-five one-hundredths of 1 percent.

That a commodity of such microscopic domestic importance could obtain in the 1930's and retain ever since what the historian of the New Deal, Arthur M. Schlesinger, Jr., has called "the most remarkable * * * special interest triumph of the period" is in large part to be explained by the Senate's rules which, whatever their justification, permit a small minority bloc to hold up the Nation. The seven States which produce most of our newly mined silver control 14 Senators, a cohesive and determined bloc regardless of party.

FOREIGN PURCHASES STOPPED

Foreign silver purchases, at first wildly pursued in 1934 and 1935, were by 1942 given up by Secretary Morgenthau as folly. Under present law the Treasury buys at 90½ cents any and all newly mined domestic silver offered and, in its discretion, sells at the same price to domestic industrial users. The mines are seeking an opportunity to get a higher Treasury price. As a step in this direction they want the Treasury to stop selling silver to industry. It is also proposed that the Treasury issue certificates against all the unobligated silver it still holds, and supply the mints' subsidiary coinage needs by market purchases. By diminishing supply and increasing market demand, the price would rise on the market. Thereafter, a "logical" step for the mining bloc would be to seek an increase in the present 90½-cent floor set by the law of 1946.

THE LOGIC OF REPEAL

More logical from the standpoint of the Nation's interest, however—as distinct from that of silver mines, most of whose stock appears to be owned outside of the mining States—would be repeal of the silver purchase laws. This need not mean taking out of circulation the silver certificates we are now using, mostly in $1 and $5 denominations. These fiat notes may be continued in use, but the silver now frozen behind them as reserve should be freed for gradual sale by the Treasury. The mints should be closed to any further deliveries of newly mined domestic silver. The political-compromise goal of the Silver Purchase Act of 1934, although it is now a dead letter so far as the Treasury is concerned, should be rescinded. This is the goal calling for building up the stock of silver until one-fourth of the total stock of gold and silver—taking gold at $35 an ounce and silver at $1.29 an ounce—is silver.

The 1934 act was both mandatory and discretionary. After sad experience Secretary Morgenthau used discretion and shelved the mandate. Since then discretion has ruled at the Treasury. But this is not enough. The mandate on the statutes should be reversed. The Treasury's power to buy silver so long as there is idle silver in its vaults should be ended. Any coinage needs should be met from that silver. And all silver not needed for that purpose the Treasury should be directed by law to sell in its discretion.

INSIGNFICANT DEMAND

Since outstanding silver certificates offer for each dollar of face value "one dollar in silver," the Treasury should be authorized under the above proposal to retain enough standard silver dollars to meet any such requests it considers likely to arise. Unless the market price of silver should rise above $1.29 an ounce, which is the "monetary value" of the standard silver dollar, the demand for silver dollar coins would be insignificant. The redemption phrase on the silver certificate in any case has no special significance, since in 1933 the Congress made all forms of currency interchangeable.

Our silver programs adopted to please the advocates of "doing something for silver" have in this century, as during the last, promoted demonetization of the metal and even its complete withdrawal from subsidiary monetary use in a long list of countries. Supporting the price of silver has made that metal too expensive for use as coin in various parts of the world.

Should our silver policies now be put in reverse and our unneeded billion be sold, any resultant softening of the market price should encourage greater use of this metal. Thus, unloading our white elephant would be "doing something for silver."

The Challenge Ahead

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. IRWIN. Mr. Speaker, the people of Ecuador on Sunday elected Dr. Velasco Ibarra as President in a fair and decisive contest, putting him in a position of confronting the enormous task of imposing social reforms, against the opposition of the nation's oligarchy. What he faces and the possible outcome of failure is outlined in an editorial published today in the New York Times, which deserves our attention. Pursuant to permission previously granted, I include the editorial:

ECUADOR'S ELECTION

The triumph of Dr. Velasco Ibarra in the Ecuadoran presidential election on Sunday, is one of the most significant and interesting events of the year in Latin America. The striking fact is that he defeated the candidates of the traditional Ecuadoran parties, running as an independent with an appeal to the Indian masses against the so-called oligarchy.

Personalism, which is so strong throughout Latin America, played a big role in Dr. Velasco

Ibarra's victory. He has always had an extraordinary appeal to the Ecuadoran people. This is the fourth time he was elected President. He is an eccentric, unpredictable man who works alone and is in constant conflict with his associates. But he is also intelligent, honest, and disinterested in the sense that he comes from the traditional Spanish ruling classes, but makes his appeal to the Indian masses.

Now the crucial question is whether the new President can force social reforms on the oligarchy and bring about social progress by orderly methods. If not, the answer may well be a Castro-type—or Bolivian-type revolution. The effect of the Cuban revolution on Latin-American countries is generally obscured by the fact that governments and the press oppose revolutionary forces for obvious reasons. Ecuador has a typical Andean altiplano maldistribution of wealth—a few large landowners, paying almost no taxation, with no economic incentive to cultivate, and a great mass of wretched Indians unable to acquire land or to better their status. This resulted in a revolution in Bolivia, which is also an Indian country with similar problems.

The United States is naturally deeply concerned. Washington knows that the Cuban revolution has posed the challenge: evolution or revolution. Ecuador has shown remarkable and praiseworthy political discipline ever since President Galo Plaza Lasso, in 1948–52, managed to survive a 4-year term for the first time and to hold a fair election. This election, too, was peaceful and fair. Dr. Velasco Ibarra won by the largest plurality in Ecuadoran history and his opponents cannot contest his victory. He will carry the best wishes and the hopes of the hemisphere with him into the Presidency.

The Late Dr. Barnett Sure

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 8, 1960

Mr. FULBRIGHT. Mr. President, on June 4, 1960, Dr. Barnett Sure, who was for many years one of the leading members of the chemistry faculty at the University of Arkansas, died. Dr. Sure, for some 34 years was a member of the faculty, and during that period he did some of the most significant research work in the field of biological chemistry and the development of very important vitamins. I think his career should be noted, and I ask unanimous consent that a short article published in the Arkansas Gazette be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DR. SURE, 68, EX-PROFESSOR AT UNIVERSITY OF ARKANSAS, DIES

MILWAUKEE, June 4.—Dr. Barnett Sure, aged 68, former chairman of the department of agriculture chemistry at the University of Arkansas at Fayetteville, died Friday night at a hospital here.

Dr. Sure, famous for his work with various vitamins and vitamin complexes, had lived at Milwaukee since 1958 after retiring from the University of Arkansas where he was on the faculty 34 years.

While at the university he was a leader in experimentation with vitamin B_{12}, as a dietary supplement. He also discovered a vitamin, deficiency of which produces sterility, which he named "vitamin E," and it was largely due to his work that vitamin B_1, or thiamine, was introduced in the routine feeding of infants by specialists of diseases of children. He later formulated, and in 1957 began production of, a meat "replacer" called Sure Food.

He was born at Vilkomire, Russia, and attended schools in Russia and the Union of South Africa. He came to the United State in 1908 and became a naturalized citizen in 1915. He attended colleges in Milwaukee and obtained his bachelor's degree from Johns Hopkins School of Hygiene and his doctor's degree from the University of Wisconsin.

Dr. Sure was a member of the American Society of Biological Chemists, the American Institute of Nutrition, the Society for Experimental Biology and Medicine, and Sigma Xi, an honorary scientific society. He is listed in "Who' Who in America" and "Who's Who in American Men of Science."

He published several books on vitamins and in 1945 wrote two chapters on vitamins in the medical nutrition book, "Wohl's Dietotherapy." He also wrote about 200 scientific papers and bulletins in the nutritional, chemical and medical fields.

In addition to his research, Dr. Sure taught for more than 35 years advance courses in the biochemistry of nutrition.

He is survived by his wife, and three sisters, Mrs. David Wolfson, Mrs. Max Sweet and Mrs. Benjamin Mishlove of Milwaukee.

Funeral and burial will be Sunday at Milwaukee.

Flag Promotion Program

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. BROYHILL. Mr. Speaker, a local service club, the Mount Vernon Civitan Club of Civitan International, has undertaken an ambitious program for promoting flag ownership and display for the residents of northern Virginia. Civitans would like to see the flag displayed in every home as evidence of our loyalty to our country and Government and to establish this as a tradition for our children.

What started out with a small program geared to the local area of Mount Vernon, Va., is gradually spreading to encompass the metropolitan area. In keeping with Civitan International's motto "Builders of Good Citizenship" the local Civitan Club under the presidency of Don F. Hunt and flag program co-chairmen Mr. Clark Tufts and Lt. Col. Glen Stutzman decided that ownership and display of the American flag should be the patriotic desire of all. It was decided there was no better time to proceed with such a program than now with the new 50-star flag.

The club initiated the program on the basis of making available to the public a 3- by 5-foot home display flag of high quality at a reasonable price—a price which could not be met by individual purchase. Through volume purchasing the Civitan Club has been able to arrive at a price that is making the purchase of these flags most attractive. Civitans hope to see their program gain such momentum that other Civitan clubs as well as other civic minded organizations will participate in the program on a nationwide scale.

A portion of this cooperation has already been achieved through phase one of the Civitan plan. This plan has consisted of inviting the cooperation of the presidents of local citizens associations, veterans' groups, auxiliary women's organizations, the Mount Vernon-Lee Chamber of Commerce as well as civic minded business firms.

I was presented recently with a desk set consisting of five flags which depict the history of our flag. These five flags are displayed on a base of mohagany in the shape of the Pentagon Building with a description of each flag engraved on each side of the Pentagon. Making the presentation were Mr. Hunt, president of the club; Mr. Tufts, and Mr. Herl, president of the Mount Vernon Terrace Citizens Associations and a designated representative for the local citizens associations.

The Mount Vernon Civitan Club proposes to make its local flag program accepted on a national scale not only by International Civitan but by our congressional leaders as well. I am deeply interested in the program and hope that others will follow with the idea of building good citizenship by cooperating with this program.

Review of U.S. Trade Policies

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, June 8, 1960

Mr. WILEY. Mr. President, as a Nation, we face the task of finding more and more markets for the output of our great productive system—if we are to remain healthy and grow stronger economically.

Traditionally, the American economy itself has been a major market for U.S.-produced commodities.

However, the ingenuity of the free enterprise system—revolutionized, particularly, by technology—has created a mass production capacity for turning out goods at a rate greater than can be consumed and/or utilized in this country.

Consequently, we face the need of looking elsewhere for more and more markets for the products of our farms and factories.

Today, there are vast underdeveloped markets of the world, holding out promise of a great potential market.

We recognize, of course, that taking full advantage of the potential market will require fundamental studies and long-range planning. The objective must be to provide the kind of products

that can be utilized by less complex economies.

We recognize that we also face stiff competition for these markets.

I am confident, however, that if we can direct adequate effort toward providing the kind of products that can be utilized by these countries, as well as encourage the creation of conditions that will assure fair competition for our products on the world market, the United States can produce for, sell to, and service the needs of, a fair proportion of the less developed market areas, particularly in the newly emerging nations where, literally, they need everything.

The task will not be simple. To the contrary, this will be one of our major challenges in the days ahead—particularly in view of increasing competition, also, for such markets from the Communist bloc.

Recently, Economic World published an informative article, reflecting upon important aspects of our foreign trade policies. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. FOREIGN TRADE POLICY NEEDS NO MAJOR CHANGE—SAY LEADING BUSINESSMEN, ECONOMISTS

Despite increasing foreign competition and shifts in world economic conditions, a group of 31 leading U.S. businessmen and economists sees no reason for a major overhaul of U.S. foreign trade policy.

In the opinion of the majority, the country's 30-year effort to encourage freer world trade remains a sound objective for both political and economic reasons.

These views are set forth in a study compiled by a special staff of the Senate Interstate and Foreign Commerce Committee, made public as the committee opened hearings on export-import policies late last month.

CONSENSUS OF VIEWS

While some advisers expressed reservations about the direction of U.S. foreign economic policies the majority, however, felt that:

A change in U.S. liberal trade policy would invite retaliation by other nations, shrink world trade, and ultimately sap free world economic strength.

The recent outflow of gold and increase in foreign dollar holdings represents a return to more normal patterns of international commerce eventually good for both the United States and its allies.

Continued balance-of-payments deficits of major proportions would pose a threat to U.S. economic stability, but damage is unlikely to occur because the Government possesses the means to deal with the problem.

The United States should continue to press for an elimination of restrictions on dollar goods especially by industrialized nations which raised trade barriers for balance-of-payments reasons.

Increased export sales would either eliminate or substantially reduce the red ink on the U.S. payments ledger.

The growth of U.S. investment abroad involves little threat to domestic employment or production with the exception of possible short-term implications for some industries.

The flow of U.S. money into foreign industries has helped stimulate greater industrialization, higher living standards, and more purchasing power, all conducive to an expanded demand for U.S. products.

Aid to underdeveloped countries should continue; any dislocation of U.S. export markets resulting from the growth of competitive industries will be insignificant in most cases and vastly outweighed by the long-range benefits to the free world economy.

U.S. policy toward trade with the Communist bloc should be brought into line with the policies of its allies.

SOVIET COMPETITION

Included in the advisory group were three economists in addition to top-level businessmen with extensive foreign operations experience in such fields as automobiles, petroleum and petrochemicals, aluminum, steel, heavy industrial equipment, shipping, metals, textiles, and construction.

A question on how best to meet the stepped-up economic offensive of the Soviet Union and Communist China drew a wide variety of responses. Five members questioned whether private enterprise could compete for trade against state monopolies which can subordinate economic considerations to political purposes. Seven felt either that no specific action was necessary or that it was premature to judge Soviet intentions.

A majority of the group, however, felt that a more fruitful approach apepared to lie in the overall strentghening of the U.S. trade position. Their specific recommendations included: stabilization of world raw material prices through more commodity agreements; encouraging development of common markets; continued exchanges of technicians between free world nations; and greater encouragement of U.S. investment abroad.

The committee's staff report offered three recommendations designed to improve this country's export sales:

1. Reestablishment of the Foreign Commercial Service under the Department of Commerce and a vigorous effort to improve trade promotion activities. (The Service was incorporated into the State Department in 1939.)

2. Institution of a flexible system of export credit insurance enabling U.S. traders to match credit terms offered by West European and Japanese firms whose transactions are backed by government institutions. The report noted that an adequate guarantee system should offer exporters insurance on short- and medium-term transactions while covering all types of commercial and political risks at rates comparable to those available to foreign competitors.

3. Establishment of a U.S. Office of Travel and Tourism to promote visits to this country and recapture some of the $1 billion annual travel deficit generated by the flood of dollar spending U.S. tourists into foreign countries. Committee Chairman WARREN G. MAGNUSON has introduced legislation to set up the proposed tourist promotion office.

A Familiar Script—A Hero's Return—Is Played Again and Again

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. EVINS. Mr. Speaker, in connection with the recent soul-searching discussions we have had on the failure of the summit conference, the very able commentator, Marquis Childs, made some comments which should be of interest to my colleagues and others and, accordingly, I ask unanimous consent to have Mr. Childs' article reproduced in the Appendix of the RECORD.

The article follows:

A FAMILIAR SCRIPT IS PLAYED AGAIN

(By Marquis Childs)

The favorite script of the Eisenhower administration is the hero's return. Whether it is the President himself or Vice President NIXON, we have seen the personal drama played out again and again of the hero who stands up to sticks and stones, insults, bad names, and then returns to the acclaim of a tumultuous welcome.

It is natural that the patriotism of Americans should respond to the fortitude of a leader who meets with adversity. But how much the personal drama really means in relation to America's position in the world and to America's aims is something else again.

President Eisenhower's reception on his return from Paris and the efforts to enhance his role in the tragedy of the U–2 and the collapse of the summit have a familiar resemblance to the drama of NIXON'S return from Latin America 2 years ago. NIXON had been stoned in Venezuela, spat upon in Uruguay and denounced in Peru. When he returned to a highly organized reception at the airport, it was the President who directed the chorus of "Hail to the Conquering Hero." This was NIXON'S assignment as the President returned from Paris.

NIXON said that his trip had demonstrated that top priority must be given to Latin America. It is well the trip was taken at this time, he was quoted as saying, for it brought out into the open the problems we face before they could get worse.

There is little evidence that important steps have been taken to upgrade Latin America. Nothing like the recasting of American policy, which NIXON seemed to feel was essential, has occurred.

The Nixon drama, while it gave a boost to the Vice President's stock in the polls and filled the headlines and the television screens, had no demonstrable effect on policy. The script was faithfully adhered to, with the Vice President ignoring the cautious advice of the experts and boldly invading centers of anti-American opposition. But it was an interior drama, enthralling for home consumption while meaning little beyond our own shores.

All this is relevant to the President's proposed visit to Japan and the massive demonstrations being staged against the Japanese-American defense treaty. He can go as planned, arriving in Tokyo on June 19, the date the treaty is due to become effective. And, defying the fanatical left-wing opposition, he could probably return to Washington for another reception, more triumphal arches and Government workers dismissed to stand on the sidewalk to greet him.

Doubts are increasing, however, as to the wisdom of this course. There remains a possibility of postponing the visit until after the elections in November. The Presdent would have a valid reason to put off the trip in view of the complications growing out of the collapse of the summit and the stormy consequences in Congress of what has happened during the past month.

The administration apparently feels under the necessity to cast recent events in such a way as to absolve the President of any blame for what went wrong. The account currently being given of what led to the collapse in Paris varies radically with what American reporters were being told as the events occurred.

The major effort seems to be to convince the public that the U–2 made no difference whatsoever to the outcome. Secretary of State Herter's story is that Soviet policy had undergone a complete switch before May 1.

But this is not what we were told in Paris by briefers who presumably had authorita-

tive knowledge. It was said quite plainly that if the U–2 had not occurred, the conference would have been held; as with many postwar conferences with Soviet Russia, it would have been harsh and even acrimonious; but it would in all likelihood have ended with a formula calling for another summit conference and the President would have made his visit to the Soviet Union.

This is, of course, an election year and the Democrats will try to exploit the U–2 and the collapse of the President's plans. But surely, even for the Eisenhower reputation, a little more candor would be helpful. We shall be told next that the Soviets invited pilot Francis G. Powers to make his flight over Sverdlovsk so that Premier Nikita Khrushchev would have a fine excuse to torpedo the summit.

Fiftieth Anniversary of Establishment of American Aluminum Co.—Resolutions

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 8, 1960

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD resolutions adopted by the Senate of the State of New Jersey and the General Assembly of the State of New Jersey saluting the 50th anniversary of the establishment of the American Aluminum Co. at Mountainside and Newark.

This firm was founded by three distinguished New Jersey families who have continued to operate it through 50 years and two generations. The firm was founded in 1911 by Joseph B. Klausmann, 14 South Crescent Road, Maplewood; Oscar Brucker, 25 Brookwood Drive, Maplewood, and the late Henry Brucker. At the time of his death in 1948, Mr. Brucker was said to be the oldest aluminum products manufacturer in the world.

The firm began by making a complete line of cooking utensils. They expanded from that into their present contract operation for the design, engineering, and manufacturing of aluminum products. They have made over 6,000 different items during their 50 years of business.

The company is owned and managed by Henry J. Brucker of 10 Portland Road, Summit, N.J.; Milton H. Klausmann of 26 Portland Road, Summit, N.J., both sons of the founders, and Edward B. Parsell of 122 Timber Drive, Berkeley Heights, N.J., a grandson. The two living founders continue as directors.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

SENATE RESOLUTION OF THE STATE OF NEW JERSEY

Whereas the American Aluminum Co. of Mountainside and Newark is celebrating its 50th year as a New Jersey company; and

Whereas the American Aluminum Co. was founded in Newark in 1911 by Henry Brucker, Oscar Brucker and Joseph Klausmann, and is operated and managed now by their sons, Henry J. Brucker and Milton H. Klausmann and grandson, Edward B. Parsell; and

Whereas the American Aluminum Co has been in continuous operation in New Jersey since its founding and over that long span of time has made a significant contribution to the industrial capacity and economy of our State and has been an active and useful participant in community and civic development: Now, therefore, be it

Resolved by the members of the Senate of the State of New Jersey, That their congratulations be extended to the American Aluminum Co. for its successful establishment and their sincere wishes for greater success in the next 50 years; and be it further

Resolved, That a copy of this resolution, signed by the president of the senate and attested by its secretary, be sent to the American Aluminum Co., Henry J. Brucker, president.

GEORGE HARPER,
President of the Senate.

Attest:

HENRY H. PATTERSON,
Secretary of the Senate.

ASSEMBLY RESOLUTION, STATE OF NEW JERSEY

Whereas, the American Aluminum Co. of Mountainside and Newark is celebrating its 50th year as a New Jersey company; and

Whereas, the American Aluminum Co. was founded in Newark in 1911 by Henry Brucker, Oscar Brucker, and Joseph Klausmann, and is operated and managed now by their sons, Henry J. Brucker and Milton H. Klausmann and grandson, Edward B. Parsell; and

Whereas, the American Aluminum Co. has been in continuous operation in New Jersey since its founding and over that long span of time has made a significant contribution to the industrial capacity and economy of our State and has been an active and useful participant in community and civic development: Now, therefore, be it

Resolved, by the members of the General Assembly of the State of New Jersey, That their congratulations be extended to the American Aluminum Co. for its successful establishment and their sincere wishes for greater success in the next 50 years; and be it further

Resolved, That a copy of this resolution, signed by the speaker of the general assembly and attested by its clerk, be sent to the American Aluminum Co., Henry J. Brucker, president.

MAURICE V. BRADY,
Speaker of the General Assembly.

Attest:

MAURICE F. KARP,
Clerk of the General Assembly.

Phillip Reed: Master Craftsman

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Afro magazine section of June 4, 1960:

PHILLIP REED, MASTER CRAFTSMAN—HE ADDED THE FINAL TOUCH—THE MAN WHO PUT THE STATUE OF FREEDOM ON TOP OF THE NATION'S CAPITOL WAS COLORED

Every schoolchild readily recognizes pictures of the Capitol Building in Washington, D.C., but few knew that atop the Capitol is a statue of freedom, placed there by a colored metalworker.

His name was Phillip Reed, who in 1863 was a worker in a foundry owned by a man history identifies only as Mr. Mills.

J. A. Rogers in his latest book "Africa's Gift to America," details the circumstances under which Reed undertook his magnificient feat.

The Statue of Freedom was cast in bronze at the Mills foundry. When it was completed and ready for erection, the foreman who had superintended the work from the beginning went on strike.

He was being paid eight dollars, and demanded ten. The raise was refused, and he walked out.

Phillip Reed took his place. Piece by piece the huge masses of metal were bolted together, joint to joint and hoisted to the top of the dome.

Bear in mind that the height of the Capitol from its baseline on the east front to the top of the Statue of Freedom is 287 feet 5½ inches.

The first dome of the Capitol was made of wood, covered with copper. It was replaced with a dome made of cast iron by 1865. The job took 9 years to complete.

Original plans for the Capitol were drawn by Dr. William Thornton, of Tortola, West Indies. They were accepted in April 1793.

Cornerstone laying was held in September of the same year with Masonic ceremonies, President George Washington presiding. The first section of the building was made of sandstone quarried at Aquia Creek, Va.

The northern wing was completed first. Congress occupied it in 1800, the Supreme Court in 1801.

The southern section was occupied by the House of Representatives by 1807, but not completed until 1811.

Then came disaster. After 18 years of construction, the interior of the Capitol was destroyed by fire set by the British in 1814.

The building process began again. By 1819 the Capitol was reoccupied.

Once again, the Capitol is under construction. A major job of rebuilding the east front, at the point where the Presidents take the oath of office, was begun early in 1959 by order of Congress.

The east portico was removed to make way for an extension of 32½ feet forward of the east front.

The wall of the original portico will become an interior wall, and the new section will provide space for 42 new offices and other facilities.

The former facade of Virginia sandstone will be reproduced in Georgia marble. Congress has voted $17 million for this and other work.

The new facade is expected to be completed in time for the presidential inauguration of 1961. During its construction, the rotunda will be closed.

For vacationers who plan to visit the Nation's Capitol this summer, here is a brief rundown on visiting hours.

The Capitol is open from 9 a.m. to 4:30 p.m. daily. The only exceptions are Christmas, New Year's Day, and Thanksgiving Day.

Tours are conducted through the Capitol from 9 a.m. to 3:55 p.m., and include a brief visit to the Senate and House; there is a small charge for this.

Foreign Commerce Study by Committee on Interstate and Foreign Commerce

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 8, 1960

Mr. THURMOND. Mr. President, during the course of the foreign com-

merce study by the Interstate and Foreign Commerce Committee there has been much realistic and knowledgeable testimony on the developments in our foreign trade situation. The very fact that the study is being made is a recognition that our trade position is seriously deteriorating. One of the best overall concise summaries of the general situation and the factors which have influenced our trade position was made by Mr. O. R. Strackbein. In the interest of bringing this information to the Members of Congress and the public generally at the earliest possible date, I ask unanimous consent that the text of Mr. Strackbein's testimony be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF O. R. STRACKBEIN, CHAIRMAN, THE NATIONWIDE COMMITTEE ON IMPORT-EXPORT POLICY, BEFORE THE SENATE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, MAY 10, 1960

The concern of the Committee on Interstate and Foreign Commerce over the general position of this country in foreign trade is thoroughly justified by the developments of the past few years.

I shall not dwell on the deficit that the United States has been running in every year but one in its foreign account since 1950. Ample statistics have been supplied to you both by the Treasury Department and the Department of Commerce. It is enough to say that both departments admit the serious aspects of this situation.

It was in recognition of this seriousness that several steps have been taken by these departments and the Department of State designed to correct or at least to alleviate the condition.

One of these steps was an effort to induce other countries to eliminate or reduce their restrictions against our exports. Another was an attempt to persuade other countries, particularly the industrially advanced ones, to shoulder a greater share of the foreign aid burden than has hitherto been carried by them. Yet another was the program recently launched by the Department of Commerce to increase our exports. There are other avenues for possible steps, such as increasing tourist expenditures in this country by foreign visitors; but the foregoing represent the principal lines of proposed activity.

It is the purpose in this statement to analyze these proposals in the light of the realities underlying our precarious competitive position in the world; and to appraise the effectiveness of the proposals.

In order to arrive at the causes of our present discomfiture in the world of foreign competition we must go back two decades or more and examine our economic history since the great depression of the early thirties. We cannot properly interpret the present situation by simply looking at it as if it were the result of a sudden development. It has been a long time shaping up, concealed by many counter currents that have now either run their course or greatly slackened.

One of our national movements was centered around the internal economic problems created by the depression; another was centered on our external economic relations, or trade. Our domestic economic policy began moving in one direction some 25 years ago while our foreign economic policy moved in the opposite direction. What we witness today is the success of some aspects of both these policies, with some distressing side effects.

On the domestic front we moved upward on the economic escalator. This movement was managed by a broad line of legislative enactments designed to increase purchasing power by putting more people to work at higher wages and shorter hours, by improving the farmer's market position, by evicting destitution among the aging and poverty-stricken through a system of social security, and by other subsidiary measures. We were launched on the upward path when World War II burst upon the scene with its vast demand upon production. During its course it accumulated a vast backlog of consumer demand. Atop of that, foreign demand from the war-torn countries after the war combined to bear our economy ever upward. Then the Korean outbreak provided a new stimulus just as we were about to settle onto a lower budget level. Latterly the cold war assured a resurgence of demand and the attainment of the upper levels of economic abundance. One of the greatest dangers during this whole period came from inflation because of the pressure of demand on our productive capacity. The whole world looked to us for equipment, food, and supplies. Little wonder that we landed on an economic plateau in relation to the rest of the world.

Much of the domestic economic legislation, mostly enacted before the war, had the effect of increasing the cost of production; but the greatest contribution of all to our present abode on stilts was the war itself and the the cold war aftermath. Taxes reached uprecedented levels; defense expenditures reached proportions never before experienced in peacetime. These expenditures, being almost pure waste in the economic sense, and paid for in the form of taxes, gave a great boost to production costs. High wages and high profits were a natural counterpart of the heavy call for goods generated by accumulated war-retarded demand and postwar foreign demand for our products.

Meantime we were dismantling our economic defenses in the form of tariffs. By a succession of trade agreements we brought down their protective effect a full 80 percent. We thought we did not need them. We apparently had nothing to fear from imports. The effects of the tariff reductions were hidden by the other factors just mentioned. Was it not clear that we were constantly selling more than we were buying from abroad? Obviously the thing to do was to take down our tariffs still more so that other countries could ship more freely into this country. They needed the dollars desperately, over and above the extensive aid we were extending to them, so that they could buy what they needed from us. We all remember the cry of the dollar gap.

It was true that we had higher wages by far than other countries; but our productivity, it was claimed, was so much higher per man-hour that we had nothing to worry about. Only some few industries that had a high labor content had anything to fear. The great mass production industries stood serenely above the storm. They were held to be invulnerable. So ran the chorus; and the tariff-cutting force reached a high momentum. Our tariffs, to repeat, have been taken down 80 percent.

Beyond tariff reductions, designed to help other countries, we brought thousands of productivity teams to this country so that the other countries might learn the magic of our vaunted industrial know-how; and in the last decade we shipped abroad $30 billion worth of the latest types of our equipment and machinery, much of it under the foreign aid program. This machinery greatly lifted foreign productivity.

Even as we succeeded, by the grace of a world war and subsequent highly unsettled international relations, in reaching unprecedented levels of employment and of national income, accompanied by a high level of costs and prices; we also succeeded in reconstructing the other leaders of the industrial world and putting them on the road to very efficient competitive capacity.

Therefore it is surprising that we should be surprised today over what has happened. Of course, success is often surprising.

The question is, if we knew how to get ourselves onto this spot do we know how to get off it?

The spot to which I refer is, of course, the one from which we see our domestic market constantly invaded by increasing volumes of foreign goods that readily undersell our own output. It is also the spot from which we see other countries recapturing their prewar shares of third markets in different parts of the world because foreign prices are lower than ours. It is the spot yet again from which we see our own industries rushing overseas to gain the advantage of lower costs of production and then shipping out from there to third countries and in some cases back to the United States itself.

Fundamentally the explanation is very simple. We have succeeded in running up our costs above world levels despite our great productivity. The modern machinery installed abroad has in many cases greatly increased productivity overseas. The textile industry is a good example. Japan, it is reported, has more modern textile machinery than we ourselves. Automobile plants in Europe are another example. Some of them are said to be ahead of us. Office machinery, such as typewriters and calculating machines, another. We can also mention tractors, electronic equipment, sewing machines, cotton, footwear, petroleum, and much else as examples of industries built up abroad by us. In more and more instances American companies manufacturing abroad are shipping back to this country.

It is estimated that of the 668,000 automobiles shipped to this country in 1959 approximately 28 percent were shipped by companies in England, Germany, and France that are subsidiaries or branches or largely owned by General Motors, Ford, and Chrysler.

One of the two sewing-machine companies that were still manufacturing in this country closed and went into importing about 2 years ago. The other company is bringing in some of its own machines built abroad. American watch manufacturers have opened up abroad and are importing from there. Typewriter and office machine companies are doing the same. Transistor radios coming from Japan in large quantities are in some instances the products of our own branches or subsidiaries or licensees producing in Japan.

In other instances it is against the policy of the parent American company to ship into this country from their foreign plants; but when foreign companies do so, this policy sometimes gives way.

Over the past two decades or more certain notions have been widely entertained about our trade and have been used in defense and support of the trade program. One was that the dollars earned by other countries through their exports to this country always come back in the form of demand for our goods. This motion has been thoroughly exploded by the facts. Since 1950 with the one exception of 1957, we have run a deficit of a billion dollars or more per year. In 1958 and 1959 combined this deficit was over $7 billion. In those 2 years over $3½ billion of gold was drained out of our stock at Ft. Knox.

During the past decade the claims of foreign countries against our gold stock has reached a point slightly in excess of this stock. Only recently these total foreign claims were reported to surpass our $19.4 billion in gold. Here, then, are some $20 billion that did not come back.

The brutal fact is that it was a great fallacy to say, as did the erudite economists, that the dollars earned abroad always come back. Perhaps they will in the long run; perhaps; but we cannot necessarily wait it out. Where are all these dollars? They are in foreign treasuries, central banks and what not: One thing is certain, wherever they are, they have not come back and they seem in no hurry to do so.

Another false notion widely disseminated by the economists during all these years was that regardless of our high wages we could nearly always produce more cheaply on the basis of unit cost than other countries. We were head and shoulders above other countries in this respect. Well, brutal facts have contradicted this notion as flatly as they contradicted the notion that our dollars would always come back to us.

It seems to be about time to rewrite some of this fallacious economics or point out that reality usually runs the so-called economic principles off the tracks through one unforeseen event or another.

There remains the forlorn hope that wages in other countries will one day soon catch up with ours. If they do it will be because ours stand very still or fall back. The evidence is all to the contrary. Only a week ago a report in the Journal of Commerce drew a curtain on this hope. The Banque de Bruxelles, Belgium, recently issued an analysis, says the Journal of Commerce, "indicating that the disparity between United States and European unit labor costs has been growing rather than diminishing." This should come as no surprise because of the relative weaker position of the labor unions in Europe compared with the American. The Belgian bank's experts, continued the report, "see little evidence of any decisive change in the near future." I would like to offer the article for the record at this point.

Finally, there are those who vehemently deny that we are priced out of foreign markets. It is, of course, demonstrably true that we are not priced out in all products. The evidence is unmistakable, however, that we are indeed priced out in a number of important lines and that the number of products is increasingly rapidly. Why, if this were not true, would so many of our companies seek oversea facilities of production?

The fact is that in those instances in which we have at hand a measure of relative prices it is a very common thing to find our products priced some 30 to 40 percent above those of the world generally.

In the case of wheat our price is some 60 to 65 cents per bushel above the world price. This is an overprice of some 30 to 35 percent. In the case of cotton we are overpriced by about 8 cents per pound. This again, is some 30 to 35 percent; and we now subsidize both wheat and cotton exports to that extent.

Are these mere coincidences? Are wheat and cotton prices out of line with industrial prices, and on a higher level? Tell that to the farmers. This may have been true 10 years ago but not today. In instance after instance in which foreign manufacturers bid on our Government contracts they underbid our bidders by 30 to 40 percent. Are these also coincidences? A few months ago when the Secretary of the Treasury ruled that the proceeds of the Development Loan Fund must be spent in this country his action was deplored editorially and otherwise. The Washington Post, a paper not noted for protectionist tendencies, said editorially that in the case of our loan to India this would mean that the appropriated funds would fall 40 percent short of the distance they would reach if India were free to spend the money in countries other than the United States. This was an open admission that foreign prices on a miscellany of materials and supplies are some 40 percent below American prices.

Everyday experience of one American industry after another that faces import competition confirms the evidence provided by the examples offered by wheat and cotton. In many instances foreign prices are lower by more than a mere 30 or 40 percent. Were it not for the lower prices why would imports in 1959 have risen by some $2½ billion over 1958? Why otherwise could imports capture a progressively higher share of the American market in more and more industries and with a rapidity that is astounding?

Considering the undoubtable fact that we are overpriced in many and a growing number of lines of products, how can we expect to expand our exports materially by sending more commercial attachés abroad and by exhortations to our exporters to resort to the "hard sell?" Sales abroad revolve more around prices and quality than they do about salesmanship.

It is reported from official sources that our exports have increased 21 percent during the first quarter of 1960 compared with 1959. Imports increased 10 percent. Two comments are in order. Imports in 1959 were already at an all time high, and by more than $2 billion; exports were well below their 1956–57 peak. The other comment is that a substantial share of the increase in exports took place in subsidized products, notably raw cotton. These exports would be close to zero but for the 30 to 35 percent subsidy.

If we go back now to inquire into the effectiveness of the program launched by the Government to counteract our deficit position, we are forced to the conclusion that it will not do the job without drawing yet more on the Treasury.

The foreign sales promotion program will do little to overcome the underlying effects of 25 years of domestic and foreign economic policy. The situation is too far out of adjustment to yield to so superficial a remedy.

The effort to induce other countries to remove their trade restrictions may succeed to a far degree. If it does, it will mean that other countries can afford to lift the barriers. Our price levels being what they are, the lifting of restrictions by other countries may be done quite safely in many instances. We may be sure in any case that no country will lay the restrictions so far away that they cannot reach them and readily pick them up again if it becomes necessary in their view to do so.

How far other countries will shoulder more of the foreign aid burden remains to be seen. Also how greatly tourist expenditures in this country by foreigners may be raised only the future will reveal.

Nothing in the program is aimed at the root of the trouble. This is to be found in the relatively high level of our prices and costs.

Under circumstances similar to this, that is, a deficit position, other countries placed severe restrictions on their imports, resorting in the process to import licenses, exchange controls, import quotas, and other devices.

It is to be noted that these restrictions helped inestimably in bringing those countries out of their predicament. The medicine was good for them. With our help it restored them to vigorous health. Their restrictions did not provoke retaliation among themselves nor from us.

Herein lies a lesson for us. Let us learn it and apply it before it is too late.

Cold War Tactics

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. WALLHAUSER. Mr. Speaker, the recent harsh actions of Premier Khrushchev in Paris have touched off a never-ending series of opinions regarding the reason for them and the possible results.

One of the clearest expositions of the effect on our way of life has recently been written by Roscoe Drummond and was published in the Washington Post under date of Monday, June 6, 1960.

I hope that it will be interesting to my colleagues.

The article follows:

COLD WAR TACTICS—MR. K. ENTERS THE U.S. CAMPAIGN

(By Roscoe Drummond)

The shape of the cold war which Premier Khrushchev intends to wage during the next 6 to 9 months is becoming clearer.

Thus far Mr. K. has been making it pretty evident that while he will continue to use provocative and violent language, he intends to refrain from provocative and violent actions. The tactic could change, but from everything which Mr. Khrushchev has said and done since Paris, it looks like the shape of things to come.

The forms which this tactic will take will almost certainly be these:

Premier Khrushchev is virtually breaking off diplomatic relations with the United States as long as President Eisenhower is in the White House.

He will likely take no overt step—like a separate peace treaty with East Germany—but he will permit no agreement in any East-West negotiations now in progress. Illustration: In the nuclear test ban talks at Geneva the Soviets have just pulled back their announced willingness to undertake joint research with the United States on better methods of underground detection.

In his long, discursive cable to Senators Lyndon Johnson and William Fulbright, Speaker Sam Rayburn and Adlai Stevenson, Mr. K. showed how eager he is to address the American people while intent upon keeping Mr. Eisenhower from speaking to the Soviet people.

The Khrushchev cable to the four Democratic leaders, who had sent to the President an expression of their support during the attempted summit casts fresh light on why the Soviets refused to negotiate in Paris. It suggests very clearly:

That Mr. Khrushchev concluded that President Eisenhower and General de Gaulle were not going to give him what he wanted at the summit.

That it was, therefore, better to have no negotiations than to fail to get what he hoped through negotiation.

That his next hope that the new administration in Washington, to be elected this fall, will be more responsive to Soviet views of fair settlements and that to Mr. Khrushchev a Democratic President would be more to his liking.

Mr. Khrushchev's telegram is a bald intervention in American domestic politics. He is obviously seeking to pin the label of "aggressor" on President Eisenhower. He

suggests that prominent political figures in the United States will agree with him and these remarks cannot mean other than that the Kremlin believes that any alternative to the Eisenhower-Nixon administration would be an improvement from its standpoint.

I believe that few Americans will attach any weight to Mr. Khrushchev's advice on selecting the next President of the United States. American voters would have no reason whatsoever to pay any attention to a Khrushchev attack or to a Khrushchev endorsement, direct or implied, of either nominee.

Mr. Khrushchev is many things, but he is not a reliable political adviser to the American people.

As to the Soviet pattern for the cold war, making it colder in words but not in overt acts, the real danger is that Communist China will use this interlude to mount some new military thrust into Laos, Vietnam, India, or Formosa.

The Southeast Asia Treaty Organization foreign ministers, meeting in Washington last week, all say this is the threat which poses an immediate peril. Fortunately the countries directly concerned and the United States are alerted. To counter this danger it will take the same quality of firmness and courage with John Foster Dulles showed in refusing to see American forces pushed off Quemoy and Matsu in 1958.

Repeal of Silver Purchase Laws of 1934, 1939, and 1946

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Wednesday, June 8, 1960

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by 62 members of the Economists' National Committee on Monetary Policy, with the signers' names and addresses, urging support for S. 3410, which I introduced on behalf of the junior Senator from Rhode Island [Mr. PASTORE], the senior Senator from Connecticut [Mr. BUSH], the junior Senator from Connecticut [Mr. DODD], and myself, and also the House companion bill introduced by Representative HIESTAND, of California.

This statement in support of S. 3410 and H.R. 11744 will, I know, be of interest to the Members of the Senate.

There being no objection, the statement and signature and addresses were ordered to be printed in the RECORD, as follows:

SUPPORT URGED FOR HIESTAND BILL (H.R. 11744) AND THE GREEN, PASTORE, BUSH, AND DODD BILL (S. 3410) TO REPEAL SILVER PURCHASE LAWS OF 1934, 1939, AND 1946

A STATEMENT BY 62 MEMBERS

The Hiestand bill, introduced on April 13, and the Green, Pastore, Bush, and Dodd bill, introduced on April 25 by Senator GREEN in behalf of himself and three associates, both of which provide for repeal of the silver purchase laws of 1934, 1939, and 1946, should be enacted because those three silver-purchase, silver-subsidy laws were not, and are not, defensible from the point of view of a good monetary system.

Fortunately, some of the provisions of those laws have not been enforced for the reason that such action would have been impracticable as well as unwise.

Silver as needed for subsidiary coinage purposes should be purchased by the U.S. Treasury at the lowest possible prices in free markets in response to demands for such coins as measured by offerings of other types of money or deposit currency in exchange.

Cyrus Eaton, Chairman of the Board of the Chesapeake & Ohio Railway, Delivers Significant Speech to Company Stockholders

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 8, 1960

Mr. RANDOLPH. Mr. President, recently Cyrus Eaton, chairman of the board of the Chesapeake & Ohio Railway, which is a major carrier in West Virginia, delivered a significant and provocative address to approximately 2,400 stockholders of that company who attended a meeting at Williamsburg, Va., marking the 175th anniversary of the founding of the C. & O. by George Washington.

Mr. Eaton's April 28, 1960, speech on that occasion provides a clear-cut expression of his views as a dedicated capitalist, both from the viewpoint of theory and practice, and deals with some of our important economic problems.

Mr. President, a speech of the nature delivered by Mr. Eaton merits our study and consideration, and, therefore, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from his speech.

There being no objection, excerpts from Mr. Eaton's speech were ordered printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY CYRUS EATON, CHAIRMAN OF THE BOARD, CHESAPEAKE & OHIO RAILWAY, AT MEETING MARKING 175th ANNIVERSARY OF FOUNDING OF C. & O. BY GEORGE WASHINGTON, COLLEGE OF WILLIAM AND MARY, WILLIAMSBURG, VA., THURSDAY, APRIL 28, 1960

Fellow stockholders, we can all take great satisfaction that George Washington, the founder and first president of the Chesapeake & Ohio Railway's predecessor company, excelled as a sound and successful businessman, as well as a superlative statesman.

Washington was a capitalist, both in theory and in practice. In 1785, when our predecessor company was chartered, he opened its stock subscription books at $200 a share. The enterprise prospered, so that the stock was selling for $400 a share within a few years.

A question of paramount importance to all of my fellow stockholders today is, I am sure, can we ever again have our stock selling for $400 a share? My answer is, If all

the railroads of America could be emancipated from the bondage of Federal Government regulations, and really be permitted to practice free enterprise, I am certain we could pursue policies that would again bring our stock to the $400 level.

Our railroad has done well, it is true, because of the extraordinary dedication and devotion of our entire organization. The C. & O. probably has the most continuous record of success of any railroad in the world. But we can do infinitely better if the Government wraps are removed. You, of course, appreciate that this is a family party, where one can speak with complete frankness.

Last week I devoted a day in Toledo, Ohio, to inspecting our modern docks and examining our matchless new coal loading facilities. In Toledo we, in fact, have the most modern and most efficient coal docks in the world. We can put 300 cars of coal into a 20,000-ton ship in less than 4 hours. I am vastly impressed with what the Toledo installation represents in human intelligence, skill and accomplishment.

From Toledo I went to Detroit for a day at the Ford Motor Co. I spent several hours in the Henry Ford Museum, a building that covers 8 acres, all under one roof. The museum displays models of all forms of transportation from the earliest times until now, and also exhibits replicas of material progress in many other fields of industry and science.

My visit to the museum was made in company with distinguished representatives of our Federal Government. All of us became acutely conscious of the vast progress that has been made from the days of the ox-drawn covered wagon to the miracles of modern-day transportation.

The system devised by our wise Founding Fathers was appropriate for the time when the Federal Government played only a small part in the affairs of the Nation, and when the individual States held most of the authority and made most of the decisions. In recent years, the power and size of the Federal Government have increased far beyond the point contemplated by the Founding Fathers. Let me just cite an example or two of outworn features of our Government.

A Congressman faced with a primary and a final election every 2 years has, in effect, an election every year. With only 2 years between these congressional contests, as compared with 4 years between presidential elections, frequent conflict is bound to arise between the legislative and executive branches of government. Meanwhile, we are forced to witness the biennial spectacle of candidates from the same party fighting each other in the primaries, and furnishing fuel to the opposition by denouncing each other in undignified fashion. I submit that national elections should be held at 4-, or perhaps even 6-year intervals, and that all Federal elective offices should be filled at the same time.

Let me give you another illustration that seriously affects our railroad industry. In recent years a total of 75 so-called independent governmental agencies have been created in Washington. The men who run these bureaus are not responsible to either the executive or legislative branches of the Government. The occupants of these offices are human, so they are constantly seeking an extension of their powers. Well-meaning though they are, they consume endless time in efforts to interpret statutes. They feel that their main task is to crib, cabin and confine American industry and finance, and all of their ramifications. The railroad industry is the most completely regulated. Management is not permitted to use, on behalf of stockholders, the imagination and drive that are essential to success in the capitalistic system. One of the weaknesses of our Government that demands sweeping changes is the vast system of bureaucracy represented by these Federal agencies.

I appeal to you stockholders to take a personal interest in these political problems. The main buttress of free enterprise and the capitalistic system is the stockholder. If all stockholders of all companies would speak up at one time on a given subject, their voices would have a far-reaching effect on the politicians. In my economic philosophy, I believe every man and woman should be a stockholder in some corporation. I should like to see all men and women who work for companies have a personal stake in the ownership of those companies. This would bring labor and labor leadership into partnership with the management of corporations, big and small, and the combined influence would be irresistible.

We urgently need a revival of the spirit of George Washington, both as applied to business and to government. We urgently need a new constitutional convention to bring our Federal Government up to date and put it in harmony with the marvelous progress of science, business, industry and finance. The Chesapeake & Ohio Railway, I may add, would be proud to extend the superb facilities of our Greenbrier Hotel for such a constitutional convention.

We have neglected George Washington's example and advice. The Father of our Country warned us against entangling alliances. He reiterated, again and again, that we should never let our foreign policies be influenced by prejudices against any other nation. We have flagrantly disregarded these two pieces of sound advice. We are now inextricably entangled with one third of the nations of the world. We are angling for alliances with another third through a lavish foreign aid program. Finally, we are permitting prejudice to lead us into bitter wrangling with the remaining third. As Walter Lippmann wrote a few days ago, the ghost writers of the State Department and the Defense Department cannot compose a letter or issue a statement concerning any part of the Communist world without employing vulgar and opprobrious epithets.

These policies that flout the advice of George Washington are burying us under a crushing burden of taxation. If they are allowed to go to the length of flaring into open war, our people will be annihilated and everything that industry and science have created will be utterly destroyed. If the wise man who founded this transportation system and started his country on the road to greatness were alive today, he would move vigorously to restore us to common sense and wisdom.

For my peroration, may I borrow a couple of lines from Wordsworth. "Washington! thou shouldst be living at this hour: America hath need of thee."

Graphic Arts Awards

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1960

Mr. DULSKI. Mr. Speaker, each year the Buffalo Newspaper Guild, Local 26, in Buffalo, N.Y., sponsors a competition whereby staff members enter their respective work which was published in their newspaper during the year.

More than 300 entries were submitted by staff members of four Niagara Frontier daily newspapers. The winners were selected by newsmen in Detroit, Pittsburgh, and Toronto.

Buffalo Evening News staff members won all five awards in the graphic arts—three in photography, and one each for cartooning and illustration. Its reporters and editors took both sports writing prizes and also scored in the editorial writing, individual reporting, woman's page and headline writing categories.

The Buffalo Evening News winners were:

Millard H. Browne, chief editorial writer of the News, who won the prize for the best editorial with an inspiring observation directed toward the "Class of 1959."

Pulitzer Prize winning cartoonist, Bruce Shanks, scored again with a cartoon that asked what Premier Khrushchev had in his other hand on the occasion of his American visit last year.

For his analysis and description of the uproar attending the Buffalo reassessment job, Ernie Gross, a News city hall reporter, carried off the prize for the best individual reporting.

A heading on a story about the button industry's woe—"Buttons All at Loose Ends as Zippers Pull to the Top"—gained the best headline awards for Elwood M. Wardlow, assistant copy desk chief.

Jean Reeves Allan won the prize for the best woman's page writing, with three interviews with home economists at a convention.

A stunning story about people who drive in the classic 500-mile Memorial Day race at Indianapolis won Jack Horrigan, sportswriter, the accolade for the top sports feature.

Dick Johnston's piece about a preseason clash between the world champion Montreal Canadiens hockey team and the Buffalo Bisons won the sports news story award.

A warm pen-and-ink sketch of St. Bonaventure University's late Reverend Thomas Plassman to accompany a feature story about the famous "Father Tom" won John A. Sunley this year's illustrator's award.

The Buffalo Courier-Express had three winners—one in feature writing, one in spot news category, and the other in interpretive writing. They are:

Richard Hirsch, who won his award in feature writing for his weekly column "Offhand," which has appeared in the Sunday Courier-Express for more than 2 years. This is the second award he has won for his column. He also won another award last year for a series, and a fourth award as well as the Walter O. Bingham plaque in 1956 for journalistic achievement.

George Wyatt won his award in the spot news category for an interview of a Massachusetts resident who was kidnaped in his car and threatened with death until he escaped in Amherst. He was cited for presenting the interview in "an interesting and dramatic manner."

William Folger, a previous winner in 1956, won his award in interpretative writing for his weekly column on the church page. His column also won him a Freedom Foundation award earlier this year.

Three photography awards went to the following News staffers:

Robert L. Smith's shadowy dramatic picture of physicians at Our Lady of Victory Hospital trying to revive an asphyxiation victim won the spot news picture award.

Merrill D. Matthews scored in the feature picture category with a Thanksgiving picture showing a small boy trying to hold down a large turkey.

Two speeding girls racing to the finish wire in the Erie County Junior Olympics gave William Dyviniak the honors in the sports picture department.

One winner will be selected from all these categories for the 1959 Walter A. Bingham Memorial Award, a prize honoring a late Buffalo Evening News photographer.

The U–2, a New Kind of Cross

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. BAKER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include a very fine address on the summit conference delivered a few days ago by a distinguished American, Lt. George W. Lee, of Memphis, Tenn.:

THE U–2, A NEW KIND OF CROSS
(By George W. Lee)

History records as the most dramatic crucifixion, the Saviour on a rugged cross, it was a supreme effort to erase from the minds of men through physical death: the image of one who had come to bring peace and brotherhood to the world, but the effort failed when Jesus of Nazareth rose again.

Today history writes a new story of the attempted crucifixion of a man on the wings of an airplane who had come to lessen the tension and establish good will among the nations of the earth: but it too failed, when President Eisenhower rose from the ashes of the summit conference to a hero's acclaim in Portugal, echoes of that tumultuous acclaim traveled with the drift of the wind to Washington, to London, to Moscow and then back to Gettysburg where once another President rose on a gusty afternoon darkened by fierce civil strife and called to a divided nation to rise and shape itself into the proudest story of time.

Wiser men than I hold myself to be had long ago predicted the failure of the summit conference. In the first place the four heads of state represent about half of the population of the world. If they had had a happy conference there still would have been the question of what to do about China, of what to do about Africa, of what to do about India. They represent forces that hang heavier in the air than the U–2 plane incident, over the air of Russia.

A study of current history might reveal the motive that caused why the rotund, barrel-shaped, waving Khrushchev to wreck the summit conference. Hitler was the last of a long line of dictators who dreamed of conquering the geographical boundaries of the world; he harnessed science to the chariot of destruction and tried to baptize the last spark of freedom in rivers of blood. But Hitler's death opened the door to a cold age in which dictators no longer dreamed of conquering the geographical boundaries of the world, but rather the conquest of the minds of men; thus Khrushchev with the tremendous firepower of Communist propaganda aimed at the conquest of the hearts of all created mankind, as a prelude to the final conquest of world's boundaries against which the marshaled forces of capitalism could not prevail.

So Mr. Khrushchev set out on a good will mission posing as the 20th century prince. He visited country after country and crowds proclaimed him. He was making great headway in developing the yellow and black worlds as well as the white Christian West into the Bolshevik orbit. And then something happened; President Eisenhower moved forward into the breach. It was at a time when world's resentment of America was at its height that President Eisenhower set out on a world's tour to demonstrate the strength of democratic idealism and attitudes to a neutral world of more than a billion people. In cities where only thousands had proclaimed Khrushchev, millions proclaimed Ike. No figure in world's history had been followed by mankind with greater devotion. At the end of his triumphal tour he had almost neutralized world suspicion of our aims into the bright sunshine of a democratic tomorrow; more than that he had almost pushed Khrushchev and his dream of grandeur down the runways to oblivion. So Mr. Khrushchev destroyed the summit conference in a vain effort to destroy the magic name of Eisenhower and erase from the minds of men the Eisenhower image.

President Eisenhower reinforced and strengthened the American tradition by refusing to bow to Khrushchev. His crusade all over the globe for a new world of freedom and peace has not been sidetracked by the brass effrontery, the unmitigated gall of Nikita Khrushchev. The world will long remember the way in which our President met Mr. Khrushchev's bruising words and unkind speech with such admirable poise and tempered words. While Khrushchev was trying to exploit the plane episode in a harmful manner and making preposterous demands, Ike was trying to save the hopes that millions of people had in this summit meeting by turning the right cheek: by offering to stop spy flying over Russia and by challenging Khrushchev to two-way talks: when Mr. President stated that we don't want another Pearl Harbor, 100 million American voices rise in unison with a cry, "God bless Ike."

Other Presidents have done good things in the past, but Eisenhower has done a little bit more. Roosevelt boasted of his great social welfare program. When Ike came on the scene he extended social security and old-age pension to domestic and farm workers and covered 10 million additional people. The Democrats talk about job opportunities under Roosevelt but Eisenhower has done even there a little bit more. Nearly every American who wants a job today has one. There are more people at work in the United States than ever before in our history. The American Negro and white worker are making $12 a week more than they ever made before. The annual income of the American Negro today is $15 billion, this more than the yearly income of the whole population of the Dominion of Canada.

The Democrats talk about Mr. Truman's civil rights program, but in this field Mr. Eisenhower has done a little bit more. When the President took office 40 percent of the Army all-Negro units were still intact; 75 percent of the Negroes in the Navy were servants in the segregated messmen's branch. Today there is not a single all-Negro unit in the Army. Mr. Truman talked about the equality of man under God, but Mr. Eisenhower did a little bit more than talk. The very Capital in which Mr. Truman lived was one of the most segregated cities in the world, but Mr. Eisenhower, like Jesus driving the merchants and the moneychangers from the temple of God, drove segregation from the temple of freedom.

The Democrats point to the Negro leaders Mr. Truman and Mr. Roosevelt appointed to office which was Governor or judge of the Virgin Islands and a few advisers to somebody, but Mr. Eisenhower has done a little bit more. He has appointed 300 Negroes to top positions. Among them are, Chairman of the U.S. Parole Board, a full-fledged Presidential secretary and an Assistant Secretary of Labor. The Democrats talk about Mr. Truman's appointment of an integrated committee to study the educational opportunities in America and make recommendations for change but Mr. Eisenhower did a little bit more. He plucked education out of the heavens and put it in the reach of the poor and today 300,000 Negro children are the beneficiaries.

The Democrats say that Mr. Truman made it possible for Negroes to have a sandwich in the dining car behind the curtain, but Mr. Eisenhower went a little bit further. He made it possible for the Negro to have a meal in the dining car with the curtains down. The Democrats claim to be a friend of the poor man, yet they sent millions of them to die on foreign battlefields. Mr. Eisenhower proved to be a little better friend. He went to the battlefield and brought back the soldiers that Mr. Truman sent to die in an undeclared war.

The Democrats claim that the Negro's progress in freedom can be best served under them. Yet, their party is split down the middle on freedom and almost a hundred Senators and Congressmen—all Democrats—signed a manifesto against extending opportunity to the Negro American. But Eisenhower has done a little bit more. He has signed a declaration on equality and dignity for all people whatever their racial origin. While the Democrats struggle to retain prejudice in America as a motive for action Eisenhower seeks to destroy prejudice with the full knowledge that its existence threatens the destruction of America.

Today we are showing great concern over Russian boasted conquest of outer space but if it is balanced by a purposeful exploration of inner space we will achieve the purpose of history, a world of free men living together in peace and brotherhood.

What won the last World War?

A Hurricane of Commonsense

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Wednesday, June 8, 1960

Mr. LONG of Hawaii. Mr. President, for the opening of the Moral Re-Armament Assemblies at Caux, Switzerland and Mackinac Island, Mich., this month, Dr. Frank N. D. Buchman prepared an address entitled "A Hurricane of Commonsense." Because of the important message which Dr. Buchman conveys in his address, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

Without objection the address was ordered to be printed in the RECORD, as follows:

A HURRICANE OF COMMONSENSE

(By Dr. Frank N. D. Buchman)

There is a hurricane of commonsense sweeping through the world. "A Hurricane of Commonsense"—that was the headline in a newspaper read by the leaders of Washington. It refers to the manifesto Ideology and coexistence which in the last six months has gone to 73 million homes throughout the United States, Canada, Scandinavia, Germany, Italy, France, Great Britain, the Netherlands, Greece, and Turkey, as well as India, South Africa, South America, Australia, and Japan. It has already been translated into 24 different languages, and will be read by the millions. It puts squarely to the modern world the choice—Moral Re-Armament or communism.

My old friend General Guisan, wartime commander in chief of the armies of Switzerland, wrote the foreword to the Swiss edition. In it he said, "On the ideological plane neutrality can be dangerous, for refusal to fight for what is right plays the enemy's game. The training center at Caux is a unique instrument that has changed the conduct of nations. I long that our whole people should face realistically the forces which confront each other today, that we draw from our traditions a relentless determination to safeguard at all costs the freedoms we inherit."

This was the last public statement General Guisan made. When he died 300,000 citizens of Switzerland stood in silent tribute to the man who was regarded as the savior of his nation. His widow wrote to me, "General Guisan was gripped by the idea and the might of Moral Re-Armament. In the evening of his life it was a great girder of support to him."

MIGHTY WIND OF HOPE

Moral Re-Armament is a hurricane of commonsense sweeping irresistibly through the heart of nations. It is smashing down the barriers between nations and races, dispersing the fogs of hate that threaten humanity and bringing a mighty wind of hope to the millions of the earth.

Hoffnung—Hope—is the name of the play God put in the mind of a miner from the Ruhr. He is a worker at the coalface. He had never thought of writing a play. He changed. He found an answer to division in his home, his nation, and the world. Chancellor Adenauer heard of this play and sent for this Ruhr miner and his friends. He asked them to go to Britain and France to prepare the way for his own visits to those countries. "Many of us Germans," he said, "do not realize how deep are the wounds in other countries which were caused by what we did through having the wrong ideology." In an exclusive article in the New York Journal-American headlined "Adenauer Calls MRA World's Hope", the Chancellor said, "A nation with an ideology is always on the offensive. A nation without an ideology is self-satisfied and dead."

In Britain, Hoffnung was like a hurricane. It shifted the prejudices of years. In the spirit of Moral Re-Armament men like James Coltart, executive of the British press and television, took inspired and fearless action to prepare for Chancellor Adenauer's visit. His time in Britain was hailed as a triumph. Back in Bonn the Chancellor at a meeting of the Christian Democratic Party referred to the mistrust between Britain and Germany which had been swept aside, and said, "We have to thank Moral Re-Armament for that."

In Paris, French audiences stood and cheered. Some were in tears as the German miners sang the Marseillaise in French.

There is a shrine at Mont Valérien where during the occupation 4,500 Frenchmen of the resistance met their death. To Mont Valérien went those Ruhr miners. They were escorted by the wife of the General at the head of the French nation's defense and the niece of President de Gaulle. They were the first Germans to go there in 15 years. They gave news of an idea powerful enough to unite nations separated by generations of hate. They expressed their sorrow for the past and their resolve to lay down their lives to rebuild Europe and the world. The columns of Figaro gave the news of this event to the French nation.

CATHOLIC COLLEGES RESPOND

Vaterland, leading Swiss Catholic newspaper, reported the response to the miners' play in the monastery schools of central Switzerland under the headline, "Catholic Colleges Hail MRA Play." Vaterland reported Rektor Scherrer of Schwyz as saying, "We can all subscribe to the principles of MRA. To recognize absolutely the dominion of God, or to bow down under the domination of human tyrants, that is the alternative which should unite us all whether we are Catholics, Christians, or non-Christians." Vaterland also reported how Father Rektor Thommen of Kollegium Niklaus von der Flue in Sarnen declared, "Because you live what you believe, we can wholeheartedly accept this ideology."

In Luxembourg where the German miners were Government guests, the Prime Minister, Pierre Werner, said, "The moral and spiritual values on which your actions are based are the ideology that can save the Christian West from its enemy."

The hurricane blew into Kerala and its 16 million inhabitants, the first major state in the world to vote itself in the Communist camp. Night after night vast crowds flocked to hear the evidence of Moral Re-Armament. Mannath Padmanabhan, father of his state, leader of the Hindu majority in Kerala, had found at Caux the secret of uniting with Christians. The governor of the state, the cabinet ministers, trade union leaders, industrial men and students in their hundreds and their thousands came to hear the news of an answer.

COMMUNISM OUSTED IN KERALA

Archbishop Gregorius of Trivandrum said, "History will record our permanent gratitude to Mannath Padmanabhan not only for having ousted the Communist regime in Kerala, but for creating the unity of all the communities following his return from Caux." The governor of the state, Ramakrishna Rao, then said, "All our problems, political, economic, individual, must be solved in the spirit of MRA. It has an essential appeal to every man."

Men changed in Kerala. The leader of 38,000 students made the experiment of listening to the voice of God. He said, "I am going to end impurity in my own life and clean up the student body. It is through moral compromise among the students that communism has gripped us. I see that the choice for India is Moral Re-Armament or communism, and I choose Moral Re-Armament."

Rajmohan Gandhi, grandson of my old friend Mahatma Gandhi whom I met on the first of my nine visits to India in 1915, said, "Without Moral Re-Armament the new government in Kerala might already have fallen. Moral Re-Armament will save India and Asia and the world from Communist take over." When Chou En-lai arrived in India for his conferences with Prime Minister Nehru, the Times of India and the Hindustan Times carried full pages with the double banner headline, "Moral Re-Armament—the Next Step for Communists and Non-Communists Alike."

These pages challenged the two men who today lead 1 billion Asians to find a new way of doing things for the sake of all men everywhere. They said in part "Communism has failed to produce the new type of man—the unselfish man who can develop and run the unselfish society. The ideology of MRA changes people. That is why thousands of former Communists all over the world are fighting the battle of Moral Re-Armament to restore the world on the basis of absolute moral standards." It was a real hurricane, and it was common sense.

IN JAPAN A MASSIVE IMPACT

When Chancellor Adenauer arrived in Tokyo for his state visit, he was welcomed at the airport by his miners from the Ruhr. He spoke to a joint session of the Japanese Diet calling for a moral ideology that could unite East and West and answer Khrushchev's challenge to take over the world. Next day in the Japanese Diet a cabinet minister said, "Chancellor Adenauer proclaimed Moral Re-Armament to Japan."

The miners had come to Japan in response to an invitation from Japan's Prime Minister and other leaders of the country and they were the guests of the Japanese throughout their 6-week visit. A special train was put at their disposal by Governor Sogo of the Japanese National Railways in gratitude for the sanity of the news they brought.

Prime Minister Kishi said, "You are giving a moral backbone to the whole world. I wish to express my gratitude for the massive impact MRA has made on this nation during the past 6 weeks. The reports which I have received from all over Japan have convinced me of the effectiveness of this mission in giving ideological clarity and a moral answer to our people."

ANSWER TO CRISIS

A leader of the Japanese Socialist Party at a crisis point early this year said that Moral Re-Armament has played a key part in healing a fresh split in their ranks and prevented communism from taking over. A leader of the Seinendan, a political organization of 4,300,000 youth, cabled me at Easter saying that MRA had once again won every seat from the Communists at the annual election in spite of the Communists' outpouring of manpower and money in the last 12 months.

A trade union leader tells how, through Moral Re-Armament, the president of one of the great mines of Japan was changed and as a result of his change 3,500 miners who needed 3,000 armed police to keep them from attacking the president went back to work satisfied that their just claims were being met.

RESTORING JAPAN'S DESTINY

At the Miike mine, where workers had fought workers at the pithead, one man had been killed and hundreds injured. The leader of the organized women of the mine said, "You brought us the answer to hate. Without it more would have been killed and injured. MRA is the answer to every injustice and human hate."

And one of the great men of Japan, primarily responsible today for the security of his country, said, "For the first time since the end of the war you have given me hope. Moral Re-Armament is restoring a sense of destiny to a hundred million Japanese people. You are talking straight to us and cleaning us up in homes and politics. You are saying to us what no on else has dared to say."

A movie is going out to the millions which says what needs to be said in a way that the modern man understand, accepts, and follows. It is a full-length Technicolor musical called "The Crowning Experience," which in the words of Arthur Baker, for 21 years chief of the parliamentary staff of the Times of London, is of "indescribable beauty. Its message is so deep that it needs to be seen again and again and yet again. It answers all the hunger and hurts of nations."

THE CROWNING EXPERIENCE

When Spyros Skouras, president of 20th Century Fox, saw this movie, he threw his arms in the air saying, "Fantastic, fantastic, fantastic. This must go to every movie theater throughout the world."

S. S. Vasan, president of the Indian Film Federation, said of it, "A thousand times wonderful. You have shown me not only how to make a film, but how to live a life."

And the leadership of the nations of Africa are clamoring for "The Crowning Experience." They say it will blow like a hurricane through the hearts of the Africans and heal the hating of a continent. Dr. Azikiwe, the man to whom 35 million Nigerians say they largely owe their freedom, says, "I spent many years in America where I was fed with the bread of bitterness. It took me 15 years to find an answer to my spirit of revenge. I found that answer at Caux." He added that "The Crowning Experience" attacks with tact and subtlety the social inequalities that have created wrong ideologies between men and gives definite promise of a cure. And he says, "Moral Re-Armament was the secret of independence for Nigeria."

Jasper Savanhu, first African to be a member of the Federal Government of Rhodesia and Nyasaland, says "The Crowning Experience" must be seen by every African, black and white, this year. He says, "Winning political power will not by itself secure the future of the African. We can throw off the foreign yoke and then find African leaders who live only for personal advantage. Unless leadership is inspired by Moral Re-Armament, there is no future for the people. Moral Re-Armament is the solution to the greed, ambition, selfishness, and competition in high places all over the world."

END OF BLOODSHED IN AFRICA

Leaders for the 40 million French-speaking Africans eagerly demand "The Crownin Experience" for their people. They say its message could bring the bloodshed in Africa to an end. Gabriel Marcel, the world-famous French writer and philosopher, said after seeing it and talking with leaders from Africa, "I came to Caux in despair. Here I have found a transfusion of hope. A deep confidence flowed back into my being."

White and black leadership in South Africa want their Cabinet and the whole country to see this movie. They say it holds the secret that alone can cure the racial divisions that are tearing South Africa apart, dividing her from other countries, and undermining her economic life.

LITTLE ROCK—GOD'S WAY

Mrs. Daisy Bates, Negro leader of Little Rock, Ark,, known all over the world for the part she played in the battle with Governor Faubus over racial integration in the schools, saw "The Crowning Experience." She said, "Magnificent. It must go everywhere. It is essential in the South, but MRA is now needed throughout the world. It will soon catch the imagination of the whole world. Nothing else on the scene can do it."

Mrs. Bates, and her husband, as publisher of a newspaper, came to our training center in Mackinac Island, Mich. There Mr. Bates said, "For the first time in my life I have lost my hatred of the white man." On her return to Little Rock, Mrs. Bates invited some of the leading citizens of her State, white people who had also been to Mackinac, to dinner in her home. They came—the first time in the history of Arkansas that such a dinner-party had been possible. After dinner, Mrs. Bates suggested a time of quiet in which together they should seek God's way of ending the deadlock. The thought came that Mrs. Bates should visit Governor Faubus, the man who for years had been pictured to the world as her bitterest enemy. She trembled, but she went. She said later, "The Governor could not have received me more graciously if I had been the President." They shook hands, and the picture of that handshake went round the world. Governor Faubus had previously said, "Moral Re-Armament is sowing the seeds that will prove to be the salvation of us all."

FIGHT FOR WHAT IS RIGHT

Mrs. Bates told an audience in Washington, "Without Moral Re-Armament it would have been impossible for me to meet Governor Faubus without hate. But I have learned to fight for what is right without hatred. I want Moral Re-Armament for the children of the South and of America. We can see on the horizon a new day." A major American network in its review of 1959 described this handshake as possibly the most significant news event of the year, which could mark the end of a hundred years of civil war in the United States of America.

In the Republics of South America the hurricane is blowing too. Millions read the news of an answer. Millions more hear it over the radio. In one week alone all the main newspapers of Montevideo carried reports of the world work of MRA, and eighteen leading papers of Argentina, Uruguay, and Peru carried 51 articles. A leading editorial in La Prensa, the largest newspaper of Peru, said, "Moral Re-Armament has a unique strength for the ideological battle in the world today. It is an insistent call to all who believe in a supreme creator to confront those who preach atheism. It is a world effort to defeat materialism. The morally rearmed are not an easy prey to materialist indoctrination."

ECONOMIC AID NOT ENOUGH

Eudocio Ravines, one of the great revolutionaries of our time who, trained by Mao Tse-tung, introduced communism to Peru and Chile, met in Moral Re-Armament a superior ideology that changed him. He says, "The basic problems of Latin America are not underdevelopment, but corruption and communism. While our countries welcome economic aid, alone it cannot touch the root problem. Without a moral ideology, it may even aggravate the problem. The best export the United States of America or any nation can send to Latin America is Moral Re-Armament."

THE BATTLE WE CANNOT LOSE

In a long lifetime of experience that has taken me to all parts of the world and brought me in touch with every sort of people, I have never seen a greater hunger and a greater hope than we find today. Man must choose the road of commonsense or he will inevitably take the path of common suicide.

Mr. P. J. Little, the well-known statesman and thinker of Ireland, put the challenge clearly in the Dublin Sunday Press. His article about moral rearmament occupied two central pages. It was headed, "World War III—the war of ideas—the battle we cannot lose."

He said, "The cold war has only to heat up to boiling point for 10 seconds, and civilization will be blasted into eternity. Ideas, not bombs, will determine who wins the battle of ideologies, and on this battle depends the length of time we have left to live and whether our children will ever grow up."

But the far-seers of this century recognize in moral rearmament the certainty of cure. My friend Robert Schuman of France, who has twice written the foreword to the French edition of my published speeches, puts it this way, "moral rearmament is a philosophy of life applied in action that I have seen reaching the millions. It is a worldwide transformation of human society that has already begun."

VOICE TO THE KREMLIN AND WASHINGTON

It needs a hurricane of commonsense to bring men to their senses, restoring the Communist and the non-Communist worlds to sanity and unity before it is too late. That hurricane is sweeping through every nation today, and in the midst of the hurricane the still, small voice of the living God, an unseen but ever-present guide, willing and able to speak to the men of the Kremlin, the men of Washington, to the millions everywhere, leaders and led, who have lost their way and seek to find it.

It is so normal. It is so practical. It is a hurricane. And it is commonsense.

Masonry Speaks

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks, I am including an address delivered by the Honorable Wiley Odell May, most worshipful grand master of Free and Accepted Masons of Tennessee.

It is truly a fine statement of masonry, and regardless of any man's faith I am sure he will gain much by full explanation of what masonry really stands for.

The address follows:

MASONRY SPEAKS

As grand master of Free and Accepted Masons of the great State of Tennessee, I bring you a message of Masonry's rightful place in the history of the past, the present and the future and of our desire to instill in the hearts of Masons a love for the fatherhood of God and the brotherhood of man. This ancient and honorable fraternity, of which each of us is a part, is the largest and oldest group of men in the history of mankind. Although its origin is to a great extent obscure, we do know that a Lodge of Freemasons was established in York, England in the year A.D. 926 and all down through the ages Masonry has stood foremost for the inalienable rights and freedoms of the individual. It has been one of the outstanding contributors to the principles of free government for well over a thousand years. This group of dedicated men must have had divine sanction or we would not have remained intact—grown, and prospered—for such a long period of this world's history.

Each of us can point with justifiable pride to our Masonic heritage. Who among you would be ashamed to walk arm and arm with such men as George Washington, Paul Revere, John Hancock, Thomas Jefferson and on down through the years with such men of vision and greatness as Andrew Jackson, Sam Houston, James K. Polk, John Sevier and many distinguished brethren of our own State.

We are a chosen people, numbering some five million in these United States, who are privileged to meet around an altar with men of every rank and walk of life. Being one in spirit and hope, we can disagree and not bear malice, discuss and not dispute and learn to respect the viewpoint of our fellowman. Where we inquire "What Is Your Need?" not "What Is Your Creed?". We linger here for a brief period and are gone on morrow but while we are here, each should do his part in the warfare against evil, intolerance and ignorance. Long after our bodies have returned to dust and our spirits to God who gave them, this venerable fraternity will continue this battle. This great country was founded on the principles and teachings of our fraternity and it is up

to each of us to guard those principles with every means at our command. It is my earnest belief that the greatest contribution we can make as Masons is to create within ourselves a more diligent faith in God and our form of Democracy. The time has come when we must, with consecrated courage, stand forth for what we believe to be right.

For some time, I have been concerned regarding the truth about ourselves as a fraternity when we have been held up to ridicule, irreverance and critical questioning. I feel it is our duty, and certainly not at variance with the landmarks we have so long adhered to and respected, to answer our enemies. Somewhere along the line we have fallen into a state of complacency. I believe we now have a great decision to make—whether to break forth from this shell or permit ourselves to smother in indifference.

It would ill become our fraternity to engage in name-calling quarrels with any person or group. Indeed, it would nullify everything that we stand for. But the American public and the profane are entitled to know the truth about our teachings and principles as a fraternity. It's time we let Masonry speak.

Have you heard "Freemasonry is a secret society"? This statement is not true. Freemasonry is a society which keeps matters secret. The organization, its officers and its purposes are not secret. Freemasons meet in temples. Many of these are beautiful, prominent buildings in the cities and towns in which they are erected. Men enter and leave these temples openly, not secretly. A number of grand lodges, including our own, publish the names of many of its members in their proceedings. Many lodges issue directories of their membership. Men wear the square and compasses on their lapels. "Who's Who" lists Masonic membership in many of its biographies. Masons appear in public at cornerstone layings and at funerals. These are not the characteristics of a secret society. The vast majority of Masons are proud of being a member of the fraternity. They boast of it, knowing the general public thinks of Freemasonry as an honor, that not everyone can be a Mason and that it is a character building organization of good men. In this country, the Masonic fraternity, whose only objectives are charity and the building of character, counts 5 million men in its membership. It is difficult to understand how such a number, proudly asserting their affiliation, can constitute a secret society.

Another misconception that has gained national publicity in recent years is the claim that Masonry detracts, or is endeavoring to take the place of organized religion. This claim is revolting and repulsive to all of our true brethren. This statement is so untrue and ridiculous (if it were not for the seriousness of the assertion) as to be comical. Freemasonry is not, I repeat, is not a religion—it has no plan of salvation. No grand lodge phases a doctrine, and a religion without a doctrine is not a religion. No Masonic lodge uses any service of divine worship in its ritual or meetings. It is true that each lodge has an altar, places a sacred book upon it, opens and closes their meetings with prayer, possesses an officer called a chaplain and are dedicated to God and the Saints John. In almost every hotel room in America is to be found a Bible—does that make the hotel either a religion, or a church? The Army and Navy have chaplains for every regiment and ship—Does that make the Army and Navy religious, or the ships churches? The American Legion and hundreds of other organizations have chaplains, but no one thinks of them as religious. Our symbols are not religious symbols—our purposes, while virtuous, are not religious. We seek no converts—we profess no doctrine—we have no plan of salvation—we gladly accept men of any and every faith. Freemasonry does indeed inculcate morality, believes in human dignity, encourages charity, practices relief. The family, schools, institutions of higher learning and organizations of a hundred characters are all moral, charitable, humanly helpful—but that does not make them religious. Freemasonry is reverent, charitable and ethical in precept and practice. So are millions of people who are neither Masons nor church members. The only religious affirmation required of a Freemason is that he believes in one God. Freemasonry accepts as members the Christian, the Jew, the Mohammedan, the Parsee or the Buddhist. A man may be a Unitarian, a Baptist, a Spiritualist, a Quaker or a Catholic. Freemasonry accepts him as a man, not as a member of a church. Quakers and Catholics cannot become Freemasons without offending their religion—which fact Masonic authorities will always explain to men of those faiths that apply—but Masonry accepts them if they are good men and wish to join. Ministers are Masons just as Masons are members of churches. A minister of one faith cannot profess a doctrine other than his own—yet he can be a Mason. The fraternity is obviously and definitely not a religion, but only a philosophy of life. With the utmost reverence for all faiths, it is my hope that each of us could have real religion, that is—get it like a Baptist, experience it like a Methodist, know it like a Christian, pay for it like a Presbyterian, stick to it like a Lutheran, simplify it like a Quaker, be as sure of it as a Disciple, work at it like the Salvation Army, practice it like a Christian Scientist, be proud of it as an Episcopalian, as devout as a Catholic, as conscientious as a Jew and enjoy it like a Negro.

Another criticism of our fraternity is that Masonic charity is only for Masons. This is another of those misconceptions that are absolutely untrue. While the charity provided by the local lodges may be largely for Masons, their widows and orphans, the individual Mason participates in a number of other benevolent enterprises under Masonic auspicies which are not limited to Masonic beneficiaries. He can also point out examples of benevolence which his lodge has extended to non-Masonic or community projects. But let us suppose for a moment that Masonic charity is only for its own members. Is that a matter for censure? A father provides a home for his own children, not his neighbors—he clothes and feeds his own family, not another's—a church builds for its own members first. A member of a workingman's group gets into difficulties; his fellowworkers contribute to his necessities. To help, aid and assist those with whom we are closely associated is common practice—it is admirable, not reprehensible. It can be said that the Masonic fraternity, as a group of men, have contributed more time, money and thought, to the relief of the poor and distressed than any other single group in the history of the world. Many of the coordinate bodies of freemasonry have established outstanding charitable foundations or enterprises whose efforts to help the needy or to alleviate suffering are not restricted to those who are Masons or who have Masonic relatives. A few examples will suffice to illustrate this point—the Scottish Rite bodies in both southern and northern jurisdictions have made contributions to education, public health and relief. The southern jurisdiction founded the George Washington University's School of Government with a grant of $1 million and has supplemented it with additional grants and scholarships. Recently it has made substantial grants to the American University in Washington, D.C., and to Baylor University in Texas. The northern jurisdiction provides scholarships for young men and women at the Boston University School of Journalism and Arts of Communication. Proven ability and financial need are the only tests applied to applicants for these scholarships. Both supreme councils maintain a foundation or benevolent fund to help, aid and assist. In the northern jurisdiction the fund is used to promote public health by encouraging research in the field of mental illness. In the southern jurisdiction local bodies support particular charities, two of the most famous being the hospitals for crippled children at Atlanta and Dallas. Each of the local bodies of the Scottish Rite has an almoner who is provided with substantial funds to administer to the needy, without regard to Masonic membership. This longtime contribution of the Scottish Rite to public welfare is never publicized—its extent and importance are rarely known. Thousands of people are helped each year by Scottish Rite almoners.

And in the York Rite, for more than 30 years the Grand Encampment of Knights Templar of the United States, has maintained a large trust fund as an educational foundation, to enable young men and women to defray the cost of a college education by borrowing, on exceedingly liberal terms, a part of their college expenses. More than 1,000 young people are helped annually. They are using approximately a half-million dollars each year. The grand encampment has also set up a foundation which supports research and treatment of diseases and injury to the human eye, in an effort to prevent blindness. This treatment is provided for individuals who are in need regardless of race, creed, sex, age or national origin.

Most widely known, perhaps, is the extensive work of alleviating distress which is carried on in the Shriner's hospitals for crippled children—all Nobles of the Mystic Shrine must be Master Masons—but the 17 hospitals which the Shriners have built and maintain at a tremendous cost are for all children of all colors, all faiths, and either sex. The requirement for entrance into these hospitals is only that they must be crippled and unable to pay for other hospitalization. The Shrine requires no other tests for admission. They maintain these hospitals at an annual cost of $20 million and have accumulated an endowment fund in excess of $200 million. The thousands upon thousands of little children that have been restored to a useful life through the efforts of these Masons and Shriners will ever be a glorious tribute to the proof of the statement that "A man never stood so straight as when he stoqped to help a crippled child.

Then the great charities that are carried on continuously by our own Grand Lodges in all of the 50 States and many of our foreign neighbors add up to such an enormous sum of time, money, and effort that it is almost beyond comprehension.

Freemasonry is justly proud of its contributions to human welfare.

Another complaint often heard is that our fraternity is a political pressure group. It is difficult to say that one false charge against the ancient craft is more ridiculous than another, but no accusation is more unjust than this one. Freemasonry has existed in the United States since 1730 and enough years have passed since our earliest American brethren met in Pennsylvania, to demonstrate the political activities of the fraternity, if such existed. Politics (meaning partisan politics) are strictly forbidden to be discussed in lodges and have been since the publication of Anderson's constitutions in 1723. If Masons were a political group, obviously they would need a cause, an idea, or a program, or platform for which to exert pressure. No one has been able to name such an aim. Freemasons, as a general rule, elect new leadership yearly and each year every one of the grand lodges in the United States publishes its proceedings which contain the annual address of the grand master. In none of these, for any year or anytime in the history of freemasonry in the United States, is there to be found any political

objective, any aim to be obtained by pressure, or any indication of the fraternity's taking part in partisan politics. If freemasonry is a "pressure group," it must have something to press for. It must have a political leader to apply that pressure. Since not the slightest particle of evidence for such activity exists, it is obvious that this charge is nonsense of ignorance. But as individual Masons, we must not let ourselves be brainwashed into complacency and apathy to the extent that we will forget that the price of freedom is eternal vigilance. Let us not as individuals and citizens become tolerant to the extent of stupidity. Let us never gamble on the chance of losing our way of life by the double talk of some of our political aspirants. Let us not forget the Holy Inquisition, Jacque DeMolay, the statements and declarations of some groups that our public school system is their "Public Enemy No. 1," that all people who are not of their faith are in error and error, that's you and I, has no rights, political, spiritual, or civil. You might say—why that could never happen to us. It has happened elsewhere and is there one among you willing to take that chance?

What then is Masonry? If it could answer, I believe it would say: I am rooted in the midst of antiquity and point to God and eternity; I am past, present, and future; I belong to the ages; I circle the globe and stand at the crossroads of the world; I am steeped in tradition and traced in the pages of history; I have rites and words that have beauty, symmetry, and rhythm; I have knowledge, wisdom, and secrets locked in my bosom which I give to men who come to me desiring me in their hearts; I place upon my altars Holy Writ and turn to Deity in prayer; I hold a square and compass in my hands and contemplate a line from earth to heaven; I speculate with all the tools of operative Masons; I translate their use into moral values and spiritual building; I await all free men of lawful age and good report and solicit none; I admit them of their own free will and accord and teach them brotherhood and unity; I make builders of men of those who are willing and give them my tools that they may work; I stoop to raise the fallen brethren and cast out the unworthy; I walk in the way of charity and travel in peace and harmony; I render aid to the poor, the sick, and distressed; I answer the cry of the orphan and sustain the widow and aged; I commit to the earth brethren who travel to that undiscovered country; I ponder at that moment on the ravages of time, as I stand at the door to eternity; I am a way of life that teaches immortality; I raise men from darkness to light; I am Free Masonry.

Thus Masonry speaks. I earnestly pray for your help and cooperation in making these truths known to everyone for—

Someone must mix the mortar
Someone must carry the stone
For neither the man nor the Master
Has ever built alone

In building a roof for the needy
Or the building a house for the king
It is only by working together
That we will ever accomplish a thing.

Payment in Lieu of Taxes

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. JOHNSON of California. Mr. Speaker, I would like to take this opportunity to comment briefly on a bill which has passed the Senate and now is before the House of Representatives, S. 910, which would give local government financial relief when huge tax-exempt Federal installations remove taxpaying property from local assessment rolls.

The mountain counties of California, which I am proud to represent here in Washington, would not receive immediate benefit from this because of the limitations of the bill as drafted, but I support this as a matter of principle.

This is a positive step in the right direction. For nearly two decades I have been active in local, State and Federal Government. During that time I have been aware of the serious tax problems created by tax-exempt Federal properties. The extent of this difficulty can best be understood when one realizes that of California's approximately 100 million acres, the Federal Government is the tax-exempt owner of 46,311,044 acres.

More than 46 percent of the lands of California are not available for financing the costs of local government. Non-Federal owners must bear the total burden, in effect adding nearly $27 million to their own local tax burden in order to pay the bill for the Federal Government.

I believe this legislation is necessary, especially a bill such as this which provides the absolute minimum of emergency relief and calls for a thorough study of the overall relationship of the Federal and local governments. This study not only would bring together and place in the proper focus all the data compiled during the last two decades, but also would give us concrete facts on which to proceed in the future. It would be of inestimable value.

Mr. Speaker, I would like to insert at this point a resolution which has been adopted by the boards of supervisors of two of the counties which I represent, Tehama and Siskiyou Counties:

Whereas the unfair and serious drain on the revenues of California counties, arising out of vast Federal ownership of tax-exempt property, has gone unchecked for many years, and

Whereas the U.S. Senate on May 12, 1960, passed and sent to the House of Representatives S. 910—the payments-in-lieu-of-taxes bill—a modest beginning solution to this great burden on local government, and

Whereas S. 910 would only authorize payments in lieu of taxes to local governments in cases where it has been demonstrated that "Uncle Sam does not play fair": Now, therefore, be it

Resolved by the county of Siskiyou, State of California, That the U.S. House of Representatives is respectfully urged and memorialized to take favorable action on S. 910 in the 2d session of the 86th Congress; and be it further

Resolved, That the county administrator is directed to transmit copies of this resolution to Representative HAROLD T. "BIZZ" JOHNSON, Senator CLAIR ENGLE, to Representative WAYNE ASPINALL, chairman of the House Interior and Insular Affairs Committee, to the National Association of County Officials and to the County Supervisors Association of California.

Dated this 24th day of May 1960.

/s/ W. C. EALY,
Chairman, Siskiyou County Board of Supervisors.

Attest:

RACHAEL N. CORDES,
Clerk, Siskiyou County Board of Supervisors.

Crime, Corrections, and the Community

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. George J. Reed, Chairman, U.S. Board of Parole:

CRIME, CORRECTIONS, AND THE COMMUNITY

(By George J. Reed, Chairman, U.S. Board of Parole)

It is a real privilege to particiapte in this, the Sixth Annual National Institute on Police-Community Relations. I am impressed by the interprofessional approach which you use in this conference. Our Government, our professions, and even our community organiaztions have become so specialized that it is extremely difficult to us to adequately communicate one with the other. This type of conference permits all of us who are interested in the problem of crime and its control and treatment to share ideas and become better informed concerning other related agencies and their progress and problems. In a Republic such as ours conferences such as these are the only method of procedure that assures us of an efficient operation while we retain our individual identity in a democratic society.

The fact that crime is increasing at an alarming rate is no secret to anyone in attendance at this conference today. Seven hundred and eighty-five thousand children will be referred to police and juvenile courts in 1960 according to the Senate subcommittee investigating juvenile delinquency. According to the Federal Bureau of Investigation, the number of crimes known to the police in this country has now risen to almost 3 million. There has been a 23.9 percent increase in known crime during the past 5 years. During 1958 alone, crime increased 7.4 percent while the population was increased only 1.7 percent. In other words, crime has increased five times as fast as population. Law violation continues to be even more a young person's activity. During 1958, arrests of persons aged 18 and over increased only 1 percent while arrests of persons under age 18 increased 10 percent. Can we long afford this unnecessary waste of human resources?

It is difficult to determine the cash value lost each year through crime. Much of the loss is temporary due to efficient police work but a great deal is permanent because of malicious damage and destruction not to mention the loss caused through inconvenience. And, of course, it is impossible to place a cash value on the damages caused through physical violence and mental trauma.

In addition to the losses traceable to the commission of crime, we are also spending astronomical amounts to house and care for inmates. Last year, it cost the Federal taxpayer an average of $3,488 for each prisoner in a Federal institution. There are more than 22,000 prisoners in Federal institutions alone, and there are almost 200,000 prisoners in prisons and reformatories for adults in the various States and localities throughout the country. These do not include the persons in juvenile institutions and the thousands of local jails.

Let us examine the reason for this tremendous upsurge in crime. Some of the most obvious factors in play here, of course, are our national "population explosion" and socioeconomic changes. We hear much about the need for increasing schools,

teachers, and recreational facilities to take care of the rapidly expanding number of children in our country—we must accept the fact that as more people are born and as they leave their parental homes a certain number of them will turn to law violation. The criminal, like the poor, I suppose, will always be with us. What is alarming though, is the fact that our crime rate increase is far greater than our population increase. In 1957, for example, the crime rate was 56.2 percent above the 1950 level. This is compared to a 13-percent increase in population level during the same period of time.

Crime, as I have mentioned, is primarily a phenomenon of the "young adult." The "war babies" of World War II are just beginning to enter that age group and in juvenile and youth institutions we now are seeing the result of the spurt in the number of births which immediately followed the war—and the end is not yet in sight.

Sociologists have been warning us for the past 15 or 20 years of the "cultural lag" here in America. They have told us that the physical sciences have made tremendous strides forward in improving and extending our mechanical and chemical scientific knowledge. At the same time they have pointed with concern to the lack of progress in the social sciences. We simply have not developed or made use of human engineers in the science of human behavior fast enough to keep pace with our progress in these other fields.

Let us examine our community attitudes of the adults as well as our young people today. What is happening to us that causes young people, in increasing numbers, to flout our laws and mores? We may find a clue to some of the answers in a very challenging article by William Attwood in the March 29, 1960, issue of Look magazine entitled "The Age of Payola." This article is a summation of a survey conducted by 12 Look magazine reporters who traveled over the country gathering expressions of attitude toward payola and other forms of cheating. The author, in his article, comments that "Payola is just one phase of an epidemic of immorality in this supposedly God-fearing Nation." Our youngsters, as they observe their peers, are being infected with a disease which tells them that anything is all right so long as they can get away with it. The fashion today is to go along with the crowd. The greatest possible insult is to be labeled a "square." A noted clergyman recently said, "Most of us have lost our sense of importance and personal value. If a man stands up against the crowd for something he thinks is right, we say he should see a psychiatrist." We seem to be developing a philosophy of personal whim without the regard of rights and convenience of our neighbors. A New Jersey judge recently stated that "youth no longer has a sense of responsibility. They just don't have an awareness toward their community, toward the fellow in the other car, toward the girl in their car, toward anyone but themselves."

I know that the favorite hobby of every generation is to condemn and criticize the generation which follows. We might better take a real close look at the attitude and practices of our own generation. I know there is always the raising of a human cry for "old-fashioned morality" as emphasized by a stern but kindly father dispensing not only food but wisdom at the head of the table. It is the accepted pattern today to be guided by the moral standard of the group or the gang rather than the standards of the father or a father figure. Personally, I feel, however, that the standards of the juvenile or youth group without proper motivation or guidance tend to deteriorate toward the lowest common denominator and that perhaps we have no satisfactory substitute for an understanding but firm concept of a final authority. In the end the community must leave to the church, the home and the character-building agencies the responsibility for educating and interpreting proper public and private morals for our people.

We have now stated some of the problems and have inquired into a cause or two as to why these problems exist. It behooves us now to take a good look at our responsibility in meeting these problems. We are people engaged in the profession of corrections. We are concerned with those individuals who violate our rules or regulations. As such, I feel we cannot solve the ills of society by ourselves. We can do only our small part in reducing the amount of crime committed. The fact is, that the community is producing more criminals than the correctional agencies are geared to accommodate. We are engaged in law enforcement, agencies of social welfare, correctional institutions, probation, parole, and so forth. What must we in the correctional and law-enforcement field do and what must we do quickly? As I see it there are a number of important tasks. First is the obvious one—we must have not only more staff but better trained personnel. As the greater number of law violators come before us we must have a correspondingly greater number of professionally trained people to deal with them. In corrections, as in education, to accomplish this goal we must rapidly expand our training facilities in the schools and elsewhere and we must pay higher salaries to attract and keep the persons who are most effective in their work. The next point is a bit less obvious but may be just as important. We must coordinate our services to eliminate overlapping and wasted motion. How often do we see juvenile police divisions who do not cooperate with, or perhaps who do not know of the existence of, social agencies in their city to whom youngsters might be referred? How often do we see one family being cared for by the staffs of three or four related agencies? How often do we see a person in trouble being shunted from one office to another because there is no central coordination bureau? It is time we leave off thinking of the best interest of our own particular little agency and begin to look at it as a segment of a total treatment program in a given area. We must subordinate our personal pride and jealousy else we shall all fail. I find governments over the country building correctional institutions based on the populations over the past year or two. There is no 10-year plan, no estimate of what will be needed in the years to come. There is little or no assumption that institutional populations will continue to increase. How much better and how much cheaper it would be to delay construction until a study could be made of the entire correctional system to determine if the use of probation, the reduction of detention time awaiting trial or the use of probation and parole might be modified and strengthened to cause a much smaller inmate population. By these and other means we must direct every welfare and correctional dollar we have toward the greatest good.

Now we have stated some of our problems, possible causes for the existence of the problems and considered a suggestion or two by way of solution. If we are able to attract and maintain better staffs and if we are able to eliminate waste by coordination what then is the goal and purpose of our combined agencies? Society has created correctional agencies as a means of self-protection and betterment. To accomplish this it has provided machinery for specialized treatment of those individuals among us who, by their tendency toward crime, show that they are in need of some form of specialized handling. The police, prosecuting officials and the courts deal with the individuals before the prosecution, and the institutional people and we parole people engage in individual treatment after the prosecution. It is important that all of us possess a similar philosophy or goal as we in our turn influence the behavior and attitude of the law violator. Any correctional agency that undertakes to understand human behavior is not automatically to be labelled as "soft on criminals." Sometimes the best type of treatment program for an individual offender requires a show of force and discipline. When it is needed it should be available and used to require the conformity to program and custody of the inmate, who will not or cannot understand any other approach. As a beginning, it is important that detection of crime is swift and sure. The greatest deterrent to future crime is the certain knowledge that wrongdoing will be found out and will be firmly dealt with. We do not seek retribution by way of a "pound of flesh" but we do seek to prove that the law-abiding citizenry is more effective and controlling than the nonlaw-abiding element. The policeman on the beat, like the rest of us, must carry out the instructions contained in the criminal codes and by the statutes which created us which set forth our rules and duties. There is latitude for individual thought and discretion even within our regulatory framework. There are frequent opportunities for all of us to exercise our own judgments during our daily routine. Some may think that a policeman on the street either makes arrests or does not make arrests solely upon the basis of the evidence presented to him. I know, however, that he often must decide for himself whether an arrest is indicated or not. I know that there are several times when a person who is a stickler for details may issue many summonses but who instead, and because he knows the community wants him to do so, handles the situation by persuasion or warning. I am reminded of two very different sort of policemen portrayed in a couple of old, old movies. One was the character who had memorized all the city ordinances and who, for example, carried a tape measure with him so he could be assured that all the shopkeepers on his beat had their awnings well above the minimum height called for in the ordinances and who delighted in hauling as many people as possible into the precinct station after discovering minor infractions. The other policeman, I recall, patrolled Chinatown in San Francisco. He was suddenly confronted one day by two elderly and not very bright Chinese struggling violently over possession of a slide trombone. Although language difficulties prevented him from getting at the heart of the matter, it was evident by the pushing and pulling that both claimed ownership of the instrument. The wise policeman merely took the trombone from both of them, separated it into two pieces by pulling the sliding part away from the business end of the gadget and handed one part to each of the individuals. Two smiling Chinamen went away happy.

Through the method of training such as you have here in Michigan, police departments throughout our land exercise informed and skilled individual judgment toward the goal of rehabilitation. I wish to mention specifically, in addition to the police training school here at the Michigan State University, the Universities of Minnesota, Northwestern, Wisconsin, and the University of Southern California, who also have excellent police and correctional training schools. There are approxmiately 15 other universities that have established short courses (that is, 3 days to 2 weeks) in the area of specialized police work with juveniles.

Just as the police, courts, and others have their role in working with the individual, we

in the parole field have our responsibility. Actually, the success or failure of a parolee is the final test of the effectiveness of all the other correctional programs which have touched him on his way out to the free community. We see parole working with a percentage of the population in the hope that salvage or control of those inmates will in turn serve to benefit the others. It is the best known system to provide controls over a released prisoner while at the same time offering him the necessary assistance as he attempts to follow through on the results of his institutional training and treatment. It is the best known system, too, by which the ex-prisoner may start repaying the debt to society he has piled up first by the commission of his crime and second by the costly institutional program he has been afforded for many months or years.

How common it is for the general public and the prisoner himself to feel that service in an institution is the method by which the criminal pays his debt to society. Nothing could be further from the truth. The accommodations he receives while incarcerated only magnify his debt. Oh, of course, society may get some measure of revenge against the man as we lock him away from his loved ones and restrict his freedom, but we don't thereby actually receive any payment on his debt. We cannot hope to receive any returns until he takes his place again in the community and begins to contribute something to his fellowman.

While a prisoner is incarcerated we are in effect paying his rent (utilities included), paying for his groceries, clothing him, occasionally defraying the cost of further education, and even paying the salary of his priest or minister. We build a ballfield and gymnasium for him, we provide professional people such as psychiatrist, psychologist, and social workers, and and if he becomes ill or injured he is given first-class medical care. To top all these first-class free services, the recipient enjoys a completely tax-free existence.

It is obvious that paroling authorities should terminate penal incarceration whenever the individual has demonstrated ability to resume his place in his home community. Laws should be sufficiently elastic and parole boards sufficiently able so that release can be effected when the individual reaches the correct psychological period in his term. Release before the prisoner is ready is dangerous not only to himself but to society. Detention for a long period after the individual is capable and willing to live a law-abiding life may generate an understandable bitterness and perhaps a cooling of his desire to live a respectable and law-abiding life.

Parole is a substitution for incarceration. It is a part of the sentence imposed by the court but served outside the prison walls. It provides realistic controls on the individual's behavior while permitting increased opportunity for him to make independent choices, using his own judgment insofar as he is able. All this is accomplished in the environment in which that individual must ultimately adjust. There is nothing artificial in the surroundings of the parolee as there might have been while he was within the institution. Parole is life itself. It is living with his own family and among his neighbors as he did before but this time with the added restraints imposed by the parole board and the supervising parole officer.

The parolee knows that violation of any of the conditions of his release may be grounds for revocation of parole and return to prison. His travel is restricted; he must remain honorably employed if possible; he must support himself and his family to the best of his ability. This latter requirement means that he must now pay his own rent, buy his own groceries, clothe himself and his family, buy his own medicine, and last but not least, he must pay his fair share of the tax burden. He must be a socially acceptable individual who either helps to produce goods or provides a service and who takes his place in the community as a contributor to the common good as well as being a taker. These are the only ways in which he can begin to really pay his cash debt to society.

There is a minority of persons who do not adequately profit from parole and who must be returned as violators. These individuals receive their chance to make good on yet another day. I am happy to report, however, that on the Federal level at least approximately 80 percent of the parolees complete their supervision periods free of behavior problems sufficient to warrant return as a violator. In 5 percent of the remaining cases, the behavior which leads to violation is not criminal behavior but instead is conduct of such character that the Board feels the individual should be returned to an institution before some criminal action does take place. Thus, 80 percent of the Federal parolees do not violate the terms of their release during the remainder of their term under parole supervision.

In summary, I wish to say that despite the soaring crime rate I believe there is cause for optimism. I say we in law enforcement and corrections should be heartened because of the following signs which I have noticed:

1. The unusual population increase occurring right after World War II will not continue to such a great extent and there should follow a leveling off.

2. We are swinging back away from progressive education and all the extreme permissiveness which that trend exercised.

3. Our legislatures and citizens seem to be more and more aware of the need for more and better training of policemen and other correctional personnel.

4. The processes of probation and parole are proving to be effective methods of rehabilitation.

5. Colleges and universities are expanding the number and type of training programs for professional, correctional, and police work.

6. Citizens' action committees on a statewide basis such as sponsored by the National Probation and Parole Association are starting to study the crime problem on the State and local level. Thus, the citizens as well as the administrators are jointly attempting to solve our problems.

7. And this last, I believe, is the most heartening—I feel that community leaders, police, and correctional people alike are beginning to realize that we all must coordinate our programs, join hands and close ranks if we are to be effective in meeting the ever-increasing challenge of crime within an orderly society.

Thank you for this opportunity to be with you today.

Benson's Record

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include a very excellent editorial from the Poughkeepsie New Yorker, which is an outstanding independent publication of the 29th District of New York. This factual review of agricultural problems, in the light of the questionable record of the 86th Congress on the subject, reflects a sound appraisal of the country's present difficulties. The author would undoubtedly be interested in the number of Congressmen who customarily go the limit on public housing on the one hand and high price supports and subsidized agriculture on the other. Such a list would certainly include the ultraliberals in the present Congress.

The editorial referred to reads as follows:

Ezra T. Benson, Secretary of Agriculture, has a right to say: "I told you so."

Benson has been blamed for the debacle which is costing taxpayers over a billion dollars yearly for the storage of surplus farm products. Yet he has striven for 8 years to avoid the very situation in which agriculture now finds itself.

Since 1933, maintenance of high and rigid Government price supports has resulted in losses of more than $15 billion. But Benson's record is clear. He has consistently urged the reduction of high price supports and has said, again and again, that the solution of the farm problem lay in eliminating unnecessary Government controls and interference.

In one of his first statements as Secretary of Agriculture, he said:

"The principles of economic freedom are applicable to farm problems. We seek a minimum of restrictions on farm production and marketing to permit the maxmum of dependence on free market prices as to the best guides to production and consumption. Farmers should not be placed in a position of working for Government bounty rather than producing for a free market."

As time went by, Benson became more and more critical of outmoded programs which were foisted upon him.

"Today's agriculture is far different than the agriculture of 20 years ago," he said. "Yet our price support legislation or some crops is still based upon the Agricultural Act of 1938 and the amendments thereto. This program has been continued so long that some nonfarm groups have a vested interest in prolonging it—in keeping their warehouses filled with Government-owned wheat and other commodities.

Thomas Jefferson once wrote that to continue outmoded institutions make no more sense than requiring a man to wear still the coat that fitted him as a boy.

Surely this applies to agriculture today. For some crops we are still operating under depression and war-bred legislation, only slightly modified two decades after the depression and more than 14 years after the war. It just doesn't make sense."

In April of 1960 Benson told an audience in Salt Lake City:

"The advances this country has made have been the fruit of liberty—our free enterprise system—our American way of life—our God-given freedom of choice. The progress of the future must stem from this same basic blessing.

"Today the scope and variety of governmental operations have become amazingly wide. We are touched by government from before we are born until after we die. Government impinges on our lives every hour of the day and night.

"Most of these governmental activities are helpful in greater or lesser degree. But we must be aware of the price we pay when we place more and more of our lives in the hands of centralized government."

The signs increase that the farm problem will not be solved until the American people—and the Congress—listen to the gospel preached by Ezra Taft Benson, Secretary of Agriculture of the United States of America.

Soviet Intelligence Flights Over Alaska

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. FLOOD. Mr. Speaker, when addressing the House on May 19, 1960, concerning the recent Paris Conference collapse, I spoke of Alaska and about Soviet intelligence flights over it and demanded that these flights be ended.

This address was published in part in the press of Alaska and promptly evoked a response by letter dated May 23 from a resident of that State, which I quote:

I, as one of the persons who has been in a position to observe, while living at Point Barrow and flying there for over 8 years, hauling hunts, flying the Dew Line sites, etc.

Have seen Russian planes a number of times in 1953. They made many trips nearly daily over to Barter Island and returned just north of Cape Tisbourne.

————, at Point Barrow, also has seen them many times close enough for their identification as Russian.

For about the last 2 years their flying has to our knowledge been less.

But during the years before we had our long-range fast aircraft, they definitely photographed all the Dew Line sites, etc., because during the construction period they flew just about daily and returned straight to Russia. I observed them from Tisbourne head to Russia a number of times and knew that they were not our planes.

During the building of our radar site at Cape Tisbourne they even came over and, on several occasions with jet aircraft with their gear down, made passes at the lower field of the first one built.

I have met and asked many Air Force pilots why they never did anything. I was told that they had orders not to fire on them unless attacked by them.

There are a number of respectable pilots and others who can verify all this but I suppose, for some reason not known to us, it has not been publicized. Thought I would pass this on as it makes us up here a bit angry also. They have a lot of Arctic I.G.Y. work on Ice Islands, etc., which are close at times and they do fly frequently close to us. We have seen them while polar bear hunting also. But they have photographed our northern Alaska area several years back without a doubt.

Now, Mr. Speaker, what could be clearer than this letter from an "on the scene" observer of Soviet flights over Alaska? It confirms the revelations of travelers returning from Alaska where they had opportunities to talk with residents. Why is it that such information as this has not been told to the people of the United States? Why is it that officials of our Government have not used Soviet flights over Alaska to counter the browbeating attacks of Premier Khrushchev? Why the silence of our press?

To say the least, the situation is untenable and should be met. To this, Mr. Speaker, I repeat what I said on May 19 to the House. Our Government should call for the arrest and deportation of Soviet spies, who form a far more extensive intelligence service here than we have in the Soviet Union. For this procedure, we have the recent action of little Switzerland in deporting spies as a precedent.

Meanwhile, Mr. Speaker, the people of the United States will expect the President to issue orders to our Alaska commands to protect our positions there in the same way Premier Khrushchev protects those of the Soviet Union. These orders should include instructions to challenge Soviet planes and to shoot down those which do not comply with orders to land.

The Need for Meaningful Health Care for the Aged

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. ROOSEVELT. Mr. Speaker, the mail which I have received over a period of many months, indicates quite conclusively that there is tremendous national interest in behalf of workable, effective, and meaningful legislation in the area of health care for our senior citizens.

Typical of the interest and concern is the following letter:

LOS ANGELES, CALIF., *May 18, 1960.*
Hon. JAMES ROOSEVELT,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR JIMMY: Referring to our previous correspondence and in further reference to needful amendments to the Social Security Act to insure medical assistance to needy aged, in my opinion, based on personal experience and contact over many years with hundreds of our citizens attempting to live under present provisions of the very helpful legislation, the administration bill would reach none of those whose needs are the greatest.

Most of the proposed legislation would indicate a general belief that assistance on the hospital expense is the paramount need. While this is very necessary, on the other hand, provision for additional funds for medical care, including physician's and nurse's visits to the home, would in many cases avoid prohibitive costs of hospitalization. In our State this cost is now approximately forty dollars per day, second highest in the Nation, which emphasises not only the need but desirability from a cost basis.

In talking with physicians we learn many cases of hospitalization could be avoided, many permanently even in the aged people, providing they could have even a minimum of proper care and medication in the early stages of their disability. Without the assurance of assistance in meeting costs of these early treatments, a great number of these people will gradually deteriorate to a point where hospitalization is obsolutely necessary and a great burden of cost is then shifted to the city, county, and State if not provided for otherwise.

Knowing your great desire to help solve this problem, and realizing you were cosponsor on the Forand bill, I do not hesitate to ask for your very decided and great influence to secure proper legislation.

With kindest personal regards.

Very sincerely,

T. K. BOYER.

A Familiar Ring

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. IRWIN. Mr. Speaker, in this morning's New York Times there was an article describing changes being made in the Cuban educational system. There is a familiar ring about the new system, reminiscent of teaching processes and other so-called educational activities of communistic nations and satellites and of Germany of the thirties. I believe the article will help in the jigsaw puzzle job of evaluating this new nation on our southern threshold. The article:

CASTRO FREED CUBA FROM UNITED STATES IS "CORRECT" ANSWER IN HAVANA—REGIME REWRITES HISTORY TO BOLSTER CAMPAIGN TO INDOCTRINATE YOUTH—TEACHERS TRAINED IN NEW DUTIES

(By R. Hart Phillips)

HAVANA, June 6.—The teacher stood before a third grade class in a Havana public school.

"What did José Marti do?" she asked.

A boy of 8 raised his hand eagerly and the teacher gave him permission to speak. "José Marti freed Cuba from the Spaniards," he said.

"And what did Fidel Castro do?" the teacher asked.

"Fidel freed Cuba from the United States, which seized all our land," the boy said triumphantly.

That was the correct answer. The lesson went on.

UNITED STATES IS ACCUSED

What happened on February 15, 1898?

A tiny girl raised her hand and gave her answer in a thin voice. "The United States blew up the *Maine* so they could intervene in Cuba," she parroted.

Thus the hate campaign against the United States goes on among the children and teenagers of Cuba. The Castro regime is bending every effort to capture the minds of youth.

The pattern of training is similar to that used by many totalitarian governments. It includes indoctrination in schools, on radio and television, and in the press; military training from 7 years of age; a hate campaign, this time directed against the United States; the organization of work brigades of boys from 14 to 18; and meetings and fiestas, all with a political purpose.

The Government feels that once the youth of Cuba is indoctrinated with hatred toward the United States the relations between the two countries will be permanently damaged.

EDUCATIONAL SYSTEM ALTERED

The educational system has been radically changed in structure and purpose. Teachers are being instructed to instill in their students a desire to till the soil and work with their hands rather than become professionals. The teachers are also being taught methods to use in developing hatred of the United States and hero worship for Fidel Castro as the saviour of Cuba.

Last January 28 the birthday of José Marti, Cuba's most beloved patriot, who was killed by the Spaniards many years before Cuba obtained her independence from Spain through the Spanish-American War, a rebel soldier was sent to each of the lower-grade classrooms in Havana.

The soldier spoke to the children about Dr. Castro, who led the 2-year revolt against

Gen. Fulgencio Batista, and told them stories of the fighting in the Sierra Maestra against the troops of the deposed regime. This was done, one teacher said, so that the children would identify themselves with the soldiers and would have a desire to join the juvenile patrols, which give military training to children from 7 to 17.

In Havana the public school teachers and prospective teachers are being given lectures every Saturday. After Friday, when school is out, there will be daily classes for 2 months to teach them the methods and aims of Premier Castro's new educational system. Hundreds of new teachers are being prepared for schools being built in the interior. Some complaints are heard that the educational level of these teachers is not up to the former standard in Cuba.

When schools open next September, the government plans to have new textbooks ready for the grade schools. All history books are being changed to conform with the attitude of the Dr. Castro's officials, who have repeatedly declared the United States is "Cuba's greatest enemy."

Among the changes to be made in the educational system, according to reports, will be the elimination of kindergartens. The "speciality" teachers, who taught music, English, domestic science, manual training and other subjects, have already been eliminated. These teachers are being utilized for regular teaching in the lower grades. Teachers in each classroom will give instruction in all subjects. English and music are being eliminated, it is said.

It is planned,according to reports, to have as many children over 5 years old as possible live at big scholastic centers, such as the one being established in Havana at the former Camp Columbia Army Headquarters. This is being done, it is said, so that the children will be under the influence of the teachers and not their families.

Most Representative Knight of the Road

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. PATMAN. Mr. Speaker, it is a genuine pleasure to see a deserving person receive the recognition due him. It is doubly rewarding when that honored person is from your home State, and in this instance from my home district in Texas. Last week I was very pleased to learn that a man from my home district in Texas had been selected as the 1960 trucking industry "Driver of the Year" by the American Trucking Associations.

He is Russell R. Brown of Mt. Pleasant, Tex., who drives a tank truck for the American Petrofina Co. of Texas. This coveted award to a professional truck driver in the United States went to Mr. Brown for his 14 years of truck driving without a chargeable accident, and for his heroic rescue of 6-year-old Charles Ray Schedule of Alvin, Tex., who was in danger of drowning.

The lifesaving incident occurred last July while he was delivering a cargo of gasoline in the small town of Alvin near Galveston. He saw three small boys and an elderly man run from a nearby house. Shortly after this, he heard the man's cry for help, and joining him, found him bending over the side of the 12- by 12-foot tank or pit containing about 7 feet of muddy water. He was told by the man that a small boy had fallen into the water.

Without hesitation or concern for his own safety, Mr. Brown dove into the water in search of the boy's body. Surfacing for air after an unsuccessful search for the boy, the driver then submerged again for the child. He found him, and although the boy appeared to have drowned, Mr. Brown began applying artificial respiration. The child began to regain normal breathing, and was taken to John Sealy Hospital in Galveston, where he recovered.

Mr. Brown's alertness, bravery, and immediate action saved the life of the child, the chamber of commerce, agriculture and industry of Alvin said in honoring the 31-year-old driver.

His driving record is equally impressive, with a total of nearly 900,000 miles logged in without a chargeable accident.

Mr. Brown, married and the father of four children, was also chosen the "Most Representative Knight of the Road," an award given annually to a Texas truck driver.

It is with justifiable pride, I think, that I include this recount of the honor accorded to Russell R. Brown of Mt. Pleasant, Tex. He is to be congratulated for his outstanding safe driving record and for his courageous and unselfish life saving action.

Time Is Short if This Democratic-Controlled 86th Congress Is To Enact and Have Written Into Law a Reasonable and Acceptable Version of Area Redevelopment Legislation

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. VAN ZANDT. Mr. Speaker, just a few days ago the Bureau of Employment Security of the Department of Labor released its May report on the classification of labor surplus areas in the United States.

This report discloses that of the 142 labor surplus areas in the Nation, 20 major industrial centers and 71 smaller areas are on a special new list of cities hardest hit by long-term unemployment.

Major areas on the list include Detroit, Mich.; Providence, R.I.; Evansville and Terre Haute, Ind.; Atlantic City, N.J.; Charleston, Huntington, Ashland, and Wheeling, W. Va. Others are Fall River, Lawrence, Lowell, and New Bedford, Mass. and the Pennsylvania communities of Altoona, Erie, Johnstown, Scranton, Wilkes-Barre and Hazleton.

Towns in the coal mining regions of Pennsylvania, Kentucky, Illinois, and West Virginia dominate the list of smaller areas. Included is the Clearfield-Du Bois area in my congressional district of Pennsylvania.

Mr. Speaker, thousands of good Americans live in these major and smaller labor surplus areas. They are not suffering from seasonal but from chronic unemployment as they try to exist by living on public assistance and surplus commodities.

Mr. Speaker, I did not approve the veto of S. 722 but when the Democratic-controlled U.S. Senate sustained the veto it meant permanent legislative death for S. 722.

It did not, however, close the door against enactment of an area redevelopment bill before adjournment. Speaking frankly, the unemployed of the Nation are looking to this Congress for further action before it adjourns.

Without becoming partisan, I think it is only fair to say that any possible political benefit has been wrung out of the veto of S. 722. This political benefit with its attendant noise is not going to provide jobs, feed the hungry or rehabilitate the economy of labor surplus areas.

Let us not forget in the coming fall campaign this army of unemployed is intelligent and will not accept lame excuses in trying to explain why this Democratic-controlled Congress, with nearly a 2 to 1 control over both Houses, failed to enact area redevelopment legislation.

Mr. Speaker, there are various types of bills pending before the House Banking and Currency Committee, several of which the Chief Executive of this Nation has given indications he will approve if given the opportunity.

With only a few weeks left before Congress adjourns, it is my suggestion to the leaders of Congress that rather than use as a political football the plight of the unemployed living in labor surplus areas, it would be far wiser to set the legislative wheels of this Congress in motion immediately and send another area redevelopment bill to the White House.

Who's Soft on Communism?

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. LAIRD. Mr. Speaker, the Marshfield News-Herald of Friday, May 27, 1960, carried an editorial entitled, "Really, Mr. Butler." Mr. Butler's fantastic charge that the Republican Party and our great President, Dwight Eisenhower, were soft on communism is answered very well by this editorial.

The editorial is as follows:

REALLY, MR. BUTLER

Two wrongs never made one right. We admit this frankly. But we must confess a large measure of amusement at the accusation by the Democratic National Chairman, Mr. Paul M. Butler, of Republicans being too soft toward the Soviet Union the past 2 years.

He may be correct in this accusation, President Eisenhower's administration may have been wrong in its conduct of foreign affairs with respect to the Soviets. That might be one wrong.

But we submit the other wrong is so vastly more glaring, so devastatingly wrong, that innocent peoples of innocent nations have suffered intolerable, and there is the terrible prospect that the whole world and all its peoples may continue to carry the yoke placed upon them by this second wrong.

Who and what turned Russia loose upon the world? The late President Roosevelt and the Democratic Party. Who was soft toward the Soviets and Joseph Stalin? Franklin Delano Roosevelt.

Here is the record for Mr. Butler and all Democrats to read and remember.

Mr. Roosevelt and the Democratic Party recognized Russia in 1933.

Mr. Roosevelt made deals with Russia at Teheran and Yalta with the support of the Democratic Party.

Who agreed to the terrible mess of Berlin? Mr. Truman and the Democratic Party.

Who said, "I like Joe?" Mr. Truman.

Who pulled back Gen. George Patton when he and his army were on the banks of the Oder River in Germany so that Russia could move in? Mr. Truman and the Democratic Party.

Who was "soft" on Russia, communism, and Russian leaders, and as a result, brought forth the frankenstein now threatening the world with total extinction? Democratic leadership and the Democratic Party.

It takes a heap of nerve for Mr. Butler or any other Democrat to talk about "softness" toward Russia. The record is replete with evidence of his party's total lack of understanding of Russia, a shortcoming in foresight and leadership that gave the Soviets the advantage they now threaten to use against civilized people.

To use Al Smith's expression, "Let's look at the record" occasionally and keep it straight.

Mutual Security Statement by Mr. Walter F. Carey

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. Walter F. Carey, president of the National Defense Transportation Association on Mutual Security.

NATIONAL DEFENSE TRANSPORTATION ASSOCIATION,
Washington, D.C., June 7, 1960.

DETROIT.—In connection with the mutual security program now under consideration before Congress, Walter F. Carey, president of the National Defense Transportation Association, issued the following statement on behalf of the association:

"These are serious times for the United States of America. Strong forces are currently at work between the East and the West which will in large measure shape future policies and programs of our country.

"The recent collapse of the summit talks coupled with the heightened Soviet condemnation of our leaders and of our country are clear indications that the so-called cold war is part of the Soviet strategy to separate our allies from us. It is clear that this is no time to weaken our allies and their faith in us. A major means by which we can continue to improve our collective position in providing a strong defense is in the continuation of the principle of mutual security. It is imperative that mutual security be fully supported, especially at this time.

"The National Defense Transportation Association is a nationwide organization dedicated to maintaining the maximum national posture to provide transportation support in any emergency situation. This is but a part of a greater overall objective of doing all in our power to secure the national defense.

"We are mindful of the serious implications of the current situation and recognize the need for national unity and solidarity. The National Defense Transportation Association strongly urges aggressive support of an adequate mutual security program in order that our allies everywhere may be assured that this country shall continue its national policy of collective security through mutual support among free nations."

He Who Pays the Piper Calls the Tune

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mrs. BLITCH. Mr. Speaker, a naked lust for national power, rather than a pious beneficence, is the true intent behind federalized education. We who oppose the bill have long contended that its central theme is absolute Federal control of education in the States. We have gently reminded our colleagues that he who pays the piper calls the tune. This simple assertion of a self-evident truth has not sufficed. The proponents have argued with great skill that this is not the case, and offer us tranquilizers and pacifiers in the form of profuse and prolix assurances against Federal interference in the schools. This controversy is now moot, if it is indeed true that actions speak louder than words.

No less than three actions of the House have screamed out in chorus the real purpose of this bill, far more stridently than any of our debates could do.

The first of these actions was the original use of a so-called assurance clause in the bill. This in itself was a conclusive admission that the nature of such a bill is to give the Federal Government plenary power to interfere with our schools. Such a clause, assuring against the use of a power, necessarily recognizes the existence of the power; otherwise, it is mere surplusage and poor draftsmanship. This power is not doubted by the Supreme Court which said in *Wickard* v. *Filburn* (1942:317 U.S. 131):

> It is hardly lack of due process for the Government to regulate that which it subsidizes.

The best verification of the efficacy of this holding is to ask any farmer—he knows it very well.

The second action was the addition of the Powell amendment. This amendment was totally repugnant to the carefully inserted assurance clause, neatly rendering the whole bill a contradiction in terms. Federalized education is thus born a monstrous, cross-eyed infant, with domination staring balefully at piety. In this regard, one can only speculate on what sort of amendment the late Vito Marcantonio might have offered, what teachings in the schools would have been required, or what decisions of the Supreme Court on the subject of communism would be sought to be recognized.

It is, of course, no surprise that the feeble assurance against Federal interference was so easily contradicted, nullified, and overcome. The third decisive action was the defeat of the Landrum amendment which provided a genuine, effective, and meaningful guarantee of continued self-government in our schools. This defeat gave the death blow to any further pretense of permitting the States to educate the children of their citizens according to the desires of those citizens, or of allowing government by the consent of the governed in educational matters.

These three concrete actions have at last cleared the air, exposed the meaning of the bill, and give us an excellent insight into the future operation of federalized education, if such a thing is enacted. It is at once apparent that when power to control is coupled with the requisite intent to control, the final accomplishment of that control is the sole possible result. The bill is harshly discriminatory in its provisions. It imposes a triple burden on those citizens who choose, as is their absolute right, to educate their children privately. To their tuition bill is added a property tax bill for local schools, and an income tax bill for schools in some distant State. The practical effect of this built-in control is to discourage attendance at private and parochial schools, further aggravating the existing problems of the public schools and broadening the base of Federal domination.

By this form of control, and by whatever others that may arise from the inevitable investigations of real or pretended State misuse of Federal funds, we may well create a Frankenstein monster. We are certainly creating that which we say we deplore in the Soviet Union: the monolithic school. To deny this would be an interesting exercise in Orwellian doublethink. No one with any familiarity with other programs of Federal spending would deny it, and the portions of the bill relating to judicial review of administrative determinations fully provide for it. After 1954, southerners referred to the Supreme Court as the Supreme School Board, in jest. Should this bill reach final passage, it would then become so, in fact. The late Robert A. Taft said—Senate debate on S. 637, October 1943—

> The intrusion of the Federal Government into the field of education is one which threatens more than any other intrusion the control of the thoughts of the people in the localities. Education is something the peo-

ple are interested in having complete control of at home.

He went even further, and maintained:

Of course, education is not a Federal function. There is nothing in the Constitution of the United States which makes it so. On the other hand, all State constitutions contain educational clauses. The practice here for 150 years have established education as a State and local function, and it has been carried out by State and local governments.

The effect on State and local governments of this usurpation of one of the most important of their few remaining powers is painfully obvious. With the question of expenditures for education removed from their jurisdiction by a Federal spending formula, the school boards would become little more than advisory groups without authority, fit only to confer with the PTA and to utter feckless platitudes. This is indeed a sorry reward for those devoted men and women who have willingly and freely taken upon themselves the burdens of long hours, little or no monetary compensation, and ever present public criticism. It would also be a sorry end for one of our basic forms of self-government—we would miss it badly.

Parents, teachers, and children, while not attacked directly by the bill, would fare but little better than the school boards. With the Federal Government nearly insolvent through a long tradition of spending piled on spending, a Federal income tax rate increase is inevitable if Federalized education is to be financed at all. How much more in accord with the principle of no taxation without representation it would be to let the people themselves decide how much they desired to spend on their own schools.

In the long run, the principle of self-government is not mocked. It requires no great intelligence to see that the growing voter resistance to local school taxation, so often cited by proponents as proof of need for federalization, will be very easily transferred by the same voters to Federal taxes, with a vengeance. This bill, attacking as it does a matter very close to the heart of the voter, runs the great risk of turning him entirely against all Federal taxation, thus jeopardizing truly worthwhile and properly national programs. Again, "doublethink" is required to believe that the taxpayer will tolerate a Federal levy when he would not tolerate a local levy for the same identical purposes.

In the last analysis, the question before Congress reduces itself to one of humility. We all acknowledge that first-rate education is essential to our national security in the long run. We also freely acknowledge that the States, the localities, the school boards, the teachers, and the parents can make mistakes in providing the children with that education. But is Congress, then, infallible? The Federal Government may well have the power to seize absolute control of education in all the States, and substitute its own judgment for that of the people. It may have the power, temporarily, but there is no wisdom in such a course. What mythical Member of Congress would dare return home and say to his constituents: "School boards, you are miserly; teachers, you are incompetent; parents, you are obsolete; therefore I will take control, tell you what you want, build it for you, and send you the bill." No group or person could conceivably be pleased with such a speech—not even a few building contractors who might be enriched. They also have children, and they despise arrogance as do all Americans.

A vote for this bill is tantamount to making such a speech, which I am certain no Member is willing to do. We are all elected Representatives; it befits us far better to wear the mantle of humility, tolerate the wishes of the localities, and preserve the self-government so earnestly desired by all our constituents. The alternative is to attempt to squeeze 437 heads into the massive crown of Federal expertise. Our constituents have long trusted us to govern them in national matters—let us, just this once, trust them to govern themselves in local matters.

Public Order and the Preservation of our Freedoms

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a most interesting and informative address delivered by Allen W. Dulles, Director of Central Intelligence, at the St. George Association, Inc. of the Police Departmetn of the City of New York on May 1, 1960, on the subject of "Public Order and the Preservation of our Freedoms."

There is no person in our country, or throughout the world, better able to discuss this subject than Allan Dulles. As Mr. Dulles well said:

I am no economist, but I feel it is our primary duty these days to produce that which will keep our country strong and free. Strong not only in the sense of military might but in education, science and technology—free not only in the sense of freedom from want but free to develop the best that is in us—with the tools to enjoy our leisure but not necessarily every imaginable gadget.

The address follows:

PUBLIC ORDER AND THE PRESERVATION OF OUR FREEDOMS

(Address by Allen W. Dulles, Director of Central Intelligence, to St. George Association, Inc., of the Police Department of the city of New York, May 1, 1960)

I am deeply grateful for the award you have tendered me. As an old resident of this great and inspiring city, there is no group of men from whom I should have more preferred to receive such an honor.

In accepting this award I wish to pay my tribute to you from the police force of New York for your contribution in maintaining order within the framework of protecting our freedoms.

I fear that injustice is often done you by the misuse of the word "police." We too loosely talk of police states, of police methods, and the like. Here in this country we well know that the police are the protectors of our freedoms and of our liberties. When order and discipline are not maintained, it is we the people who cannot exercise our natural rights and carry on our appointed tasks.

You, in turn, help to enforce the laws adopted by the representatives of the people to protect the people from the invasion of their rights. This is fundamental to our form of government.

If this country of ours does not set an example to the world of maintaining order under law, what can we expect from other countries less well situated than we—countries new to the task of making democracy work?

We meet here today on May 1, a day which has had particular significance in history. The idea for such a day of peaceful demonstration was initiated by American labor unions some 70 years ago. The purpose was to win an 8-hour day. Unfortunately, over the years, May Day has been more and more taken over by the Communists, and now we have our own separate Labor Day in September.

Before this day is over we may hear from various parts of the world some strange and dangerous doctrines preached—even from countries near to us. It is typically one of the techniques of the Communists to take over ideas which originated for the purpose of peaceful demonstration to protect the peoples' rights, and make them over into instruments for destroying those rights.

The problem of maintaining order in the world, so necessary for the protection of the rights of the individual, has become vastly complicated over the last few decades by the emergence of Soviet Russia and Communist China as world powers dominating nearly a billion people. And at the same time we see emerging scores of new states untried in the ways of democracy.

The Sino-Soviet bloc is dedicated to changing the face of the world and to replacing the democratic system of law by the dictator system of the proletariat. In the course of advancing this program, they have promoted violence and class struggle as one of their chosen instruments.

Here in the United States we are more fortunate than most of the peoples of the world. Due to our tradition, the inherent strength of our institutions and the vigilance and temperance of our law enforcement, Communist penetration and Communist agitation has been rigorously restrained.

Unfortunately, in many other countries of the world today this is not the case.

It is the strategy of the Soviets and the Chinese Communists to concentrate first on the weak and then to encircle us, the strong, by penetrations in Asia, Africa, Latin America. Even in some countries in Europe, the Communist Parties have considerable open strength, and a well-organized underground apparatus.

If you have thought of me for your award, it may be because as head of the CIA, I have the duty to bring together all of the information on the Communist plot on a worldwide basis, to expose it, and to furnish others with the means of exposing it, and to collect the evidence on which the policymakers in Government may frame an effective policy to combat international communism.

As you know so well in order to deal with crime and the artisan of disorder, whether locally or in the international field, we must have intelligence on their plans and objective; on their leadership and their techniques; and so it is also with the Communist plot.

The general Communist program has been well advertised to us all; their tactics are often disguised.

It is the Communist view that history rolls inevitably toward the final victory of communism.

Khrushchev told us all about this during his recent visit to this country. In his address last September at the National Press Club, he explained the "We will bury you" theme.

He said that by this he did not mean any physical burial of anyone at any time. It was merely a question of inevitable changes in the social system over the course of the historical progress of society.

In another address Khrushchev argued that the social system changes as society develops. First he said there was the feudal system. It was superseded by capitalism. Capitalism was more progressive than feudalism. But capitalism, he claimed, engendered irreconcilable contradictions and as it outlived itself, it like every earlier system would give birth to its successors. Capitalism, he said, as Marx, Engels, and Lenin have proved, will be succeeded by communism.

Khrushchev would have us believe that this evolution to communism will be a peaceful, painless process. One might footnote this view by suggesting that this had hardly been true in Poland, in Hungary, in the Baltic States or in China.

Although professing that history will take care of us, Moscow and international communism have a definite program for helping along this so-called historical evolution.

I shall briefly outline what I believe this program to be. And since today is Sunday, it is well to start out with the Soviet attack on religion as one of the cardinal points of their program.

Karl Marx taught that religion is the opiate of the people. As late as 1954 the central committee of the Communist Party labeled the church as "the prop and tool of the ruling classes which they use as a means to enslave the workers." They propose to instill atheism as a substitute for religion.

Here we can quote history back to them. No great civilization has ever prospered and endured without a deep religious background.

The Soviet's atheistic program of attack on the free world has three major elements; first, the military, second the economic, and third the subversive. I shall say a world about each of them.

The military threat is widely advertised and is easier for the people of the world to understand than their more subtle techniques.

This threat is based on Soviet missiles and bombers, nuclear weapons and a large conventional force, ground and air, supplemented by the largest submarine fleet in being the world has ever known.

For their own political purposes they rattle the missile; this took place notably during the Suez crisis about 4 years ago. Some foreign visitors to the Kremlin these days have also received Khrushchev's estimate of how many missiles and nuclear bombs were being reserved for them, or would be required for the destruction of their respective countries. He hasn't yet told us how many are reserved for the United States.

I believe, however, that Khrushchev is still confident that he can win the world without actually employing military force. He doesn't want to acquire a world in ruins if he can take it intact. However, he keeps up his military forces as an ever ready threat particularly for those countries which live under the shadow of Soviet Russia and Communist China.

Then there is the Communist economic threat. This has two main elements—their own domestic industrial growth, and their foreign economic penetration.

Khrushchev recognizes that the United States is the most highly developed economic power in the world today. However, he claims that with the Soviets' higher annual rate of growth, they will catch up with us in the next 10 to 15 years.

Such boasts are an exaggeration but this does not prevent his peddling them on a worldwide basis. Nor do these boasts fail to impress the underdeveloped and nonindustrial nations who see the great strides which the Soviet has made over a few decades. From a second rate industrial power they have now come to be second only to the United States.

While Soviet industrial production today is less than one-half of ours, it is true that their present annual rate of growth is about twice our own. If one takes the free world's industrial production and contrasts it with that of the Communist world, including that of Communist China, the gap in favor of the free world is still greater.

In the decade or so which Khrushchev allows for equaling our industrial production, the Soviet, on the basis of present relative rates of industrial growth, will narrow the gap, and in 1970 Soviet industrial production could be about 60 percent of our own.

This is impressive, and while not up to Khrushchev's boasts, it certainly gives us no call to relax.

As for agriculture, the picture is very different. With six times the number of farmworkers that we have in the United States, the Soviet Union is producing about 25 percent less in farm products than are we. The facts are that their agriculture is inefficient. Here they have little or nothing to boast of. There is too much of Karl Marx and collectivism and too little free enterprise incentive and ambition on the Soviet farms.

However, what should give us pause about their economy is that they are putting into national power goals, into military hardware, heavy industry, and related fields, a far greater percentage of their total production than are we.

We are spending a great deal these days for the production of certain types of consumer goods which add little to the sinews of our national strength. And in making comparisons with the Soviet Union, we must realize that it is the use to which we put our great economic resources rather than their absolute size that determines the measure of national power.

I am no economist, but I feel that it is our primary duty these days to produce that which will keep our country strong and free. Strong not only in the sense of military might but in education, science and technology; free not only in the sense of freedom from want but free to develop the best that is in us; with the tools to enjoy our leisure but not necessarily every imaginable gadget.

I admit this is easier to say than it is to accomplish in a free society.

In his regimented state, Khrushchev takes his military hardware out of the hide of his people. He limits the volume of consumer goods, of housing and the like. As a consequence, Khrushchev today faces a domestic problem of no mean proportions in meeting the growth demand for more progress in raising the standard of living.

The other phase of the Soviet economic threat is targeted abroad.

It is carried out on a highly selective basis but it is very efficiently publicized.

The areas of Soviet economic penetration are chiefly the Middle East, including Egypt, Syria, Iraq, Afghanistan; south and southeast Asia, including India, Burma, and Indonesia. Recently, the Soviet Union is turning its attention to central Africa and to the hemisphere to the south of us, with Cuba now receiving Soviet credits and oil products from Communist countries.

It is well to remember that the less developed countries look upon the Soviet Union as a nation which in a few decades has developed from a backward country into the world's second industrial power. These less developed countries aspire to do the same. Although they do not expect to reach anything like the high economic and industrial levels of the United States, they are attracted by Moscow's claims that rapid industrial progress can be achieved if they just conform to Communist methods and discipline. We know the fallacy of that argument but many of the lesser developed countries do not.

The third major element of the drive of communism to fulfill its boast of inheriting the earth lies in the field of political action, propaganda and the subversive effort to undermine free governments everywhere.

They start of course with the weakest and most vulnerable targets but they lose no opportunity to work even against the strong and the sophisticated.

Their weapons include the control of their farflung Communist Party organization, underground and above ground, on almost a worldwide basis. Then they have their front organizations in the fields of labor, of veterans, students, youth, women, and the various professions.

Their so-called world peace and "ban the bomb" movements appeal to the aspirations of peoples in various parts of the world.

The overall strategy of international communism is generally worked out in Moscow or, in some cases, in Peiping, at secret conferences of Communist delegates from various areas of the world.

Take Latin America, for example. At the 21st Communist Party Congress held in Moscow a little over a year ago, guidance was given to the Communist leaders in secret regional sessions. The Latin American Communists were directed to develop the theme of nationalism and to omit any reference to relations with Moscow. They were were told to use every effort to eliminate pro-American elements, and to develop their local revolutions with the United States as the main target and whipping boy. I need hardly point out that these directives are being implemented. The theme in Latin America is liberation from what international communism describes as the domination of the "Colossus of the North."

This is just a short blueprint of the strategy of international communism.

It is a formidable threat to our free institutions and those of the free world.

But communism is not the wave of the future. It is reactionary, repressive, atheistic and intolerant.

As such it will not satisfy the strivings of man. While it may produce material strength, it does not create moral values.

There is some evidence today that those who are living under Communist domination are becoming restive as education and knowledge of the outside world become more general behind the Iron Curtain.

The example set by this country as the leader of the free world will play a major role in the shaping of the future and in our success in meeting the Communist threat.

In the opening paragraph of the Federalist papers in which men who had a great part in the framing of our Constitution and our system of government expressed their views, there is this statement, "It seems to have been reserved to the people of this country by their conduct and example, the important question, to decide whether societies of men are capable or not of establishing good government."

It has been an inspiration to me to meet with you today, to receive this award and to know that throughout this land there are great bodies of men who like you are dedicated to the upholding of law and the maintenance of order within the framework of the preservation of our freedoms.

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 8, 1960

Mr. WILEY. Mr. President, the stimulation of ever-greater trade through the St. Lawrence Seaway is important, not only to the Great Lakes, but to the economy of the whole Nation. Currently, the flow of deepwater vessels through the channels of the seaway project reveals an increasing volume of traffic to and from American ports on the Great Lakes.

From all evidence, we can expect substantially increased traffic in 1960.

There will, of course, also be problems and challenges. Among others, these include encouraging more and more shipping interests to utilize the Great Lakes and the St. Lawrence Seaway; resolving of pilotage problems; promoting good labor-management relations; and heading off efforts by special interests elsewhere in the country to divert traffic from the St. Lawrence Seaway.

These, and other, problems confront us.

In addition, there are still development problems relating to navigation on the seaway and the Great Lakes. These include: Further improving the Great Lakes connecting channels; need for greater harbor development; studies of ways to deal with the bottlenecks at the Welland Canal, and elsewhere on the seaway; accommodation to the changing pattern of navigation resulting from the seaway; and other factors.

Recently, the Great Lakes Seaway Journal published a review of the informative study by the Corps of Engineers entitled "Great Lakes Navigation."

Reflecting on the basic problems that need to be met, and solved, to assure that the seaway—once a dream, and now transformed into reality—lives up to its promises, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Great Lakes Seaway Journal, May 1960]

GREAT LAKES NAVIGATION

(By north central division, U.S. Corps of Engineers)

CONNECTING CHANNELS IMPROVEMENTS

The project for deepening the Great Lakes connecting channels as authorized in 1946 and 1956 has an estimated Federal cost of $146 million. Funds appropriated by Congress to this project amount to $70 million. The budget for fiscal year 1961 includes an additional sum of $30 million to carry on the work. The work is presently about 37 percent complete. The Amherstburg Channel in Detroit River and the Middle Neebish Channel in St. Marys River have been deepened to the new project depth over the westerly 300-foot channel width as provided for in the authorized plan of improvement. There are 11 other reaches of these channels which have work now underway at an estimated investment of $28 million and it is expected that contracts for work in 8 additional reaches at an estimated $22 million will be awarded by July 1960. Further, work in about seven additional reaches is planned for initiation with funds anticipated for fiscal year 1961.

The controlling depths in the connecting channels at the present time for upbound traffic are 21 feet in the St. Marys River and 25 feet in the Detroit and St. Clair Rivers, and for downbound traffic are 25 feet in all channels. Completion of works to provide a controlling depth of 27 feet is scheduled for June 1962. However, this schedule is very tight. Many contracts are underway and many more are yet to be awarded. In view of the large amount of work remaining to be accomplished, it is possible, for reasons beyond control, that there may be some slippages and consequent delays in the schedule.

The question is often asked as to what effect the deepening and enlarging of the connecting channels will have on lake levels. The work will have no effect on the levels of Lake Erie and Ontario as these lakes are downstream from the channels being deepened. Neither will the work have any effect on the levels of Lake Superior as the outflow from that lake is completely controlled at the Soo. However, if not compensated for, the deepening of the St. Clair and Detroit Rivers would lower the levels of Lakes Michigan and Huron.

The enlargement of the channels in the Detroit River has been compensated for by placing obstructions to flow in the form of dikes such that the net effect of the work will have no effect on the levels of Lakes Michigan-Huron.

Deepening the St. Clair River and construction of Southeast Bend cutoff channel would have the effect of lowering the levels of Lakes Michigan-Huron about 0.11 foot or 1⅜ inches if not compensated for. Studies show that the net effect of the deepening of the St. Clair River to 25 feet during the years 1933 and 1937 has been to lower the levels of Lakes Michigan-Huron about 0.15 foot or about 1¾ inches. Thus the combined net effect of the deepening of St. Clair channels to 25 feet and the present deepening to 27 feet, including Southeast Bend Cut-off Channel, would be to lower the levels of Lakes Michigan-Huron about 0.26 foot or 3⅛ inches.

The current program for deepening the connecting channels includes the construction of compensating works in the St. Clair River. These works will compensate for the lowering of Lakes Michigan-Huron levels which would be affected by the current deepening program in the St. Clair River and will also compensate for the lowering which resulted from the previous deepening of the river to 25 feet. The compensating works will consist of submerged sills in the upper reach of the river with depth over the sills of about 31 feet. Upon completion of the sills, it is expected that they will have the effect of raising the levels of Lakes Michigan-Huron by 0.26 foot. The regimen of levels on these lakes will then be the same as they were prior to the dredging which was accomplished to deepen the St. Clair River to 25 feet some 25 years ago.

All work on the project for deepening the connecting channels is scheduled to be completed by June 1965. However, the nature of the work expected to extend beyond June 1962 will not restrict the drafts of vessels. This work includes completion of the deepening of Point Iroquois Shoal and anchorage area, the channels in the Straits of Mackinac, Pelee Passage Shoal, and construction of the compensating works in the St. Clair River.

An important feature in the connecting channels program is Southeast Bend Cut-off Channel. This cutoff channel through Canadian territory, which has been approved by Canada and for which we have awarded a contract, will be a straight 700-foot-wide channel connecting the upper end of Southeast Bend in the St. Clair River with the present channel in Lake St. Clair. This is a worthy improvement from the standpoint of savings in vessel time and eliminates the hazardous Southeast Bend section of the river.

NEW POE LOCK AT THE SOO

Another important feature of the general program is construction of a new lock at the Soo to replace the obsolete Poe Lock.

The proposed lock will be 100 feet wide, 1,000 feet long between inner operating gates and will provide for 32-foot depth over the sills at low water datum. For comparison, similar dimensions of the MacArthur Lock are 80 feet by 800 feet by 31 feet.

The estimated cost of the new lock is $42,300,000. Of this amount, some $725,000 has been appropriated to date for planning purposes. Provided the $1,350,000 which has been requested is appropriated by Congress, construction will be initiated in fiscal year 1961. Completion of the lock is scheduled for fiscal year 1965, depending on this funding.

Design of the new lock is well advanced. The construction operation is planned so as not to interfere with vessel traffic through the other three locks at the Soo. The first contract will be advertised this fall. It calls for construction of the upstream and downstream cofferdams, removal of the existing Poe Lock, and reconstruction of that part of the approach piers lying outside the cofferdams.

HARBOR IMPROVEMENTS

The present high degree of development for the Great Lakes navigation system has been justified primarily by transportation savings on waterborne commerce in iron ore, stone, grain, and coal. The survey report completed in 1954 determined that anticipated benefits from transportation savings on movement of these bulk commodities exceeded by 78 percent the cost of deepening the connecting channels and associated principal harbors. In this report the system of harbors was considered as a group. The Great Lakes Harbors Study, currently in progress, will determine individual harbors which should be improved in this overall Great Lakes system.

There are two general groups under study in the report. These comprise harbor improvements needed for bulk cargo traffic and the improvements needed primarily for overseas general cargo traffic through the St. Lawrence Seaway. We have considered initially the harbors which require improvement to permit full utilization of the deepened connecting channels for bulk cargo traffic. Thus far, we have completed 19 out of 43 interim reports. The recommended improvements are in the interest of bulk cargo but will also benefit the iron ore traffic from Labrador through the St. Lawrence Seaway and to some extent oversea traffic. There are still interim reports to be completed which will consider further improvements of harbors for both bulk cargo and oversea traffic.

While it is appropriate to emphasize that benefits to bulk cargo traffic have been the basis for economic justification for deepening the connecting channels and harbors serving this commerce, the importance to the midcontinent of adequate harbor facilities for oversea traffic cannot be minimized. The interim harbor reports which will consider improvements for general cargo traffic have posed many difficult economic analysis problems. The development of the estimate of prospective general cargo traffic to individual harbors and evaluation of transportation savings to such traffic have been complex tasks. We are now entering the final stage of these economic studies.

Harbors on the Great Lakes have been studied and progressively improved as a con-

tinuing program for many years. Several survey reports are now underway for harbor improvements in addition to those for the comprehensive Great Lakes harbors report. The separate survey reports deal generally with improvements considered for bulk cargo traffic not directly related to the deepening of the connecting channels and construction of the St. Lawrence Seaway.

ALL AMERICAN CANAL

An investigation of interest to many is the proposal for a canal from Lake Erie to Lake Ontario in the United States, commonly known as the All American Canal. Provided funds which have been requested are appropriated in fiscal year 1961, a reconnaissance survey will be initiated in order to make an estimate of the overall problem before embarking on a detailed and comprehensive survey report.

SUMMARY

The Great Lakes navigation pattern is changing. There are two facets to this change. First, there is the gradual change which has extended over a long period of time, accommodating the larger, deeper draft, more economical vessels in the bulk cargo fleet. The second and certainly more distinct in character and recipient of widespread public attention upon completion of the St. Lawrence Seaway, is the appearance on the Great Lakes of oversea traffic using modern ocean ships, and the ability of Great Lakes bulk carriers to reach the St. Lawrence River below Montreal.

The importance of the Great Lakes navigation system to the national economy will continue to be based primarily upon the economical transportation of bulk raw materials to serve the industrial complex of the region.

U–2 Probe Seen Revealing Loose Rein Before Summit

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Roscoe Drummond as it appeared in the New York Herald Tribune of June 3, 1960:

U–2 PROBE SEEN REVEALING LOOSE REIN BEFORE SUMMIT

WASHINGTON.—The thoroughly fair-minded Fulbright committee hearing is revealing some grave shortcomings in the administration's handling of the U–2 plane incident, although one aspect of the President's conduct of the affair seems to me to be strengthened.

The most damaging disclosure is that there was never any considered, specific high-level examination of whether the U–2 flights should be suspended prior to the summit. This suggests a grievous oversight and a looseness of reins at the top of an operation, which by any standard demanded close and continuous scrutiny.

The hearing has also revealed a gaping lack of coordination among the White House, the Central Intelligence Agency and the National Aeronautics and Space Agency, and between the State Department and its official spokesman, which resulted in contradictory and embarrasing public statements.

On the other hand, Mr. Eisenhower's reasons for telling the obvious but rarely admitted truth that the President is personally responsible for the Nation's undercover intelligence activities became more persuasive in light of the testimony before the Senate Foreign Relations Committee.

Understandably Secretary Herter sought to put the best possible face upon the administration's handling of the whole matter. At the very outset of the inquiry, Mr. Herter affirmed as one of his central points that "the decision not to suspend this program of flights, as the summit meeting approached, was a sound decision."

But the alert Senator FULBRIGHT was not deflected by the bland implication that the continuance of the flights represented a careful decision by those in authority. He pressed Mr. Herter to say who made the decision, and whether there was thorough consideration of summit consequences. The Secretary was forced to back away from his contention that the administration reviewed the flights in light of the summit. This fact emerges from the following questions and answers:

FULBRIGHT: "Was such a decision taken?"

Herter: "That I can't tell you. I was not a party to that."

FULBRIGHT: "You say that 'the decision not to suspend the flights as the summit approached was a sound decision.' Was there any decision taken not to suspend them?"

Herter: "I did not interpose any objection to (them) because of any diplomatic event that was coming up."

FULBRIGHT: "Is it fair to say that no specific decision not to suspend them was taken? They were allowed to go along without any decision being taken to suspened them?"

Herter: "I think that is correct."

FULBRIGHT: "Therefore, the other way around is that no positive decision was taken not to suspend them; is that correct?"

Herter: "That is right."

There you are. There can be an honest difference of opinion whether the flights should have been suspended on the eve of the summit. It is certainly damaging to have to admit that the matter was not even considered at the highest level of government.

The President's decision to take open responsibility for the flights was not casual; it was deliberate. Apparently Mr. Eisenhower felt with some reason that Mr. Khrushchev was simply baiting a trap for him in suggesting that the U–2 flights were being made without his knowledge and approval. He concluded that any such an out would not keep the Soviets from using the incident to explode the summit. He could see Mr. Khrushchev just waiting for such a disclaimer so he could come back with the argument that the U.S. warmongers in the Pentagon were an even greater peril to peace on the thus admitted ground that the President could not control their actions.

The administration can reasonably contend that since Mr. Khrushchev negotiated with the President at Camp David knowing that the U–2 flights were taking place, it was not the fact of the flights which caused him to refuse to negotiate at Paris.

But on balance it is clear that the administration's handling of the matter showed grave deficiencies and will be a legitimate aspect of campaign debate.

One Goal Is Service

EXTENSION OF REMARKS
OF
HON. FRANK A. STUBBLEFIELD
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. STUBBLEFIELD. Mr. Speaker, I would like to include in the RECORD a speech by Chairman Earl W. Kintner of the Federal Trade Commission before a luncheon meeting of the National Independent Dairies Association in Washington, D.C., on April 4, 1960.

Mr. D. C. Daniel, executive vice president and general counsel of the National Independent Dairies Association, called my attention to this address and reported to me that it was most favorably received by the association's members.

I particularly commend to my colleagues the portion of the statement relating to the purposes and objectives of the Small Business Division of the Federal Trade Commission. It is my sincere belief that the best interests of our Nation will be served by unrelenting vigilance in the protection of small businesses—protection from those practices, often illegal, which have as their final effect the liquidation through bankruptcy or "forced" merged of locally owned independent businesses.

The statement follows:

ONE GOAL IS SERVICE

(Statement of Earl W. Kintner, Chairman, Federal Trade Commission, before luncheon meeting of the National Independent Dairies Association, Washington, D.C., April 4, 1960)

I

For me this occasion is a reunion. Reunions are always pleasant, but this one is more pleasant than most for it is a source of pride to me that I was invited to address your founders meeting at Chicago in May 1957. Your new invitation gives me the opportunity to thank you once again for that honor.

Yours is a volatile industry. The swift pace of change, so evident in 1957 when the association was founded, is swifter today. The seeds of change sown in other years are now flowering and new seeds are being planted. It would serve no good purpose for me to recount the forces now at work within the dairy industry, to merely list the changes of yesterday and the challenges of today to this group. Indeed, it would be presumptuous of me to lecture you who are spending your business lives in the dairy industry on the problems that face you. Your industry's publications and the public statements of your officers and representatives demonstrate that you possess a very lively awareness of those problems. However, perhaps I can make a contribution if I am able to demonstrate that you are not alone in your awareness. For you are not alone. The Federal Trade Commission is a small agency charged with surveillance of the entire economy; but notwithstanding the manifold, hydra-like problems competing for our attention and the limited resources that we have to expend, I can assure you that we have a keen appreciation of the problems of the dairy industry, of the independent small businesses within the industry, and of the ramifications of problems manifest throughout the whole complex of food distribution.

Our awareness has been translated into action in many instances. Actions affecting your industry constitute a significant portion of the entire spectrum of Commission activity.

Our most important activity is, of course, the enforcement of the antitrust and trade regulation laws committed to our responsibility. The large volume of our antimonopoly activity in the dairy industry is a source of amazement to many. At this very moment, no less than twenty-three antimonopoly complaints charging members of the dairy industry with violations of the antitrust laws are pending at various stages of litigation before the Commission. In addition, our Bureau of Investigation is now

conducting eighteen active formal investigations in antimonopoly matters involving the dairy industry. It is impossible to say that the dairy industry does not bulk very large in our antimonopoly work.

I do not propose to discuss these pending matters with you today. However, one of the Federal Trade Commission's ablest young staff officials will do so. Mr. William R. Tincher, Associate Director of the Commission's Bureau of Litigation, unites a deep devotion to the principles of competitive free enterprise with intensive experience in antimonopoly matters. I am sure that his discussion will be enlightening. I might surmise that his analysis will be much more detailed than any I could give, restricted as I am by the strictures of the Administrative Procedure Act and the natural reticence to discuss matters sub judice that should be embedded in the conscience of all who exercise an adjudicatory function.

However, I think that there is still room for me to make a contribution to your understanding of the functions of the Federal Trade Commission. Enforcement is the core of our activity, but not the sum of it. Our first duty must always be unremitting enforcement of those great charters of economic freedom that we know as the antitrust and trade regulation laws. The greatest good that we can achieve is to furnish assurance that freedom of entry into any market is not foreclosed, that all can compete unmenaced by predators, and that no monopoly strangles individual decision in any segment of our economy. Effective enforcement of the antitrust laws achieves more than the proscription of the unfair competitor charged in a given case; effective enforcement also has a prophylactic effect. Nothing so discourages those who are tempted to gain unfair advantage in the market place by prohibited means than the sight of one who has been tempted and is now penalized for succumbing to that temptation. All our efforts come to naught, all our ideals crumble to dust if ever we abandon this basic premise. I can say confidently that we have not abandoned it, that we are not abandoning it, that we have no intention of abandoning it. Our performance should assuage all doubts, for despite our recent feverish manning of the fire line against a holocaust of false and misleading advertising, "payola," "plugola," and the like, our antimonopoly activity has increased, not decreased. Fiscal 1960 is now 9 months old. During that 9-month period the Commission issued 85 antimonopoly complaints. This was five more than the number issued during the entire 1959 fiscal year.

II

Competitive free enterprise is the core principle animating our economy. The Federal Trade Commission is dedicated to the vindication of this principle. I cannot reiterate too often that the primary means of effectuating this ideal is through timely and efficient enforcement of the antitrusts and trade regulation laws. But if deterrence is our central goal it is not our only goal.

From the time that the idea of a trade commission was first discussed, its proponents insisted that the proposed agency must be something more than prosecutor. The original intention was to arm the Commission with a panoply of means to achieve a better competitive atmosphere. They felt that the provision of assistance and encouragement to the honest trader was as essential as the disarmament of the dishonest one. For, as expressed by President Wilson in words that are as fresh and meaningful today as they were when first uttered in 1914:

"The businessmen of the country desire something more than that the menace of legal process in these matters be made explicit and intelligible. They desire the advice, the definite guidance and information which can be supplied by an administrative body." [1]

Therefore, one of our goals must be service to those businessmen who evince a desire to obey the laws we enforce and who seek guidance in the sometimes perplexing task of obedience. We covet voluntary compliance, and our door is always open to those businessmen who realize that self-regulation is the plain duty of every freeman. The Federal Trade Commission also serves business by functioning as an information center. The acquisition and dissemination of information essential to the identification of our economic problems and to the successful solution of those problems is a function not to be treated lightly. Today, I wish to describe briefly some of the service functions performed by the Commission.

III

The story of our Bureau of Economics deserves a wider audience. Much of the time of our economists is devoted to immediate support of our antimonopoly enforcement efforts. Cases attacking corporate mergers or discriminatory pricing practices in many guises often raise complex economic issues requiring detailed analysis. Our small staff of economists have discharged this important duty in a commendable fashion. However, their activities extend far beyond the provision of assistance to the trial lawyers. One of the Bureau's critical functions is the conduct of general economic surveys and investigations. These studies are both intensive and extensive. They may examine specific economic problems already identified. They may examine a specific industry or manufacturer or distributing process caught in a complex of problems, or they may range over a wide expanse of the economy in order to identify trends or significant changes in economic structure. These studies have been of incalculable value. I, for one, have no patience with those who say that theory is useless to practical men and that long-range study is of no value in daily activity. The converse is true. There is nothing more practical than theory, and few things have more immediacy than long-range study. If you doubt the validity of this contention, I suggest that you think of those citizens of a generation ago who laughed at the scientists who maintained that the atom could be split, or those "practical men" who invested in the securities of interurban trolley lines as Model T's were pouring out of Detroit.

Many of the studies of the Bureau of Economics have had immediate practical effect. The outstanding example was the response engendered by the final report on the chain-store investigation issued in 1935. Its revelation of widespread discriminations in price induced by large buyers, of large brokerage fees paid to the chains and of disproportionate advertising and service allowances granted to large customers furnished much of the impetus for the passage of the Robinson-Patman Act. You who are a part of the vast food distribution industry are, of course, very much aware of the immediacy of these problems.

However, I am sure that you do not need to be told that the problems attempted to be met by the Robinson-Patman Act do not exhaust the list of your difficulties. For instance, I am told that one of your principal difficulties has been caused by the contraction in the number of retail distribution outlets available to you. A small supplier is often disadvantaged in attempting to meet the needs of a large retailer, since the small supplier's geographical coverage and power to offer economic inducements are often limited. It is possible that the market power of large retail food distributors can be abused in many ways to the ultimate detriment of a small supplier. I am informed that one of your worries is the possibility of increased vertical integration by retail chains. Each time a chain purchases its own ice cream manufacturing plant or fluid milk processing station one more market is removed from the reach of the independent dairymen. Such an action may or may not be in violation of the antitrust laws, but the fact that such integration has taken place in the past and may take place again in the future creates an atmosphere in which practices clearly violative of the antitrust laws can proliferate. I refer, of course, to the possibility that a large chain may use the threat of vertical integration to force an independent who desires its custom to grant discriminatory discounts, rebates, services, advertising allowances, loans of money, free equipment or other inducements.

I am confident that a recent study just now being completed and not yet published by the Bureau of Economics will shed new light on these problems and others related to them that concern you so closely.

During 1959 the Bureau of Economics conducted an intensive study on the basic economics of food distribution. This study involved analyses of the distribution structure of the corporate chains, the voluntary group wholesalers, and the retailer-owned cooperatives—types which in 1958 accounted for the bulk of retail food store sales.

The report will show many interesting and dramatic changes in the industry. For example, stores selling over $1,000 a day accounted for only 4 percent of food store sales in 1929 but 70 percent in 1958.

Having found a large measure of concentration and integration in the distribution of food at the retail level in this first phase of the study, the Bureau of Economics during 1960 will study the economic impact of current trends upon suppliers. This study will include analysis of the buying and selling practices of chains and wholesalers and will examine the details of their business dealings with the growers and others who supply them with essential food items for the conduct of day-to-day retail business. Where adverse economic impact, unfair or illegal trade practices, unwarranted discrimination, or other evidences of abuse of free competition are discovered, remedial steps will be recommended. Such studies on marketing topics by Government, added to the wealth of research in business today, can provide important guideposts for marketing executives.

I suggest that this forthcoming report from the food industry can be of great usefulness to the members of this association. From this report you can learn hard facts about the present structure of the market that you seek to serve. Your opportunities for effective sales promotion may be maximized by using the report as a tool for analyzing the specific markets in which you operate or expect to operate. You may wish to use the facts contained in the study in shaping your sales promotion plan, and in this day of the supermarkets, sales promotion for the small independent supplier is more important than ever. The independent dairymen or any similar group of small businessmen should not be discouraged from imaginative sales promotion efforts by any contraction in the number of retail outlets available. As you plan, remember that you have the protection of the Robinson-Patman Act. Any pressure by a large retailer seeking preferential treatment from you violates that law.

Thus, you should be encouraged to develop sales promotion programs in cooperation with all of your retail customers. The big

[1] Sixteenth message and papers of the Presidents, 7910 at 7916.

chain and the small operator should both be given equal treatment and can be expected to give you full cooperation. You are entitled under the law to get all of them to work for you to sell your product with your label.

IV

I deliberately chose to discuss in some detail the importance of the work of the Bureau of Economics to the members of this association, to all small businessmen, and to business generally, because the import of that work is not readily apparent to the casual observer. However, the services furnished to small businessmen by the Federal Trade Commission are by no means limited to broad studies of business activity, valuable as those studies are. We also offer assistance in more immediate ways.

In order to systematize its assistance to small businessmen the Commission established a Small Business Division within the then new Bureau of Consultation in 1954.

The creation of this Division symbolized the Commission's determination to assist small businessmen in every way possible within the scope of its assigned functions. That determination persists.

The Small Business Division meets a variety of needs. Perhaps its most creative service is the provision of advice and guidance to perplexed businessmen. Small business owners preparing plans for future operations or beset by problems in their day-to-day activities have a standing invitation to draw on the resources of the Division of Small Business. Most of the problems submitted to the Division raise questions regarding the applicability of laws administered by the Commission to given business situations. Once the issue is defined the Division then analyzes precedents established in Commission and court cases that may bear on the particular problem under analysis. If need be, the Division of Small Business can draw on the combined knowledge of the entire Commission staff. When the analysis is completed informal guidance is then given to the businesman. The advice furnished, because of its informal character is, understandably, not legally binding upon the Commission. Rather, it is designed to assist the small business manager in adapting his practices to Commission requirements, as well as to assist him in obtaining the relief from the unfair practices of his competitors which Commission law affords.

The Division of Small Business does not abdicate its advisory role if the problems of the businessman seeking guidance extend beyond the confines of Federal Trade Commission jurisdiction. Whenever the situation warrants, it seeks to inform small businessmen of the functions and jurisdiction of other governmental agencies concerned with their interest. To better fulfill this role the Division maintains liaison with the House and Senate Select Committees on Small Business, the Small Business Administration and other agencies dealing with the problems of small business.

If a businesman wishes to make use of this individual advisory service it is important that he make a full revelation of the details of his problem in writing, when possible, and at the earliest convenient time. In that way our staff is given an adequate opportunity to do the necessary research. After this research is completed, a conference will be arranged if it is desired and if time and distance permit. In instances where such a conference is not desired or is impractical, guidance will be furnished by correspondence.

Another function performed by the Division of Small Business is the expedition through the Commission of those matters involving practices which adversely affect small business. Any small business concern which has reason to believe that a businessman is using methods proscribed by the laws enforced by the Commission should submit a complaint to the Division. The complaint may be submitted in any written form—a letter is sufficient. It should contain the name and address of the persons whose practices are questioned, together with a description of those practices in as much detail as possible. Where practical the complaint should be accompanied by any evidence that is readily available.

It is the policy of the Commission to hold the name of the complaining person in any proceeding in confidence. This policy is premised on the fact that a complainant is not a party to any Commission proceeding; since the Commission acts only in the public interest, all formal actions are instituted in its own name.

A letter of complaint receives prompt consideration. If it is determined that further proceedings would be in the public interest and that the Commission has jurisdiction, a formal investigation is docketed. When the facts are known, appropriate action is taken.

It should be understood, of course, that not every practice which adversely affects small business will be found illegal. In this regard, the Division of Small Business will be glad to ascertain whether a given complaint actually does involve practices which violate the law.

The activities of the Bureau of Economics and the Division of Small Business represent only two facets of the broad service functions performed by the Federal Trade Commission. Mention should be made, for instance, of the Trade Practices Conference program and the Guides program. However, I will count it a real gain if I have demonstrated to you that we have facilities available for your use and for the use of all other businessmen who desire to compete in an ethical and efficient manner.

If we can be of service to you please call on us. One of our goals is service to the business community, and, as with all our goals, we are determined to achieve it.

Support for Conservation Reserve Program

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. LAIRD. Mr. Speaker, Mr. James H. Murphy, chairman of the board of the Murphy Products Co., of Burlington, Wis., made a very interesting and informative speech at the annual meeting of the Wisconsin Swine Breeders Association. This speech was recently called to my attention and I believe deserves the careful study of every Member of Congress.

The Murphy Products Co. is a commercial feed concern and for that reason Mr. Murphy's statement on the conservation reserve program deserves special consideration. The speech is as follows:

SIDELIGHTS ON THE FARM PROBLEM

The farm problem in its simplest form is a matter of an overproduction of essential foods and fibers for human use. This problem is not new, but is the accumulated result of two important factors.

First. For 50 years the efficiency of producing food and fibers has increased about 2 percent per year or 100 percent overall. This 50-year increase in efficiency is more progress than was made in the previous 2,500 years. It occurred as the result of experiment station research, improved machinery, better breeding, the use of hybrids, better fertilization, and newer, more up-to-date production methods.

Second. Under the stimulus of high prices during two world wars, much of our long-time grassland, and a lot of marginal land was plowed up and used for cropland farming. This occurred throughout our agricultural area, but especially in those areas normally considered too dry, too cold, or too rough for good crops.

These bothersome farm surpluses first occurred shortly after World War I and caused the farm depression of the 1920's, which became more accentuated in the 1930's. Under the Hoover administration, Alexander Legge, president of the International Harvester Co., was called in to head up the Farm Administration. He found the problem too big to cope with on an administrative basis, and didn't have time to develop an effective method of meeting the problem. In the following administration when Henry Wallace was Secretary of Agriculture, he recognized the problem as one of overproduction beyond our needs. He undertook to solve it by killing off 10 percent of our newly farrowed pigs, plowing under every third row of corn, and cutting down on our overall agricultural production.

Then World War II took over and not only absorbed all surplus food and fiber, but demanded ever-increasing supplies for ourselves and our allies. The problem became one not of supporting prices, but on setting ceiling prices that would still encourage top production. As a matter of fact, any food and fiber material that could be produced could be sold at the highest prices permitted by regulations.

Then, following World War II, ceiling prices became support prices. The question of parity came into the picture. Farm crops were subsidized, not for production to meet our needs, but to give the farmer prosperity. These subsidies encouraged overproduction, developed ever-increasing surpluses, and knocked out the price factor which ordinarily controls supply and demand.

Now we face this monstrous dilemma, of our own making, and wonder which way to go. First, we must recognize that producing beyond our needs is wasteful, uncalled for, and, from a conservation standpoint, just as wrong as pumping our oil wells at full capacity and letting the oil soak into the ground, or of cutting our forests and letting the fallen trees rot away.

Second, our food and fiber production capacity, the fertility of our soils, is a sacred trust, a legacy or inheritance, if you please, that we should conserve for future generations when a greatly increased population will badly need it.

We should produce no more than we can consume or distribute, and I think you will agree it is morally wrong to produce and waste while others in this world are hungry and needy. We should produce for ourselves and face the responsibility of distributing our surpluses to those far more needy folks who are hungry and poorly clad in many areas of the world.

We can't sit back in smug, well-fed, well-clothed satisfaction and let our tremendous overproduction go to waste. Regardless of price, we must face up to the responsibility that if we can't use it we must distribute it to others. At the same time, our tremendous and increasing production capacity should be conserved. It is, as I say, a legacy—a trust fund—an inheritance that should be conserved and improved for our children and grandchildren.

This is not a new thought. During the past few years the U.S. Department of Agri-

culture, under Secretary Benson, has organized the conservation reserve of the soil bank. This department is headed by one of our top Wisconsin farmers, Mr. Tom Hamilton, of Westfield; he is a man who has made an outstanding farming success on comparatively marginal land by following new and approved production methods. He and his associates believe that one practical method of meeting the farm surplus problem is to reverse the trend from grassland to cropland.

The soil conservation reserve is set up to do this. It encourages farmers to put their cropland farms into grassland, reforestation, or develop them for recreational use. The privilege of putting land in the conservation reserve must be applied for and is not forced on anybody. It is a natural for folks who wish to retire and still live on the farm. It takes care of the widow with a growing family who wants to hold the farm until her youngsters grow up. It provides for taking cropland out of production and preserving its fertility for the future.

In 1959 nearly 23 million acres were enrolled in the conservation reserve. Twenty million aces went back into grass. Over 2 million acres was reforested, and the balance was developed into recreational areas. Most of this reserve consisted of whole farms, and none were taken unless a subsidized crop had been produced on them in one of the previous 2 years. Consequently, nearly 17 million of the 23 million acres was cropland.

This method controls production and costs far less than subsidies. The cost per acre on the average is $8 per acre for land that will produce 20 bushels of wheat per acre. The entire 23 million acres, much of it excellent cropland, cost the Government a total of $375 million or an overall average of $16 per acre—less than one-fourth of what a crop subsidy would cost.

Our authorities estimate that to control our present surpluses would require taking out of production somewhere from 66 million to 100 million acres, and this could be done at a yearly cost of a little over $1 billion, or about what storage plus carrying charges are on our present surpluses. In addition, we would be conserving vast areas of grassland and forests for future generations.

Then, too, we could stop pouring out billions in needless subsidies that now encourage marginal farmers to continue building up our unwanted surpluses.

For just a moment let's consider who gets these subsidies:

No. 1, there is the commercial family farm—well run, ably managed, efficiently equipped, that under normal conditions can make money without extra subsidies. About 25 percent of our farms fall in this class and they produce 75 percent of our food and fibers.

Prof. N. S. Hadley, head of the farm management division of Purdue University, says that while we now have 4½ million farmers, that in the next 10 or 15 years less than one-third of them—1 to 1½ million—will produce at least 90 percent of all the food and fiber we need. He says in the Corn Belt these commercial family farms will include 300 to 500 tillable acres with a capital investment of $200,000 up. He says the 80-acre farm, the 5-cow herd and the 100-hen flock are rapidly disappearing; however, we don't need 3,000 acres, 10,000 hens, or 500 cows to stay in business.

Returns to labor and capital increase very rapidly as the size of the farm moves from 80 acres to 200 acres. Then holds steady to 500 acres and from there up returns to capital and labor tend to drop off. This larger, more efficient, more productive and more profitable farm unit can support 30 to 50 dairy cows, 20 to 40 brood sows with their pigs, 1,000 to 2,000 hens and 75 to 100 steers. Of course, many highly successful farmers can go well beyond these numbers, and he concludes that the trend will be in this direction. So much for the commercial family farm and its potentials.

Then No. 2, there is the hobby farm owned by a man successful financially, often with a farm background. He likes the farm. He wants to raise stock. He likes to raise crops. He may consider the farm a hedge against hard times. However, he dsilikes regimentation and certainly doesn't need a subsidy.

The third class are the part-time or second-shift farmers. These are farmers near industrial areas or on marginal land. They do not make a living on the farm. They are employed off the farm at least 100 days a year. In some areas they work in industrial plants, and have a small farm to provide better family living or as a safeguard against unemployment, or because they like country living. Their production adds to farm surpluses but need not be subsidized.

Some of these part-time farmers are on marginal lands and may raise sizable families who help with the fieldwork. The farmer himself finds seasonal employment in construction, roadbuilding, forestry, cutting pulpwood, doing guidework during hunting and fishing seasons, or in any one of dozens of other fields of activity.

He makes as much off the farm as on, but is very vociferous about demanding that the Government subsidize his farm operations so as to make them pay. He probably would be as well off working full time off the farm, but still living on it and let it go back to grass and reforestation.

So, if a means were supplied to retire these marginal farms, our surpluses would be greatly reduced, the pressure on prices would be cut down and our efficient farmers could operate at a profit without subsidies. All this the Conservation Service of the soil bank provides. It is not the whole answer, but is an important, constructive step in the right direction.

Properly expanded to four or five times its present size it could cut down unmanageable surpluses to a reasonable size that could be handled. This, coupled with increased distribution to needy areas at a low world price or on a giveaway basis as we dispense money and munitions, would materially reduce our surpluses.

This would enable us to operate our farm production on a sound basis both morally and financially—and at less than one-fourth of what it now costs.

So, let's not merely sit back and agree with those who for political and other reasons criticize the efforts of our faithful public servants, but rather keep in contact with the constructive steps they initiate. Then when a worthwhile constructive proposal such as this Conservation Service develops, let us encourage it, cooperate with it and support it to the fullest possible extent.

It is a movement that is already started, can be developed and extended on a foundation that is both morally and financially sound.

Triton High School, Runnemede, N.J., Science Fair

EXTENSION OF REMARKS

OF

HON. WILLIAM T. CAHILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. CAHILL. Mr. Speaker, I want to take this opportunity of bringing to the attention of the Congress the outstanding progress which has been achieved in the Triton High School in Runnemede, N.J. This school located in the Black Horse Pike Regional High School District draws its students from the three municipalities of Bellmawr, Runnemede, and Gloucester Township. This area was one of the earliest settled in colonial southern New Jersey and is part of the dynamic Delaware Valley.

I had the personal pleasure of visting this school during the week that a science fair was being conducted and was tremendously impressed by the number and quality of the exhibits that were there on display. I am also greatly impressed by the great respect which the students had for the teaching staff and the teaching staff had for the administrators of the school. All in all, it carried out, in my opinion, the ideal school system with an active board of education, a qualified administrator and teaching staff and an enthusiastic and industrious student body.

I wish to pay tribute to Mr. August W. Muller, superintendent and his assistants Mrs. Virginia Forneron and Mr. Walter F. Johnson. Mention should also be made of the heads of the departments as follows:

Mr. James A. Keegan, head of science department; Mr. Frederick Lynch, head of the industrial arts department; Miss Helen Megargee, head of the English-language department; Mr. John Oakes, head of the physical education department; Mr. Edward R. Ritchie, head of the social studies department; Mrs. Marjorie Simpson, head of the business education department; Mr. Charles W. Weigle, head of the mathematics department.

I am also happy to insert in the RECORD the names of the members of the board of education who are really responsible for the establishment of this school. They are as follows:

Mr. James Thomas, president; Mr. William Minkoff, vice president; Mr. George Burlingame, Mr. Leonard DeGeorge, Mr. Raymond Hansen, Mr. William Knippe, Mr. Joseph Moffa, Mrs. Frances Pyne, Mr. Elwood Robertson, Mr. Elmer Hill, secretary of the board.

Space does not permit inserting the names of all the students who participated in the science fair. In fact over 500 of the students participated by entering exhibits in the fair. Let it be said to all of the students of the Triton High School who participated that they demonstrated not only a great aptitude for and interest in the field of science; but by their enthusiasm and knowledge they also indicated the superb quality and dedicated service of the faculty of Triton High School.

I am, of course, pleased that Triton High School is situated in the First District of New Jersey which I have the honor of representing.

Job Exports and Prosperity

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend

my remarks in the RECORD and include therein an unusually provocative and interesting article entitled, "Blame for Job Exports Laid to Several Sources," by the distinguished economic columnist Elmer Roessner.

On previous occasions I have inserted some of Mr. Roessner's articles in the RECORD because I have found his presentations to be of real significance in the light of many developments taking place in the country and the world today.

When we ponder in the Congress, as we do, about the reasons for the so-called trouble spots and depressed areas in the United States which are not by any manner or means sharing in current prosperity, we would do well to consider the reasons for these conditions and for the steadily widening impact of foreign imports and foreign migration of American capital upon our own economic posture.

It is surprising to me that more of our national leaders do not realize where these trends are leading us and the devastating effects they have and are bound to have increasingly on the American economy and our free way of life.

As in other matters, I suppose we will wait until the horse is stolen before we close the barn door, but I merely want once again to make my own strong, emphatic protest against the policies and the laws that are making these threatening developments possible.

The article follows:

BLAME FOR JOB EXPORTS LAID TO SEVERAL SOURCES

(By Elmer Roessner)

This is more about exporting American jobs.

Jobs themselves, of course, are not exported. But when someone has work done overseas that could be done here, it means that somebody is laid off in the United States and someone is put to work abroad—and for all practical purposes that's a job export.

Two areas in which jobs have long been exported are in movies and in fine engraving. The color engravers of Germany, France, Switzerland, Belgium, Holland, and perhaps a few other countries do fine work cheaper than Americans.

Many will argue that despite the guild-like devotion to skills in the Old World, and the handing of skills from father to son, American engravers are superior to Europeans. Even if this is true, the European craftsmen turn out work cheaper. Engravings, and sometimes printed sheets themselves constantly flow in from abroad. Every day's work means the transfer of one job across the Atlantic.

FILMING ABROAD

The exportation of moviemaking is well known. American producers have been making many movies abroad for years. Scenery and backgrounds have been considerations, but lower scales and tax advantages are important. In Hollywood, extras live on unemployment benefits; in Italy, France, the Holy Land and elsewhere, natives draw unexpected pay for moving across the background.

Now work on cartoon films has been exported. Variety reports that major U.S. film companies are almost completely out of the cartoon field and the foreign countries may become chief suppliers of both short- and feature-length cartoons. "Estimates differ, but it's figured that a foreign cartoon can be acquired for from 50 to 75 percent less than one of similar length made in the United States," Variety says.

And Women's Wear reports that Warner Bros. Co., Bridgeport, is having its own staff design foundation garments for manufacture in Europe with the stated reason of using quality laces, elastics and workmanship abroad.

Is this export of jobs good or bad? Little of both. When there is heavy unemployment in this country, farming out work abroad worsens the situation. When labor is scarce, it is helpful. When foreign countries are in economic distress, sending jobs abroad can help them. It may be cheaper to support some Americans with unemployment insurance than to cause foreign workers to turn to communism because there is no market for their brassieres or transistors.

Who is to blame for export of jobs?

Partly the administration because it has been trying to shore up the economies of our allies, and has been reluctant to use discretionary powers to limit imports.

Partly our tax system, which provides great advantages for knowing persons who can transfer their earning powers abroad, and for corporations that can keep outside the taxing power of the United States.

And partly labor itself, which has priced itself so high that almost all of American industry is on a quiet search for ways in which its products can be made and its services rendered by low-wage workers abroad.

Faith of Our Fathers Living Still

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. WESTLAND. Mr. Speaker, I am proud that one of the youths from my district received recognition for her essay entered in the Daughters of the American Revolution Good Citizenship Contest. She is Miss Marie Weston of Freeland, Wash., and her paper, "Faith of Our Fathers Living Still," was among those which won top State honors.

I believe that what Miss Weston wrote is an indication of the seriousness of thought and purpose of today's youth, and is an inspiration for those who read it. The essay follows:

FAITH OF OUR FATHERS LIVING STILL

Our country's great leaders down through the years have shared a sure belief in God, in themselves, in their fellow men, and in freedom. In crisis and in peace they have placed their faith in God's wisdom, and in their ability to work out their problems, and in the great justice of a free people.

It is my belief that we still have as a nation that same faith, that same reliance on divine aid and assistance, as was needed at the Constitutional Convention. I am very grateful that they established and wrote into their documents a recognition of their dependence upon the Almighty; that they stamped on their coins the slogan, "In God We Trust."

The problems of our country are complex and difficult and there are many responsibilities. We need guidance as never before.

Ezra Taft Benson, Secretary of Agriculture, says that the men who work with him in the Cabinet are men who believe that the Constitution contains eternal truths. They are men of faith who join in prayer in weekly Cabinet meetings, men who want to keep America strong and are willing, as their fathers before them, to sacrifice financially to serve the Government.

Several times President Eisenhower has issued a proclamation for a day of prayer in which all branches of the Government were asked to devote the day in giving thanks for blessings received and to ask God to strengthen us in our efforts for peace and to guide us as a nation.

At a prayer breakfast attended by men of various religions and political beliefs there was a piece of literature distributed by Conrad Hilton. It was inspired by the many letters he received as the result of an address given by him over the air. It was a picture of Uncle Sam on his knees in prayer saying "* * * not beaten there by hammer and sickle but freely intelligently, responsibly, confidently, powerfully." A prayer was pinned beside the picture and part of it read "Inspire us with wisdom, all of us of every color, race, and creed to use our wealth, our strength to help our brother, instead of destroying him."

The faith of our fathers still motivates the lives and thinking of our leaders. They believe as Benjamin Franklin that, "God governs in the affairs of men—without His aid we build in vain."

We are thankful for this land of abundant living, for freedom of conscience and individual opportunities and for faith itself. This is the legacy our fathers left for us. Let us preserve those sacred things of our heritage for those who come after us so as Lincoln said, "That this Government of the people, by the people, and for the people shall not perish from the earth."

"In God we trust."

Midwest State Transportation Leaders Endorse H.R. 9488

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. CUNNINGHAM. Mr. Speaker, additional support for H.R. 9488, which would prevent the airlift of first-class mail on which airmail postage has not been paid, is voiced in the following resolution adopted last week by the Midwest Association of Railroad and Utilities Commissioners, representing 11 Midwestern States.

The resolution follows:

RESOLUTION

Whereas for over 6 years the Postmaster General of the United States has been conducting an airlift program for transporting by air ordinary first-class mail on an experimental basis and has recently substantially extended the program and has announced plans to further extend the program on a permanent basis; and

Whereas the diversion of first-class mail revenues from the railroads as a result of this program materially impairs their ability to continue to provide the service required of them in the interest of a sound national transportation system to adequately serve the national economy and properly maintain the Nation's defense: Now, therefore, be it

Resolved, That the Midwest Association of Railroad and Utilities Commissioners hereby go on record as opposed to the program to fly ordinary first-class mail and as

favoring and urging enactment of legislation to require discontinuance of the program; and be it further

Resolved, That copies of this resolution be sent by the Secretary to each Senator and Congressman from the States embraced in the membership of this conference, and to the members of the Committee on Post Office and Civil Service of the Senate and House of Representatives.

Commencement Address by Henry Cabot Lodge, U.S. Representative to the United Nations, at Graduation Exercises of U.S. Naval Academy

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, today at the U.S. Naval Academy at Annapolis, Md., the distinguished representative of the United States to the United Nations, the Honorable Henry Cabot Lodge, delivered the graduation address to the class of 1960.

Mr. Lodge has represented America with great distinction at the U.N. His task there is an insuperable one. He has gained much knowledge of world conditions because of this position and his other outstanding military and public contributions to his country. He spoke to the young men of Annapolis from this storehouse of information. His address was short, unequivocal, and direct. His words were inspiring and timely.

It gives me therefore, Mr. Speaker, great pleasure to include with this permission, the address of this distinguished man in the Appendix of the RECORD:

TEXT OF COMMENCEMENT ADDRESS BY HENRY CABOT LODGE, U.S. REPRESENTATIVE TO THE UNITED NATIONS, AT GRADUATION EXERCISES OF THE U.S. NAVAL ACADEMY, ANNAPOLIS, MD., JUNE 8, 1960

To stand before this class, whose members are about to become regular officers of the U.S. Navy and other services, is an unforgettable honor for any man. It is doubly so for one who, like millions of other American soldiers in the Second World War, had the experience of putting his life into the hands of the Navy.

In the minds of the American people the Navy means daring, discipline, and sacrifice. It means bold feats of arms which, in times of danger, have changed the country's fortunes—from Lake Erie to the Battle of Midway and the Inchon landings. It means the rise of the United States as a great power with responsibilities as wide as the oceans of the world.

That idea of the Navy which Americans hold is not an illusion. It is true. There could be no higher wish for you who will become officers of the Navy today than that you yourselves should carry through your lives, in good times and bad, such a shining image of your calling.

Many centuries ago a wise man said:

"No counsel is more trustworthy than that which is given upon ships which are in peril."

In our generation the United States, and all nations which love their independence, are in peril. The realization of that peril should not cause us to become rattled. Rather, like sailors who are aware of danger, we should get down to fundamentals and seek trustworthy counsel about the things which really matter.

First on the list must come the country's security from armed attack. For that, America looks first and foremost to you, her professional military men. You must maintain our security in an era of dazzling change in weapons and in organization. You must not become mentally frozen. You may indeed see a time when new weapons and techniques will have wiped out the age-old lines of demarcation and our forces will no longer be divided into an Army, a Navy, an Air Force, and a Marine Corps. You will have to be able to take such radical changes in your stride and not be merely career-minded.

This means that you will have to keep your horizons wide—as wide as the interests of the United States. In fact many of you will have to be acquainted with more than military affairs. In this age of danger our military strength is the indispensable physical backing for our foreign policy. You will have to understand that foreign policy, the world in which it operates, and the basic American aims which underlie it. For the time is past—if it ever existed at all—when foreign policy and military affairs could be talked about in isolation from each other. The truth is that our security depends both upon our power and upon our purposes.

The Navy lives in that knowledge. Yours is not a mothball Navy which sleeps until war breaks out. In the Mediterranean and the Formosa Straits your ships and aircraft have accepted the risk of violence to give sanctity to the treaties and pledges of the United States. Your readiness is one of the profoundest reassurances of peace that free nations can hope for in this turbulent world.

We strive for our ideals and for a world at peace. Yet we know the road is difficult and dangerous. We know there can be misunderstandings, that our ideas can be distorted, and that the possibility of violence is a familiar fact of our time.

The most recent Kremlin press conference, for example, impresses us first by its untruth, its unpleasantness and its crudity. Yet on second thought we can see it as a healthy reminder of the facts of life. One of those facts is that basic Soviet aims have never changed. Another is that our military strength is now—and in the future must ever be—such that, as President Eisenhower said at West Point last week, no one dare attack the United States. Our reaction to such events, therefore, should be calm and cool.

America looks to the military forces in which you will play a great part, to lead her across dangerous seas. Vital though they are, it is not missiles which will ultimately save us, but men. And it is not at moments of celebration such as this that men prove their qualities, but in the hour of confusion and alarm.

Four hundred years before Christ, the Athenian ruler Pericles said this about the soldiers who had died in war:

"They faced the foe as they drew near him in the strength of their own manhood; and when the shock of battle came, they chose rather to suffer the uttermost than to win life by weakness. So their memory has escaped the reproaches of men's lips, but they bore instead on their bodies the marks of men's hands, and in a moment of time, at the climax of their lives, were rapt away from a world filled, for their dying eyes, not with terror but with glory.

"Such were the men who lie here and such the city that inspired them. We survivors may pray to be spared their bitter hour, but must disdain to meet the foe with a spirit less triumphant.

"They gave their bodies to the commonwealth and received, each for his own memory, praise that will never die, and with it the grandest of all sepulchres, not that in which they mortal bones are laid, but a home in the minds of men, where their glory remains fresh to stir to speech or action as the occasion comes by. For the whole earth is the sepulchre of famous men."

The American people look to you, the officers of the Navy and of all our military services, for the hard, steely resolve which can stand up amid disaster and take command to save our Nation. Thus being ready for the worst, we can pursue with confidence the path which leads toward the best.

As you begin your careers of service to our cause, I salute you and wish you well.

Lewis G. Castle

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. KILBURN. Mr. Speaker, I insert an editorial from the Watertown Daily Times, Watertown, N.Y., regarding my friend Lewis Castle, Administrator of the St. Lawrence Seaway Development Corporation. This paper, as well as all of us in northern New York, knew of his fine character and the remarkable achievement that Mr. Castle made in the development of the St. Lawrence Seaway. I know that the Members and the public Generally will want to read this fine tribute to a truly great American:

[From the Watertown Daily Times, June 6, 1960]

LEWIS G. CASTLE

Lewis G. Castle, who died in Massena Saturday afternoon, had the rare experience of satisfying a lifelong ambition. That ambition was for the construction of the St. Lawrence Seaway which he himself was able to accomplish through being the Administrator of the St. Lawrence Seaway Development Corp. Here was a man who nationally was at the forefront of those who sought the construction of the seaway and those who campaigned for the construction of the seaway during the period of the 1940's and early 1950's. When the Federal Government finally passed legislation to undertake the seaway construction, Mr. Castle was appointed by President Eisenhower to be the responsible head of the corporation which was assigned the job of construction and later the job of running the seaway.

He was a citizen of Duluth, a member of an illustrious Minnesota family. He had been associated with the banking business in Duluth. He became the chairman of the executive committee of the Great Lakes-St. Lawrence Association shortly before this association was to undertake its most successful effort to secure action on seaway legislation. For many years the Great Lakes-St. Lawrence Association had sought in vain Federal development of the seaway. His first reward was the passage of the law. His second reward was the assignment to build the seaway. His third was the completion, and his last was that of seeing the successful use of the seaway by ships from all over the world for almost 2 years. It was only

last June that the Queen of England participated in the ceremonies at Montreal and Massena officially opening the huge St. Lawrence canal system. Some ships had passed through the canal in the late fall of 1958. The shipping season of 1960 has been well under way since mid-April.

If he thought it was difficult to secure Federal passage of the seaway legislation, that was nothing compared with the last 6 years of his life during the period of construction and the initial use of the St. Lawrence Seaway. He had a unique role as the head of the seaway corporation. The United States was sharing the construction cost of the seaway with Canada. Thus there was the difficult challenge of accomplishing an international project. At the same time, and as part of the seaway undertaking there was also the associated power development project which was undertaken by the New York State Power Authority and the Province of Ontario Hydroelectric Commission. Here was a citizen of Minnesota who found himself enmeshed in the affairs of two Federal Governments and the State government of the United States and the Provincial Government of Canada.

To some extent he had experience in the complications of such a tangle of governments and personalities during the time when he was making an effort to secure Federal passage of the seaway legislation. He had competition in the sense that these various governmental units during the construction period were vying with one another to accomplish the project. He had to reconcile his concept of the project with that of the greatest and most colorful builder in the world, Robert Moses. He had the difficult role of representing a Federal Government whose financial stake in the St. Lawrence Seaway and power project was smaller than the stakes of New York and Ontario. Each of these instrumentalities spent more than two times the money on the St. Lawrence River that the Federal Government of the United States and the Canadian Government spent.

Yet through it all, Mr. Castle was successful in representing the Washington point of view, as well as his own personal attitudes which at times were difficult to argue in the face of the opposition. It wasn't a case of conflicting ambitions. It wasn't a case of jealousies. Rather it was an example of a billion-dollar enterprise in which the St. Lawrence Seaway Development Corp. which Mr. Castle headed was a third or fourth partner. Let it also be said that the conflict within the United States with respect to the seaway was such that he did not ever secure the complete backing in Washington that his counterpart in Canada secured from Ottawa. What New York State and Ontario were able to do because of the nature of the backing to Ontario Hydro and to the New York Power Authority made it necessary for Mr. Castle to feel his way along carefully and conservatively.

The virtue of his service was that he was able to advance the U.S. Government interest in spite of the competition and the conflicts to the point that he was responsible for doing an almost impossible assignment.

Mr. Castle was a friendly, devoted public servant who was most successful in smoothing over the inevitable rough edges of the biggest public works undertaking in the modern North American continent. He has lived for the last 2 years in Massena, where there was a funeral service Sunday before the service which will be held in his home in Duluth. He will be greatly missed for his humanness in this tremendous enterprise. His success in accomplishing his ambition was due to the fact that he was a man of fine instincts, great persuasiveness and affability, who at the same time could be stern and aggressive.

The 14th Commonwealth

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. FLOOD. Mr. Speaker, it gives me great pleasure to compliment one of my constituents, Attorney William Brewster, of Kingston, Pa., upon the completion and recent publication of another of his valuable historical works entitled, "The 14th Commonwealth."

It is very interesting to note that Attorney Brewster is a descendent of Elder Brewster, who came to New England with the first settlers. Another one of his ancestors was on the bridge at Lexington and helped repulse the British.

William Brewster was born on a farm in Susquehanna County in the northeastern section of Pennsylvania. Now past 80 years of age, he recalls that in his youth Galusha A. Grow, who lived in that general vicinity, rode by in his carriage. Grow, who succeeded David Wilmot in Congress, was Speaker of the House in the early days of the Civil War and introduced the Homestead Act in the Congress of the United States.

In his youth, Attorney Brewster was a newspaperman and he was working on a newspaper in Stroudsburg, Pa., when he decided to try his hand at newspaper work in the Wyoming Valley, which comprises my congressional district. For many years he covered the Kingston Borough area for a Wilkes-Barre newspaper and while thus employed entered a law office and pursued the study of law.

Attorney Brewster served as a board member and as solicitor of the Kingston Borough School Board for a total period of over 50 years. In 1922, he served as solicitor for the Luzerne County sheriff's office and for several decades was a prominent figure in the political life of Luzerne County.

Attorney Brewster is president of the Hoyt Library of Kingston, a position he has held for many years. He is an honorary member of the board of directors of the Wyoming Historical and Geological Society, of Wilkes-Barre.

For over 50 years, he has been a leading figure in the annual exercises held by the Wyoming Commemorative Association at the Wyoming Monument, in Wyoming Borough, which memoralize the battle and massacre of Wyoming which took place near there on Friday, July 3, 1778, and this year, Mr. Speaker, I have the honor of serving as chairman of the commemorative program.

William Brewster is considered to be an authority on the Constitution of the United States and he is the leading authority on early Connecticut land claims in northeastern Pennsylvania.

A distinguished lawyer who was widely recognized for his oratorical ability, Attorney Brewster is generally regarded as the leading historian of northeastern Pennsylvania.

His current book, "The 14th Commonwealth," is a historical piece which merits the widest possible attention. It is a searching inquiry into the times and events when the residents of Westmoreland County of Connecticut—which encompassed Wyoming Valley—under the leadership of John Franklin and Judge John Jenkins and others, attempted to organize a new state in the northeastern portion of Pennsylvania.

In line with the publication of Attorney Brewster's latest book, I include a news story which appeared in the Wilkes-Barre Record of Wednesday, June 1, 1960:

KINGSTON MAN WRITES BOOK—WILLIAM BREWSTER'S WORK IS HISTORICAL

Wilkes-Barre Record has received an autographed copy of "The 14th Commonwealth" by William Brewster, Kingston. It is his most recent book. It is a history of the attempt to form a new State here in the Wyoming region and is on sale at local book stores.

George S. MacManus Co., Philadelphia, describes the volume as treating of the four movements for new States by Vermont, Westmoreland, Franklin, and Transylvania which developed during the Revolution and the period following its close. The publisher further says:

"About these movements, in newspapers and magazines, from time to time, much has been said, both inaccurate and incomplete; and only one of the lost States has been adequately treated by competent authority. The recurring interest in the subject, we believe, warrants this work which is a concise account contained in one volume. All had similar aspects. Vermont and Westmoreland had a somewhat close relationship and Ethan Allen was a leader in both movements. Likewise, Franklin and Transylvania had a close connection.

"Vermont succeeded and the others became the States that failed; and the intelligent reader of this work may perceive the reason why. Ethan Allen won the independence of Vermont, and the dramatic incidents in his startling career are vividly told. His more astute younger brother, Ira Allen, established the Republic of Vermont, which in 1791 became the 14th Commonwealth. The little known intrigues, by some considered treasonable, of the Vermont leaders with the British during the Revolution, are fully related.

"Westmoreland, the Wyoming region had the most tragic history, replete with Indian massacres, and an open war of pitched battles, murders and cruel evictions. A township and county of Connecticut for 8 years, there was a long, bitter and bloody struggle for its possession between Connecticut and Pennsylvania, known as the Yankee Pennamite Wars. There is a brief biography of John Franklin, the great Yankee leader, who drove out the Pennsylvanians and led the new State movement. The activities of such great national characters, for and against it as Ethan Allen, Oliver Wolcott, Joel Barlow, Timothy Pickering, and James Wilson are fully related. Every reader will be charmed with the fascinating story of Gideon Dudley and the exploits of his Wild Yankee Boys."

The author is a member of Wyoming Historical and Geological Society, and his publications include a "History of Kingston," treating of the history of the Wyoming Valley, and "The Pennsylvania and New York Frontier"; and he has also delivered many historical addresses, among which are "The

Connecticut Claim" delivered at the commemorative exercises at Wyoming Monument in 1939; and "The Beginning of the Anthracite Industry" delivered at the convention of the Mine Inspectors Association of the United States and Canada, both of which have been published.

Reds Enjoy U.S. Privileges

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. SCHERER. Mr. Speaker, in the June 3 issue of the New York Mirror, there appears an article by the able and fearless columnist, Victor Riesel, entitled "Reds Enjoy U.S. Privileges."

In this column Mr. Riesel vividly and effectively contrasts the treatment of Francis Gary Powers by the Communists with two well-known Russian spies that have been caught in this country. We cannot help but draw the conclusion from what has happened in these and other cases that there is a void in the law, due in part to the failure of the Congress to act and in a greater measure to decisions of the Supreme Court, which prevent us from dealing effectively with the various operations of the Communist conspiratorial apparatus within the United States.

I commend this excellent column of Victor Riesel and the information therein contained to the thoughtful consideration of the Members of the Congress:

REDS ENJOY U.S. PRIVILEGES
(By Victor Riesel)

Here is the line between sadism and civilization.

Our spy, Francis Gary Powers, is in solitary confinement. He has been dazed by injections of ampules of sodium pentothal—the truth serum.

Their spy, Col. Rudolph Ivanovich Abel of the Soviet Security Service, is in the Atlanta Federal Penitentiary in good health and thoroughly adjusted to the routine and privileges extended to all other inmates. Much of his time is spent in the prison's drafting and commercial art departments. There Abel can use his skills as a commercial photographer.

He is not sweated for information. He has it. He used three short wave radios for regular secret communication with the Soviet intelligence forces for years. We would like the colonel's knowledge. But he has complete freedom to speak or not.

Abel is entitled to an approved list of visitors—relatives or the nearest Soviet consul or even the Ambassador. But they have abandoned him. Our Ambassador in the U.S.S.R. has tried for weeks to exercise his diplomatic right to visit Francis Powers.

Nor is the line between sadism and civilization a thin one. It is a broad stroke. Take the case of Irving Potash. Years ago he was deported as an undesirable after being convicted of conspiring against the United States. He was—and is—a top official of the American section of the Communist International.

Potash reported to his bureau in Moscow after he was deported. He was assigned to China. He was shifted to Poland, his birthplace. Then he slipped back into the United States. The FBI picked him up. He served 2 years in Atlanta.

When he was released the Immigration and Naturalization Service tried to deport him again. No country would accept him. We did not imprison him or dump him somewhere beyond our borders. Potash got the full measure of the law, which says that if no country will accept him, he is free to move about in the judicial district where he was tried. This is the Southern District of New York.

Comrade Potash now is under supervisory parole. He may not go out of the district. But he is National Labor Secretary of the National Committee of the Communist Party, USA, which takes its instructions from the Central Committee of the Communist Party, USSR. He can conspire against us but there is no law apparently to stop him.

This amuses him. Late in March, for example, Potash broke parole. He had helped to plan a secret meeting of the Communist Party high command—the National committee. This was set for Chicago some 900 miles from the line beyond which he was ordered not to go.

But he went. He sat in on the meetings. They were held in the Midwest Hotel, 6 Hamlin St., Chicago.

The Immigration and Naturalization Service referred the matter of the broken parole to the U.S. Attorney in the Southern District. He checked the law as he would in any routine case.

There was the law. The fact that Potash has been serving the international Communist movement—the threat of which costs this Nation $40 billion a year and more in armament—made no difference. Nor did his association with the Polish and Chinese Communists. The U.S. Attorney ruled that Potash could not be held. He based this on court decisions in analogous cases.

So Potash, though a citizen of Poland and Soviet activist, is free to help run the Communist Party in America. How would you or you be treated if you were to slip into Moscow or Warsaw to organize an opposition party?

Khrushchev's Clean Hands?

EXTENSION OF REMARKS
OF
HON. H. ALLEN SMITH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. SMITH of California. Mr. Speaker, I am pleased to include in this RECORD the comments of a constituent of mine, Mr. R. M. Norrington of Pasadena, Calif., as set forth in a recent letter to the editor of the Los Angeles Times. I feel these are very timely and well-chosen remarks:

RED CHIEF'S CLEAN HANDS, PURE HEART UNCOVERED

With his arms above his head, Khrushchev declared, "As God is my witness, my hands are clean and my soul is pure."

There are three lies in those few words. He doesn't believe in God, his hands are bloody from Budapest, his soul is as pure as a running sewer.

His esthetic nature was terribly shocked that any nation would resort to such low tactics as spying, even in self-defense. He completely overlooked the thousands of Commie spies who roam the earth and possibly the skies as well.

This saintly character called the spy incident an act of aggression. My dictionary defines aggression as "an unprovoked attack." The spy incident was neither unprovoked nor was it an attack.

There is really only one answer to this boasting, bluffing, bombastic, bloodthirsty bully—"baloney." So, I say to Ike:

"Adhere as closely as possible to the Monroe Doctrine. Straighten out your weak State Department. Veto the huge spending bills. Spend the taxpayers' money sanely. Keep the budget in balance. Curb inflation. Save what little is left of the value of the dollar. Keep the Nation strong, and forget the biggest hypocrite who ever lived. Then the Nation will be behind you 100 percent."

R. M. NORRINGTON.

PASADENA.

New Jersey's Most Honored Judge

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. ADDONIZIO. Mr. Speaker, the Honorable David A. Nimmo, judge of the superior court of the State of New Jersey, has been named "New Jersey's Most Honored Judge" by the New Jersey League of Weekly Newspapers. The following interesting article about the distinguished jurist by Mr. M. Martin Turpanjian, president of the league, appeared in the North Bergen Hudson Gazette:

NEW JERSEY MERRY-GO-ROUND
(By M. Martin Turpanjian)

SUPERIOR COURT JURIST DAVID A. NIMMO, OF JERSEY CITY, NAMED "NEW JERSEY'S MOST HONORED JUDGE" BY WEEKLY NEWSPAPER LEAGUE AS HIS SCOTCH ANCESTORS HAVE GLORIFIED THE ANNALS OF ENGLAND'S HISTORY FOR THEIR HEROIC STRUGGLES FOR MAGNA CARTA WHICH WERE FERTILE SEEDS THAT SET INTO MOTION U.S. INDEPENDENCE

Superior Court Judge David A. Nimmo, of Jersey City, was born in Hoboken, January 10, 1896. He received his early education in Jersey City and attended New Jersey Law School, now known as Rutger's University. He was admitted to the bar in 1919. He enlisted in the 104th Field Signal Battalion of the 29th Division, U.S. Army, serving in France during World War I until 1919 as a sergeant.

Judge Nimmo was appointed by Gov. Walter E. Edge as judge of Hudson County juvenile and domestic relations court in 1944. He was reappointed by Gov. Alfred E. Driscoll in 1949. Governor Meyner named him to Hudson County court in 1954. In 1957 he was appointed to the superior court, chancery division.

He is a 33d degree Mason and a trustee of Emory Methodist Church, of Jersey City. He resides at 206 Fulton Avenue, Jersey City. He is a former commander of Hudson County American Legion. He is married to Pilar Huerta, of Ridgefield Park.

David A. Nimmo has been named as "New Jersey's Most Honored Judge" by the New Jersey League of Weekly Newspapers, Inc., with all due respect to others. He is a splendid orator and after-dinner speaker. He is very unassuming. He has received plaques and citations from numerous racial or national groups and from houses of worship and organizations. Some people had been laboring under the impression as if

Judge Nimmo is of Italian ancestry; others believed he was of German ancestry while others felt he was of French ancestry and still others claimed he was of Spanish or Hungarian ancestry.

The Spotlight magazine, of Newark, N.J.'s picture news weekly, listed Judge Nimmo in its Rome edition a few years ago as if he is of Italian ancestry. Many people were consulted and the great majority claimed Judge Nimmo was of Italian ancestry and when the story was written by me in Spotlight a gentleman from Ocean County called up to tell me that he served with Judge Nimmo in the Army in Europe and he was positive that Judge Nimmo was of German ancestry; and finally I began to make my own investigation and went to him and asked him directly as to his ancestry background and Judge Nimmo said he was of Scotch ancestry and a 33d degree Mason, and that his ancestors came to America some 300 years ago and there had been a municipality by name of Nimmo Village in Virginia. Whereupon I wrote to the Governor of Virginia to get authentic facts and the chief executive asked the mayor of Princess Anne region to give the answers and the mayor told me if I wrote to the clerk of the court of that area he would be able to shed more light on the subject and finally I received a letter from Sadie Scott Kellam who said that she is the author of a book on old Virginia families and that she resides on James Nimmo plantation site. I bought that book for $8 and presented it to Judge Nimmo. References are made to Nimmos frequently. James Nimmo came to Virginia some 300 years ago as Ambassador of the Queen of England. He had many holdings and plantations. He erected a church which was known and is still known as Nimmo Church. Many roadways were named after Nimmos.

The family tree of Judge Nimmo also includes a William Nimmo around 1690. It was a William Nimmo who was on Washington's Committee of Safety and his son was with Morgan's riflemen who fought at Saratoga, N.Y. Like soldiers in all wars, some remain where they fought, and this one did and married a girl settling in Albany, N.Y., and Judge Nimmo's grandfather was born there in 1836. It is from him that Judge Nimmo's great-grandfather came to Brooklyn, N.Y., and Judge Nimmo's grandfather was born there in 1836. He is buried in Evergreen Cemetery, Brooklyn. In 1883, his son, the father of Judge Nimmo, came to Jersey City. On his grandfather's tombstone is cut a coat of arms that was bestowed in 1663 bearing an inscription "Nimmo of Scotland." The one who received this recognition had captured a Turkish fort in one of the crusades. After that there was a migration to the New World in the late 1600's.

Judge Nimmo has scored a record of judicial prestige and meticulous wisdom so illuminating in its consistency and its rigid inflexibility of fair play in all his decisions. He has truly glorified the historic American administration of justice. He has had a noble origin. His great ancestors were the pioneers for civil and religious liberty. His Scotch ancestry glorifies the annals of English history for their heroic struggles for the Magna Carta which were the fertile seeds that set into motion the American Declaration of Independence.

The unique characteristic quality of Judge Nimmo is the fact he has that sense of inner peace of mind and mental composure that radiates a magnetic personality and inspires a friendly approach for he is inherently friendly in his daily behavior pattern. He adheres religiously to the very exactitude of truth in all his legal interpretations.

Judge Nimmo has surely lived up to the lofty ethical ideals of his crusading ancestors.

Judge Nimmo personifies the highest note in the symphony of ethical manhood.

A Tribute to Will Rogers

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. ROOSEVELT. Mr. Speaker, 25 years ago, on August 15, 1935, we, as a nation, were truly shocked and saddened by the untimely and unfortunate death of Will Rogers.

I am sure that if Congress were in session on August 15 of this year, there would be many well-deserved tributes to this outstanding and beloved man. Since the time schedule makes this unlikely, I am today paying tribute to the memory of Will Rogers who made singular contributions to the American—indeed the world—scene.

Accustomed patterns are the basis of civilized life throughout the world and protection of the patterns is the general purpose of all civilized society. From this we derive stability and comfort, and also, unfortunately, a degree of stodginess and a preposterous sense of self-importance.

It therefore becomes necessary, from time to time, for some lighthearted soul to step forward and disrupt our patterns; to poke fun at them and us; and to remind us that our way of life, though comfortable, may be, in fact, a little ridiculous.

This is not an easy thing to do since it is, in a way, a form of attack upon a great mass of people, and none but the most astute humorist can pull it off without being drowned in a torrent of universal disregard.

Yet some can manage their attacks so skillfully and wittily as to emerge triumphant, having trampled the silliness of people and institutions and at the same time won the admiration of all.

Such a man was Will Rogers, the self-styled cowboy philosopher from Oklahoma.

Generally recognized as the foremost American comedian of his day, a star of stage and screen, Will Rogers was far more than that to his average fellow countrymen. He was, in a sense, an institution—the greatest debunker of stuffed shirts and fanciful ideas in the country.

He had the God-given quality for making people laugh and think at the same time. In a few words over the radio, on the stage, or in the newspapers he could say more and say it better than most of our would-be statesmen could say in hours of mouthings.

Nor was he a respecter of rank or social position. He kidded Presidents, crowned heads, Congressmen, and anyone or everything else when he saw fit; yet managed in the process to make even his victims like it, simply because there was never any venom in what he said.

But like all the great humorists in history, Will Rogers also had his serious side which, in his case, centered on the field of aviation. So devoted was he in this respect that the veteran aviator, "Casey" Jones—president of the Curtiss Flying Service—cited him among the leaders in the promotion of America's aviation industry.

"After Lindbergh," Jones explained, "Will Rogers was aviation's best press agent. The industry owes him more than he is ever likely to collect. His wit, his extraordinary publicity resources, and his genuine enthusiasm for flying entitled him to the nomination as patron saint of aviation."

Will Rogers called attention to commercial flying in his magazine articles, on the lecture platform, and from the stage, in his untiring endeavor to enlist the interest of America in air travel.

And when, ironically, the patron saint of aviation lost his life in a plane crash, a quarter of a century ago, the event could be said to parallel the death of so many frontier heroes at the Alamo. Dedicated to the pioneer instinct, all gave their lives in the interest of pioneer progress and for the benefit of generations to come.

Comedian, philosopher, pioneer—Will Rogers earned not only the adulation of contemporaries but also a place in the memory of time. It is a tribute worthy of his talents; a recognition of genius which the world cannot afford to neglect.

Military Guidance in a Counseling Program

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1960

Mr. WAINWRIGHT. Mr. Speaker, I received an article from a constituent of mine the other day which I believe touches on a real problem in our high schools today. There is no question that a concrete program of military guidance at the high school level is a very necessary thing. The article by John R. Lang, guidance counselor of the Babylon High School, Babylon, N.Y., follows:

MILITARY GUIDANCE IN A COUNSELING PROGRAM

I had the pleasant opportunity of visiting Pensacola, Fla., as a guest of the Secretary of the Navy and Vice Adm. Robert Goldthwaite, Chief of Naval Air Training. The "orientation cruise," as it was called, was extremely enlightening. The group was composed of leading businessmen and educators chosen by the local naval command. Counselors who are interested in learning how the tax dollar is spent in training pilots should apply through their local Navy commandant.

As a guest of the Navy, I was taken through every phase of pilot training that I could squeeze into 3 days. While at Pensacola, I learned that military guidance in many schools seems to be a forgotten part of the counseling program. Some schools fail to stress the fact that we are continually fulfilling military needs by way of the draft and enlistments. I think that many of us fail to realize just how this important phase of counseling is neglected. Many high school students about to graduate do not have any

conception as to what his military obligations are. Some students that enter college are not aware of the latest military requirements. For example, from August 9, 1955, the term of obligated military service by every male from 18½ years to 26 years of age is now 6 years. For example: If a man enlists now he might serve 3 years on active duty and serve 2 years in the Ready Reserve and 1 year in the Standby Reserve to complete his obligation of 6 years. There are other variations, but this is one of the common types of enlistment methods. There are also deferment plans for college students. The counselor should explain these deferment practices to each college-bound student also.

During this trip, the fact was repeatedly stressed that the service was not more interested in numbers of enlistees, but quality of enlistees. If the armed services of today were to entrust the modern machines and devices to the untrained student, millions of dollars would go up in smoke. The student of today should be advised that the military services encourage enlistments of high school graduates. In our area, if a student desires to enlist before graduating, the local recruiting station always contacts the guidance office requesting us to see the boy and to try to encourage him to finish high school. The recruiting officers have repeatedly stated this in all of their group guidance discussions in the schools.

At Pensacola, we visited the preflight school, where the prospective pilots are studying such basic fundamentals as aircraft engines, navigation, mathematics and reading. The last subject, reading, is one of the important subjects with the preflight school stresses. The program is always faced with a student, whether he is a college graduate or not, who cannot read according to accepted standards. Therefore, each student must take a speed reading course in order to improve his reading ability. In the preflight school, the commanding officer informed us that some of the pilots have improved their reading ability as much as 110 percent. It is a strenuous course for the average reader and is extremely helpful for disciplining the mind to correlate facts and figures correctly. If a pilot is flying an aircraft at 1,200 miles an hour, he must be able to disseminate many facts and figures in a split second. We saw an excellent example of just one of the decisions a pilot must make. A Blue Angel fighter came toward our viewing stand 50 feet above the ground at 1,200 miles an hour. As he approached us, he climbed almost vertically above us. If the controls varied a fraction of an inch from the standard position, you can imagine the holocaust.

Along the flight line, we questioned some sailors who were working on the jet engines. Some of the men were only 18, 19, and 20 years of age. These men were taught how to repair the jets while in their teens.

A $2-million plane might be entrusted to these men. Enlisted men had duties in the simulated high altitude laboratories. We also spoke to enlisted men in the labs where space suits were continually being subjected to experiments. Officers in these laboratories were using Buck Rogers-type machines which would break down if the incorrect buttons were pushed. One of the machines was designed to regulate the the amount of revolutions in a centrifuge containing a pilot. At the same time he is checking the recording machines which record respiration, pulse, brain wave patterns and the gravitation and pull on the body.

Therefore, if the students are being properly counseled, the students are in a better position to predict their futures, and the schools are fulfilling a tremendous need in informing the student of his military obligation.

Jobs After 40

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 3, 1960

Mr. HOSMER. Mr. Speaker, elimination of employment barriers on account of age is a practical necessity in our country. It is an objective which can be gained only by assaults from many directions. State antiage discrimination laws are one phase of the effort. The National Committee on the Aging staff report issued September 1959, discussed New York's experience with such a statute as follows:

AGE DISCRIMINATION IN NEW YORK

Evidence that public and private educational campaigns are inducing employers to hire on the basis of ability, not age, is provided by experience of the New York State Employment Service and the New York State Commission Against Discrimination.

Placement of nonagricultural workers 45 years of age and over by the NYSES has increased from 21 percent of total placements in the first 6 months of 1953 to 29 percent in the corresponding period in 1958 and 30 percent in 1959.

A spot check of the Hempstead office of the NYSES revealed that job orders containing upper age specifications dropped from 22.7 percent in 1955–56 to 0.3 percent in 1958–59.

The New York age discrimination law, effective July 1, 1958, is responsible for the precipitous drop in age specifications in advertising. Newspaper advertising specifying upper age restrictions, previously common, has virtually disappeared since the law became effective.

During the first year of operation of the age discrimination law, a total of 148 complaints were filed with the New York State Commission Against Discrimination (SCAD). Eighty-two percent of these complaints were in the New York City area. Employers were named as respondents in 73 percent of the complaints, employment agencies in 17 percent, labor unions in 10 percent.

Fifty-four of the 148 complaints had been closed by the end of the first year of the law's operation. Charges of discrimination were sustained in 9 cases, dismissed for lack of jurisdiction in 28 cases, dismissed for lack of probable cause in 15 cases, and dropped by complainants in 2 cases.

Clerical workers comprised 38 percent of the complainants; professional, semiprofessional, and managerial workers 22 percent; skilled, semiskilled, and unskilled workers 27 percent; service workers, salesmen, and sales clerks, 13 percent.

Among case histories reported by SCAD are the following:

Case 1: A 60-year-old draftsman applied for a position with a steel manufacturer. The chief draftsman who interviewed him stated that he could not hire a man of his age because it was against company policy. The applicant filed a complaint with SCAD. The investigating commissioner met with the assistant general manager of the firm, who stated that the information given complainant by the chief draftsman was not company policy. He agreed that age would not necessarily lessen an employee's usefulness in the job under consideration. Complainant was reinterviewed, passed the required physical examination, and was hired as an engineering draftsman at $120 per week.

Case 2: A 43-year-old man responded to an employment agency's newspaper advertisement for an accountant with construction experience to work at surety underwriting for an insurance company. On referral, the applicant was told by the insurance company representative that he could not be hired on account of his age. The applicant filed a complaint with SCAD. The investigating commissioner was told by the assistant secretary of the insurance company that the statement regarding age had been made to complainant, but that complainant had been rejected because he was not qualified by experience for the job. In the meantime, complainant obtained employment elsewhere and was no longer interested. The insurance company agreed to bring its employment application form into compliance with the law, display the SCAD regulatory poster, and issue a directive to all employees charged with hiring responsibilities that it is the company's policy to judge applicants without regard to age, race, creed, color or national origin.

Case 3: A 64-year-old woman applied to a county hospital for a cleaning job, but was refused on the ground that she was "too close to retirement age." She had references and a doctor's certificate stating that she was in good health and capable of performing such duties as the job might entail. She filed a complaint with SCAD. The investigating commissioner determined that the facts supported the charge of age discrimination. The hospital director agreed (1) to notify complainant when a vacancy occurred in a position for which she was qualified, (2) to consider her for such employment without regard to her age, and (3) to instruct all employees that "it is unlawful to discriminate in employment because of age, race, creed, color or national origin" and that any violation on the part of subordinates would lead to disciplinary action.

Case 4: A 38-year-old woman alleged that when she attempted to inquire by telephone concerning an advertisement in a newspaper for a position as a secretary, she was told that she must state her age if she wanted to be interviewed, as only girls in their twenties would be considered. She filed a complaint with SCAD. Respondent denied discriminatory practice and declared that no applicants were asked their age or denied appointments if older than the twenties. The only girls employed, however, were in their twenties, and the two employed as a result of the advertisement were 17 and 26. The investigating commissioner found probable cause for the complaint. Terms of conciliation were proposed similar to those in Case 3 and respondent was "advised that this Commission will maintain a continuing interest in respondent's employment practices and that a review will be conducted in approximately 6 months in order to determine whether the terms of conciliation have been fully and conscientiously carried out."

Case 5: Two supervisory employees aged 62 and 63 were retired with pensions by a metal products manufacturer on the grounds that they could no longer perform their duties adequately. They filed complaints with SCAD. Investigation showed that five other supervisors, aged 63, 56, 54, 45, and 35, had been discharged at the same time, while some supervisors in the 60–65 age bracket had been retained. The investigating commissioner dismissed the complaints for lack of probable cause, stating, "In view of our thorough and careful investigation of this complaint based on the record as a whole, it seems clear that the complainant was not dismissed from employment because of his age, but rather because of other considerations. The record clearly shows that at the time of his dismissal other and younger men in supervisory capacities were dismissed also for various reasons. Furthermore, our records show that the company has continued to employ over the years a considerable number of older workers."

By administrative interpretation, the State Commission Against Discrimination has held that the New York law bars complaints by persons over 65 years of age or by persons who claim discrimination on grounds that they are "too young." Requests by the Commission for clarification of legislative intent were not acted upon by the 1959 session of the State legislature.

Judge Paul R. Selecky

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. FLOOD. Mr. Speaker, last Friday I received a great shock when I learned of the sudden death of one of my closest friends, Judge Paul R. Selecky, president judge of the orphans' court of Luzerne County. Judge Selecky and I had many common interests and we served together on a number of boards and committees over the years dealing with veterans, community, and national affairs. In addition, Mrs. Flood and Mrs. Selecky are very fond of each other and she joins me in expressing our profound regrets to Mrs. Selecky and the other members of the family in this hour of their most tragic loss. It is indeed most regrettable when a gentleman of Judge Selecky's accomplishments and contributions to a better community life passes on in the prime of a distinguished career.

As a further extension of my remarks on Judge Selecky's passing, I include two news articles and an editorial that appeared in last Friday's edition, June 3, 1960, of the Wilkes-Barre Times Leader:

ORPHANS COURT JURIST DIES AFTER ATTENDING DINNER IN POCONOS

Paul R. Selecky, president judge of the orphans' court of Luzerne County, died unexpectedly this morning at 7:15, following a heart attack at his home, 28 West Main Street, Glen Lyon. One of the most active jurists in northeastern Pennsylvania, Judge Selecky would have observed his 50th birthday anniversary June 14.

In apparent good health, Judge Selecky and his tipstaff, Alexander Polacheck of Wilkes-Barre, attended the Monroe County Bar Association outing and dinner last night at Sciota, near Stroudsburg. The dinner was held at the Linden Court Hotel there after which Judge Selecky and his tipstaff motored home, arriving about midnight.

After discussing the affair with his wife, Helen, Judge Selecky retired. He awoke this morning at 2 o'clock and complained to his wife of having pains in the chest. After awhile, Judge Selecky said he felt better and he and his wife went back to sleep. Mrs. Selecky awoke about 7 o'clock and noticed her husband was still asleep. Although he seemed to be all right, Mrs. Selecky became alarmed when she detected heavy breathing.

Mrs. Selecky immediately phoned Dr. Stanley M. Stapinski of Glen Lyon, former county coroner, and close friend of the family. Dr. Stapinski, who resides a short distance away at 80 West Main Street, Glen Lyon, hurried to the Selecky home. By the time he arrived, Judge Selecky had passed away to an acute coronary occlusion.

FUNERAL ON TUESDAY

The funeral will be held Tuesday morning from the family home and on that day there will be no sessions of Luzerne County court.

Judge Selecky was to have presided at sessions of juvenile court this morning at the courthouse. This afternoon at 3 o'clock, he was scheduled to leave for Washington, D.C., to attend the ordination of his nephew, Rev. Adrian Donald Tirpak to the priesthood at the National Shrine of the Immaculate Conception. After hearing of his death, juvenile court was canceled and the flag at the courthouse was lowered to half-mast.

Judge Selecky's body, first taken to General Hospital, was scheduled for removal later today to Hazleton State Hospital where a post mortem will be performed by Dr. Julius Foldes, pathologist. Luzerne County Coroner Dr. Herman H. Feissner, Jr., Freeland, directed the post mortem at request of the Selecky family. Judge Selecky willed his eyes to an eye bank.

In November 1957, after serving as a lawyer for 23 years, Judge Selecky was elected orphans' court judge defeating Orphans' Court Judge Arthur A. Maguire by a margin of 9,000 votes. He was the leading vote getter on the Republican ticket for contested offices. Judge Maguire was appointed to the bench by Gov. George M. Leader to take the vacated place of Judge Ben R. Jones who, in 1956, became a justice of the State supreme court. Judge Selecky was sworn into office on January 6, 1958, for a 10-year term.

Prominent in legal circles, community, civic, and veterans' affairs, Judge Selecky was often described as a human dynamo by his friends and acquaintances.

SCHOLASTIC HONORS

In elementary and secondary schools and at college, Judge Selecky distinguished himself educationally. He was graduated first in his class from Newport Township High School in 1926, and first in his class at Wyoming Seminary the following year. Honor student and Phi Beta Kappa at the University of Pennsylvania, he was first in his class during 3 successive years at the law school and was first in his class at graduation in 1934.

Possessing the high ideals of his Slovak race, Judge Selecky had an interest in the education of children which he displayed by the way he successfully handled the various problems of teenagers each week in juvenile court.

A native and lifelong resident of Glen Lyon, Judge Selecky was born June 14, 1910, a son of the late Mr. and Mrs. Andrew J. Selecky. In high school, he was active in sports, serving as captain of the basketball team and was a member of the glee club and winner of the American Legion medal for high scholastic average. In college, he served as corresponding secretary of the Luzerne County Club, played the violin in the orchestra and cymbals in the band. He also was a member of the Aero Club and holder of a senatorial scholarship.

LAWYER SINCE 1934

Admitted to the county bar November 7, 1934, Judge Selecky was also admitted to practice law in the orphans' court in December of that year. He maintained law offices many years in the Miners Bank Building and soon after starting his legal career was appointed solicitor for Newport Township School District. In February 1948, he was named special deputy attorney general for district 2, Pennsylvania Liquor Control Board. He filled the vacancy caused by the death of his brother-in-law, Attorney Peter Jurchak, in December 1947.

A U.S. Navy veteran of World War II, Judge Selecky took an active part in veterans' affairs here soon after his honorable discharge. He served as district commander of Luzerne County American Legion and in July 31, 1953, was elected State commander of the Legion for a 1-year term.

A former vice chairman of the American Red Cross, Nanticoke-Newport area, he served as chairman of the Red Cross donor program. He acted as legal counsel for the Pennsylvania Slovak Union and was a past president of the Tatra Club, in addition to being affiliated with the Elks, Eagles and various Slovak fraternal organizations.

Active in arranging instruction in Polish and Slovak languages at Wilkes College, Judge Selecky helped introduce the teaching of Polish as a regular part of the high school curriculum at Newport, Nanticoke and GAR High Schools. Chosen as a member of the committee arranging refresher courses for GI lawyers after military service, he was a member of the court rules and minimum fee committees of the county bar association. He also served as director of the Legal Aid Society and was cochairman of the radio division of the bar association's public relations committee.

The United Mine Workers in Glen Lyon, claimed Judge Selecky as a member because he worked in and around the mines for six summers while he went to college and law school. Judge Selecky also was a director of the United Fund, the Heart Association and American Red Cross and was a member of the Boy Scout committee. He also served as legal adviser of the draft board during World War II. A member of Post 539, American Legion, Glen Lyon, he was a communicant of St. Adalbert's Church, Glen Lyon, and a member of the Holy Name Society.

Surviving are his wife, the former Helen Jurchak of Glen Lyon; seven children, Paul, Jr., a senior student at the University of Pennsylvania, scheduled to graduate this month and enter premedical school in the fall; John, also a student at the university; Mrs. Julianna Semple, Erie; Mary, Thomas, Helen and Peter, all at home; two sisters, Mrs. Catherine Tirpak of Glen Lyon, and Mrs. Emma Mras of Harrisburg, and a brother, Alois of Wilkes-Barre.

COURT NOTES THE DEATH OF LOCAL JURIST—PASSING OF JUDGE SELECKY TERMED GREAT LOSS TO HIS COLLEAGUES

A court minute, noting the sudden and untimely death of Judge Paul R. Selecky, was ordered filed this afternoon in court records by President Judge John J. Aponick. It follows:

"The court notes with extreme regret the sudden and untimely death of President Judge Paul R. Selecky of the orphans' court of Luzerne County.

"Judge Selecky was born in Glen Lyon, June 14, 1910. He was graduated from Newport Township High School, Wyoming Seminary, University of Pennsylvania, and the University of Pennsylvania Law School. He was admitted to the bar of this county on November 13, 1934, on motion of the late Attorney Peter Jurchak.

"Judge Selecky practiced law in this county from then until he was elevated to the bench in January 1958.

"On July 1, 1958, at the request of the judges of the Court of Common Pleas, he assumed the burden of presiding in the juvenile court in addition to his other duties. He entered upon that task with his usual enthusiasm and was responsible for many innovations and improvements in the handling of the youth problem. He also created the traffic school to which are sent all of those involved in motor vehicle violations.

"Judge Selecky was a veteran of World War II, having served in the Navy. He was very active in the American Legion, being department commander in 1953–54.

"He was connected with numerous civic and fraternal activities. He also served by assignment of the supreme court in other counties of the State, particularly Philadelphia and Pittsburgh.

"The passing of Judge Selecky will be a great loss to his colleagues on the bench. He was always more than willing to assist either in civil or criminal court, beyond anything that could reasonably be expected. He will long be remembered by the judges, the lawyers and the public in general as a cheerful, conscientious, and hard-working judge.

"Judge Selecky is survived by his widow, the former Helen Jurchak, and seven children.

JUDGE PAUL R. SELECKY

The Commonwealth and the County of Luzerne, as well as the community, his profession and a score of organizations with which he was identified, share the shock and sense of loss of the family in the sudden death of Paul R. Selecky, president judge of the orphans court of Luzerne County, at his home in Glen Lyon this morning. His passing at 50 has terminated a brilliant career that many believed was far from its climax when he was fatally stricken.

A native of Newport Township, Judge Selecky was of Slovak extraction and endowed with the zeal and ideals of his forefathers. It was apparent in boyhood days and when he reached man's estate that he was destined for high places because he was valedictorian in his class as Newport High School, Wyoming Seminary, and the University of Pennsylvania. At the University of Pennsylvania Law School, where top students are enrolled from all over the country, he was first for 3 successive years, proof of his drive as well as his intellectual attainments.

The activities in which he engaged and the progress he made since 1934 when he was graduated from law school and admitted to the bar offered incontestable proof of his unusual capacity and dedication to the public interest.

It was no coincidence that in every field he entered he forged to the top. That was true in his profession, in the American Legion of which he was State and district commander, and in other bodies and movements to which he devoted his time, skills, and energies. He was not content to go along for the ride; when he was named to a post, he made a substantial contribution to the success of the undertaking. When he received recognition, it was because he had earned it.

His election to the orphans' court bench did not change him. Applying himself with the diligence that singled him out as a student, legal practitioner, and civic leader, he not only served with distinction in his own bailiwick, but in the juvenile court of Luzerne County and as a relief jurist throughout the Commonwealth upon assignment of the supreme court.

The father of seven children, he used his high office to rehabilitate juvenile delinquents, to promote safe driving, and to raise standards. The files of this newspaper contain many letters from him, seeking support on these and other projects, so close to his heart. His erudition was matched by his sense of responsibility and his courage when the occasion demanded action.

A message he sent to the editor, commenting on an editorial that appeared in these columns, contained this passage which furnished an index to the character of Judge Selecky:

"I am happy that you have expanded on the duty of each generation to protect its own liberty. As I indicated in my talk to Kiwanis, liberty was proclaimed throughout the United States on July 4, 1776, only when the persons who proclaimed it were willing to pay the price therefor, when they closed the very Declaration of Independence with words to this effect: 'and for the support of this Declaration, with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor.'

"It is for the veterans and all the citizens to renew that pledge every year if they are to protect the liberty in their time."

Man on the Spot—John Morton—Continental Congress Delegate Gained Eternal Fame and Pennsylvania Gained a Name—The Keystone State

---

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. EVINS. Mr. Speaker, as we all know, the conscientious legislator sometimes pays a high price for doing the right thing and adhering to high principles against heavy pressure from special pressure groups. One of the outstanding examples of voting right to serve this Nation is retold in the action by John Morton who, as the Representative in the Continental Congress from Pennsylvania cast the deciding vote for the Declaration of Independence, and freedom for our country. The immortal role that this delegate played is briefly but well reviewed in an article by Fletcher Thomas Beck, called Man on the Spot, which appeared in the June issue of the Liberty magazine. It is worth reading and preserving.

Under unanimous consent I include this article in the Appendix of the RECORD.

MAN ON THE SPOT

(By Fletcher Thomas Beck)

(The position of Pennsylvania's key delegate was precarious. The strong influence of a Tory lobby, the bribes of an intriguing diplomacy, threats of ostracism by family, relatives, and neighbors had been brought to bear upon him. The time had come to test his convictions. How would John Morton vote?)

The immortal role John Morton played in the adoption of the Declaration of Independence furnishes a story that has been told for generations at the fireside of the country he served so well.

And well it might, for it was one of the most dramatic and important incidents recorded in our history. It happened on the night of July 3, 1776, at Independence Hall. Around that historic table were delegates and alternates representing 12 colonies. John Hancock had the floor. He was talking—just talking, for six of these men had voted aye and six nay on the question of adopting the Declaration.

Supporters of the measure sent a messenger outside the hall to tell John Morton that the Pennsylvanian delegation was divided two and two on the issue. Without this colony's wealth and power the Revolution could hardly succeed.

How would Morton vote? That was the question uppermost in the minds of the Pennsylvania delegates. When the sound of the president's gavel rang through the assembly hall there was a hush. All eyes were turned to Pennsylvania's delegation. Franklin voted "aye." Willing, "no." Wilson, "aye." Humphries, "no." Dickinson and Morris abstained from voting.

At this decisive moment John Morton entered the hall. The Pennsylvania House of Representatives, of which Morton was the speaker, had instructed its delegates to the Continental Congress to "dissent from and utterly reject and proposition, should such be made, that may cause or lead to separation from our mother country, or to a change of the form of this Government." But by the time of the vote the assembly had withdrawn these instructions.

All eyes were fixed on Pennsylvania's key delegate. His position was precarious. The strong influence of a Tory lobby, the bribes of an intriguing diplomacy, threats of ostracism by family, relatives, and neighbors had been brought to bear upon him. The time had now come to test his convictions.

When the clerk called John Morton's name, the beating of anxious hearts was almost audible in the deep silence of the hall.

Although afflicted with an illness that was shortly to cause his death, with pallid face and fever-parched lips he answered in a clear firm voice, "Aye." The tie was broken. And thus the keystone swung into place. The arch was complete. A nation was born.

And so the mighty deed was done,
That makes us what we are today,
By which our sovereign right was won,
John Morton gained eternal fame;
'Twill last with Independence Day,
And Pennsylvania gained a name—
The Keystone State.

America's honored patriot was a descendant of 17th-century Swedish colonists. He was born posthumously, the son of John Morton and Mary Archer in the year 1724 in the township of Ridley in the county of Chester (now Delaware), about 4 miles from Upland (now Chester).

The widowed mother subsequently married John Sketchley, an Englishman, who, learned in mathematics and having taken a liking to his stepson, schooled him in the three "R's." The stepfather quickly discovered that he was tutoring no common scholar.

In 1754 John married Ann Justice (or Justis), a descendant of the Delaware Swedes, and had by her three sons and five daughters, who survived him. Many of their descendants have attained distinction.

John Morton began his career by farming the paternal estate and securing odd jobs as a surveyor. In 1757 he was commissioned justice of the peace, and was soon after appointed a representative of the General Assembly of Pennsylvania. An active and influential member for a period of 10 years, he for part of that time served as speaker of the house.

In 1765 Morton was made a delegate to the First American Congress, which sat in New York.

Governor John Penn appointed him associate justice of the Supreme Provincial Court in 1774, and in 1774 the Assembly delegated him to the First Continental Congress.

He took his seat in that body on the 10th of May at the meeting of the Second Congress. On the 3d of November, 1775, he was again appointed a representative, while serving as speaker of the house of assemby; and on the 20th of July, 1776, he was elected for the last time a member of the great National Council.

In "Biography of the Signers," Editor Robert T. Conrad describes him thus: "John Morton possessed a disposition at once lively, sociable, friendly and humane. Overpowering the deficiencies of early education, by the strength of his mind, and the force of his talents, he rose to the highest and most dignified office of the State. It would have been in vain to seek the plow-boy of Ridley in the dignified judge upon the bench, in the speaker of the Legislative Assembly of Pennsylvania, or in the important member of the most august body of assembled virtue and patriotism that the world has ever been taught to venerate.

"He was charitable to the poor; a kind friend, an affectionate husband and father; a social, and sometimes jocular companion. His modesty was equal to his merit, and the remark might justly be applied to him in the language of the poet that 'It is the witness still of excellency to put a strange face on his own perfection.'"

Out of appreciation for the services rendered his country, Pennsylvania, in 1938, rescued from the ravages of time the 284-year-old house believed then to be the birthplace of this signer of the Declaration of Independence. A recent survey, however, of the ownership of the Morton property by the staff of the Pennsylvania Historical Museum Commission shows that this tract of land was never in the possession of the elder John Morton, the signer's father. Nor was it ever recorded as being in the possession of John Morton, the signer. At one time it was believed to have been acquired by his son, Sketchley Morton, but it has since been discovered that this is not the same tract as the one willed to his son.

The house where the signer dwelt at the time of his death appears to have been on the west side of Stone Creek, now in Ridley Park. Therefore it cannot be the same as the property at Darby Creek Ferry, restored by the Historical and Museum Commission, Commonwealth of Pennsylvania.

Whatever the final verdict may be regarding the place of his birth, one thing is certain: John Morton, who paid the price of social ostracism for voting "aye" on American independence, is now permanently enshrined in the heart of a grateful nation.

In historical old St. Paul Cemetery in Chester a simple, weather-beaten monument marks the resting place of this patriot. It bears the following inscription:

"DEDICATED TO THE MEMORY OF JOHN MORTON

"A Member of the American Congress from the State of Pennsylvania, assembled in New York, 1765, and of the next Congress assembled in Philadelphia in 1774, and various other public stations.

"Born, A.D. 1724; died, A.D. 1777.

"This monument was erected by a portion of his relatives, October 9, 1845.

"In 1775, while speaker of the Assembly of Pennsylvania, John Morton was reelected a Member of Congress, and in the ever-memorable session of July 1776, he attended that august body for the last time, enshrining his name in the grateful remembrance of the American people by signing the Declaration of Independence.

"In voting by States upon the question of the Independence of the American Colonies, there was a tie until the vote of Pennsylvania was given; two Members from which voted in the affirmative and two in the negative.

"John Morton decided the promulgation of the glorious diploma of American freedom."

Censured by some of his friends for his boldness in casting the deciding vote for the Declaration of Independence, Morton dictated a message to them from his deathbed: "Tell them that they will live to see the hour when they shall acknowledge it to have been the most glorious service that ever I rendered to my country."

The Safety Valve

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. VAN PELT. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and include an editorial, entitled "The Safety Valve," which was carried in the Monett Times of Monett, Mo., Friday, June 3, 1960.

To me it is a thought-provoking editorial and Mr. Kenneth G. Meuser, publisher, should certainly be commended because I am sure that he expressed the sound grassroots thinking of our Republic.

The article follows:

[From the Monett (Mo.) Times, June 3, 1960]

THE SAFETY VALVE

The most inconceivable statement that has been made by a military or political leader of modern times was spoken Tuesday in London by Field Marshal Viscount Montgomery, British hero of World War II. After a 3-day visit to Peiping, capital of Red China, Field Marshal Montgomery told an Associated Press correspondent that Nationalist Chinese Formosa, or Taiwan, should be handed over to Red China.

Backing up his reasons for a bloodless capitulation, the field marshal stated:

"I believe there should be one China and not two, and that China is the one which has its Government in Peiping.

"When I survey the picture it seems to me that Formosa should be part of China." (Montgomery has spoken similarly in the past and has proposed that Peiping regime represent China in the U.N.)

Montgomery added that he prefers Communist-ruled China to pre-Communist China.

"I formed the impression that there is a great deal of misconception in the West about the new China as compared with the old.

"I am of the opinion that the new China is quite preferable. They (the Reds) have cleaned the country up and they've swept away corruption and bandits and there are no Teddy Boys." (Teddy Boys are a type of English exhibitionists who affect narrow trousers and sideburns and have become associated with juvenile violence.)

Montgomery went on to give this opinion of Red China's Premier Chou En-lai:

"I think he is most charming, very brilliant, a delightful person with beautiful manners, and he is most courteous."

The article was written by Colin Frost, a reputable Associated Press correspondent. It still seems impossible after we reread the Montgomery statement three times that a military leader who held the respect of the British people during World War II could possibly subscribe to such a disgustingly naive defeatist philosophy.

The free world should be thankful that Field Marshal Montgomery did not represent Great Britain at the summit conference which was torpedoed by Premier Khrushchev of Soviet Russia. Prime Minister Harold Macmillan upheld the dignity of England; he placated, to a degree, but he did not grovel before the bully from Moscow. I think that Prime Minister Macmillan, President Eisenhower, and President De Gaulle of France were keenly disappointed that the summit conference didn't get off the ground because they represent Western democracies who desire peace, but peace with honor.

For the good of the Western Powers, Field Marshal Montgomery should lie down on a couch and a group of England's best psychiatrists should give him a good going over before he is allowed to make another public statement. It is difficult for me to think that he has lost his patriotism to his country; rather I think that he has lost his marbles.

The Nationalist Chinese regime is anything but a straight and honest system of government, but at least they are on our side. If we would hand Formosa over to the Red Chinese Communists, we would henceforth give up all of our influence in the Far East, including the Philippines, Japan, and all of the nations which are a part of the SEATO pact in norheastern Asia.

The people of the Western democracies can rest easier at night because our 7th Fleet patrols the Straits of Formosa. We have strong naval bases in the Philippines and Japan and we send military missions to Nationalist China and show their military men how to operate planes, missiles, ships, and guns that are made in America.

About 5 months ago the Red Chinese Air Force which consisted of souped-up Russian MIG's that killed thousands of American troops in the Korean war, challenged the Nationalist Chinese Air Force on Formosa to an aerial dogfight. The Nationalists knocked the Chinese Reds out of the skies with U.S. Navy-developed Sidewinders and the Reds have been licking their wounds ever since. Incidentally, the Sidewinder is a missile which is standard equipment with our fighter aircraft and is quite effective. When it is spotted and locked onto its target—usually the afterburner of any enemy plane—it is guided directly to the plane by infrared heat with a deadly and effective destructive charge.

A group of intelligent Britishers should sit down and reason out the international problem with Field Marshal Montgomery, reminding him "that there will always be an England."

The position of the United States among many nations of the world is not in highest repute because of our advances in so many fields. Through the years we have fought defensive wars without acquiring 1 square inch of territory for our own gains. We have nothing to offer the world but the means of a better way of life and a deterrent to communism. We are not imperialists in any sense of the word.

I think that it is time for our Commander in Chief to play down soft platitudes, and do some hell-raising and saber rattling with the Communist world. If we're going to live with a global community of bandit nations who try to divide and conquer with bulldozing tactics, I think that President Eisenhower should send stern letters of protest to Premier Khrushchev of Russia, Premier Chou En-lai of Red China, Premier Fidel Castro of Cuba, Premier Abdul Nassar of Egypt, and others of similar disposition. President Eisenhower is a peace-loving man, as most of us are. For the interest of our future security, his letter should be one which would call the bluff of all of the bullies in the world. We don't need to take insults from any nation or combination of nations. America is strong offensively and defensively. We need to command the respect that is due us.

If Field Marshal Montgomery really said what the Associated Press claims that he did about giving Formosa to Red China, he did the Western Powers far more disservice than did the late Prime Minister Neville Chamberlain when he partitioned Czechoslovakia at Munich and claimed that we would have "peace in our time." Frankly, I'm afraid that the old boy has finally cracked up.—K. G. M.

The Mutual Security Program

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another article on mutual secur-

ity which points out the importance to underdeveloped countries of this program. The article is a release from the Catholic Association for International Peace, entitled "The Mutual Security Program":

In this year's presentation of the mutual security program, the executive branch has introduced a new concept of concentrating economic development aid in a few selected countries of Asia with the expectation that it will result in a more effective allocation of resources for the purpose of accelerating development in the less developed areas. It is believed that there is merit in this new approach provided the selection of countries is not too narrowly conceived, both as to area and as to the criteria for selection. Although the magnitude of the U.S. efforts in economic assistance to the underdeveloped areas has been criticized as being inadequate, it is believed that the new principle of aid introduced by the executive branch should be recognized as constituting a significant step forward independently of the size of the economic assistance funds.

The economic life committee of the Catholic Association for International Peace endorses the mutual security program and its present plans wholeheartedly. The committee would also like to call attention to certain capital sources available to underdeveloped countries which should be broadened and strengthened as a matter of policy.

In addition to economic assistance provided under the aegis of the International Cooperation Administration and the Development Loan Fund, there are a number of other public sources of capital available to the underdeveloped countries which potentially could make large contributions to their economies. First, there are the public banking institutions, either bilateral or multilateral, which provide capital funds on a loan basis, such as the Export-Import Bank, the International Bank for Reconstruction and Development, the International Finance Corporation, the Special United Nations Fund for Economic Development, the newly established Inter-American Development Bank, and the proposed International Development Association. Moreover, short-term capital is provided for stabilization purposes through the International Monetary Fund. In addition to the public banking operations, the U.S. Government has facilitated a flow of capital from private sources through the investment guarantee program. This program should be continued and, if possible, expanded.

One further aid source which plays an important role is the very sizable program amounting to $1.5 billion per annum deriving from the sale of agricultural commodities abroad under Public Law 480, which has a very great and directly beneficial effect on the economic development of these countries.

Apart from the various sources of capital assistance from public institutions, both national and international, we must also draw attention to the very close financial relationship existing between trade and aid. Most of the underdeveloped countries are raw materials producers and when the terms of trade shift against them, it causes them to become more dependent on external assistance in the form of loans, both hard and soft, and, in some cases, grants. More consideration should be given to the trade problems of these countries by all administrators of economic aid. This could well reduce the ultimate need for external aid and increase the capacity of the receiving countries to pay their own way for the capital imports necessary for economic development.

We should do what we can, for example, to remove those tariff and import quota barriers which reduce the access of these raw materials producers to our markets, recognizing that their resulting increased export earnings may far exceed any amount of direct assistance which is likely to be forthcoming. The effect of freer trade upon increasing our own efficiency in the use of resources is an important secondary advantage, since the growing magnitude of domestic and international claims on our resources requires maximum efficiency in their allocation.

In connection with the effort to increase trade, the underdeveloped countries themselves should be encouraged to diversify their economies, rather than to continue to rely exclusively on exports of one or two marketable commodities. Similarly, to avoid the negation of economic assistance by unfavorable shifts in the terms of trade, we should consider the advisability of supporting reasonable commodity stabilization programs proposed by the raw materials producing nations themselves.

In some countries the burden of military forces is oppressive. New technologies are changing the weapons and strategies of waging war. It should, therefore, be possible in several countries to reduce military expenditures, especially if disarmament agreements can be reached which will truly reduce the possibilities of conflict. Wherever military expenditures can be reduced—whether in Latin America or in Asia—it will be possible to move economic development that much faster.

The President's request for mutual security funds is the minimum needed for the support of U.S. policies in the underdeveloped countries. We should look forward to doing more, not less. Special emphasis, perhaps, should be accorded technical training programs to encourage increased productivity and marketing techniques through improved managerial, administrative, and other skills, for these serve to upgrade the most strategic resource of all, the human resource, the level of development of which determines to a very large extent the degree of utilization and the effectiveness of all other resources.

Our responsibilities in social justice demand an adequate response to the needs of others which, if adequately met, will redound to our own national interest as well. We cannot afford to do less.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. PHILBIN. Mr. Speaker, under previous consent to revise and extend my remarks, I include therein a recent guest editorial appearing in the esteemed Palmer Journal Register of Palmer, Mass.

The editorial, written by Joseph A. Kszepka and Boguslaus S. Grzywna, president and vice president, respectively, of the United Polish-American Organizations Council of Palmer, expresses noble sentiments in paying deserved tribute to the Polish people and the cause of a Free Poland on the occasion of Polish Constitution Day.

All true Americans, blessed with a heritage of freedom, must respond to the call of captive peoples everywhere who are seeking self-determination, freedom, and liberation. Messrs Kszepka and Grzywna, in this excellent guest editorial, remind us of the great sacrifices made by the Polish people in the cause of freedom. Let us continue to extend the hand of friendship, trust, and confidence to the Polish people in their fight against oppression and tyranny.

The editorial follows:

POLISH CONSTITUTION DAY

(By Joseph A. Kszepka and Boguslaus S. Grzywna)

This year the United Polish-American Organizations Council of Palmer has set aside Sunday, May 1, to pay tribute to Poland on its 179th anniversary of Polish Independence. The people of Poland and those Americans of Polish descent can be proud of this rich heritage of freedom which stemmed from the adoption of their constitution. This document, inspired by the American Declaration of Independence, included within its framework the fundamentals of freedom earlier. It is fitting and proper that we remember each year this sister document of freedom which symbolizes with our own, the will of man to achieve liberty for himself, his family, and his community.

The Polish people have a long and proud history of producing leaders of strength, courage, and deep conviction. Americans of Polish ancestry have proven themselves time and again equal to and reflecting the image of the great Polish leaders.

By a very fitting double coincidence the 150th anniversary of the birth of Frederick Chopin is noted and honored this year. His compositions of national folk music, such as, mazurkas, waltzes, and polonaises are characterized by exquisite melody of great originality, refined harmony, subtle rhythm, and poetic beauty, making him the greatest of all composers of music for the piano. Likewise this year, we mark the 100th anniversary of the birth of Ignacy Jan Paderewski, not only one of the greatest masters of the piano, but also a statesman who devoted himself to the cause of Polish independence by being elected prime minister of foreign affairs in the Polish Republic.

We only hope and pray that the Polish people will ultimately have their full freedom and independence as stated in the original Polish Constitution—so as to realize their full capabilities and their dignity as a completely free nation.

The Tidelands Decision

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 17, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial broadcast over WDSU–TV and WDSU radio:

THE TIDELANDS DECISION

In the tidelands oil case, the U.S. Supreme Court today ruled against Louisiana, Mississippi, and Alabama but in favor of Texas and Florida. The Court ruled that Louisiana and her two eastern neighbors own the oil under the Gulf of Mexico only out to 3½ miles from shore. But it gave Texas and Florida all the way out to 10½ miles.

This decision goes back to the Submerged Lands Act of 1953. That act gave to each

State the submerged lands within its boundary as it existed when that State joined the Union. On the basis of historic papers, the High Court majority ruled that three of the Gulf States came into the Union with 3-mile boundaries and two with 10-mile boundaries.

In the opinion of this station, today's decision may be legally and technically correct. But as a matter of practical effect, it is ridiculous and discriminatory to give some States three times the seaward territory of others.

Louisiana, incidentally, is the one State that stands to gain or lose the most by this decision. For instance, there is not now a single producing oil well off the Florida coast and only half a dozen off of Texas. But there are more than 1,500 producing wells off of Louisiana.

It is significant to us that two dissenting Justices said today they felt the middle Gulf States had been discriminated against.

Justice Douglas said he didn't think Texas was entitled to 10½ miles. But if it was, he said, then so were Louisiana, Mississippi, and Alabama.

Justice Black said he considered the decision unfair to these three States. He said the Court should have considered that these States have actually been exercising possession over their marginal lands ever since they came into the Union. And until recently the Federal Government has always recognized State control of them.

Black said that, in the final analysis, it will be up to Congress, and he said he did not think Congress would want to treat the States differently as to boundaries.

We agree. There is no reason why Texas and Florida should take their stand 10 miles out in the gulf while Louisiana, Mississippi, and Alabama are cut off at the ankles. These States have no choice but to go to Congress seeking equal treatment.

Violation of U.S. Flag Code

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. BOSCH. Mr. Speaker, we have all been much concerned about recent revelations that surplus flags of the United States have been sold as rags and put to many and sundry uses. Every patriotic citizen of the United States is enraged that our flag should be so desecrated. We must put a stop to this and certainly penalties for violation of the flag code should be spelled out.

Under leave to extend my remarks, I include a letter which appeared in the Tablet of June 4, 1960, on this subject:

ASKS END TO VIOLATION OF U.S. FLAG CODE

DEAR SIR: There have been shocking violations of our flag code and desecrations of our flag reported during the past several years, but none as shocking as the recent sale of our national emblem to Haiti to be used for rags. This must not be overlooked.

Our flag, the Stars and Stripes, is a symbol of our Nation. It should symbolize everything our Nation represents. That includes honor, integrity, and the liberty and freedom it guarantees. If allowed to be sold to a foreign country for rags and other such uses then, figuratively speaking, that symbolizes that our honor and integrity are gone, that our Nation can be sold or bought for a price.

The New York State penal law, regarding our flag, does cover this particular desecration, and with penalties. The State or New York City attorney general is the one to enforce this penal law.

Section 1425, subdivision 16(b) regarding our flag says: "Any person who shall expose to public view, manufacture, sell, expose for sale, give away, or use for any purpose, any article, or substance, being an article of merchandise, or thing for transporting merchandise, or a receptacle upon which has been printed, painted, attached, or otherwise placed, a reproduction of any such flag—standard, color, shield, or ensign, or drawing * * * (d) shall publically mutilate, deface, trample upon, or cast contempt upon either by words or act, (e) shall raffle or place in pawn and such flag * * * shall be deemed guilty of a misdemeanor; shall forfeit a penalty of $50 for each such offense—to be recovered with costs in a civil action, or suit * * * recovery to be certified by the district attorney of the county in which the offense is committed."

This covers the jobber who sold the bales of cotton, including the flags, to Haiti, and also those who sold them to him. Does it not also include the transportation to Haiti? Why did not our Ambassador to Haiti, who admitted the flags were being sold at Port-au-Prince, report the fact to the proper authorities here, rather than allow an American citizen visiting there to make the report?

Now that it is known, could not our State Department negotiate through the Ambassador from Haiti to have every such flag collected and properly disposed of? How can we be sure other such shipments have not been made to faraway ports?

With the new 50-star flag coming into use in July, there will be another wholesale elimination of flags throughout the country. Therefore this situation should be promptly taken care of and provisions made whereby such a disgraceful desecration of our flag could not happen again.

Be sure that on Flag Day, June 14, you not only display your flag, but be alert for any disregard shown our flag or violations of flag laws. This is just one more example of the great need for each and every American to be mindful that eternal vigilance is essential for the saving and welfare of our Nation, our freedom, and our liberty.

HELEN P. LASEEL,
National Chairman, U.S. Flag Committee.

Analysis of the Wilderness Bill

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an analysis of the wilderness bill which appeared in the Carmen's Railway Journal of June 1960:

THE WILDERNESS BILL

The purpose of the wilderness bill is to "secure for the American people of present and future generations the benefits of an enduring resource of wilderness"—a resource that will "serve public purposes including recreational, scenic, scientific, educational, conservation, and historical use and enjoyment by the people."

WHAT THE WILDERNESS BILL WILL DO

1. Establish a national policy for wilderness preservation and a program to make it effective.

2. Give statutory protection to wilderness areas in national parks and monuments, national forests, and national wildlife refuges and ranges.

3. Establish a national wilderness preservation system "for the permanent good of the whole people" to consist of the now-existing wilderness areas in the forests, parks, and refuges.

4. Set up an orderly procedure for additions, deletions, or changes in the wilderness preservation system, with provisions for due notice, public hearings, and review by Congress.

WHAT IT WILL NOT DO

1. It will not conflict with established uses of the parks, monuments, forests, or wildlife refuges.

2. It will not interfere with established practices, such as grazing, for example. (It includes no areas now open to lumbering.)

3. It will not endanger existing private rights; it specifically safeguards them.

4. It will not call for money; it merely sets up a system by which existing Federal agencies will preserve wilderness values in the specified areas already under their jurisdiction.

WHY THE WILDERNESS BILL IS NEEDED

1. Wilderness now has only administrative protection. There is no national wilderness policy or program prescribed by Congress. Administrators change; their ideas on the composition and values of wilderness differ. One administrator can abolish or seriously reduce wilderness established by another. Administrators are under pressures hard to withstand when there are no congressional guidelines.

2. The wilderness bill would provide the guides and strengthen the hands of the administrators, since it requires administering agencies to preserve the wilderness character of the wilderness areas in their charge.

3. It authorizes multiple use, including wilderness.

4. Congress—representing all the people—should have the decisive voice in stating and carrying out a policy regarding the use of public lands for the benefit of all the people of the Nation.

Sponsored in Congress by Senators and Representatives of both parties, westerners and easterners, the wilderness bill has the support of conservation organizations which have long realized the need for a basic national policy, as well as garden clubs, women's organizations, sportsmen's organizations, labor groups, professional people, clergymen, businessmen, housewives, teachers and professors, students, naturalists, scientists, and "just folks." In one hearing there was testimony for wilderness preservation from a sawmill operator who saw greater public value in the forest as a wilderness in that area than in the timber that could be taken out of it.

AMONG SUPPORTERS ARE

Many prominent individuals, including—Ansel Adams, Elliott S. Barker, Guy Emerson, U. S. Grant 3d, Frederick Brown Harris, Paul G. Hoffman, Joseph Wood Krutch, Karl Menninger, Eleanor Roosevelt, Francis B. Sayre, Jr., Adlai E. Stevenson, Wallace Stegner, Edwin Way Teale, G. Mennen Williams.

Twenty-two National and 58 State and other organizations, including—AFL–CIO, American Planning & Civic Association, American Nature Association, Citizen's Committee on Natural Resources, Council of Conservationists, Federation of Western Outdoor Clubs, Garden Clubs of America, General Federation of Women's Clubs, Independent Timbermen's Committee, Izaak Walton League, National Audubon Society, National

Council of State Garden Clubs, National Parks Association National Wildlife Federation, Nature Conservancy, New York State Conservation Council, Sierra Club, the Wilderness Society, Trustees for Conservation, Washington State Sportsmen's Council, Wildlife Management Institute.

Many newspapers, in editorials, including Boston Herald, Christian Science Monitor, New York Times, Washington Post, Washington Evening Star, Minneapolis Star, St. Louis Post-Dispatch, Bend Oreg., Bulletin, Eugene Register-Guard, Portland Journal, San Francisco Chronicle, San Francisco Examiner.

The administration, through the Bureau of the Budget, Secretary of the Interior, and Secretary of Agriculture, has urged prompt approval of the wilderness bill.

WHAT IS HAPPENING TO THE BILL?

In the Senate the Interior Committee after two hearings in Washington, D.C., and six in the West is now considering the wilderness bill. Senators and staff members have worked out a revision to clarify, modify, and amend it in accordance with criticisms presented. This revision—known as Committee Print 3—has been accepted by wilderness bill advocates. They are urging that it be reported promptly by the committee and passed by the Senate. Substitute bills and amendments advocated by Senator JOSEPH O'MAHONEY and Senator GORDON ALLOTT have been opposed as representing attempts to frustrate and defeat the real purpose and needs of this legislation.

In the House, the Interior Committee leadership has agreed to take up the wilderness bill as soon as it is passed by the Senate. This will have to be done promptly so the bill can be enacted this year. The bill in its Senate Committee Print 3 form has recently been introduced in the House. Thus, the way is being prepared for prompt action that can bring enactment this year.

(This is being written on March 31, 1960.)

YOU CAN HELP

You can write your Senators urging them to speed up action on the wilderness bill as revised in Committee Print 3 and asking them to oppose last-minute substitute proposals by those who want to delay and frustrate this much-needed legislation. Address: Senate Office Building, Washington 25, D.C.

You can urge your Congressman (address: House Office Building, Washington 25, D.C.) to support the wilderness bill and do everything he can to insure prompt action. Ask him or her to help see that the House Interior Committee acts promptly so we can get the wilderness bill through this year.

Protect American Music, Art, and Culture

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein an interesting and timely article by John Crosby which recently appeared in the celebrated Worcester Daily Telegram entitled, "Songwriter Has Some Bitter Ideas."

The Nation has been deeply concerned about payola, and the Congress has made some rather feeble, ineffectual efforts to rectify the conditions in American broadcasting and music that is uncovered by recent disclosures.

As Mr. Crosby's article and Mr. Harburg's views indicate, there are some very distasteful developments taking place in the musical, theatrical, and broadcasting industries which, of course, are matters of common knowledge to millions of Americans who are captive audiences, and have no way of defending themselves against the barrage of rot that is so often forced upon them.

In great public service industries, this situation is much bigger than payola and goes much deeper than payola. I hope that the distinguished and very able chairman of our House Interstate and Foreign Commerce Committee, the gentleman from Arkansas, our distinguished friend, Mr. HARRIS, will broaden the scope of his current inquiries into this whole composite picture and come up with some effective recommendations before American culture is laid prostrate before the onslaught of greedy entrepreneurs who in effect are threatening to erase all traces of traditionalism and good taste from the music, folklore, stagecraft, and entertainment activities of the Nation.

SONGWRITER HAS SOME BITTER IDEAS

(By John Crosby)

NEW YORK.—"Finian's Rainbow," a lovely musical play from the 1946–47 theatrical season, has been revived at City Center, with such glowing success that it has been transplanted to a Broadway house for what I devoutly hope is a long run. "Finian's Rainbow" is fantasy with social implications, a difficult thing to carry off, and it is full of marvelous tunes like "How Are Things in Glocca Morra?" "The Begat," "Old Devil Moon," "Something Sort of Grandish," "When I'm Not Near the Girl I Love," and "If This Isn't Love."

The lyrics are impish, lovingly written, witty things, jampacked with ideas and the other day their author, Yip Harburg, divested himself of some ideas, many of them bitter, on the state of show business.

BOOMERANG

"We are trying to arrange it so that the tickets would be $6 instead of $9 top," he said. "But we couldn't. You can't do a musical for the people these days. This thing is going to boomrang back on the people who outpriced everything in the first place."

"Finian's Rainbow," Harburg said, was never bought by the movies because the movies were scared to death of fantasy. "Hell, we had a terrible time getting 'The Wizard of Oz' on," said Harburg, who wrote the lyrics for such songs as "Yellow Brick Road" and "Over the Rainbow" for that movie. "Just the same 'Finian's Rainbow' has a life of its own. There isn't a week goes by when it is not playing somewhere Nunneries and monasteries do it. Colleges do it. Tents do it. It's being done all the time. It has real life, that play."

Harburg turned to the state of contemporary popular music which he finds fairly awful. "Payola," he said. "What you hear is some stuff done by some professional who doesn't care about music as much as he cares about payola. But the reason there aren't many good lyric writers or composers around is they don't get the training we got in the twenties or thirties.

"We used to have 60 or 70 musicals come to town every year. Revues, lots of revues. You'd contribute a song to a revue and then stand behind the audience and get its reaction. Writing wasn't done under pressure. You'd sculpture things. You had time. But mass communication has touched the pressure button.

PRESSURE BUTTON

"Commercials have made a big impression. You can just kick them out, write a quickie, make it as close to all the other quickies as you know how, make a fast buck, and start on something else. Nobody writes the way we used to. We all tried to get into the catalog of time.

"The 'Hit Parade' did to songs what horse racing does to horses. It became a lottery, a competition. But good songs are not quick hits. The audience has to catch on to a song. George Gershwin never had a big hit, never sold a million copies of his songs—in his lifetime. Gershwin, Arlen—their songs grow little by little. When I wrote 'April in Paris' for a show called 'Walk a Little Faster,' it was a complete flop. Years later, Ilka Chase sang it in smart supper clubs and now it's a big song."

The tone grew bitter. "For the past 10 years, it's been impossible to sell a good song to a publisher. The influence of the radio, of television, is ruining the whole culture of the United States. It's because the sponsors are more interested in seeing their own commercials than in doing something worth while.

"A country whose President can't speak a simple declarative sentence doesn't deserve anything better for its children. The esthetic quality of life is disappearing and one reason is the cold war. We're living in an age devoid of elder statesmen like Edmund Burke or Tom Paine or Lincoln or Jefferson. The beautiful language of diplomacy is gone. We have fight language like 'Kill the * * *.' How can we expect this not to seep through to our children? This is the atmosphere our kids are brought up in. Rock 'n' roll, torch songs which are maudlin, self-pitying, undignified.

BERNARD SHAW

"Take our theater. Bernard Shaw said: 'When you leave a play and it leaves you, it's not a play. A play must give you something to think about, some wisdom—something. Entertainment alone without meaning is for the unthinking. Alexander Pope said that a long time ago and it's true.' "

It is certainly true right now. This is the age of the unthinking.

Miss Sally B. Heggie, of Indian Orchard, Wins First Place $500 AFL–CIO Massachusetts State Labor Council Scholarship for Essay

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. BOLAND. Mr. Speaker, Miss Sally B. Heggie, a 17-year-old Classical High School senior from Springfield, Mass., and the daughter of Mr. and Mrs. William G. Heggie of 30 Homestead Avenue, Indian Orchard, won the first place $500 scholarship sponsored by the AFL–CIO Massachusetts State Labor Council. The subject of the 300-word essay was entitled "What Is Your Concept of the Ideal Role of Organized Labor in a Democratic Society?"

Under unanimous consent, I include Miss Heggie's well-written and prize-

winning essay in the Appendix of the RECORD as it appeared in the Springfield Union newspaper of June 7:

STATE'S TOP ESSAY ON IDEAL ROLE OF ORGANIZED LABOR

A 300-word essay on "What is Your Concept of the Ideal Role of Organized Labor in a Democratic Society?" was the major factor determining the winner of the AFL–CIO Massachusetts State Labor Council's first place $500 scholarship, according to Francis E. Lavigne, director of education and research for the council.

ESSAY STANDS OUT

Lavigne said the essay of Miss Sally B. Heggie, 17-year-old Classical High School senior, who won the first place scholarship, "stood way above the rest."

Miss Heggie, daughter of Mr. and Mrs. William G. Heggie of 30 Homestead Avenue, Indian Orchard, was among 1,043 students from 172 schools throughout the State who took the 2-hour examination in the scholarship competition.

Following is her essay:

"The organized labor movement has the ability to play, and does play, a vital role in a democratic society such as America. With millions of workers in its ranks, organized labor wields considerable influence. What do I feel is the ideal role of this labor movement?

"Of first importance in its role are the individual members of the union. Its first responsibility is to these members. The unions should work vigorously to keep wages at a level with the cost of living. It is also up to organized labor to bargain collectively with employers to obtain proper sanitary and safety conditions in factories, to obtain fringe benefits for its members, and to safeguard the rights of the workers."

MOUTHPIECE OF WORKER

"The union is the mouthpiece of each and every worker and should work earnestly for these workers. The union's importance to the individual member cannot be overestimated, for it is by means of the union that he has progressed from the deplorable conditions of early America.

"Wage increases, hour decreases, proper working conditions, extra benefits, and a genuine voice against employers: These are the results of organized labor and show its importance to the individual member of the union. My concept of the ideal role of labor calls for continuation of these functions in a vigorous, unwavering manner.

"Ideal organized labor owes a great deal to the community, State, and to the Nation as a whole. Since it represents such a large segment of the population, it should make the beliefs, thoughts, and feelings of its members known to the general public. It is up to labor to take an interest in Government legislation and candidates, and inform its members about them. Its voice should be an influence in promoting legislation favorable to labor and Americans in general. For as one person said, 'What is good for America is good for labor.'"

LABOR'S RESPONSIBILITY

"Labor should work earnestly for everything that is of value and importance to America. Its cooperation in international labor groups (such as ILO), its work toward better schools and housing, its work to combat communism, its work for 'getting out the vote' at election time, and its work for increased social legislation should be an integral part of labor policies. A great responsibility rests upon labor and it is up to it to bear this responsibility—for the good of America and our democratic society.

"Organized labor is of great importance and contributes a great deal to the American economy. Because of this importance, additional responsibility is thrust upon labor. When wages go up, many times this is followed by a price increase. It is up to labor to make its demands on management reasonable to the cost of living. Management is equally responsible for wage and price scales, however. Together, it is up to the two groups to come to logical agreements.

"Organized labor has made the economy of America a constantly growing and vital state. It wields great influence, by means of its members, on the economy and is a prominent factor in the prosperity and greatness of our Nation. Labor, by the work of its individual members, has made America what it is today.

"Most of the characteristics possessed by my conception of the ideal role of organized labor in a democratic society are actually possessed by the unions throughout America. May the unions continue to work for their individual members, and may they continue strong in their contributions to America and its way of life."

Cold War Is Fought in Hunger's Arena

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. McDOWELL. Mr. Speaker, a $4.1 billion foreign aid bill has been approved by the Congress and signed by the President. This amount is about $88 million less than the figure requested by President Eisenhower. The new measure includes provisions to tighten up administration of the program, and assures more detailed accounting of expenditures to the Congress. This is, however, only the first stage of congressional action. The real test will come when Congress votes on the actual appropriations. The appropriations step usually cuts the amount of money still further by some 5 to 15 percent.

Recently I received a most cordial message from President Eisenhower thanking me for my support of the mutual security program. I am deeply convinced that the alternative to a strong mutual security program is the drafting of millions of American men to guard the borders of distant lands. Despite these clear alternatives the opponents of mutual security have been growing in numbers and strength in recent years. If there is to be the necessary support for his mutual security program the President is going to have to work much harder for it than he has in the past, especially among members of his own party in the Congress.

There are compelling reasons, in addition to the purely military ones, for support of the mutual security program. Our economic self-interest also requires that we support this program.

America has always been one of the great trading nations of the world. In the last few years, however, our exports have fallen considerably from 5 percent of our total output of goods and services in the 1920's to 4 percent, with imports down from 4 percent to 3 percent for the same period.

The expansion of trade is basic to the proper functioning of our economy, and here the mutual security program is of tremendous assistance in opening up new markets and in helping us keep the markets we presently have.

The economic columnist of the Washington Post, J. A. Livingston, declares that:

Trade expansion is a social imperative as well as an economic desideratum. The Communists have made their finest capital out of the "splendid isolation" of the "have" nations. The have and have not struggle transcends wars. Its outcome, as President Eisenhower made so clear in his postsummit speech will determine who controls the peace—the Western World or the Communist dictatorship.

In his historic speech on May 2 in Washington, D.C., at a dinner sponsored by the Committee for International Economic Growth and the Committee To Strengthen the Frontiers of Freedom, President Eisenhower reduced the mutual security program to essentials. He said that the free world needs America but, just as importantly, America needs the world. "Important it is that our allies contribute 5 million soldiers, 30,000 airplanes, and 2,200 combatant ships to the common defense of freedom," he said.

Our involvement with our neighbors is more basic than this, however, according to the President. Foreign trade, he said, is the prime example of our need for other nations. Foreign trade is for America, President Eisenhower said:

A $30-billion-a-year business. To this trade 4,500,000 of our people owe their jobs * * * we export on the average a third of our cotton crop, just under a third of our wheat, and a fourth of our tractor production * * * the health of our economy depends upon materials owned by others. Manganese, chrome, tin, natural rubber, nickel are examples. As our economy grows, we depend increasingly upon others for such materials. Eight years ago we imported only about a twentieth of our iron ore. Today we have to import over a third.

One way to help America regain its great role as a trading nation is to sharply reduce executive featherbedding in American industry. In some areas of our economy, it would seem, practically everybody above strawboss is a vice president. Vice presidents have been seen carrying brief cases for other vice presidents.

Al J. Hayes, president of the International Association of Machinists AFL–CIO, declares wasteful management practices are not as well publicized as the feather-bedding which management charges unions with.

Mr. Hayes points out that "overloading of executive levels with surplus vice presidents, managers, and directors" is rampant today. In fact, inflated expense accounts, stock options, bonuses, country club memberships, and company-paid yacht cruises and hunting trips are standard operating procedure today as everyone knows.

These "fringe benefits" cost American industry staggering sums and are growing with every passing year. This executive featherbedding is the fat which

makes American industry increasingly sluggish in the sharp competition with the Soviet Union and other countries of the totalitarian bloc and the low-wage countries of the uncommitted bloc of nations, as well as the low-wage countries among our allies and friends.

The railroad managements of our country have for years talked and inspired others to talk about the "featherbedding" in the railroad industry which they charged to the railroad unions. In reply to this unfair charge G. E. Leighty, chairman of the Railway Labor Executives' Association, in a speech before the Southeastern Association of Railroad and Utilities Commissioners, April 16, 1959, declared that:

In 1923, when the class I railroads had approximately 1.8 million employees, they had 16,000 employees at the management level. In 1959, when rail employment dropped to less than half its 1923 level, the number of managers remained almost constant.

The RLEA has recently completed a study, based on the railroads' own reports to the ICC, which shows that, for the railroad industry as a whole, 190 new officials were added on the railroads between 1955 and 1957, although the number of other workers in the industry declined from 1,041,792 to 969,737 over the same period. In the same time, the total outlay for officials' salaries increased by $21.8 million and reached a staggering total of more than $180.9 million annually.

I include as part of my remarks the article by J. A. Livingston in the Washington Post of May 29, 1960, to which I referred earlier:

COLD WAR IS FOUGHT IN HUNGER'S ARENA

(By J. A. Livingston)

Andrew Tunc, professor of law at the University of Paris and formerly in the Legal Department of the International Monetary Fund, makes this revealing comment about life in America:

"The front pages of your newspapers tell a great deal about Russia and communism. Day after day they describe military developments. Naturally, the summit conference gets full treatment. But anything about the underdeveloped countries appears on the back pages. Yet, that is the greater problem of the future."

Professor Tunc, who has been on leave to the University of Pennsylvania Law School, insists that the "have" nations of the Western World are doomed to defeat in the struggle with Communist Russia if they do not help satisfy the "rising expectations" of the people of the underdeveloped world. Americans, Frenchmen, Englishmen can't expect to live in comparative splendor while millions upon millions of persons haven't enough to eat.

INTERNATIONAL NEW DEAL

Professor Tunc cites data on the United Nations. Some 2 billion people live on a per capita income of less than $300 annually; 1.5 billion live on less than $100 a year—if that can be called living. Contrast that with America's $2,000 a year per capita spending power.

The ultimate political loyalties of the "have-nots" will determine the victor in struggle with Soviet Russia, not nuclear weapons or military might, says Professor Tunc. As a result of the greater literacy, people of Asia and Africa have an understanding of how the other few percent live. The times call for "an international New Deal."

Professor Tunc argues that the United States, France, Great Britain and other nations of the West must increase their foreign economic assistance—not purely out of sympathy, the desire to help those who are in misery, but out of self-interest.

What would happen if the vast majority of people in the United States had an income of $100 per capita per year and a comparatively few had $2,000 a year? There'd be a revolution, a forceful takeover of wealth, says Professor Tunc. This is what will happen in the world—in the form of a swing to communism.

ONE PERCENT OF U.S. OUTPUT

These ideas are not unique. They have been expressed by Paul G. Hoffman, the first administrator of the Marshall plan. They have been publicized by Barbara Ward, a contributing editor to the London Economist. They have been enunciated over and over by officials of the State Department and President Eisenhower himself.

America can expect to prosper only if the rest of the world prospers. Yet, every time mutual security aid legislation comes up in Congress there's an outcry. Charity begins at home.

This year the President asks a little more than $4 billion for MSA. It's a small outlay in the massive struggle against Soviet power and propaganda.

Mutual security aid has been split about 60 percent military and 40 percent economic. Current plans call for about half and half. But the total is only 5 percent of the U.S. budget. It constitutes less than 1 percent of the total output of goods and services. And it's down sharply from the 1953 peak of $5.7 billion.

Aside from sympathetic decency, economic self-interest is a sufficient reason for MSA. America has always been a great trading nation. In the late twenties U.S. exports amounted to 5 percent of the total output of goods and services. Imports came to 4 percent.

WHO CONTROLS THE PEACE

International trade in that era was helped along by the overly hopeful investment bankers who lavished loans on governments unprepared to use funds sensibly. Governments defaulted wholesale during the depression.

These were high interest loans. They were to be serviced by the improvements in economic development in the country which couldn't afford the toll. They differ from mutual security aid which not only is financial but also is technical. The beneficiary countries are advised how to adopt modern methods where applicable to their own economies and they don't have to dig up dollars to pay interest to impatient lenders.

In recent years, U.S. exports have fallen to about 4 percent of our gross national product and imports to about 3 percent. It is quite possible that as stability increases in other parts of the world, the percentages will rise to late 1929 levels. Foreign markets could be America's new economic frontier in the sixties.

Indeed, trade expansion is a social imperative as well as an economic desideratum. The Communists have made their finest capital out of the "splendid isolation" of the "have" nations. The have and have-not struggle transcends wars. Its outcome, as President Eisenhower made so clear in his postsummit speech will determine who controls the peace—the Western World or the Communist dictatorship.

Patriotism in Time of Cold War

EXTENSION OF REMARKS

OF

HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 11, 1960

Mr. BECKER. Mr. Speaker, I am inserting in the RECORD an article by David Lawrence entitled "Patriotism in Time of Cold War." This was published in the Washington Evening Star of June 6, 1960. I believe this article should be read by every American as it is true in every respect, and I am also in accord with the views published in this article:

PATRIOTISM IN TIME OF COLD WAR—AID AND COMFORT TO ENEMY ARE SEEN IN U.S. ATTACKS ON PRESIDENT'S ERRORS

(By David Lawrence)

Time was when in the midst of war neither scribe nor politician ventured to give aid and comfort to the enemy.

Time was when the citizen felt a tingle of emotion go up and down his spine as he sang "The Star-Spangled Banner" or saluted the flag.

Time was when the Nation found itself in peril, and nothing else mattered. No sacrifice—even of life itself—was too great to make for the honor of our country.

But things seem to be different now. The President of the United States is insulted and yet some writers continue to furnish aid and comfort to the press of the Soviet Union by denouncing Mr. Eisenhower and holding him cupable for errors he couldn't possibly have avoided and still protect the safety of the American people against surprise attack.

Is the country changing? Is patriotism just an obsolete notion, nurtured only by those of us who have witnessed manifestations of national spirit and pride over a long span of years? Are some of us old-fashioned because we cannot accept the modern cynicism which insists that a President of the United States shall be pilloried by political leaders and by some segments of the press of his own country as Moscow papers reprint every bit of captious and carping criticism?

Is a "cold war" any different really from the crises that call for nonpartisanship during a "hot war"? Time was when in wartime a newspaperman practiced "voluntary censorship" and when his conscience kept him from writing anything that might possibly aid the enemy.

A "cold war" and a "hot war" are no different so far as national danger is concerned. Today the demand is for almost every scrap of information, including "classified" information, and there are newsmen and Members of Congress who insist in all sincerity that they, and not the executive branch of the Government—which has the responsibility for our safety—shall be the final judges of what ought to be suppressed or disclosed.

Time was when this correspondent used to hear the expression: "I'm an American first and a newspaperman second." But today things seem different. No matter how damaging to one's own country, the tendency now is to give the information or comment publicly to the enemy dictator, who promptly quotes it in his propaganda speeches.

As America, moreover, approaches a political campaign, partisan writers say that the

President should have known in advance of every act to be performed by every subordinate in the numerous agencies of a big Government, and that efforts to gather information abroad clandestinely should have been in effect suspended indefinitely to the advantage of a gangster regime in Moscow. Immediately, Moscow seizes on every such adverse comment, especially when it emanates from the Senate Foreign Relations Committee. Was it too much to ask, as Senator WILEY, Republican, of Wisconsin, did, that a public investigation by any congressional committee on international matters during a crisis be suspended?

Maybe the urge to patriotism is less strong today than winning an election or carrying on a partisan crusade. Maybe we are witnessing the rise of new "liberals" who espouse the cause of nationalism in the various countries of Africa and Asia, but denounce any nationalism expressed in the United States in behalf of the interests of our own country.

But these misguided "intellectuals"—so many of whom, in the scientific world especially, believe in "world citizenship" as superseding American citizenship—will some day be proved completely wrong. Back in the 1920's, after World War I, there were demonstrations of students in the colleges against war. They held meetings or organizations calling for the soldiers' "bonus of future wars." It was a satirical effort to put the label of selfishness on the men who had to leave their families and jobs and go to war. But when the United States entered World War II in 1941 this same generation acquitted itself nobly. No better troops ever fought for America than those who battled in World War II.

Grassroots Americanism today resents bitterly the insults flung at the President of the United States. It resents attacks on Mr. Eisenhower in the American press which the next day are parroted and quoted with exultation in the Soviet press.

It so happens that Mr. Eisenhower was the supreme commander of allied forces in World War II. He helped to save the Soviet Union from the yoke of Hitler. The American people between 1941 and 1945 sent billions of dollars to help equip the Soviet armies. When the war was over General Eisenhower was received with acclaim in Moscow. But Nikita Khrushchev now says Mr. Eisenhower is fit only to manage a home for children. Recently he called the President a "thief."

It begins to look as if Nikita Khrushchev is resentful of all military men. But he has miscalculated public opinion everywhere if he thinks he can belittle not only the President of the United States, but the very general who helped Russia in the winning of World War II.

The Soviet Premier, to be sure, has lost whatever prestige he may have had in the West. He has forfeited an opportunity for effective leadership as a negotiator with the West. He has really betrayed his own country. For the people of the Soviet Union don't want war, and when they get all the facts they will not long support a man who acts more like an uncivilized boor than like the dignified premier of a government which professes to represent a great people.

The Bracelet That Saves Lives

EXTENSION OF REMARKS

OF

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I would like to incorporate in the RECORD, an article from This Week magazine of June 5, 1960, concerning the lifesaving Medic-Alert Foundation conceived and developed by Dr. Marion C. Collins, of Turlock, Calif. At considerable personal sacrifice, Dr. Collins has developed this foundation to the point where more than 20,000 persons are wearing Medic-Alert amulets to protect themselves from tragedy. The article follows:

[From This Week magazine, June 5, 1960]

THE BRACELET THAT SAVES LIVES

(By Don Duffy)

(If you're one of the millions of Americans who would be seriously endangered by the wrong medicine treatment, you need to know about this ingenious safeguard.)

TURLOCK, CALIF.—Today there is a magic amulet saving lives because a smalltown doctor has decided to gamble his own life in a struggle against senseless deaths.

The amulet is the emblem of the Medic-Alert Foundation. The smalltown doctor is Dr. Marion C. Collins, 53, a physician and surgeon in this agricultural community of 7,000 people in the San Joaquin Valley. The story began here 7 years ago, the day his daughter Linda, then 14, cut a finger on a rifle trigger.

Frightened by the thought of infection, Linda fled from the rifle range to the small 40-bed Lillian Collins Clinic founded by her grandfather. Linda's uncle, Dr. James Collins, quickly decided to treat her with tetanus antitoxin. Carefully but calmly, he made a scratch test with one drop of serum. Seconds later, the teenager was sprawled on the floor, jerking convulsively and gasping for breath. The serum droplet had set off a violent allergic reaction called anaphylaxis.

For 3 days Linda fought against death inside an oxygen tent. She finally won the battle, but no drug could cure her allergy. Once inside her sensitive system, the serum would have a lethal effect because her body had been sensitized by the serum. The terrible danger is that if she ever is given the serum again by mistake the very same reaction will occur.

Most of Turlock learned of Linda's near tragedy so there were no problems until she was ready to leave for college. But nightmarish scenes of what might happen then began haunting the Collins family—an injured and unconscious Linda in a strange hospital, unsuspecting doctors with no way of knowing that any protein serum injected might spell death.

The normally healthy coed needed some sort of positive protection, some device that would flash a warning whenever any emergency struck and she was unconscious. Dr. Collins weighed three widely used warnings and then rejected them all as too undependable. A note pinned inside her clothing or a card in her purse could easily be lost or overlooked. A tattoo, which Linda pleaded against, would cover only one area where serum could be injected into her body. But what would prove better?

A FAMILY BRAINSTORMING SESSION

The answer came out of a family brainstorming session—a silver bracelet with the warning "Allergic to Tetanus Antitoxin" engraved on its back. To accent this vital message, Dr. Collins had the snake-encircled Staff of Aesculapius, symbol of the medical profession, and the words "Medic-Alert" engraved and emblazoned in bright red on the bracelet's face.

Linda's new piece of jewelry calmed his fears as a father, but fanned the humanitarian instincts that had driven him to choose his father's profession and become California's youngest practicing surgeon at the age of 24.

What if his next emergency patient had a hidden health problem like Linda's and had no protective warning? The riddle prompted him to search out these frightening medical statistics:

Ten percent of all persons inoculated with tetanus antitoxin develop some type of allergy to the serum. In some cases, the reaction would be almost instant death.

Another 5 percent of us are allergic to penicillin, the antibiotic that causes one death every 5 days and half the nonfatal cases of all reported drug allergies.

HANDLE WITH CARE

More than 1 in every 10,000 Caucasian males is born an incurable hemophiliac who could bleed to death from a slight wound without special emergency care.

Some of our 11 million arthritics and rheumatics need cortisone, hydrocortisone or ACTH after shock or injury. Without one of these drugs, complications could be serious and painful.

Many of our 10 million cardiovascular patients take daily medications that must be counteracted by other drugs in certain emergencies.

Most of the 2 million diabetics and 1,500,000 epileptics face a different but equally dangerous threat. Anyone without medical training can easily mistake them for drunks when diabetics go into insulin shock and epileptics becomes ill. Police everywhere dread giving an unidentified diabetic or epileptic a night in jail to "sleep it off" instead of an ambulance trip to the nearest hospital.

MEDIC-ALERT IS LAUNCHED

"Millions of these people don't realize the tragedies that could happen when they're traveling alone," Dr. Collins told his wife, Christine. "And those who know the dangers, including some of my own diabetics, are depending on warnings we ruled out for Linda."

This realization was the beginning of the Medic-Alert Foundation. Dr. Collins canceled plans for a week-long vacation, started working on his new project. His heavy workday, averaging 40 office visits and at least 1 surgical case meant launching the foundation during evenings and over weekends.

He talked with doctors, police officials, nurses and health organizations who all agreed some standard, infallible method of identification was long overdue. But they also warned that the hurdles facing him seemed too high to clear. The bracelet would be too small to carry any detailed medical records so essential in many cases. Medical people and police would have to recognize the bracelet instantly. And finally, launching the project would take a large staff, months of work, and a considerable investment because costs to wearers would have to be nominal.

THE DOCTOR GOES INTO ACTION

Dr. Collins listened to these hard facts and moved ahead. He mapped out a system for filing complicated medical records at the hospital where nurses could answer emergency telephone calls and give out vital information at any hour. Bulletins describing the bracelet and its meaning would be sent to all hospitals in the United States and Canada, all State police forces, and municipal police departments in every city with more than 10,000 population, also all sheriffs and Canadian mounties.

He would finance the Foundation with his own funds. Christine, his wife, would do the clerical work and handle all correspondence. Tommy, their 12-year-old son and the last of four children still at home, would be bookkeeper and order filler. Dr. Collins sister would be traveling promotional representative. James, his brother, could handle his patients when foundation work and displays at medical conventions took him out of town. The Collins home would serve as headquarters.

For the next few nights he sat at a typewriter, pecking out copy for pamphlets and

bulletins. Then the whole family tackled the chore of addressing and stuffing envelopes so printed announcements would reach more than 8,500 hospitals and police departments.

Special dies for manufacturing bracelets and neck medallions cost $3,000. A month later, armed with a few dozen silver amulets and stacks of literature, Dr. Collins set up a display booth at the 1956 American College of Surgeons convention in San Francisco to announce his project to the medical profession. Hundreds of delegates left the meeting armed with Medic-Alert literature to spread among colleagues and patients back home.

Exhausted but elated, Dr. Collins went home to Turlock. And 2 days later, tragedy struck. A sharp chest pain jolted him awake in the early morning hours. The pain shot down his back and left arm, undeniable symptoms of a coronary occlusion.

A clinic colleague gave him a choice he already knew. Slow down or risk death. "If I quit now," he told his wife, "Medic-Alert is dead."

His fateful decision was soon rewarded when letters from doctors, police chiefs and hospital administrators flooded the Turlock post office. Among them was a bracelet order for a Miami epileptic, sent by a patrolman who had mistakenly jailed the man as a drunk.

THE FIGHT PAYS OFF

Once this initial impact waned, the doctor discovered his Foundation had hundreds of professional enthusiasts but ony a few members. He knew the lifetime membership fee and $5 for a bracelet and complete medical history listing could not be lowered without completely draining his finances. The main problem was in reaching potential wearers.

Instead of becoming discouraged, he poured more time and money into promotting the Foundation among doctors and health organizations. Weary from maintaining his own practice at the same time, he gulped down daily doses of aminophylline to ease the strain on his damaged heart.

Orders for memberships began trickling in again and then letters of a different nature started arriving. The first was from a Portland, Oreg., epileptic telling how a passer-by stopped when he was stricken on a street corner, saw the bracelet, and summoned an ambulance that brought an emergency oxygen supply. A New York City woman allergic to pencillin wrote how her bracelet had stopped a doctor from giving her a shot of the antibiotic while she was delirious with pneumonia.

DRAMATIC EVIDENCE

And then came the experience (see p. 4) of an elderly diabetic in Modesto, Calif., who was driving alone when his illness struck. A passing highway patrolman boxed in the weaving car, scraped fenders, and forced it off the road. Then he recognized a Medic-Alert bracelet on the unconscious driver's wrist and read the warning "I am a diabetic." Seconds later, the trooper was radioing for an ambulance.

With this dramatic evidence of the amulet's magic, the doctor and his sister stepped up their promotion campaign. Editors of company bulletins, religious publications, labor, newspapers, and dozens of industrial news letters accepted stories on the Foundation. A national radio network broadcast an interview with Dr. Collins. Public libraries in key Western cities set up Medic-Alert exhibits. Nurses' organizations began selling memberships as their special project, with $1 from each membership fee going into the Linda Collins Nurses' Scholarship Fund.

THE TURNING POINT

These developments provided the turning point. Today, more than 20,000 persons are wearing Medic-Alert amulets to protect themselves from tragedy. Among them also are deep sea divers and sandhogs who know the "bends" can strike them hours after surfacing, and alcoholics whose daily doses of antabuse would turn one swallow of alcohol into a nauseating emetic.

The foundation's success has cost Dr. Collins nearly $30,000. And now, he has removed any possible taint of commercialism by incorporating it as nonprofit with the legal name of the Medical Problem Welfare Association, Inc. Serving on its five-member advisory board are an internist, an industrial toxicologist, and a pediatrician from the University of California medical center; a Turlock deputy sheriff, and a San Francisco publicity expert. A pharmacist, a registered nurse, a jewelry manufacturer, and a Turlock business leader are among its consulting directors. All serve the foundation without salaries.

A SECOND HEART ATTACK

The first directors' meeting in San Francisco was a dream fulfilled for Dr. Collins. The new directors began planning State and national meetings, and discussed the possibility of interesting some national service organization in assisting them in all phases of foundation work. The doctor was unable to attend the second meeting 3 weeks later. His refusal to slow down had finally caused a second coronary occlusion.

A few days after the attack, propped up in bed with the crisis past, he again was planning the foundation's future. "We're gaining about 50 new members each day now," he told a visitor, pointing to a stack of mail on his bed stand. "It's getting too big for us to handle. That's why we hope some national organization will help."

And then maybe the doctor will give his twice-damaged heart an adequate rest. Until that day, though, the whole Collins family will continue devoting every available hour to the Medic-Alert oFundation and the magic amulet that could save your life.

Further information about the foundation may be obtained from Dr. Collins, 1030 Sierra Drive, Turlock, Calif.

The Story of Chief Joseph: From Where the Sun Now Stands—Part V

EXTENSION OF REMARKS

OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am presenting the fifth article of the excellent story of Chief Joseph, one of America's most distinguished Indians. Tomorrow, I will present the concluding article.

The fifth article follows:

SUNDAY, SEPTEMBER 30, TO FRIDAY, OCTOBER 5, 1877

"Left front into line," bellows an officer. Corporals pick up the shout. In perfect unison the blueclad 7th swings smartly to the north. Cantering horses are kicked into a dead gallop. Sabers glint dully in the cold morning light. The 7th's guidons stream behind their slender shafts. Above the thunder of hoofs, the short staccato notes of "charge" ring across the frozen land. It is a picturebook cavalry charge, dipping into hollows, sweeping over ridges, breaking into a ragged headlong rush for the enemy camp.

The flying troopers are hardly a hundred yards away when the final mound between them and the tepees crashes into smoke. Hats fly off; bodies careen to the ground. Wild-running horses with empty saddles appear everywhere as the magnificent charge begins to falter. Four of the 7th's five officers (and this was no accident) have been killed or wounded, leaving a single lieutenant in command.

The withering fire continues. Troopers mill about in deadly confusion. Hard-breathing infantrymen arrive, their ranks swiftly stained by casualties. A rider topples off a mule drawing a howitzer and two of the four mules go down. The gun lurches to a halt, its muzzle still pointing uselessly to the rear. In less than 5 minutes an earth-pounding cavalry sweep which had wrecked virtually every Indian position it was sent against has been turned into a blood-stained shambles by 60 or 70 leather-faced Nez Perces firing steadily from behind rocks and ridge crests. About 60 of 115 men in the charge have been killed or wounded. The 7th shudders and withdraws.

But the Nez Perces also have been hurt severely. They knew nothing of Miles' angling pursuit. With Howard still far behind, scouting was neglected. An hour before the attack two of the tribesmen rode in to report a buffalo stampede which might have been caused by whites. Looking Glass saw no need to worry. "Plenty, plenty time," he told the families at breakfast. Some were still eating and only a few loads had been packed when another Nez Perce was seen signaling with his blanket from a bluff to the south: "Enemy right on us. Soon the attack." Leisurely packing collapsed into turmoil. Grabbing rifles and cartridge belts, some warriors raced to the southern bluff. "Horses, save the horses," Chief Joseph shouted, and others followed him toward the herd. A few Indians, their ponies at hand, struck out for Canada. Less than 10 minutes after the blanket signal, the 7th came sweeping over the low, naked ridges.

Now the frontal attack has been fended off but Cheyennes and the 2d Cavalry have exploded into the Nez Perce herd, which stampedes in every direction. Here many of the finest warriors still surviving are caught without cover. They wrestle with ponies or fire from shallow ravines. The Paloos chief Hahtalekin goes down. Ollokot, Joseph's brother, is killed while shooting from behind a boulder. Another bullet ends the retreat for Toohoolhoolzote, the aging but sinewy chief who led savage counter-attacks at the Clearwater and Big Hole. Shouting and shooting, cavalrymen drive off several hundred ponies, the bulk of the Nez Perce herd.

Firing continues through the day as Miles, turning to seige tactics, extends his lines to encircle the village. A brief foray aimed at diverting Snake Creek from the Indian camp is driven off. A Hotchkiss gun is brought up but cannot be depressed sufficiently. Its shells burst above the camp, where women and children cower under buffalo robes.

Husishusis Kute, an excellent shot, picks off what he thought were three Cheyennes in a washout southeast of camp. But the victims were Lone Bird and two other Nez Perces. Later the hard-driving squawman trail leader, Poker Joe, meets the same fate, mistakenly killed by a Nez Perce across a small canyon.

The cold gloom of Sunday darkens into night. Joseph and others cut off with the ponies slip back into camp. Deep shelter pits are dug along the creek bottom for women and children. Rifle pits are carved in the bluffs above. But an icy wind springs up, driving gusts of snow through the camp. By morning 5 inches of snow cover the battlefield, and squaws no longer find buffalo chips for fuel. Wounded men lie in blan-

kets, silently waiting to die. Children cry with hunger and cold. In vales surrounding the camp, soldiers suffer from the same biting wind.

Sporadic sharpshooting greets the second day. One shelter pit caves in under fire from a howitzer, burying a woman and child. But of 25 Nez Perce casualties in this battle, 22 occurred the first day. Colonel Miles paces uneasily. He wants a surrender. But even a successful attack would be too costly. Miles has messaged Howard and Sturgis for reinforcements. But he knows some of the Nez Perces may have slipped through to Sitting Bull in Canada. Suppose the Sioux should arrive first to rescue the Nez Perces by tearing apart the seige?

The colonel sends out a white flag. Perhaps the hostiles, their herd largely captured, can be talked into quitting.

This overture calls for a council in the Nez Perce camp. Of the five chiefs whose bands have been fighting heroically for 3½ months, Toolhoolhoolzote and Hahtalekin are dead, killed the previous day. Looking Glass again has been discredited, White Bird (over 70 years old) is almost worn out, and Joseph, for the first time, emerges alone as a leader. A man of effortless courage but lacking the warrior's lust for killing, Joseph had fought as a rifleman in at least two of the battles. The roles he fitted most naturally, though, were those of providing leadership and protection for the women and children and of safeguarding the herd, whose loss would end everything. In many ways it was easier, in an Indian culture where warfare was almost a sport, to race off with a rifle to the firing line than to make sense of frightened squaws, crying babies and milling ponies. To a large extent Joseph had held together the fabric of the Nez Perce society more surely than the guns which defended its long retreat.

Joseph knew too that his people had become involved with far more than a single army under Howard. Now that the end was in sight, the words of this man who had always spoken for a realistic conciliation suddenly make sense. To him, no military genius but the greatest of the Nez Perce chiefs, a majority of the chilled, war-weary tribesmen now turn.

Between lines, an impatient Miles and a stolid Joseph speak briefly through an interpreter. Miles insists that Joseph surrender all his arms. No; half must be kept for hunting. The talk gets nowhere. As Joseph turns to leave, Miles orders him seized. The chief is led into the white lines where his arms are bound and his ankles hobbled.

But the colonel's coup backfires. Lt. Lovell Jerome, apparently believing the war was ended, wanders into the Nez Perce camp. He is detained, though far more comfortably than Joseph. Next day the two are exchanged. Whites and Nez Perces resume their potshooting with a mutual lack of enthusiasm.

The night of October 4, Howard arrives with a small party. Miles greets him coldly: Will his one-armed superior now take over command to receive credit for the surrender? Surely Howard has earned it. Through 1,300 miles of wilderness, he has doggedly pursued the Nez Perces. But Miles is an old friend, deserving of becoming a general. Despite the indignant protests of one of his aides, Lieutenant Wood, Howard makes it clear Miles will remain in charge. Instantly the colonel's attitude changes (cordially and with great solicitude): "General, you must be very tired. Let's meet in the morning to arrange the details."

Next day, Friday, October 5, the Nez Perces learn of Howard's arrival. This has a profound effect. The hostiles mistakenly assume Howard's entire army is close behind. An attack by two enemy forces would swiftly overwhelm the weakened village. Further resistance seems out of the question.

"The women are suffering with cold, the children are crying," Joseph says. "For myself I do not care. It is for them I am going to surrender."

Looking Glass and White Bird begin planning to escape. But time has run out for Looking Glass. Moments after the final council he springs from a rifle pit to stare at a mounted horseman coming from the north. Could this be the first of the Sioux? A sharpshooter's bullet drills into Looking Glass' left forehead. He topples backward, the last casualty of the Nez Perce war.

Joseph and a few warriors emerge from their camp for a final parley with Miles and Howard. The Indians are promised food, shelter, and decent treatment as prisoners of war, without trials or executions. It is stated or clearly implied they will be returned to the Lapwai Reservation in Idaho. Certainly Howard's orders direct him to retain the hostiles in the Department of the Columbia, where Lapwai is the only available area. On the basis of these terms, Joseph returns to camp and prepares for a formal surrender.

It is late afternoon when he rides slowly to the crest of a slope where Miles and Howard are waiting. True to his promise, Howard directs Joseph to give his rifle to Miles. Then Joseph speaks, Chapman interpreting, Wood scribbling on a pad of paper.

"Tell General Howard I know his heart. What he told me before I have in my heart. I am tired of fighting. Our chiefs are killed. Looking Glass is dead. The old men are all killed. It is the young men who say yes or no."

Nearly 700 Nez Perce had started from Idaho in June. Their warriors, perhaps 150, had fought 4 pitched battles and numerous skirmishes against several different commands totaling 1,400 troops and volunteers supplemented by Indian scouts from 10 different tribes. Of the whites, 109 had been killed and 115 wounded. Under generally able leadership, they had been outmarched and often outmaneuvered. The Government's direct expenses approached $2 million.

"He who led the young men is dead. It is cold and we have no blankets. The little children are freezing to death. My people, some of them, have run away to the hills, and have no blankets, no food. No one knows where they are, perhaps freezing to death. I want time to look for my children and see how many of them I can find. Maybe I shall find them among the dead.

Ninety-six Nez Perce had been killed, 36 of these women and children. Surrendering with Joseph were 418 made up of 87 men, 184 women, 147 children. That night 230 others, including White Bird and most of his band, would escape toward Canada. Once the most powerful Indian Nation in the American Northwest, the Nez Perces had now lost their horses, their land, and their freedom, and were helplessly reduced to the will of their conquerors.

"Hear me, my chiefs. I am tired; my heart is sick and sad. From where the sun now stands, I will fight no more forever."

Facts About the National Committee for a Sane Nuclear Policy

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. PORTER. Mr. Speaker, the National Committee for a Sane Nuclear Policy is confronting and attempting to solve the problem of mankind's survival despite the tremendous weapons he has contrived.

It is such a group that must help educate the public so that the force of opinion will require our Government to do far more than it has been doing in the interest of survival.

Under unanimous consent previously granted I am including hereafter information about the National Committee for a Sane Nuclear Policy, its purposes and related information:

NATIONAL COMMITTEE FOR A SANE NUCLEAR POLICY

WHO WE ARE

Steve Allen, "The Steve Allen Show," co-chairman, "Hollywood for SANE."

Prof. Gordon W. Allport, psychologist.

Harry Belafonte, singer, actor.

Ray Bradbury, science fiction writer.

Allan M. Butler, M.D., chief of pediatrics, Massachusetts General Hospital.

Henry S. Canby, writer.

Dr. William Davidon, physicist, Argonne National Laboratory.

Prof. L. Harold De Wolf, School of Theology, Boston University.

Helen Gahagan Douglas, former U.S. Congresswoman.

Clark M. Eichelberger, Director, American Association for the U.N.

Jules Feiffer, cartoonist, author.

Harold E. Fey, editor, the Christian Century.

Dr. Harry Emerson Fosdick, minister emeritus, the Riverside Church.

Dr. Erich Fromm, psychologist, author.

Patrick E. Gorman, international secretary-treasurer, Amalgamated Meat Cutters and Butcher Workmen, AFL–CIO.

Dr. Walter Gropius, architect, author.

Gen. Hugh B. Hester, brigadier general, U.S. Army (retired).

Ira Hirschmann, president, the Ira Hirschmann Co., Inc.

Hallock Hoffman, Fund for the Republic.

Prof. H. Stuart Hughes, historian, Harvard University.

Walt Kelly, cartoonist.

Dr. Martin Luther King, Jr., minister, Baptist Church, Montgomery, Ala.

Rabbi Edward E. Klein, Stephen Wise Free Synagogue, New York.

O. A. Knight, president, Oil, Chemical and Atomic Workers, AFL–CIO.

Dr. M. Stanley Livingston, director, Cambridge Electron Accelerator, Harvard University.

Arnold H. Maremont, chairman of the board, Thor Corp.

Prof. A. H. Maslow, psychologist, author.

Dr. Seymour Melman, industrial management expert, author, "Inspection for Disarmament."

Dr. C. Wright Mills, sociologist, author.

Lewis Mumford, author.

Dr. William F. Neuman, professor of radiation biology.

Richard Neutra, architect, author.

Earl D. Osborn, Institute for International Order.

Dr. Linus Pauling, chairman, division of chemistry, Caltech.

Josephine W. Pomerance, U.N. Disarmament Observer for A.A.U.N.

Dr. Charles C. Price, director, laboratory of chemistry, University of Pennsylvania; president, United World Federalists.

Dr. David Riesman, professor of sociology, author, "The Lonely Crowd."

Robert Ryan, motion picture actor, co-chairman, "Hollywood for SANE."

Dr. Jack Schubert, physicist, Argonne National Laboratory.

Prof. J. David Singer, department of political science, University of Michigan.

Dr. Ralph Sockman, minister, Christ Church, New York.

Dr. Pitirim A. Sorokin, professor emeritus of sociology.

Dr. Edward J. Sparling, president, Roosevelt University.

Dr. Harold Taylor, former president, Sarah Lawrence College.

Dean Howard Thurman, Marsh Chapel, Boston University.

Louis Untermeyer, author, editor.

Dr. Maurice B. Visscher, University of Minnesota Medical School; Minnesota Atomic Development Problems Committee.

Jerry Voorhis, executive director, the Cooperative League of the U.S.A.

Bruno Walter, conductor.

Bishop Hazen G. Werner, resident bishop, Ohio area, Methodist Church.

WHY WE EXIST

"We are facing a danger unlike any danger that has ever existed. Nations now possess more than enough nuclear explosives to put an end to the life of man on earth.

"Our approach to the danger is unequal to the danger.

"What the world expects of America is not just bigger and better intercontinental missiles and hydrogen bombs. The world is looking to us for the ideas that can make this planet safe and fit for human habitation.

"The test of a nation's right to survive today is measured not by the size of its bombs or the range of its missiles, but by the size and range of its concern for the human community as a whole.

"There can be no true security for America unless we can exert leadership in these terms, unless we become advocates of a grand design that is directed to the large cause of human destiny.

"To the rest of mankind, America can say:

"That none of the differences separating the governments of the world are as important as the membership of all peoples in the human family;

"That the big challenge of the age is to develop the concept of a higher loyalty—loyalty by man to the human community;

"That the greatest era of human history on earth is within reach of all mankind, that there is no area that cannot be made fertile or habitable, no disease that cannot be fought, no scarcity that cannot be conquered;

"That all that is required for this is to redirect our energies, rediscover our moral strength, redefine our purposes" (from the first statement published by NCSNP, Nov. 15, 1957).

WHAT WE DO

SANE publishes full-page ads in major newspapers to achieve high visibility.

Distributes literature; 300,000 pieces in 2 years.

Forms committees in local communities which engage in educational and nonpartisan political activities. There are SANE committees in many American cities.

Maintains liaison with representatives of related movements in other countries.

Maintains liaison with the United Nations and delegations of the United States and other countries.

Presents its position on TV and radio.

Provides speakers for hundreds of lectures throughout the country.

Instituted a worldwide appeal in support of ending nuclear weapons tests—signed by Trygve Lie, Mrs. Franklin D. Roosevelt, Lord Russell, Dr. Albert Schweitzer, and many others.

Petitioned the United Nations Trusteeship Council on behalf of the Marshall Islanders.

Protested the French tests in the Sahara.

Stimulated the formation of a National Student Council for a Sane Nuclear Policy.

Helped form "Hollywood for SANE" committees with Steve Allen and Robert Ryan as cochairmen.

On the issues

SANE revealed the conflict of interests affecting the Atomic Energy Commission on testing and fallout issues.

Provides support for government efforts to secure agreement on nuclear testing and arms control measures.

But the most important, the National Committee for a Sane Nuclear Policy inaugurated a program in which individuals can become effective on questions of vital interest. The committee will continue to focus public opinion on the most critical issues of our time.

WHAT WE STAND FOR

"The development of nuclear weapons and their delivery systems and of other weapons capable of causing unlimited destruction has made war unthinkable as an instrument of national policy. The best hope of a world without war lies in the achievement of universal, total disarmament with adequate inspection and control. Recent events suggest that this goal is within reach as a practical possibility.

"The National Committee for a Sane Nuclear Policy works for:

"A. Cessation of all nuclear weapons testing with adequate inspection: Much progress has been made at Geneva, but public pressure is still urgently needed to guarantee:

"A continued moratorium on testing.

"Agreement by the three major powers at Geneva.

"Ratification of the agreement by the U.S. Senate.

"Adherence to the agreement by all other nations which have or might obtain nuclear weapons.

"Denial of nuclear weapons, weapons parts and delivery systems to additional countries, pending conclusion of international agreements to control nuclear weapons.

"B. General Disarmament: Practical steps toward this end will probably be cessation of the production and eventual elimination of the stockpiles of nuclear weapons, and international cooperation in the control of missiles and exploration of outer space. Arms control will ultimately involve the abolition of all weapons of mass destruction—fire, high explosive, chemical and biological as well as nuclear, and the reduction of all conventional arms and manpower down to levels adequate for maintenance of internal order.

"Only total arms control can result in world security. Stopping with partial measures in which certain important levels of arms are still retained would lead to suspicion and a revival of the arms race. Arms control can be carried out in stages, and each stage can be monitored and concluded before the next begins, but the agreed goal must be complete arms control" (from the Policy Statement of the National Committee for a Sane Nuclear Policy, adopted Nov. 16, 1959).

THE POWER OF WEAPONS

A 10-megaton bomb (equal to 10 million tons of TNT) would:

Gouge a crater a half-mile across.

Level every brick building in a circle 14 miles across.

Collapse all frame structures for 18 miles.

Kill in 15 minutes anyone caught in the fallout for 20 miles.

Inflict second degree burns and start fires for 50 miles around.

A thousand-plane raid of the World War II type would be required each night for 13 years to equal the explosive power of one 20-megaton bomb.

Fallout

Even the testing of nuclear weapons inflicts suffering and takes a toll of human life. Since the time when testing began, the nuclear powers have set off the following nuclear explosions: United States and United Kingdom—120 million tons (U.K. part was small); U.S.S.R.—60 million tons.

These explosions result in the formation of radioactive debris which is carried around the globe and gradually falls to earth. This is "fallout." Fallout contains radioactive elements which are highly poisonous. Some did not exist until man created them.

The most dangerous are:

Strontium 90: Similar to calcium, strontium 90 is a bone seeker. It can cause leukemia and bone cancer.

Cesium 137: The main effects of cesium are genetic, causing mutations which result in stillbirths and deformities.

Iodine 131: Radioactive iodine can cause cancer of the thyroid.

Carbon 14: Radioactive carbon will cause genetic damage.

Other effects of exposure to radiation are reduced life span and lowered resistance to disease.

HOW MUCH DAMAGE?

"An estimated total of 25,000 to 150,000 cases of leukemia will ultimately occur * * * from tests already held.

"An estimated total of 2,500 to 100,000 genetic defects will occur over subsequent years from tests already held"—United Nations report on radiation.

"Carbon 14 from bomb tests will cause 100,000 gross physical or mental defects, 380,000 cases of stillbirths and childhood deaths, and 900,000 cases of embryonic and neonatal deaths"—Atomic Energy Commission report (WASH 1008).

Fallout from tests already held will rain to earth for years to come. If no more tests are held, a peak will be reached about 1965, which will only return to current levels by the year 2000. Our children and generations to come will pay the price of our recklessness with human life.

In war, nuclear weapons would bring unimaginable destruction. In a medium-sized raid:

"The expert testimony and supporting scientific data presented at the subcommittee hearings indicate that under present conditions such an attack (263 nuclear weapons) would have cost the lives of approximately 50 million Americans, with some 20 million others sustaining serious injuries. * * * Altogether approximately 50 percent of existing dwellings in the United States would have been destroyed or rendered unusable for a period of several months"—Summary-Analysis of Congressional Hearings, 1959.

WHAT YOU CAN DO

Know the issue

Write for additional information. We will gladly provide it. (Single copies free.)

Read more detailed pieces. We will suggest some.

Begin to act yourself

Send for copies of this pamphlet and other current literature to distribute in your school, church, club, place of work.

Send it with a personal note to leading radio and television commentators, to religious and organizational leaders, to your neighbors.

Find local sponsors for an ad in your newspaper.

Write letters to the President, to your Senators, and your Congressman (or talk to them while they are at home).

Write letters to the editor of your newspaper. We will give you suggestions.

Seek out and work with others who believe as you do. Join a Sane Nuclear Policy Committee if there is one in your area. (We'll send you a list.) If there is not a group near you, start one. We will help you.

HONORARY SPONSORS

Max Born, Germany; Lord Boyd Orr, United Kingdom; Pablo Casals, Puerto Rico; Brock Chisholm, Canada; Canon L. John Collins, United Kingdom; Francois Mauriac, France; Gunnar Myrdal, Sweden; C. Rajagopalachari, India; Lord Russell, United Kingdom.

BOARD OF DIRECTORS (NATIONAL MEMBERS)

Cochairmen: Norman Cousins, editor, the Saturday Review; Clarence Pickett, executive secretary emeritus, American Friends Service Committee.

Treasurer: Max Youngstein, vice president, United Artists.

Eugene Exman, vice president, Harper & Bros.

James Farmer, program director, NAACP.

Dr. Robert Gilmore, New York City, secretary, American Friends Service Committee.

Robert Gurney, motion picture producer-director.

Rev. Donald Harrington, minister, Community Church, New York.

Rabbi Isidor B. Hoffman, religious counselor, Columbia University.

Councilman Stanley M. Isaacs, New York City.

Dr. Homer A. Jack, assistant director, American Committee on Africa.

Clarence H. Low, retired.

Lenore G. Marshall, author.

Lawrence S. Mayers, Jr., New York.

Rev. Stewart Meacham, foreign service section, American Friends Service Committee.

Orlie Pell, president, U.S. section, Women's International League for Peace and Freedom.

Norman Thomas, chairman, Post War World Council.

Dr. Hugh C. Wolfe, chairman, Department of Physics, Cooper Union.

Executive director: Donald Keys.

And we are the thousands of individuals in and out of local committees across the Nation who are working for sanity in world affairs.

Time Grows Short for Lead and Zinc Miners

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. EDMONDSON. Mr. Speaker, only a few weeks remain before we reach the end of this session of the Congress.

There are many important measures still to be acted upon by the House, and I know the case of the domestic lead and zinc industry is not one to attract much attention in many States of this Union.

The number of men involved is relatively small, and the mines are scattered across 22 States which do not command large voting delegations in this body.

No other problem in our country today, however, poses a more serious test of our machinery for justice under the Reciprocal Trade Agreements Act, than does the problem of the domestic lead and zinc industry.

For this is an industry, Mr. Speaker, which has proved its case three times before the U.S. Tariff Commission: in 1954, in 1957, and again in 1960. On all three occasions, it has been conclusively established that imported lead and zinc, under reciprocal trade agreements, are causing serious injury to our domestic producers.

For the small producers, the shutdown is a total one. It has been a total shutdown in the tristate area since 1958.

Is there no relief for a domestic industry, even when it proves its case before the body authorized by this Congress to hear the case and recommend a solution?

Is this Congress impotent to correct such a manifest injustice?

In my heart, I cannot accept a negative answer to these questions.

I cannot believe that this body will fail to act upon legislation now pending in the Rules Committee to save our small producers from total ruin. The time, however, is short indeed.

A Pig in the Mud

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. LEVERING. Mr. Speaker, not only the people of the United States, but the people in the whole free world have been shocked by the intemperate, castigating remarks which the Russian leader, Nikita Khrushchev, has used against our President. Such abusive language against President Eisenhower is, in truth, a slander of our people and anyone who has a sense of dignity.

Mr. Speaker, I take pride in the fact that I have the honor to represent such red-blooded Americans as Bob Beer, publisher of the Ashland Times-Gazette of my congressional district in Ashland, Ohio, who is unwilling to take Mr. K.'s venom lying down.

Under leave to extend my remarks in the RECORD, I include Mr. Beer's editorial of June 6, 1960:

[From the Ashland (Ohio) Times-Gazette, June 6, 1960]

A PIG IN THE MUD

Nikita Khrushchev, the creature who looks like a pig and acts like a pig, is wallowing in the mud like a pig.

It would seem that those who have credited him with astute handling of Russia's diplomatic and propaganda interests would now see that the real danger lies in his stupidity and not in cleverness. As each day passes the Hitler image of wild and unreasoned lust seems to be incarnated more vividly in the Russian leader.

Like a pig in a parlor, he was totally disgusting to the American people who viewed his barnyard manners while he was the guest of our President. In true animal fashion his emotions were explosive and fleeting; he grinned, and he snorted; his gestures and expressions were repulsively swinelike.

Frightening, to be sure, but fearsome only because of obvious lack of depth in intellect and control.

His scuttling of the summit and his crude abuse of our President, Vice President, and the former and present Secretaries of State further reveal the horrible threat that this shallow beast holds over the life of the world.

Surely such a monster cannot be credited with uncanny finesse and genius when he single-handedly solidified the allies of free government in a speedier and firmer manner than they could have done by themselves.

Nikita is desperate, and in desperation he could suddenly bring us all to the end of our existence. Something is seriously amiss in Redland, and an awesome gamble is being carried to the veritable brink of war. Hopes of peace have never been more dismal; the fact cannot be covered up; armed conflict with all of its terrible aspects could come at any moment.

The United States and her allies have reached the saturation point of patience and tolerance. The slightest act of aggression by Russia against any one of the free nations would likely be construed as an initial attack, thereby justifying retaliation and the start of the final war on the face of the globe.

The seething contempt which we and our President hold in silence toward the pig of the Kremlin and his dirty litter is primed to burst in a flash unless some sensible and decent element or faction in Russia soon puts a ring in the Khrushchev snout and puts another twist in his tail.

Human beings—no matter where they live—cannot forever thrive on nor digest a diet of hogwash and swill.

R. M. BEER.

A Request That the President Will Meet With Taiwanese Leaders When He Is in the Far East Will Have Consideration

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following correspondence concerning my request that the President meet with Taiwanese leaders when he is in Taiwan on June 18 to hear what they have to say:

JUNE 2, 1960.

THE PRESIDENT,
The White House.

DEAR MR. PRESIDENT: When you are in Taiwan on June 18 I hope that you will meet with Taiwanese leaders and hear what they have to say.

The Taiwanese on Taiwan number 8 million and the Chinese who came with Chiang Kai-shek number 2 million. In the recent elections only 18 Taiwanese were permitted to join with about 1,400 Chinese national representatives to elect Chinese officials to govern Taiwan.

These 1,400 Chinese were elected to office 13 years ago in China. While they have some claim to represent the 2 million Chinese on Taiwan, they do not represent the 8 million Taiwanese.

The United States has long supported Chiang Kai-shek, just as it long supported Syngman Rhee. Many believe it is high time that the United States took steps to show its concern about the nature of the Government of Taiwan. The Taiwanese, it appears, should have a larger voice in the affairs of their island.

I sincerely trust that you will deem it appropriate to meet with the Taiwanese leaders when you visit Taiwan, June 18.

Sincerely yours,

CHARLES O. PORTER,
Member of Congress.

THE WHITE HOUSE,
Washington, D.C., June 7, 1960.

The HONORABLE CHARLES O. PORTER,
House of Representatives,
Washington, D.C.

DEAR CHARLIE: On behalf of the President, it is a pleasure to acknowledge your June 2 letter and to assure you that your suggestion respecting a meeting with the Taiwanese leaders will have consideration.

With kind regards.

Sincerely yours,

JACK Z. ANDERSON,
Administrative Assistant to the President.

Further Proof of Need for the Great White Fleet

EXTENSION OF REMARKS
OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. EDMONDSON. Mr. Speaker, in the last several weeks the newspapers have been full of stories of natural disasters—earthquakes and tidal waves— in the friendly South American Republic of Chile. The impact of this devastation has even been felt on our own west coast and in the State of Hawaii, and more than 400,000 Chileans are reported to be homeless today. As the United States has rushed aid to the stricken areas at tremendous cost, the sympathy and concern of Americans across our Nation have gone with this aid.

These disasters have only served to bring home more forcefully the need for action on the use of a Great White Fleet to support American foreign policy as suggested in the resolution which dozens of Members of this body introduced last year.

I do not wish to minimize the effectiveness of the U.S. military in carrying out the immediate rescue operations. Their activity was masterful, massive, and effective as far as it went. But the U.S. military has other important tasks. Regular forces should not be required to continue operations for as long as they are necessary in the event of such widespread and far-reaching disasters as these of the last several weeks. The envisioned Great White Fleet operation is essential for this type of relief.

Mr. Speaker, our delay thus far has cost us at least two major opportunities to come to the aid of humanity and enhance the effectiveness of American foreign policy both in Morocco and in Chile. We cannot afford further delay; American humanitarianism cries out against further delay.

I urge all Members of the House to make this resolution a matter of personal concern. I urge action now to declare the sense of the House as in favor of a Great White Fleet in our time, to meet the urgent needs of our day.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Advertisers Stress Global Markets

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, June 9, 1960

Mr. KEATING. Mr. President, several days ago, I addressed the Senate on the need to stimulate American private investment overseas, especially in the presently less developed areas of the world, which I believe will be the most fertile and important markets of the future.

I spoke at that time of the various approaches available to us in encouraging such investment. Among them are: Tax incentives, improved credit export guarantees, and expanded and more widely publicized Government trade promotional services.

With regard to the latter, expanded trade promotional activities, I was happy to note that at the 12th annual International Advertising Congress, held recently at the Waldorf-Astoria Hotel in New York City, a number of leading American advertising executives stressed the importance of increased private efforts to sell American goods overseas.

Much of our domestic economic vigor is due to enthusiastic salesmanship, whether soft sell or hard sell, which has always been characteristic of our economy. Such efforts are now needed overseas as well.

With the recovery of the economically developed countries of the free world and with great strides that are being made by less developed countries, American goods no longer sell themselves. There is competition for sales in every market of the world.

Mr. President, the best and most logical way for us to meet our much publicized balance of payments difficulties of recent date is to increase exports, and one of the most obvious and direct ways to increase exports is to promote the sale of American goods overseas to the fullest possible extent. I am glad that many of the members of the International Advertising Association realize this fact. I hope that they will follow through on the speeches made at their recent congress in New York.

Mr. President, I ask unanimous consent that an article from the New York Herald Tribune by Joseph Kaselow which is entitled "Global Role Predicted for U.S. Firms," and which is about this meeting, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, June 2, 1960]

ALONG MADISON AVENUE WITH KASELOW—GLOBAL ROLE PREDICTED FOR U.S. FIRMS

(By Joseph Kaselow)

The growth of world markets may bring with it the expansion of American companies into global corporations, the 12th annual International Advertising Congress was told yesterday. This glowing picture was tempered, however, by statements that many U.S. firms are still amateurs in international operations and that their salesmanship abroad is not an unqualified success.

The congress, sponsored by the International Advertising Association at the Waldorf-Astoria, heard talks by Frank X. White, international vice president of American Machine & Foundry Co.; V. Z. Brink, oversea distributors and export manager of the Ford international group; Ray W. Macdonald, vice president of the international divisions of Burroughs Corp.; and Sylvester L. Weaver, chairman of McCann-Erickson Corp. (International.)

VIEWED AS WHOLE

Mr. White said that the most important change now taking place is that American management is viewing the world market as a whole as its province. Funds available for investment in expansion are now being allocated on a worldwide basis in the sense that the claims of the international division are considered in the annual budget process on an equal basis with the domestic investments, he said.

"The final result of this kind of organizational development in many companies will be the abolition of the international division and the conduct of the business on a worldwide basis from one headquarters without regard for national boundaries," he said. "Top management and corporate staff will not only think in global terms, they will also operate globally."

Mr. Brink, along with Mr. White, warned that many U.S. firms had a lot to learn about selling abroad and, in fact, were being outsold by foreign competition in some areas. Said Mr. Brink: "Despite the general acceptance of our products overseas, U.S. salesmanship has not been an unqualified success. We have engaged in the postwar market with the knowledge that many of our products could sell themselves. Now the situation is changing; we are losing our inherent product advantage and are faced with learning how to sell in depth. Sales of American-made products in foreign markets are facing increasing competition as oversea customers become more discriminating, more sophisticated and better judges of value."

The international market, he said, is expanding and volatile and U.S. businessmen must adjust themselves to it. International selling requires creative action in certain major areas, he said, and continued: "We must define our customers through market research and then develop an increased understanding of their customs, language, and traditions.

GREATER EFFORT URGED

"We must live closer to our field sales personnel and more effectively exploit their knowledge of the market. And we must reappraise and make more aggressive our total merchandising effort, giving special attention to financing and to servicing our market."

Mr. Macdonald said it is "quite possible" that within our lifetime, the most important economic and political fact wil be the European market. "The Europeans are thinking politically and ethnically as a group," he said. "This is a development that 15 or 10 years ago would never have been believed. They completely reject the idea of strife and warfare and now think only in terms of cooperation."

Mr. Macdonald, pointing up the opportunity for American firms, said the United States has only 9 percent of the world population but 50 to 54 percent of the productive capacity of movable goods and services.

The association also passed a resolution recording its protest on the intervention by the Cuban Government of Cuban newspapers and of station CMQ and said it will continue "to use all of its moral powers in behalf of maintaining the freedom of the press and other media."

Tidelands Oil

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Young Men's Business Club of New Orleans and an editorial broadcast over radio station KSIG, Crowley, La.:

June 2, 1960.

Hon. HALE BOGGS,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN BOGGS: Our club in general meeting assembled on June 1, 1960, adopted, without opposition, the following resolution:

"Whereas the Supreme Court of the United States has declared that Louisiana, Mississippi, and Alabama boundaries extended only 3 miles into the Gulf of Mexico from their respective coastlines at the time of their admission to the Union, but that Texas and Florida boundaries extended 3 marine leagues or about 10 miles from their respective coastlines into the Gulf of Mexico at the time of their admission into the Union; and

"Whereas the result of this decision is inequitable and should be changed by Congress to provide an equal offshore boundary for all States at least as far out as the boundaries of Texas and Florida: Now, therefore, be it

"*Resolved*, That the Young Men's Business Club of Greater New Orleans go on record as urging Congress to speedily enact legislation to provide for an equal offshore boundary for all States at least as far out as the boundaries of Texas and Florida; and be it further

"*Resolved*, That the YMBC of Greater New Orleans go on record as urging the National Conventions of the Democratic, Republican, and States Rights Parties to insert a plank in their respective platforms pledging support for an equal offshore boundary for all States at least as far out as the boundaries of Texas and Florida; and be it further

"*Resolved*, That copies of this resolution be sent to the Governor and attorney general of Louisiana, the Louisiana congressional delegation and the heads of the national political parties for referral to their respective platform committees and to other interested agencies."

We earnestly solicit your support of the recommendations contained in the above resolution.

Very truly yours,

PAUL H. RAMOS,
President.

There can be no doubt that the Supreme Court decision relative to the ownership of tidelands oil is a serious blow to the State of Louisiana, which is already on shaky financial grounds. We at KSIG, though somewhat lost in the maze of large and complicated issues involved, realize that the decision must certainly have far-reaching effects, and they will not be good effects for us.

In attempting to make an estimate of the situation, it is difficult for us to divorce ourselves from the selfish viewpoint that the money involved is money which the State enjoyed for years without interference and which has now been taken away, as it were by the Federal Government. It is easy for us to cry out that "we wuz robbed." Words of protest rush to the lips, and we do not find it difficult to join with our State leaders in accusations of political punishment and reprisal, or to speak of money-hungry bureaucrats invoking technicalities to grab our natural wealth to be used for their own political ends.

However, no matter what we say about the tidelands situation, our words would not be based on a sound and thorough knowledge of the situation. There are not doubt very few people who know less about the intricacies of the laws and precedents involved in the situation than we. And so, knowing little of these things, we will not attempt to make any profound pronouncements on the subject.

We will content ourselves with observing what has come to pass: that the Supreme Court of our land has decreed that the offshore boundary of Louisiana, Mississippi, and Alabama is 3.45 miles from shore, and that the offshore boundaries of Texas and Florida are 10.45 miles from shore. How they reached this decision, and how they justify it as not discriminatory against the free sovereign States of Louisiana, Mississippi and Alabama we will not attempt to fathom.

We do hope if the laws of the land permit this sort of discrimination and that it can be justified, that a sufficient number of Congressmen will see to it that the laws are changed. We hope that the lawmakers of the Gulf States will make this their primary concern in the present session and that they will use every resource at their command to achieve a more equitable settlement of the controversy.

Castro Criticizes U.S. Protest

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 9, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Castro Calls U.S. Protest 'Aggressive' and 'Crude'," written by R. Hart Phillips, and published in the New York Times of June 9, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CASTRO CALLS U.S. PROTEST "AGGRESSIVE" AND "CRUDE"—NOTE CONDEMNING HOSTILE ACTIONS BY CUBA IS REJECTED—PREMIER AGAIN CHARGES ATTACK IS PLANNED

(By R. Hart Phillips)

HAVANA, June 8.—Premier Fidel Castro said today that the U.S. note of protest to Cuba last week was "aggressive and written in crude language." He also repeated his warning that the United States intended to launch an armed attack against Cuba.

The Premier spoke for about 2 hours in defense of his policies and in an effort to assure the people that both economic and military aggression against Cuba would fail. The speech was made to the closing session of the National Congress of Barbers and Beauty Shop Operators in the Palace of Workers.

The Premier appeared there unexpectedly at 2 o'clock this morning after he had attended a performance of the Peking Opera troupe now in Havana.

Declaring that the "hostility of our powerful neighbor is rising," Dr. Castro said: "We know that they will not leave us in peace and that each day they are more aggressive against Cuba."

What does the United States expect to accomplish with this "aggressive note"? the Premier asked his cheering audience. He referred to the note protesting the "campaign of slander being directed against the United States by representatives of the Cuban Government," the confiscation of U.S. property in Cuba, failure to pay U.S. exporters and other actions of the Castro regime against the United States.

"Are they trying to get Cuba to renounce its sovereignty and the right to maintain commercial and diplomatic relations with the countries it deems advisable"? the Premier asked.

The Premier declared that all military and economic efforts of the United States against Cuba would fail.

"If they intend to strangle our national economy they will fail," he shouted. "If they try to invade us they will be defeated," he continued.

The Cuban people must confront the aggressions of the United States "with courage and faith" because Cuba is the example that all Latin America will follow in defeating economic and military attacks from that country, Dr. Castro said.

"The triumph of Cuba means the triumph of the Latin American countries," the Premier declared.

This afternoon President Osvaldo Dorticós assured the Cuban people that Latin America was supporting Cuba solidly in her struggle against the United States. The President broadcast from his plane as it passed about 100 miles south of Cuba on the way from Venezuela to Mexico, where he will wind up his tour of six Latin American countries.

A Suggestion for Better U.S. Citizenship

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extremely interesting letter which I received from Mr. John Edwards, editor and publisher, the West Side News, Forty Fort, Pa., in which he incorporates a fine suggestion for making our young people better U.S. citizens. I think Mr. Edwards' idea is a wonderful one and I stand ready to assist he and others who might be interested in the implementation of this suggestion in my congressional district.

The letter follows:

WEST SIDE NEWS,
Kingston, Pa., May 31, 1960.

HON. DANIEL J. FLOOD,
Member, House of Representatives,
Congress of the United States,
Washington, D.C.

DEAR MR. FLOOD: Thank you for your courteous letter of May 26. We are pleased to know that you liked the group pictures in the West Side News. We are particularly pleased and impressed by the report that you take time out from your busy schedule for 50 such pictures each year with youngsters from Luzerne County, for their trips to Washington are important, and your greeting them and their pictures would be lasting mementos.

Impressing these young ones with the importance of their interest in government is a matter that has caused me great concern, particularly since our last primary election when 14.5 percent of the registered voters in Luzerne County made a decision on the question of horserace gambling, when only 48,000 of the 188,000 registered voters went to the polls. It is alarming to me that such a small percentage of our citizens can mandate a question like that, while such a large percentage expresses no interest.

Now, as you know, when a young person attains the age of 21 he is eligible to vote. It is to be hoped that his parents guide and advise him. But how often is this youngster left entirely on his own politically, to find his way to the polls for the first time, and to develop as a working citizen? What is there to inspire him to responsible citizenship? How many young new citizens are left, like Topsy, just to develop as citizens however they can.

When one becomes a naturalized citizen, he must take an oath that he will be a good citizen and there is a formality involved. But the native born new citizen is taken for granted. There is no fuss made over him, he is required to take no vows; he is left to sort of drift into citizenship if he happens to want to.

Now, I would like to know if it would be possible for formality to mark the 21-year-old's entry into the status of a working citizen of the United States. Why couldn't the 21-year olds of Luzerne County be invited to assemble in Wilkes College gymnasium, or some similar place, to be inducted as new citizens? They could be addressed by Governors and Congressmen on the obligations of citizenship; they could be welcomed as new citizens; an oath of good citizenship could be administered; they could be presented with some sort of certificate or card that would identify them as citizens. All this, of course, would be unofficial. But it would show the new voter that somebody has an interest in him, that he develop into a responsible citizen who will vote at every election, who will not cheat on his income tax, who will not violate the speed laws nor park in front of fire plugs.

Such a program could be the project of an institution like Wilkes College, or it could become the project of one of the major political parties. The important thing, however, is that some project be developed that will help promote and inspire these young people's interest in their government.

I have discussed this project several times in the editorial columns of the West Side

News and talked about it. My interest in such a project is quite simple: I have four children. I don't want them to just drift into U.S. citizenship. I want them to come into that honorable estate impressed and fully conscious of the obligations of good citizenship. So, when our eldest, Janie, attains her majority, I am going to hire the biggest hall in town, invite everybody I know, hire a brass band, and have you as the main speaker. When she was born she and her mother and I got our names in the paper. She will be graduating from high school in a week or so and again her name will be published. When she is married her picture will be in the papers. There are "sweet 16" parties and coming-out parties. There is a fuss made over her at all these milestones in her career. But what fuss will there be when she becomes a working citizen? I'm going to see to it that she is dined and shouted at, that she will be fully aware and feel honored that she is now an active, working citizen of the United States.

I respectfully solicit your views on this idea and your aid in working out some practical program.

Very truly yours,

J. EDWARDS.

Dairying—A Giant of American Agriculture

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, June 9, 1960

Mr. WILEY. Mr. President, in recent years, June has been designated as Dairy Month.

The purpose of such special observances include:

First. Paying tribute to the significant role of dairying in our economy; as well as the important contribution of dairy foods to the health of our people; and

Second. Carrying on promotion programs to increase consumption, as well as utilization, of healthful dairy products by consumers.

We recognize, of course, that efforts to improve the outlook for dairying must be carried on on not just a 1-month but a 12-month schedule. In fact, "Every day should be dairy day" at meal time for the American family.

In reviewing the dairy picture, it is important to take into account the following factors:

First. Producers are entitled to a reasonable return for milk and other dairy products; in accordance with general goals in our economic system, that should include the cost of operation plus a reasonable profit.

Second. The handlers are entitled to a reasonable return for manufacturing, processing and distributing quality milk and milk products.

Third. Labor, also, has a right to expect an adequate wage.

Fourth. Last, but by no means least—is the consumer, for whom must be provided an adequate supply of good, healthful milk and dairy foods at reasonable prices.

Today, dairy foods are a best buy in the marketbasket of the American family. According to analysis, these provide approximately 30 percent of America's food nutrients at less than 20 percent of the food dollar, making dairy products a good investment for the family budget.

Here in Congress, we have opportunity—from time to time—to consider legislation affecting the outlook for the dairy industry. These include the determination of price support levels for dairy products; the carrying forward of the special milk programs for schools, child care centers, and other such institutions to expand the consumption of milk; and other programs.

During this month, the dairy industry itself is carrying on constructive, creative programs to increase the consumption of dairy foods—thus benefiting the health of the public as well as improving the economic outlook for the industry.

Recently, the American Dairy Association sponsored a special spring and summer edition of new plans, new ideas for celebrating June Dairy Month all over America.

I ask unanimous consent to have an article entitled "Dairying—A Giant of American Agriculture" from this special edition, reviewing the significance of dairying to the economy printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EMPLOYS MILLIONS—DAIRYING—A GIANT OF AMERICAN AGRICULTURE

The dairy industry, a giant of American agriculture, has itself become an important customer for a wide variety of goods and services.

The far-reaching economic effects of the milk produced by the Nation's 1 million dairy farmers are felt in scores of industries which directly serve dairying and many others which indirectly feel its influence.

Dairy farms themselves, located in all 50 States, represent sizable capital investments, with $35,000 considered mimimal. Most dairy farms are highly mechanized and run strictly as a dollar-and-cents business operation, requiring a steady supply of machinery, chemicals, feeds, and other commodities.

ARMY OF WORKERS INVOLVED

To keep the dairy milk supply moving from the farms through the various processing and distribution steps to the consumer requires the efforts of millions of workers. More than 300,000 are employed in dairies and processing plants alone, with many more engaged in sales and merchandising, scientific and technical fields, administration, education, and with the Government.

The dairy industry is one of the biggest single customers for the automotive industry, with an estimated 380,000 vehicles used to transport milk and dairy products. Tank trucks, hauling milk from farm to city, and from one market to another, are often refrigerated to keep milk quality preserved. This, in turn, creates a demand for cooling apparatus and vast amounts of stainless steel and other materials. A similar chain of demand is repeated in many other phases of supply to the dairy industry.

MODERN PROCESSING METHODS

Once the farmer's milk is received at the dairy plant, it is subjected to processes requiring more quantities of modern machines, glass and steel pipelines, pumps, and other industrial equipment. Automation and other modern time and labor saving techniques are becoming increasingly important in dairy plants as efficiency and costs of operation loom larger as vital factors in milk handling.

Science has been important to the milk business since the time of Louis Pasteur, over 100 years ago. An army of biochemists, medical and technical researchers, breed specialists, nutritionists, and other scientific workers are engaged in all phases of the milk field, working to make dairy foods better in every way. Through their contributions, and the millions of dollars invested in their work by the dairy industry, modern milk is safer, purer, and more nutritious than ever before.

BROUGHT TO THE CONSUMER

Once the product is ready, it must be marketed. The fields of advertising, sales promotion, merchandising, and public relations play a significant role in aiding retail sales. Packaging the millions of pounds of dairy foods sold daily makes this young industry another important contributor to dairy marketing, with many kinds of glass and paper containers needed.

The wide variety of dairy products available makes it possible for them to be sold through many channels and outlets. Milk is sold by routemen, supermarkets, grocery stores, dairy food stores, vending machines, and through restaurants and commercial eating establishments. A similar wide distribution is seen for ice cream, cheese, butter, and other milk products.

The growth of dairying and its far-flung influence on the American economic scene has been a major factor since the earliest colonial times, and is likely to remain so in the future. The cow and her milk have given rise to scores of dynamic new industries and have provided strong markets for many others, creating more jobs, additional outlets for goods and services, and adding strength to the entire economy.

TV's Just Wasting Away—Feeding on Violence

EXTENSION OF REMARKS
OF
HON. HAROLD B. McSWEEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. McSWEEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lawrence Laurent:

TV'S JUST WASTING AWAY—FEEDING ON VIOLENCE

(By Lawrence Laurent)

The decline of radio, from importance as a social force to a toy for adolescents, began when radio became a kind of juke box. The decline of television, it seems, began when it became a substitute for home movies. The parallel, while not quite as exact as one might like, shows up most clearly in a report from Los Angeles.

When radio (with some superb exceptions) began to concentrate on high school students, rock 'n' roll became the dominant ingredient. This is a formless, repetitious and monotonous sound. Musically, it is almost valueless and most of its advocates are nonskilled amateurs.

The day that junior high students began carrying radio receivers on walks to classes, radio's influence became important only to the bubble-gum and pony-tail set.

When television left (with notable exceptions) New York City and was concentrated in Hollywood, a similar series of events took place. The skilled professionals lost out to the beautiful boys and girls. Hundreds of unlined, blank faces and thousands of gleaming dental caps filled the 21-inch tube. In turn, violence became the great "entertainment" ingredient.

The current issue of Newsweek reports on a study made in Los Angeles by 300 students and faculty members of Pepperdine College. They watched seven Los Angeles TV stations for 669½ hours during a 1-week period.

During the monitored time, they reported a total of 1,261 incidents involving death; 1,348 of mayhem, and 1,087 threats of bodily harm.

They discovered, too, that on television a threat of maiming is four times as likely as an indication of love or affection. During the monitored week, the viewers saw 995 kisses of all varieties.

Included in the survey are 258 instances of property destruction and 784 alcoholic drinks consumed. The students and teachers counted 7,887 commercials, an average of 11 advertisements an hour.

The survey was under the direction of Speech Teacher Fred Casmir. His conclusion: "If this is what the public wants, they're getting it."

There is, of course, a simpler conclusion to be drawn. In the hard economics of the hard-eyed TV producer's world, violence is just about the cheapest commodity. Professional writers are expensive and so are the skilled actors who might create a story that is moving and successful.

Violence—the gun, the fist, the knife—is cheap. One doesn't have to be intelligently trained to fire a revolver or a machinegun. The machine does all.

Dramatic training is not required for the phony fights that fill the Westerns and private eye shows. Any young tumbler can fill the role.

If the producer really wants to save money, he can buy stock film of battles at a cheap rate per foot. After all, the cheapsters who made millions of movies for children to watch on Saturday afternoons have enormous libraries of mayhem, murder, and maiming.

Violence is as old as drama, and conflict of some kind is absolutely essential to a compelling story. The complaint here is not against the clash of men's wills, but the endless solution of problems by beating and killing. One must honestly question whether this is quite the ideal to be held up to a rather peaceful people.

Boris Pasternak—The Music of Unarmed Truth

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 9, 1960

Mr. HUMPHREY. Mr. President, many have eulogized the Russian poet and novelist Boris Pasternak in the days since his death. Many have struggled to define precisely what quality in this man made him not only a literary prize winner but a spokesman for men everywhere in our difficult age. They have sought also to define precisely what quality in his writing caused the Soviets—usually so eager to garner prizes and public honors—to reject and isolate this great Russian.

Ralph McGill in a column in the Washington Evening Star for June 8 called Pasternak's achievement and his ultimate victory "the inward music of unarmed truth" which permeated all he said and did. This service of truth does not win prizes in the slave society of communism.

Mr. President, I ask unanimous consent that the column by Ralph McGill be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington, D.C., Evening Star, June 8, 1960]

PASTERNAK'S PASSIVE DEFIANCE—RUSSIAN AUTHOR'S DEATH IS CALLED A LAST REBUKE TO COMMUNISTS

(By Ralph McGill)

Boris Pasternak, poet and author of the Nobel Prize novel "Dr. Zhivago," has been buried, at his request, in the graveyard of a small Orthodox church near his home in a village some 20 miles from Moscow.

Pasternak was a "believer." The revolution had rolled over him. He had never lost his personal faith nor his love of country. Nor had his zest for beauty of nature, poetry, the written word and people in any degree lessened. Marxist communism understandably found him difficult. His faith in a supreme being was greater than that in Marx and his disciples. Pasternak's fame was a trouble. So was his death. His end was a last rebuke, a final passive defiance.

In thinking on the death of this lonely man who held fast to the hand of God, one thought in this time of increased world fear, of Matthew Arnold's "Dover Beach."

"The sea of faith
Was once, too, at the full,
But now I only hear
Its melancholy, long withdrawing roar. . . .
Ah, love, let us be true
To one another! for the world which seems
To lie before us like a land of dreams,
So various, so beautiful, so new,
Hath really neither joy nor love, nor light,
Nor certitude, nor peace, nor help for pain,
And we are here as on a darkling plain
Swept with confused alarms of struggle and light
Where ignorant armies clash by night."

Pasternak must have felt all this—and more. Certainly he did see, as he revealed through Dr. Zhivago, that he and many others in the world often felt they were on a darkling plain, swept with confused alarms as ignorant armies clashed in the symbolic night.

And so he was—and so are we all.

Edmund Wilson, in "The Shores of Light," quotes from Prof. Alexander Bruckner's "History of Russian Literature":

"To the intelligent Russian, without a free press, without the liberty of assembly, without the right to free expression of opinion, literature became the last refuge of thought, the only means of propagating higher ideas. He expected of his country's literature not merely esthetic recreation; he placed it at the service of his aspirations. * * *"

We get some hint of this from Ilya Ehrenburg, the veteran propagandist gadfly and novelist who in his novel, "The Thaw," in effect loosed a gusty sigh of relief at being permitted an expression of aspirations and higher ideas.

For Pasternak the quote seems a neat fit. He did place his writing at the service of his aspirations. His writings were not a denunication of the revolution. He himself had believed in the need for it. What he failed to do was to idealize it, to pretty it up, to hide the effect of the inevitable brutality and ugliness. For this he was condemned and isolated.

Pasternak wrote that if the beast who sleeps in man could be held down by threats—any kind of threats—then the highest emblem of humanity would be the lion tamer with his whip. But, he said, what has for centuries raised man above the beast is not the cudgel but the inward music of unarmed truth, the powerful attraction of its example.

This has given his grave a final victory. The inward music of his unarmed truth will everywhere haunt those whose symbol of authority is the cudgel.

Credit Given Where Due

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. FORD. Mr. Speaker, all too often, when a public official does a good job, he is given no credit or praise for it.

So that credit may go to Assistant Secretary of Defense Murray Snyder, where it is due, an article by Pat Munroe in the May 21, 1960, issue of Editor and Publisher follows:

Newspapers have reason to feel a special bit of gratitude to Assistant Defense Secretary Murray Snyder in the handling of news released on the world-girdling submarine *Triton*.

For the first time in this reporter's memory, all news media had a crack at this major Pentagon story on an equal footing. With obvious reference to officers who sell articles to magazines, Mr. Snyder says:

"When the news belongs to the public it should be available to all media at the same time. I've always opposed the theory that somebody who works for the Government can profit from these exploits simply by withholding information from the general public."

Mr. Snyder's plan for covering the underwater trip of the atomic sub was worked out in detail with White House Press Secretary Jim Hagerty. The fruition of their work was a press conference held at the White House by the sub's skipper, Capt. Edward L. Beach, on May 10.

Mr. Snyder's plan was twofold:

1. Captain Beach, a best seller author, was to keep an unclassified chronology of the trip. This lengthy document—68 pages, 43,000 words—was released at the press conference.

2. Recall to active duty, just for this trip, Navy Reserve Comdr. J. B. Roberts, a photographer for the National Geographic magazine. He was taken off the sub on May 2 in Spain after the ship had officially circled the globe, and flown with his film to Washington. His magazine has the same access to his pictures as other media.

Many daily newspapers were able to blossom with color pictures of the feat shortly after the news of the trip's success was known. There was no waiting around to see the pictures first in some magazine. Defense released 21 black and white and 14 color stills.

Mr. Speaker, one further comment should be made pointing out the fact that the day Captain Beach arrived at

the White House, 2,000 feet of movie film taken by Commander Roberts was immediately available for showing on TV that night.

All in all, Mr. Speaker, this was a well coordinated public information undertaking, fair to all news media.

Tribute to Catholic Press Association

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, June 9, 1960

Mr. KEATING. Mr. President, it was my pleasure to attend the congressional breakfast of the golden jubilee convention of the Catholic Press Association recently held in Washington. The Catholic press in our Nation has long represented one of the most vigorous and salutary forces of American journalism. Its influence in contributing to the spiritual and moral tone of the Nation has been inestimable. In particular, the vigilant and energetic action of the Catholic press in its continued fight against atheistic communism constitutes a vital and meritorious service to the cause of freedom.

On the occasion of the golden jubilee convention, the Most Reverend Albert R. Zuroweste, bishop of Belleville, Ill., delivered an address outlining the significant accomplishments of the Catholic press in the United States. Because of the timely importance of Bishop Zuroweste's address, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF THE MOST REVEREND ALBERT R. ZUROWESTE, D.D., BISHOP OF BELLEVILLE, ILL.

It is an honor for me to greet our distinguished guests in the name of the Catholic Press Association. This particular convention marks our golden jubilee, and we look back with pride and satisfaction on the accomplishments of the past 50 years. During this half century great progress and advancement have been noted both in our Nation and our church. In all sincerity, we believe that the Catholic press has been a truthful and powerful communication means in promoting those causes and programs that have aided the material and spiritual growth of our Nation.

Our organization has defended nobly our Nation during the strain and stress of war years; during days of depression and prosperity. It has helped immeasurably in upholding the dignity of man, in fighting for the social betterment of the lower and middle classes, and in seeking justice and rights, irrespective of race, creed, or color.

Today our subscribers number in excess of 25 million and are served by 131 newspapers and 150 magazines in the United States and Canada.

Every Catholic newspaper and magazine covering the field of missions, devotion, education, social sciences, philosophy, liturgy, current comment, and opinion, is staffed by competent and devoted editors, writers, and editorial contributors.

The National Catholic Welfare Conference Press Department, under the direction of the bishops, has established the National Catholic Welfare Conference News Service which is now in its 40th year. This news service issues dispatches daily utilizing radio, telegraph, teleprinter, and mail facilities. It is comparable to the AP, UPI, and other general worldwide news gathering agencies. This NCWC service gathers its news through 146 foreign correspondents, 115 U.S. correspondents, and is accredited as a bona fide news agency in the press galleries of Congress, at the White House, at other U.S. Government establishments, and at all other important centers of the United States and abroad.

Our association enjoys a freedom (of press) that is an enviable one. Difference of opinions on every subject, except that of defined doctrine of the church, makes for a healthy, progressive, and aggressive press. Since true freedom is founded on truth, we as Catholic editors are dedicated to the pursuit and propagation of truth.

The ideologies of communism are diametrically opposed to truth and democracy. There is no press, be it general or religious, more active and forceful against these false teachings of atheistic communism than we of the Catholic press. Our record of the past half century is one of loyalty and service to our church and our country, and this policy will ever be the standard under which we will continue to function. There is no group in the world more dedicated and appreciative of the freedom of religion and freedom of the press than the Catholic Press Association.

We are grateful to our distinguished guests who have honored us by their presence at this breakfast. Aware of your very pressing problems and busy schedules, we're all the more thankful to each and every one for making this, our golden jubilee, a truly noteworthy and historic one.

Winning Nebraska REA Essays

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. CUNNINGHAM. Mr. Speaker, it is my pleasure to include in the RECORD two papers written by high school students in Nebraska, concerning the value of electricity in rural areas.

The first essay is by Mary Jo Marrin, 16, a senior at Dalton High School, Dalton, Nebr., and is entitled "Workers by Impulse."

The second is by Robert Hokom, 17, who was graduated this year from Lodgepole High School, Lodgepole, Nebr., and is entitled "The Value of Rural Electrification in Our Home and Community." The essays follow:

WORKERS BY IMPULSE

The letters "REA" stand for one of the greatest developments in the history of the United States. The high standard of living that western Nebraskans enjoy on their farms and in their small towns today would be impossible without the electricity supplied by the Rural Electrification Administration. But, to fully understand and appreciate the value of electricity, we must realize all that it does for us.

The story of electricity starts very simply. From only coal and water, Susie and Sammy Spark are born. Soon they are being whirled through giant electric generators in huge powerplants and carried out of the plants by a large network of wires. When Susie and Sammy have been transformed to the proper voltage, they speed through the wires on their way to play an important part in someone's life. Suddenly a switch is turned, and Sammy rushes to the scene to find a young polio victim in an iron lung. The young boy's very life depends on the power Sammy can give. Grasping the situation, Sammy soon has everything under control, starts the iron lung, and continues on his way. Finding Susie gone, he goes to look for her and finds her giving the necessary warmth to the tiny babies in the nursery of the same rural hospital.

Susie and Sammy feel proud that they belong to the great organization that has made possible hospitals like these and the saving of so many lives. As they resume their journey through the beautiful and peaceful countryside, the Sparks begin to understand why electricity has so revolutionized the farming industry. Before the REA came into existence, many farmers were moving to the city. The strenuous work and long hours seemed senseless when compared to the many comforts and better wages of the city. But, with electricity, the work was lightened, and farming once against seemed the best way of life to many people.

Susie and Sammy have now arrived in the next town and gone immediately to the places where they can be useful. Sammy is needed by the businessmen of town to give them light and heat. Susie is needed in the home by all the homemakers to cook the meals, do the washing and ironing, clean the house, and for countless other jobs.

The next stop for the Sparks is a small farm about 12 miles from town. They go right to work—Sammy providing power for the more than 200 jobs electricity can do on a farm, while Susie uses her power for appliances in the home. The farmer uses electricity all day long and in practically everything he does. He can pump water with it, dry hay, keep chicks and baby pigs warm, have milking machines, do his own welding, and besides many other things, maintain and run a larger farm with this electrical power. His wife also depends to a large extent on electricity for the water heater, refrigerator, range, washer, dryer, telephone, radio, and numerous other things. When the work for the day is done, and the people can relax, the Susie and Sammy Sparks go right on providing comfort through light and heat, television, and theaters. Without this priceless electricity, our modern living would be very backward. Rural electrification is invaluable.

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

As I picked up a back copy of the Sidney Telegraph, I noticed in small print "Farmers Hampered by Power Outage." I said to myself, "Such news in small print? No. It should be in large print, being such a rare occasion." Thanks to the efficiency and expertness that the Wheat Belt is operated on, an occasion of this type is as rare as a blizzard in July.

I thought about that night when there was the power shortage. What a night. I remember distinctly the first inconvenience that there was no water available because we had an electric water pump. Somehow we managed to eat, but after that I went into the living room and turned on the television set. What, no television; that was unbelievable. What would I do until time to go to bed? A person couldn't study or read; after all, there wasn't any light except for that which was furnished by a candle.

A person doesn't realize the value of rural electrification until he has to do with-

out the conveniences electricity brings to a rural home.

Rural electrification plays the biggest steppingstone in the success of every farmer and every farming community. The farmer with his modern shop tools has his labor problem cut in half. There are electric elevators, milkers, pump jacks, welders, drills, sanders, to mention only a few, for any job that must be done by the farmer.

The housewife has improvements in the home that could not be replaced by anything. In contrast, take a woman working over an old coal-burner stove and compare her with the woman of today who has either an electric range or oven.

The housewife of today has things as sweepers, washers, dryers, and many other laborsaving devices. The farmer's wife of today can enjoy all of the modern conveniences that the urban dweller enjoys. Not so 25 years ago. Twenty-five years ago only 7 percent of Nebraska's farms had electricity; today 95 percent are receiving the benefits of REA.

On May 11, 1960, the Rural Electrification Administration observes its 25th anniversary. What other service has progressed so rapidly? Surely there is none other.

REA can, without doubt, be labeled the greatest asset to the farmer in the history of rural life. Now the farmer may receive any of the benefits that someone living in the city enjoys. The farmer of today is not some hillbilly, but is as far advanced as a dweller in an industrial metropolis or a sophisticated suburban commuter. The farmer has reached this level, but a large share of the credit must go to the availability of electricity provided by REA.

REA has raised the social standing of the rural communities. Just as gunpowder was known as the leveler of the great and common people in the time of England's Hundred Years' War with France, so is REA a leveler of the urban and rural people in social life and standings.

The values of rural electrification are too numerous to cover in detail in this paper. However, I feel that they may be divided into three categories: (1) Comforts received; (2) laborsaving devices; (3) the social benefits and the great leveling brought about by REA.

Suppression of Cuban Free Press

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 9, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cuban Free Press Buried on May 17," published in the Inter-American Labor Bulletin for June 1960.

There being on objection, the article was ordered to be printed in the RECORD, as follows:

CUBAN FREE PRESS BURIED ON MAY 17—ITS DYING STATEMENT, SUPPRESSED THERE, IS REPRODUCED HERE

Symbolically, press liberty died completely in Cuba when the last of the opposition dailies "Prensa Libre" was shut down. The means used was the same as previously utilized against "Diario de la Marina," "Avance," "Excelsior," "El Mundo," and "El Pais," the same that the dictator Peron used when he strangled "La Prensa" and the rest of the free press in Argentina, the same as all dictatorial and totalitarian states use to silence any free expression from the opposition.

It is with a feeling of shame and repugnance that we note that the direct instrument, the cat's-paw used to silence the free press of Cuba, was the printing and journalist trade unions. These unions having been previously emasculated by the new labor code that prevents a worker from taking or quitting a job without permission of the Labor Ministry and substituting Ministerial decree for collective bargaining have now been perverted to the role of "goon squads" for the suppression of even a whisper of opposition to the ruling clique.

Much has been written in the daily press of the free world against this most recent abuse of civil rights, but it would be unfair to the valiant men who fought this abuse to the last minute if their last statement, meant to appear for all of Cuba to read in the May 17 edition of Prensa Libre (which was suppressed) were not made known to our readers. The statement follows:

"Cuba, we appear before you, before your people who are our people, before your judgment which is the only judgment to which we are beholden.

"We are neither lofty men nor heroes, but we have been sincere and have always written with our eyes on you. We have built this independent newspaper which never yileded to threat nor to bribe. And we have stated the truth even when it was an immediate danger to do so.

"We are no braver than others, but we have not permitted nor will permit that we be abused and annoyed. We are not infallible but neither do we believe in the infallibility of anyone.

"Today we appear before you, Cuba, to denounce an outrage, a crime against our liberty and our democracy. Dark forces that obey foreign orders have incited and conspired with elements who wish to capture the channels of expression in order to destroy us—these elements attack us for having our own viewpoint—for combating the sinister international conspiracy directed by Russia, against our land and against the solidarity of the American continent.

"If this crime is committed against us, against you, beloved Cuba, then let it be known in every Cuban family, in every Cuban heart, that we have sacrificed our all, our property, our personal security and that of our children because we did not submit to those who wish to substitute our symbol of the lone star with a red rag."

Signed by Humberto Medrano and Ulises Carbó, assistant directors of Presna Libre.

National Aeronautics and Space Act of 1958

SPEECH
OF
HON. ERWIN MITCHELL
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12049) to amend the National Aeronautics and Space Act of 1958, and for other purposes.

Mr. MITCHELL. Mr. Chairman, in beginning may I state to each of my colleagues of the Science and Astronautics Committee, the great admiration I have for the work and support that they have given to me not only in this bill but in all of our joint endeavors together. There is great talent on this committee and I think this body realizes that there is tremendous talent, from the chairman of the committee down to all the members of the committee.

This is quite an important matter. It concerns quite a bit of money. It deals with a philosophy and I think you can draw your line as a result of your vote on the patent provisions of the Space Act as to what your political philosophy is.

The National Aeronautics and Space Act currently requires that the Government acquire complete ownership of all inventions produced under NASA research and development contracts. The act does more. It does not allow a patent to be issued on any invention which appears to the Commissioner of Patents to have "significant utility" for the space program unless the applicant can show that his invention was made without any Federal assistance. Even then the would-be patentee may be overridden by the NASA Administrator and compelled to go to court for whatever rights he may have.

It is true that NASA can waive its rights to title—but only if the Administrator can prove that it is in the best interests of the United States to do so. This is so stringent a requirement that NASA has felt able to waive title in only three instances (and one of those involved a contract initiated with the Air Force) in the 21 months of its operation.

Those 21 months have now proved that the patent section of the law is tending to hamstring the Space Administration in its efforts to meet the challenge of the Soviet Union in space.

This we obviously cannot afford, and we shall be both derelict and not very bright if we do not erase the trouble and erase it now.

So we propose, Mr. Chairman, to rewrite the patent section of the Space Act along these lines:

Our proposal would place in the NASA Administrator the discretion for acquiring title within certain limits. That is, the Administrator—in all cases—would be obliged to secure a royalty-free, irrevocable license to make or have made and to use the invention for governmental purposes. But he would not be obligated to acquire the entire right, title and interest to the invention unless some other law required it or until he found the national security or welfare required it.

This proposal is accompanied by a statement of intent in the report which outlines in some detail the conditions under which the Administrator should consider retaining title and those under which he should not. It is a carefully prepared statement which required months of work by experts in the Government research field in collaboration with the committee. Incidentally, the statement purposely was not incorporated in the bill itself for good reasons. One is that, as a statutory requirement, it would result in time-consuming, formal procedures and the necessity for spelling out procedures on factfinding. Another is that it would result in addi-

tional costs and possibly undesirable litigation. We felt the best all-around results could be obtained by making the statement a part of the legislative history of the act.

Please note carefully that what we are proposing is a balanced, middle-road approach to the problem. It is certainly not the Government-monopoly approach of the Atomic Energy Commission. Neither is it the approach of the Defense Department, which never acquires more than a royalty-free license to make and use inventions produced under its contracts so long as the contractor wishes to retain commercial rights.

In essence, we have come up with a flexible solution—one which guarantees that both the public interest and the equities of the contractor shall be protected.

Why is this change essential?

As indicated, the basic reason is because the present patent provision is detrimental to our space effort.

With the current patent provision in effect, NASA does not get the best research for the lowest cost. Sometimes it cannot get the research it needs at all. I have here summaries of eight specific instances in which the Space Administration has been seriously hampered in its efforts to secure research in crucial areas because of the inequitable requirements forced upon it. Eight times in the space of a few months—and other similar situations are bound to face NASA in the near future. It is incredible that we should permit this kind of thing to continue.

I should like to incorporate the background of these cases in the RECORD at this point:

Case No. 1: The Washington Electric Corp. believes that they have made some very basic and fundamental discoveries in the technique of maintaining and regulating an arc discharge in a gaseous medium. The discoveries which Westinghouse Electric have made in connection with arc discharge resulted from their studies over the years of the phenomena of arc discharge. It appeared to technical representatives of Westinghouse Electric that these recent discoveries could well have application to the development of high-velocity wind tunnels capable of producing velocity of the order of mach 15. Westinghouse Electric informally inquired of NASA whether or not a contract for research and development with NASA to apply their discoveries in the field of arc discharge to the development of a high mach number wind tunnel would permit them to retain commercial rights in inventions made in the performance of such a contract. Westinghouse Electric appeared to believe that there would be further demand for such wind tunnels not only by the Government but by industry, and the retention of commercial rights in inventions would enhance their competitive position in supplying wind tunnels, utilizing their techniques. Westinghouse Electric was advised that the only procedure to accomplish this objective is the waiver under subsection 305(f) of the NASA Act, as implemented by NASA regulations. These regulations provide for the granting of waiver by the Administrator of NASA upon recommendation of the NASA Inventions and Contributions Board, and therefore any specific action cannot be foretold. These regulations do provide that waiver may be granted if it is shown that the invention has only incidental utility in the conduct of activities with which the Administration is particularly concerned, and has substantial promise of commercial utility. It would appear that any invention in the field of wind tunnel design would not be said to have only incidental utility in the conduct of activities with which NASA is concerned. Accordingly, this provision for waiver offered little promise that a waiver of the Government's rights in these inventions could be obtained.

Another provision for waiver is where it is shown that the invention is directed specifically to a line of business of the contractor with respect to which contractor's expenditure of funds in the field of technology to which the invention pertains has been large in comparison to the amount of funds for research and development work in the same field of technology expended under the contract of the administration in which the invention was conceived or first actually reduced to practice. It would appear that any invention in the field of wind tunnel design would not be likely to qualify under this provision. None of the other provisions for waiver appeared to offer better hope to obtain commercial rights. Accordingly, Westinghouse Electric now has the matter under consideration. It should be added that Westinghouse Electric has contracts with NASA in fields of technology where their commercial position is not so critical.

Case No. 2: The Electric Storage Battery Co. was requested by McDonnell Aircraft Co., prime contractor for Project Mercury, to accept a subcontract for the development of a battery to be used in Project Mercury. Since the research and development to be undertaken pursuant to this requets would parallel the Electric Storage Battery Co.'s own sponsored research program, and since the inventions emanating from this undertaking would be subject to the patent provisions of the National Aeronautics and Space Administration Act, Electric Storage Battery refused to enter into this subcontract with McDonnell Aircraft Co. Had it not been for the development of an alternative power supply by another NASA contractor, the refusal of Electric Storage Battery to take a subcontract with McDonnell Aircraft merely because of the NASA patent provisions could have seriously impaired or delayed Project Mercury.

Case No. 3: The Motorola Co. has made certain discoveries in photographic processes and techniques which appear to have substantial promise of commercial utility. These discoveries in photographic processes and techniques were made independently of any Government sponsorship and are presently the exclusive property of the Motorola Co. It appears, however, that these photographic processes and techniques may have application in the solution of problems of photography in space exploration, and officials of the Motorola Co. approached NASA to suggest a research and development contract to apply these techniques to problems in outer space photography but desired to ascertain whether such an NASA contract would result in the Government acquiring title to any of these inventions.

The answer to the foregoing question depends upon whether these inventions have been "actually reduced to practice," a matter not easily ascertainable. It is the policy of NASA not to acquire, except by direct purchase, rights in inventions that have been actually reduced to practice prior to the placing of a contract with NASA. Because the investigations undertaken by Motorola are still in an experimental stage, some questions remain as to whether or not their present state of development would, in each case, be considered as an "actual reduction to practice." Moreover, the Motorola Co. desires to continue their own research and development program in the commercial applications of these new photographic techniques and processes, and therefore desires to retain commercial rights to all new inventions. The NASA patent provisions leave in doubt the desirability of making a proposal to NASA to support such investigation.

Case No. 4: The General Electric Co., under contract with an agency of the Department of Defense, had successfully completed the basis research and study to indicate the applicability to missile guidance of certain phenomena previously discovered by the General Electric Co. relating to superconductivity. NASA desired to join with the Department of Defense in applying these discoveries in superconductivity to space vehicle guidance. This joint sponsorship would, of course, necessitate the incorporation in the contract of the special NASA patent provisions which are less favorable to the contractor than those of the Department of Defense. The contractor refused to take the contract under such joint sponsorship, and presumably this investigation, if undertaken, will have to be supported solely by the Department of Defense. It should be added that the General Electric Co. is participating under research and development contracts with NASA in many other areas of research and development, and their reluctance to accept NASA's support in this specific case was undoubtedly attributable to their reluctance to grant any rights in the background inventions involved in this undertaking.

Case No. 5: Narmco Industries, Inc., of San Diego, Calif., was requested by NASA to undertake some research investigations bearing upon the development of new structural materials for outer space application which would involve the impregnation into plastic or metal structures of fibers or disk-like flakes of ceramic or glass materials. Narmco would be responsible for the development of the end material but would be required to seek from the glass or ceramic industries the improved fibers and disk-like materials which were to be incorporated into the plastic or metal matrix. On investigation, Narmco found that the glass and ceramic industries were reluctant to participate in this program if their participation would subject them to the patent provisions of the NASA Act. Because of these difficulties, this proposed investigation did not materialize. However, it is understood that Narmco has accepted contracts with the Departments of the Air Force, Army, and Navy for the above research and development investigations.

Case No. 6: The Associated Piping Engineering Co., of Compton, Calif., has apparently developed, independently of any Government sponsorship, a novel process for welding tungsten-containing alloys. It appears that the process developed by Associated Piping could be applied to tungsten or molybdenum to achieve a NASA objective which is important in our space program. The NASA patent provisions, which would be required to be contained in such a contract, are presently delaying the placing of a contract with this firm. It appears that Associated Piping has a well-established proprietary position in this field. Not only would they be required to give the Government patent rights, if they were to enter into a contract, but would also be required to convey information developed under such a contract and background information under conditions where they may be made available to the public.

Case No. 7: The Lesona Corp., subsidiary of Patterson-Moof Corp., was approached by NASA to develop a carbon dioxide analyzer for use in Project Mercury. Lesona, the owner of patents for this subject matter, had granted an exclusive license to another firm under all inventions covered by its patents and all improvements therein. Under the NASA patent provisions required

in the proposed NASA contract, the Government would acquire exclusive rights in inventions made in the performance of work under the contract and Lesona could be held to have violated the terms of its exclusive license agreement. Even though Lesona wanted to accept the NASA contract, the officials of the company decided that it would be in the best interests of the company to refuse the work with NASA.

The foregoing examples typify the difficulties encountered as a result of the patent provisions of the National Aeronautics and Space Administration Act. However, there is reason to believe that many other industrial firms are reluctant to do business with NASA because of the patent provisions of the act. NASA would not be aware of this reluctance because these firms have not been seeking business with NASA. I understand that the Industrial Nucleonics Corp. has, in testimony before the Congress, indicated their reluctance to do business with the Atomic Energy Commission because of the patent policy of AEC. I also understand that Industrial Nucleonics, for the same reason, will not do business with NASA. It is also understood that the Garrett Corp., of Los Angeles, would be unwilling to accept contracts with NASA in fields of technology related to their commercial business if inventions would be likely or necessary in the fulfillment of the work requirements of the contract. I also have reason to believe that Statham Instruments, of Los Angeles would refuse to accept research and development contracts of NASA in certain fields of technology.

Another very important example of the way the current patent provision is hamstringing NASA can be seen in this communication from the space agency.

NATIONAL AERONAUTICS AND
SPACE ADMINISTRATION,
Washington D.C.

HON. ERWIN MITCHELL,
Chairman, Subcommittee on Patents and Scientific Inventions, Committee on Science and Astronautics, House of Representatives, Washington, D.C.

DEAR MR. MITCHELL: By letter dated February 25, 1960, this office forwarded to you a number of specific examples of negotiation difficulties encountered by NASA which were attributable to the patent provisions of the National Aeronautics and Space Act of 1958. My attention has just recently been directed to another instance wherein NASA has encountered difficulties in contract negotiations which are again attributable to the patent provisions of the National Aeronautics and Space Act of 1958, and it occurred to me that I should also bring this to your attention.

A proposal had been received from the Gravity Research Corp. for a design and feasibility study leading to the development of a lunar surface gravity meter system capable of meeting space, weight, and acceleration specifications imposed by vehicle system requirements for instrumented soft lunar landings. This proposal was evaluated and approved and funds were allocated to proceed with the contract. In fact, Dr. LaCoste of the Gravity Research Corp. was quite eager to commence work on the lunar gravity meter system, and, in anticipation, started some preliminary calculations on temperature problems which were to be anticipated in the lunar environment. Negotiations could not be carried forward at this time because of the lack of certain information. As a result, Dr. LaCoste was requested to submit a revised proposal as well as additional information necessary to proceed with such negotiations.

On February 2, 1960, a letter was received from Dr. LaCoste stating that the provisions of the NASA Act regarding property rights in inventions would be very unfair to the Gravity Research Corp., and consequently they did not intend to submit the requested revised proposal or to proceed with the contract. The technical staff of NASA responsible for this development believes that it is extremely unfortunate that the initial research on the lunar gravity meter system cannot be started right away and with the Gravity Research Corp. which appears to be the best qualified to handle the research problems involved.

Sincerely yours,
JAMES P. GLEASON,
Assistant Administrator,
for Congressional Relations.

Another reason for the change is because the current patent section of the law is awkward, cumbersome and difficult to administer. It is fraught with complexities and complicated appeal procedures.

A third reason is that the current law results in more expense to the Government. This is because private companies, when they are required to surrender all their commercial rights to an invention, are apt to increase their base costs for the research done.

A fourth reason is that NASA must often contract in the same research areas, with the same companies and at the same time as the Department of Defense. You can imagine the confusion and red tape which results when these two agencies, the principal ones involved in space research, cannot follow similar contract policy as necessary.

Mr. Chairman, even the minority views on our committee—subscribed to by only four members—do not oppose some change in the present law, which they concede to be unsatisfactory. Their thesis is that the matter should wait on legislation which might eventually unify all Federal patent policy relative to research contracts.

I submit we cannot wait. Such an approach may be 5 or 10 years away. Even then, we would not be sure of a different policy than we are proposing today.

Let me call attention to a letter of the Comptroller General to our committee on March 29, 1960, in which he cited his earlier comments to the House Judiciary Committee on the problem as follows:

In lieu of establishing one uniform policy, consideration might be given to legislation which would give recognition to the functions and problems peculiar to the activities of individual agencies, as well as the differences in the types of research and development being contracted for by the Government. Such legislation might appropriately set forth broad general policies, including basic principles, guidelines and criteria, permitting a measure of flexibility in administration where circumstances so dictate, and might embrace some features of the present administrative practices and methods.

Waiting, then, is no solution.

Moreover, a reasonable policy such as we believe our proposal to be may attract other departments to its standard and thus promote uniformity as a matter of practice if not of law. For example, let me read part of a letter which I have received from the Director of Procurement Policy, Department of Defense, following the report of our subcommittee.

I consider that the subcommittee report reflects one of the most thoughtful and carefully reasoned studies on a highly technical subject that it has been my privilege to read. Certain of the committee recommendations contained in the proposed statement of congressional intent would, if they became governmentwide policy, require modification in the existing nonstatutory policies of the Department of Defense. Since these recommendations seem so carefully reasoned, I have asked that our people who are responsible for developing policy recommendations in this field, give them immediate consideration looking toward the advisability of changes in our policy which would be in consonance with these recommendations.

Mr. Chairman, there are those who feel that NASA should indefinitely be compelled to follow the patent policies of the Atomic Energy Commission, which is the only Federal agency whose organic law, like NASA's, requires Federal ownership.

Their logic escapes me, for the factors involved are not the same.

The AEC has had a unique origin. The atomic energy industry was initiated, sponsored, and paid for by the Federal Government from its inception. Furthermore, it deals in a limited and highly specialized field. The situation confronting NASA is quite different. The Space Administration must deal with contractors who spread across the entire industrial spectrum. For the most part NASA must call on established industry to help with the space venture, on industrial elements with a broad background of self-acquired experience and know-how. It is highly inequitable, I think, to demand outright ownership of an invention produced under a NASA research contract when the production of that invention is normally not only an unpredictable incident but has resulted in considerable degree from a knowledge which far antedates the Government's interest in the field involved.

Another thing—the atomic energy advocates say that Federal ownership of a patent is a good thing because it means it is free for anyone to use. However, the fact is that "free" patents are not picked up and put to work for the simple reason that few companies will sink money into the development of an invention when they know anybody can take advantage of their work and market the same item the moment it reaches production stage.

The AEC, for example, now owns more than 2,300 patents. Private industry has requested licenses on less than 400 of these, about 16 percent. Nobody knows just how many are actually being worked, but it is known to be considerably less than 400. It seems probable that somewhere between 6 and 12 percent of the total AEC-held patents are being used. On the other hand, surveys undertaken by the patent, trademark, and copyright foundation of the George Washington University—under contract with the Federal Government—show that 57 percent of current privately held patents are worked and another 7 percent are licensed.

Even allowing for the limitations placed on atomic energy uses by its peculiar nature, this is a very broad dis-

parity. Certainly, it does nothing to prove that Government-held patents, in most cases, accomplish much more than gather dust in bureaucratic files.

Mr. Chairman, in conclusion let me emphasize that title to inventions produced under NASA research contracts normally means very little. NASA will get all it can use when it receives a royalty-free, irrevocable license to have the invention made and to use that invention for Government purposes. There is no added cost to the Space Administration, which can have the invented article produced by any firm it chooses on a competitive bidding basis.

Finally, we need the best creative thinking we can get if we are going to win the race into space. And we will not get that kind of thinking until we make this change in the law.

Mr. QUIGLEY. Mr. Chairman, will the gentleman yield?

Mr. MITCHELL. I yield to the gentleman.

Mr. QUIGLEY. Will the gentleman inform the members of the Committee as to what is the standard practice in American industry when one company subcontracts with another company for purposes of research; who gets the title to the invention when this happens within the private enterprise concept of America as it exists today?

Mr. MITCHELL. As far as knowing what is standard, in answer to my good friend from Pennsylvania, I will say what the testimony was—and the gentleman from Pennsylvania was a valuable member of the subcommittee—was to the effect that in contracting with employees or subcontractors the prime contractor would require in its contract that any invention resulting within certain limits would be in the prime contractor.

Mr. QUIGLEY. I think my subcommittee chairman is quoting the gist of the testimony correctly. My question then is this: If it is sauce for the goose, why is it not sauce for the gander? If American industry can say to its employees, "If you come to work here, if you develop any inventions in our laboratory or using our facilities, the patents to those inventions belong to the company, not to you," why cannot the American Government say to its employees, "If you develop any inventions working for Uncle Sam the patents do not belong to you, the patents belong to Uncle Sam?"

In private enterprise, if one company can say to another company, "If you do this research for us on a subcontract basis and you come up with anything patentable it is ours, it is not yours," by what logic then do we suddenly come up as the Committee is proposing here and apply an entirely different set of standards when the companies are dealing with the Federal Government?

Mr. MITCHELL. The logic of this is in itself apparent. This is a government; the other is private enterprise. As has been pointed out, when we are going to apply the employee-employer relationship with Government, I certainly hope that that is not the philosophy of my good friend and it certainly is not my philosophy.

Mr. QUIGLEY. The point I want to make is that a careful manager of any private enterprise interested in protecting his stockholders' money will make sure that if he gave out a subcontract for research and development, any patents that were developed would go to the general contractor and not revert to the subcontractor. Why, as the board of directors of this corporation, the United States of America, should we take the stockholders' money, the taxpayers' money, and say to any company, "Go ahead, use our money, and if you develop anything you can have it"?

Mr. MITCHELL. May I answer the gentleman by asking this question: The gentleman knows as a member of the subcommittee the Government never uses these inventions commercially and certainly should not, so what good is title to any invention in the Government? Will the gentleman answer that question?

Mr. QUIGLEY. What good is it is this, that with Government ownership they have the right to make it available to any private enterprise that elects to use it. Under the patent system a patent developed at Government expense through the taxpayers' money that was used for research can go to the corporation under a research-and-development contract, and thereafter that company does not have to make that available to anybody for exploitation and development. If it does it can make it available only on a royalty basis. It is a case of the private company gaining something at the taxpayers' expense. It is as far as private enterprise is concerned a competitor as distinguished from the Federal Government, using that only for its own profit.

Mr. BROOKS of Louisiana. Mr. Chairman, will the gentleman yield?

Mr. MITCHELL. I yield.

Mr. BROOKS of Louisiana. Of course there is a vast difference. In this case the Government retains the royalty-free license regardless. In every contract, whether it be with the inventor or another contractor or another individual, the Government still uses the patent royalty-free. It is irrevocable. Every big company that patents an article is interested in promoting that patent. The Government has no interest whatsoever in promoting patents. If you take that patent away from that company it will not be used in many instances, it will not be promoted, and certainly the inventor is not prepared to spend any money in furthering the perfection of that patent right. Is not that right?

Mr. MITCHELL. The statement of the gentleman is correct. The testimony before our subcommittee was to the effect that—well, we have figures, for example, concerning the Atomic Energy Commission. Out of around 2,200, on only some 400 of them do they have a license. That approximates 16 percent. This is quite the contrary insofar as the situation under the private patent system where business is using about 57 percent, if I recall the figures correctly, of the patents that they have received. I think this is illustrative of the point that our chairman pointed out.

Mr. ANFUSO. Mr. Chairman, will the gentleman yield?

Mr. MITCHELL. I yield.

Mr. ANFUSO. To answer the gentleman from Pennsylvania, is it not a fact that the Government does follow the policy that he speaks of in reference to its own employees? In other words, when any employee of the Government makes an invention, he does not get the title to it. That is a master-servant relationship. But when you are dealing with independent contractors, then the situation is entirely different; is that not so?

Mr. MITCHELL. I think the gentleman has made the distinction very clear.

Mr. ANFUSO. A principal contractor can also make any contractual relation he would like to make with a subcontractor. But when we are dealing with the NASA agency which is a scientific agency, an important security agency, we then look to the best interests of the country; is that not correct? And is it not a fact also that here we are dealing with a scientific agency which is interested in making progress through space. Certainly, here time is of the essence. The gentleman has conducted long and exhaustive hearings. His committee has heard all kinds of witnesses. Is it not true that the witnesses disclosed the fact that in many cases substantial contractors refused to make an agreement with the Government because of the fact that they would not have title to the inventions, if any inventions resulted; is that not a fact?

Mr. MITCHELL. The gentleman is quite correct, and I have here 8 specific instances which at the proper time I will ask to be inserted as a part of the RECORD.

Mr. ANFUSO. Is it not true that that has retarded progress in the space field?

Mr. MITCHELL. Yes, definitely. I might say to the gentleman that in these hearings in the interest of the public, we searched to find some way and manner in which the public could benefit. In this bill, we have protected the public interest. That was our prime motive. But you can find very rare instances so far as the Space Act is concerned where there would ever be any occasion where the Government of the United States would be benefited by title to any invention.

Mr. ANFUSO. I think the gentleman knows when he presented this proposition before the committee that I opposed it because I, just as other gentlemen who have spoken today, thought the public interest would be better preserved if we did not pass this. But I was convinced, after read the testimony brought out before your committee, that this is in the best interests of our country. I commend the gentleman for the very fine job he has done, and I would also advise any critics of this proposal to read your report. Then, I am sure, they would change their mind as I have and realize that this is in the best interests of our country.

Mr. MITCHELL. I thank the gentleman for his kind remarks.

Mr. Chairman, anyone who is interested in doing something for small business will support this proposal because the small business people of America want and need this.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. MITCHELL. I yield.

Mr. FULTON. It should be remembered that the Government and the public interest is protected because the United States gets an irrevocable, nonexclusive, nontransferable, royalty-free license for such inventions throughout the world by and on behalf of the United States.

Second, the question is between two provisions—whether any invention under contract with NASA shall be the exclusive property of the United States, or whether we shall have a provision that the Administrator of NASA shall, in his discretion, acquire title to inventions produced under NASA research and development contracts, and may then decide in his discretion what protects the public interest and what protects the equities of the contractors.

The thing I cannot understand, and that is why I agree with the gentleman from Georgia, the thing I cannot understand about the opponents is we are automatically depriving the contractors of the equity they have. This latitude was in the discretion of the Administrator under our type of provision. From the subcommittee's point of view the Administrator decides what is best and what will protect the private interest and the public interest. The opponents would automatically deprive the private interests of any standing at all, and I think that is wrong. I think the Administrator in the various cases that come up should have the right, as the gentleman from Georgia, chairman of the subcommittee has pointed out, in his discretion to make the decision either way.

The CHAIRMAN. The time of the gentleman from Georgia has again expired.

Mr. FULTON. Mr. Chairman, I yield the gentleman 2 additional minutes to get an answer.

Does the gentleman agree with that?

Mr. MITCHELL. I agree with the gentleman from Pennsylvania wholeheartedly.

Mr. DADDARIO. Mr. Chairman, will the gentleman yield?

Mr. MITCHELL. I yield to the gentleman from Connecticut.

Mr. DADDARIO. I would like to direct the argument back for a moment to the statement made by the gentleman from Pennsylvania [Mr. QUIGLEY], and to the logic of his position. He was speaking of the employer-employee relationship. Is there any great difference between a contractor taking a contract from the Government and an employee who works for a company? The contractor working for the Government is engaged in business; he has the means and the people to develop the product and put it on the market for the common good. The employee who works for him or who works for the Government does not have this ability and as a result there is the possibility that great gains could be lost insofar as commercial industry is concerned.

Following the logic of the gentleman from Pennsylvania [Mr. QUIGLEY] further, his position is correct. If the Government can take title, and has the right to give that title to anyone else it can give an exclusive title to one company, and possibly one that did not make the invention in the first instance. I think that is another consequence of the gentleman's theory if you follow it through to its logical conclusion. Is that not true?

Mr. MITCHELL. I think my colleague very clearly states the proposition. It has been proved that when the Government takes ownership and title to inventions they are not used. What we are interested in is that the American people be the beneficiaries of the creativeness of its citizens.

The CHAIRMAN. The time of the gentleman from Georgia has again expired.

Mr. BROOKS of Louisiana. Mr. Chairman, I yield 3 additional minutes to the gentleman from Georgia.

Mr. QUIGLEY. Mr. Chairman, will the gentleman yield?

Mr. MITCHELL. I yield.

Mr. QUIGLEY. Assuming that the gentleman from Connecticut [Mr. DADDARIO], is correct in pointing out the effect of my reasoning with regard to the employer-employee relationship, I would still like someone to explain to me why the relationship I spoke of in private industry of a subcontractor is any different from a similar contract relationship between the U.S. Government and private industry.

Mr. GIAIMO. Mr. Chairman, will the gentleman yield?

Mr. MITCHELL. I yield.

Mr. GIAIMO. I hesitate to intrude in this discussion, not being a member of the committee, but I am interested in this problem. I think the difference—and the gentleman from Georgia can correct me if I am wrong—between the prime contractor and the subcontractor and an employer and employee under our free enterprise system, rests with the matter of profit and the question of property rights, whereas where the Government is the employer the Government's problem is not the profit motive but it is to see that these patent rights be used whether it be through Government ownership or through private ownership. It was explained to the gentleman's committee that there was not widespread use of these patents in the hands of the Federal Government such as there is in private ownership. Is that not the distinction between Government and private interests?

Mr. MITCHELL. I think it has been well stated by my colleague.

Mr. BROOKS of Louisiana. May I say to the gentleman, if I might be recognized, that the Government does do a great deal of this type of research and development work. If the Government starts making it a policy to retain all of the patent rights, the day is coming when the percentage of patent rights will be large so far as the Government is concerned, compared with private industry, and, therefore, our whole system of patents, allowing incentive to private individuals to build up patent rights, will be lost and will result in the Government trying to take over everything that should be given to private industry.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

West Berlin—A Beacon at the Frontier of Freedom

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 9, 1960

Mr. HUMPHREY. Mr. President, the aftermath of the summit collapse is a most appropriate moment to reaffirm American support of West Berlin and its people in their unshakeable devotion to freedom.

It is my deep concern that the tragic lack of effective plans for dealing with the capture of the U–2 and the breakdown of the summit conference may indicate there are no effective plans for maintaining free Berlin in the face of whatever crisis the Communists may manufacture.

Roscoe Drummond last week in an excellent column in the Washington Post described the drama of West Berlin—its brightly lighted face turned toward the arriving air passenger as a striking symbol of the light of freedom it tends so staunchly.

Mr. Drummond pointed out that West Berlin indeed has never been "logically tenable" but West Berliners have against all logic made it tenable.

I would point out to my fellow Americans that it is actually the unchallengeable logic of freedom that America's abandonment of the brave men, women, and children of West Berlin to Communist slavery could be "the first step in the erosion of American freedom itself."

Mr. President, I ask unanimous consent that Roscoe Drummond's column, along with releases covering two of my statements on West Berlin—one delivered last Sunday before the Minnesota Volkfest Association in Minneapolis and the other delivered in Milwaukee on March 6 be printed in the Appendix of the RECORD.

There being no objection, the statements and article were ordered to be printed in the RECORD, as follows:

WEST BERLIN—A CITY OF LIGHT, FREEDOM

(By Roscoe Drummond)

WASHINGTON.—During my recent trip to West Berlin, I realized that Nikita S. Khrushchev is right; you only have to see and feel West Berlin in the flesh to realize why to the Soviet leader it is a "cancer" and a bone stuck in my throat, an abnormality.

It is all of these things—and more.

It is an annoying, disturbing, depressing vision of Western democratic spirit visible to the whole Soviet and satellite peoples, a

radiant image of what their life could be if it were permitted.

The truth is that West Berlin is a city of light and determination.

But Soviet Prime Minister Khrushchev is not willing to look upon West Berlin as a challenge which he will take up and eagerly endeavor to surpass.

Instead, West Berlin's freedom and resilience and prosperity are a "bone in his throat," an abnormality which he must try to suffocate.

I feel sure the West Berliners are not going to stand quietly by and have their inalienable rights to life, liberty, and the pursuit of happiness suppressed. They will defend their postwar democracy with everything they own including their bare hands.

To travel by air to Berlin at night is an exciting experience. For 110 miles you have been flying over East German Communist territory and in every direction there is almost unrelieved darkness, occasionally a lone flicker of light to suggest a sleeping city—a kind of mental darkness as well as visible.

And then you come upon West Berlin as though a massive rainbow had burst through the clouds, a flashing, animate, multicolored city spread out below you as though proud to be alive and proud to be seen.

You can theorize all you want to about how West Berlin—a divided city in a divided country, a city surrounded by a regime controlled by Moscow—cannot last. You can look at the facts and say that this city can't exist, can't survive, can't sustain itself.

You can believe that West Berlin can surmount the latest Soviet-inspired crisis, but can it survive the next? Or the next? And you can logically conclude that West Berlin just is not tenable.

West Berlin has never been logically tenable but West Berliners have made West Berlin a great, a vibrant city of freedom, and made it tenable against all logic.

Some suggest that West Berlin is a dying city. It isn't. Because of the high percentage of elderly people in the city's total population, its population decreased 18,000 last year. Deaths still exceed births. But the birth rate is steadily going up. It mounted from 7.9 to 9.5 in the last 4 years. This measures the confidence of West Berlin youth in their future.

If there is one thing which the Western Powers must preserve it is the freedom of the 2,250,000 West Berliners who are using that freedom so magnificently.

HUMPHREY LAUDS WEST BERLIN AS "WHITE LIGHT OF FREEDOM" IN COMMUNIST DARKNESS

Senator HUBERT H. HUMPHREY, Democrat of Minnesota, told a gathering of the Minnesota Volkfest Association in Minneapolis Sunday that Khrushchev's "passionate resentment of the fact of West Berlin's independence stems from his fear that the white light of freedom streaming into the surrounding Communist darkness from West Berlin will keep all of Eastern Europe in a constant agitation for something better than the Communist can give them."

The Minnesotan, a member of the Senate Foreign Relations Committee, told the group that he expected "renewed pressure on the United States and our allies" from the Communists to get out of West Berlin.

"We must have strong nerves and firm courage," he said, "the kind which the West Berliners themselves and their gallant mayor, Willy Brandt, have been displaying for so many years."

"Khrushchev has complained that West Berlin is a bone in his throat," Senator HUMPHREY commented. "What he really means is that West Berlin is a dazzling light that gets in the Russian eye. He doesn't like it, and I don't blame him: West Berlin as an island of freedom and prosperity is a psychological threat to the whole edifice of Communist power in Eastern Europe.

"I must confess that I am worried, however, about what plans our Government may have for dealing with any new crisis on West Berlin that Khrushchev may bring about at any time."

"After more than 18 months since I was in Berlin with Willy Brandt at the time of the last great Berlin crisis, I am not convinced that our Government has made any concrete, workable plan for dealing with the next crisis—just as there were not workable plans for dealing with the U–2 incident and the summit collapse.

"Indeed, in those 18 months, Communist military power as compared with our own has been strengthened, and Khrushchev's arrogance and threats have increased proportionately.

"We cannot permit ourselves to stumble and falter if we are again faced with the next naked threat to the Western position in Berlin. We must not only have definite plans to deal with the crisis, but we must be sure that the Soviet dictatorship understands very clearly that the United States and our allies will take firm and definite steps to protect the freedom-loving West Berliners.

"There must not be another humiliating disaster to the West like that which we have just experienced."

Senator HUMPHREY recalled his visit with Mayor Brandt of West Berlin in November of 1958, when the Minnesotan flew directly to Berlin to assure the West Berliners that the American people backed them to the hilt in the face of the Khrushchev ultimatum.

"I remember as if it were yesterday how warmly Mayor Brandt welcomed me and with what pride he showed me his half of the city—from its bustling shops and factories to its modern housing for workers. He told me how all this had been raised from rubble—rubble so tremendous that it has been piled into landscaped and terraced hills and made into public parks.

"In long and frank talks as we drove about the city, he shared with me the grave problems in maintaining this little island of freedom in a totalitarian sea. At the heart of the city, by the famous Brandenburg Gate, we stood together on the very frontier between freedom and slavery.

"I was deeply moved as he told me of the hardships of the first Berlin blockade, and expressed the gratitude of his people for the Allied airlift which kept the city alive. The people of Berlin have put up a beautiful memorial directly in front of Templehof Airport to the 38 flyers who lost their lives in the course of the airlift, and I was privileged to lay a wreath before it."

"I spoke to many Berliners, and asked them how their nerves were standing up under the strain. They told me: 'Don't worry about our nerves, and we won't worry about yours.' "

"That is the spirit that characterizes the brave people of West Berlin," Senator HUMPHREY concluded. "To abandon them to the tyranny of the Communists would not only be morally evil, but it could be the first step in the erosion of American freedom itself."

"The Communist tiger would not be appeased by feeding him the bone of West Berlin—his appetite would only be sharpened for bigger game."

TEXT OF REMARKS OF SENATOR HUBERT H. HUMPHREY, RADIO STATION WISN, MILWAUKEE, WIS., MARCH 6, 1960

It is only 10 weeks until the opening of the summit conference at Geneva. It is 16 months since Khrushchev launched his ultimatum against the freedom-loving city of Berlin, and he is losing no opportunity to show his impatience. He very badly wants to push the West—and freedom—out of Berlin.

Even during his junket to Indonesia, he took time to threaten Berlin again. He demanded that the Western Powers sign peace treaties with both Germanies—West Germany and East Germany. If they did not, he threatened to sign his own treaty with East Germany, and to snuff out the legal rights of the occupying powers in Berlin.

"West Berlin," he said ominously, "is on the territory of East Germany."

The 1958 ultimatum has already yielded big dividends to Khrushchev—two Foreign Ministers' conferences, his visit to America, and an invitation to a series of summit meetings. But the appetite grows with eating, and he wants more and more and more.

At his press conference last month, Secretary of State Herter acknowledged that the tough Soviet talk on Berlin has him worried. With a frankness so far unique among administration leaders, he attributed it to the edge the Soviet Union now holds over the United States in intercontinental missiles—the so-called missile gap.

This raises a very grave question—what have we done with the 16 months since Khrushchev launched his warning?

One thing we certainly cannot complain of—the attitude of the free people of West Berlin. Under the leadership of their gallant mayor, Willy Brandt—a man whom I am proud to number among my close friends—they have remained steadfast in the face of a long series of veiled and naked threats.

I was in Europe in 1958 when the Khrushchev ultimatum was delivered, and I went direct to Berlin to assure its mayor and people that the American people backed them to the hilt.

I remember as if it were yesterday how warmly Mayor Brandt welcomed me and with what pride he showed me his half of the city—from its bustling shops and factories to its modern housing for workers. He told me how all this had been raised from rubble—rubble so tremendous that it has been piled into landscaped and terraced hills and made into public parks.

In long and frank talks as we drove about the city, he shared with me the grave problems in maintaining this little island of freedom in a totalitarian sea. At the heart of the city, by the famous Bandenburg Gate, we stood together on the very frontier between freedom and slavery.

I was deeply moved as he told me of the hardships of the first Berlin blockade, and expressed the gratitude of his people for the allied airlift which kept the city alive. The people of Berlin have put up a beautiful memorial in front of Tempelhof Airport to the 38 flyers who lost their lives in the course of the airlift, and I was privilege to lay a wreath before it.

I spoke to many Berliners, and asked them how their nerves were standing up under the strain. They told me: "Don't worry about our nerves, and we won't worry about yours."

I don't worry about our nerves—but I do worry about the yawning gaps in our readiness to meet a crisis which may burst upon us in 10 weeks time—or even sooner.

I am concerned, as many well-informed observers are, about the space gap and the missile gap.

Soviet sputniks and luniks are blazing out into space with a magnitude of thrust which, even now—2 years after the first sputnik—we are unable to match.

I am alarmed by the prospect that, within the next 2 or 3 years, the Russians may have a 3-to-1 advantage over us in missiles—but I am even more alarmed that the administration reacts to this appalling prospect as if it were nothing more than the Russian victory in the winter Olympics.

It is the complacency gap which troubles me even more than the missile gap.

When I was in college, we were taught in elementary psychology that a stimulus gives rise to a response. This administration, however, has repealed the basic laws of human behavior. There is plenty of stimulus, but tragically little response.

We have been warned—again and again and again. But all this administration does is to administer us another tranquilizing pill.

There is another gaping gap that bothers me—what I call the testimony gap, the gap between what we are told and what we uncomfortably suspect to be the painful truth.

Recently we were told, in an official manual that shall remain nameless—and, in fact, unsanctified—that the idea of Americans having a right to know what's going on is, and I quote, "Another foolish remark often heard."

The manual has been shot down, but the malady lingers on. Only a few days ago the President blasted two of our most responsible newspapers—the New York Times and the Washington Post—for printing perfectly accurate reports of the testimony of former Defense Secretary Robert A. Lovett—a Republican, by the way.

I for one shall keep repeating this so-called foolish remark until someone up there hears and heeds—and lets the American people know what's going on.

Who are we fooling, anyway? Maybe our own people—but not, by Secretary Herter's admission, the Soviets.

Then there is a third threatening gap—the moral gap, the gap between what we preach and what we practice.

Almost 6 years have passed since the Supreme Court's decision outlawing segregated schools. Yet the administration and Congress still shirk their share of responsibility for enforcing that decision.

We haven't even heard from the White House what we have every right to expect—a clear and unequivocal affirmation of the moral rightness of that historic decision.

We talk of our affluent society—and yet we leave over 20 million of our people languishing in poverty: the aged, the sick, and those marooned in the depressed areas which pockmark our country.

Khrushchev doesn't need a "seeing eye" satellite to spy out our weaknesses. As he sees it, ours is a dying system—and his hands are itching for the spade so that he can "bury" us—to quote his own blunt word.

There isn't any quizmaster who can slip us, under the table, the answers to the grave questions which hang over us. There isn't any payola that will insure our prestige in the world, unless we earn it by deeds as well as words.

I have made a pretty careful study of Soviet strategy, and I know this. There is no day-to-day fumbling in their policy, as there too often is in ours. They think in terms of years and of decades. They weigh future trends as well as present facts.

They will have one kind of policy if they think America is rising in the world. They will have another, and much more unpleasant one, if they see we are sinking.

They will be watching what we do, listening to what we say, in the coming weeks. They will form their own shrewd judgment about whether we will continue sleepwalking into the limbo of second-class powers or whether we will, at long last, wake up and rally our great energies and capabilities for the crisis that lies ahead.

It is good that we have all—Democrats and Republicans alike—united to say we will stand firm on Berlin. But we must do more than say the right words—much more. We must move to close the gaps that cloud with doubt the firmness of our purpose.

I have just heard that Mayor Brandt has canceled plans to visit America and put the case of his beleaguered city before us—because of the renewed gravity of the situation there.

He wants to be on the job 24 hours a day, to meet and to cope with whatever may come. I would to God that our own Government had been on the job 24 hours a day for all these wasted 7 years.

For myself, I shall continue to blow the bugle, sound the warning, seek to awaken the American people to the peril in which they stand. Given the full facts and alert, on-the-job leadership, we shall, I am utterly confident, surmount this coming crisis.

Restoration of Freedom to Captive Nations

EXTENSION OF REMARKS

OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am proud to insert the report submitted recently by Alexander Melnychenko, president of the executive committee of the Ukrainian National Council, local branch, Minnesota, regarding the restoration of freedom to captive nations.

I have many fine and loyal Americans of Ukrainian descent in the Third Congressional District of Minnesota, and this report of Mr. Melnychenko embodies their hopes and prayers that the leaders of our great Nation will never cease their efforts to bring peace and freedom—America's priceless heritage—to those behind the Iron Curtain:

RESTORATION OF FREEDOM TO CAPTIVE NATIONS

(Report sent by the Ukrainian National Council, local executive committee, Minneapolis, Minn., to the following members of the U.S. Government on June 7, 1960: The President of the United States of America, Dwight D. Eisenhower; the Vice President of the United States of America, Richard Nixon; the Secretary of the Department of State, Christian A. Herter; the U.S. Representative to the United Nations, Henry Cabot Lodge; the Congress of the United States of America, Washington, D.C.; the U.S. Senate, Washington, D.C.; the Ukrainian National Council-Ukrainian Government office in exile in Munich, West Germany; the President of the Ukrainian National Democratic Republic in exile, Dr. Stephan Wytwytcky; and the Ukrainian Democratic News Agencies-Press in United States and Europe.)

The members of the Ukrainian National Council, local executive committee, of the State of Minnesota takes the liberty of asking you to bring the following to the notice of the Representative to the United Nations and representative in the Security Council, Hon. Henry Cabot Lodge.

Our people, who make up about 45 million of the population of the Soviet Union, have been conquered and incorporated in the imperialistic Russian empire at various times.

In the course of the 1917 revolution Ukraina was separated from Russia and formed its own republic, whose independence was recognized de facto by many governments, while a number of powers, including the Soviet Union, recognized them de jure.

In spite of this, the Soviet imperialistic government had scarcely seized the territory of Russia proper during the civil war when it treacherously turned its weapon against our country and many others, conquered them one after the other.

The legitimately elected democratic parliaments and governments of our democratic national republic were liquidated. The deputies to the parliaments and the ministers were executed or deported. The same cruel fate befell the men of science and the national intelligentsia, as well as wide circles of the population of the republics conquered by the unhuman and despotic Soviet Government.

Religion was proclaimed "an opiate of the people" and was profaned. Churches, mosques, Buddist temples, and Jewish synagogues were destroyed or turned into clubs, warehouses, or places of entertainment while priests of all denominations were either killed or deported to slave labor camps in Siberia.

All the conquered republics were subordinated to the central organs in Moscow and Sovietized. Millions of innocent peasants and workers of our country perished owing to Red terror during compulsory collectivization, during the famine which was artificially created by the Soviet Government, under the butcher Khrushchev, and during all kinds of purges, resettlements, and deportations, which are still continuing. The numbers of all prisoners in the concentration camps is beyond all calculation.

The dictatorship, which is carried out officially by the Communist Party, but in actual fact by only a few members of the Presidium of the Central Committee of the Communist Party of the Soviet Union, continues undeviatingly its work of destruction, whose objective it is to spread communism and to seize power throughout the world.

Democracy, personal and national immunity, freedom of religion and of the press are not recognized in the Soviet despotic empire. Parliaments as the supreme legislative organ does not exist. Only in 1944 in some of these republics and autonomous territories more than 3 million people were wiped out with a stroke of the pen.

These crimes of the Soviet Government were at long last admitted by Khrushchev in his speech at the closed session of the 20th Congress of the Communist Party in Moscow on February 24 and 25, 1956. And yet Soviet despot Khrushchev was not ashamed to assert in the same speech that "the U.S.S.R. is considered a model multinational state, because we have insured in practice the equality and friendship of all the people who live in our great homeland."

Problems of such vital importance as the liquidation of a series of republics and peoples are not discussed by the Supreme Soviet, which is only a pretense of a parliament in the U.S.S.R. but by the Presidium of the Central Committee of the Communist Party.

Was the question of the genocide and the liquidation of the republics and territories discussed by the Supreme Soviet or by one of its two chambers? How did they defend the national peculiarities of the peoples, and how did the remaining deputies to the Supreme Soviet react to this crime? And finally, how did Soviet justice react to this heinous crime?

The answer is: There is no justice in Communist state.

We request the authority of the U.S. Government and our American representative to the United Nations and all the representatives of the democratic nations to the United Nations to ask the Soviet representatives what they have done, as members of the Soviet Government, to prevent the abovementioned crimes, what they have done to have the millions of deported and imprisoned people returned to their native soil?

We all know that there will be no answer from Soviet butchers.

We testify to the fact that there is no parliament in the U.S.S.R.. There are no free elections; freely elected nor a freely acting parliaments, being completely at the beck and call of the so-called collective leadership. The deputies to the Supreme Soviet are not freely elected representatives of the peoples of the U.S.S.R., they are individuals nominated by the Presidium of the Central Committee of the Communist Party.

Deprived of no chance to realize their legitimate rights and their will, our peoples are compelled to resort to the only means at their disposal; that is, to revolt againt Soviet despotism, which is evidenced by frequent uprising, in the Ukraine, in the Cossack territory, in the Caucasus, Turkestan, and in the Byelorussia. These uprisings, however, are fiercely suppressed by Soviet military might and even poison gas.

We take the liberty of drawing the attention of the people of the United States, of the members of the U.S. Government, of the representatives of the democratic nations to the United Nations and its governments, to the fact that all contact with the Communist pseudoparliaments strengthens the Kremlin dictators, who claim to the people throughout the world that they are the champions of all enslaved peoples and that they are against colonial oppression, while they themselves are subjecting our peoples to unprecedented oppression, terror, and eradication.

The fraudulent slogan of coexistence, which is being advanced by Moscow, is completely unfounded in the presence of a totalitarian U.S.S.R., which fact is testified to by constant opposition of our peoples and our countries, and the countries of the so-called people's democracies. Driven to despair by the Moscow dictatorship's cruelty, they are forced to demand their freedom insistently, a fact which is eloquently manifested by recent events in south Germany, Poland, Hungary, and other countries beyond the Iron Curtain.

Let us all beware of Communist slavery.

Let us all stand firm and united against any Communist movement to enslave the whole world.

Let us all have in minds about the "Restoration of Freedoms to Captive Nations."

We, American citizens of Ukrainian descent of the State of Minnesota, and as members of the Ukrainian National Council, local branch, of State of Minnesota, hope and pray that the members of the Government of the United States and the representatives of all democratic nations to the United Nations will strongly support our aspirations.

Respectfully yours,

ALEXANDER MELNYCHENKO,
President of the Council.

Federal Fishing Stamp Act

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 9, 1960

Mr. WILEY. Mr. President, across the country, constructive efforts are underway by State conservation departments, as well as by conservation-minded individuals and groups, to preserve, conserve and, if possible, expand our fish and other wildlife resources.

Wisconsin, particularly, has carried forward realistic, well-designed, expansive programs in this field.

We recognize, of course, that traditionally, States have been hard pressed to find funds to carry forward such much-needed conservation programs. Nevertheless, the States have zealously—and rightly, I believe—guarded against unnecessary encroachment by the Federal Government.

Currently, there is pending before the Merchant Marine and Fisheries Committee in the House of Representatives, a bill, H.R. 11410, which, among other things, would authorize the issuance of a Federal fishing stamp.

The purchase of such a stamp—appended to a resident license—would permit fishing in national park areas elsewhere in the country.

In addition, the provision would authorize two or more States to form a compact, under the following provisions:

First. Agree to recognize Federal-State fishing licenses and stamps.

Second. Agree on a uniform fee.

Third. Agree on an "equitable" formula for the allocation to the States which are parties to the compact of amounts from the sale of Federal-State fishing stamps.

Fourth. Agree not to subject the holder of a Federal-State fishing stamp to any requirement not applicable to the holder of a resident sports fishing license.

The measure would further provide for a compact between 10 or more States, in conjunction with the Secretary of Interior, for entering into agreements on recognition of fishing privileges.

Among other things, the compact would provide:

First. The proceeds would be paid into a special fund of the U.S. Treasury.

Second. After payment of all overhead, the Secretary of the Interior would prorate funds back to the parties of the compact.

Third. Not to exceed 10 percent of the moneys placed in the fund would be available to the Secretary of the Interior in any one year to promote fishing in national parks.

Fourth. The holder of a resident sports fishing license with a Federal fishing stamp attached could legally fish in all national parks, and, if his or her State were a party to the compact, in all waters of States in the compact.

Recently, I received a message from Lester P. Voigt, conseravtion director of the State of Wisconsin, expressing strong opposition to the objectives of H.R. 11410.

To give my colleagues the benefit of the points outlined in Mr. Voigt's letter, I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF WISCONSIN,
CONSERVATION DEPARTMENT,
Madison, May 20, 1960.

Hon. ALEXANDER WILEY,
U. S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: Bill H.R. 11410 which is to be cited as the Federal Fishing Stamp Act has come to our attention.

Under title I of the bill, the Secretary of the Interior is authorized to issue a Federal fishing stamp, the net proceeds of which, after deduction of expenses by the Postmaster General, would go into the Federal fishing stamp fund and would be made available for use by the Secretary of the Interior in promoting fishing within the national parks. The Federal fishing stamp would have to be purchased and attached to the resident fishing license within 10 days after the purchase of the latter. The holder would then be entitled to fish in any national park without payment of any additional fee.

Title II of the bill gives the consent of Congress to the States to enter into compacts for the purpose of establishing and providing uniform nonresident fishing licenses. The Secretary of the Interior would issue a Federal-State fishing stamp to be sold at a uniform fee and attached to the resident fishing license issued by the State of residence of the holder. The holder would then be permitted to fish in any member State to the compact, and also to fish in any national park without the payment of any further fee. Not more than 10 percent of the revenue would be made available to the Secretary of the Interior for promotion of fishing in the national parks. The net proceeds from the sale of the Federal-State fishing stamps would be allocated to the member States on the basis of a formula agreed upon by the States in the compact.

The State of Wisconsin has consistently taken the position that proposals such as this are an encroachment on the rights of several States in that the legal title to, and the custody and protection of all wild animals, including fish within the State, is vested in the State for the purpose of regulating the enjoyment, use, disposition, and conservation thereof, and that the Federal Government has no authority to impose a system of fishing license fees or charges for the privilege of fishing in the public waters of the respective States. Further, this measure is a dangerous and unprecedented invasion of the traditional revenue source of the State in the management of its native fish populations.

The States may presently enter into compacts subject only to the approval of the Congress to the compact and this measure is not required to achieve interstate license reciprocity. The proposal would without question prove most costly to the State of Wisconsin from the standpoint of reduced revenues since we are the favored vacation State in the Great Lakes region by reason of our location, climate, scenery, and water attractions and the natural result of a reciprocity arrangement such as this would be that residents of other States would be allowed to enjoy Wisconsin's fishing advantages whereas residents of Wisconsin could not expect to avail themselves of similar advantages in other States where comparable fishing opportunities do not exist.

The State of Wisconsin has for a number of years sold more nonresident fishing licenses annualy than any other State in the Union. Our State is favored with a multitude of lakes and streams that provide good fishing and the management of our fishery resource for sport fishing is nationally recognized as being outstanding. A large part from the revenues obtained as a result of the sale of such nonresident fishing licenses is necessary to maintain our fish management and law enforcement programs.

We believe that H.R. 11410 should be vigorously opposed and toward that end, we urge that your office express the oposition of the State of Wisconsin. We feel very strongly that enactment of this bill would seriously affect our income and cause us to reduce our programs materially. As you may know we recently found it necessary to adopt an austerity program because of increased costs and a drop in income. Further reduction in our program would really spell disaster.

If there is any further information that we can furnish, we will be most happy to do so.

Very truly yours,

L. P. VOIGT,
Conservation Director.

Scientists and Conflicts of Interest

EXTENSION OF REMARKS
OF

HON. MARTHA W. GRIFFITHS

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mrs. GRIFFITHS. Mr. Speaker, recently, Chrysler in the city of Detroit bid on a Saturn missile contract. They did not receive the contract. When Michigan Representatives inquired from Dr. Glennan, the head of NASA, as to how the contract had been placed, we learned that one of the things done in placing such a contract is to set up a committee of expert scientists to determine whether or not the companies bidding have the technical competence to perform the contract. We were told that this committee on the Saturn contract placed Chrysler sixth among the bidders. In view of the fact that our first satellite put in orbit was made largely by Chrysler, this came as a distinct shock to those of us from Michigan.

In view of the fact that there are only a few scientists in the United States who are competent in space projects, such scientists are of necessity advisers both to industry and to the Government.

Without suggesting that such a thing was true in the placement of the Saturn contract, the method of placement raises the questions of first, whether or not there exists an inherent conflict of interests on the part of the scientists in such placement, or second, whether or not the scientists are to some extent being used as fronts behind which the Department of Defense places contracts as it chooses.

On May 5, the Military Affairs Subcommittee of the Committee on Government Operations, chaired by HOLIFIELD, of California, and of which I am a member, inquired into conflicts of interest. I would like to place in the RECORD at this point some of the information brought forth in that committee:

Mrs. GRIFFITHS. I would like to ask a question. When do you consider a conflict of interest of such degree that those involved are unemployable?

Mr. STEMPLER (from the Office of the General Counsel, Department of Defense). That is a good question; you mean setting aside statutes which are on the books? As a matter of ethics and morality?

Mrs. GRIFFITHS. No, right under the statutes.

Mr. STEMPLER. Under the statutes? Well, you start with an ethical principle that man cannot serve two masters.

Mrs. GRIFFITHS. All right.

Mr. STEMPLER. If the man is a full-time Government employee, he is subject to certain restrictions in his work and he is also by law subject to certain restrictions after he leaves work for a period of time. This differs with civilians as it does with retired officers. They have different restrictions on them.

* * * * *

Mrs. GRIFFITHS. Well, in my personal opinion, we have entered a new era. We have arrived at a place where we need people skilled in a very specific field, and these people are being hired by industry as consultants, they are also used by the Government as consultants on occasion. Now, I think a new conflict of interest situation has arisen. This is just my judgment. It is perfectly obvious that if you are the consultant, today, to a vast industry and you receive a really good fee for it, and tomorrow you are the consultant to the Government and you are determining the specifications for a purchase, even up to the point as to which companies are capable of doing it, that you have a possibility of a conflict of interest. I think the Government has arrived at a very difficult position.

Maybe those people who are hired as those consultants can be objective, but I doubt it. We are turning over the spending of $40 billion to a very small and select group of people. And I think while they may be excellent in science, they are subject to the same type of prejudices that other people are subject to. And they hand these contracts out to their friends. Now, that is just all there is to it.

I had an interesting opportunity to talk with a man who was one of the first employees of a firm that dealt exclusively for a long period of time with the Government, and he told me the one thing he never understood about that firm was the consultants that they had. They would bring topflight scientists into the business. It was in a very pleasant area of the country. They would spend long vacations there and he said, "As far as I know, they never did anything." They really didn't do any work, but they were paid astronomical fees. The Government paid them, of course.

Then these consultants went back into the Government and set up a set of specifications, really, that only a few people could meet, only a small part of industry. Now I think this presents a real problem. I think the power of government purchasing today is one of the biggest factors that this economy has to deal with, and I think it is being more and more restricted to only a few concerns in a few areas of the country.

I think one of the problems with it is this consultant business in the Government. I think this is one of the questions that the Government has to answer, and I think it is a real tough question.

Mr. HOLIFIELD. It poses the problem of requiring consultants who sit on one side of the table to restrict their consultative clients to the Government, for instance, if they are working for the Government.

Mrs. GRIFFITHS. I agree.

Mr. HOLIFIELD. And a general consultant, as Mrs. GRIFFITHS points out, who is paid a fee of $10,000 as a consultant's fee for electronics company X one day, who has a new device, and 3 weeks later he is called into the Defense Department on a $50-a-day basis, $56-a-day basis, to advise them on what kind of electronics for a certain purpose they should purchase.

Mrs. GRIFFITHS. That is right.

Mr. HOLIFIELD. He is in a perfect position to let us say, justify the $10,000 fee which he was paid the previous week or so.

Mrs. GRIFFITHS. I mean he could be above reproach and yet he is human. He thinks in terms of what equipment did that particular concern have and what kind of management did they have. They are his friends. I think you have to arrive at the place where you consider this a conflict of interest.

* * * * *

Mrs. GRIFFITHS. May I ask you, if the Defense Department required every bidder to supply the names and the salary paid to all consultative experts over a period of a year or 2 years preceding the bid and required every consultant they employed to list their employers for the last year, do you think that would help some in determining whether there has been a conflict of interest or not?

Mr. STEMPLER. I really don't think so, Mrs. GRIFFITHS, for this reason: When we pick a consultant, by "we" I mean when the person or people concerned decide they want Jones to help them on this matter, I assume they know Jones—what work he does, who he does work for, and I hope if Jones is an automotive engineer, a consultant to General Motors, they don't get Jones as a consultant to draw up specifications for procurement of a new truck. I hope they take this into account in what they are doing.

What you mentioned before could conceivably take place, but I would hope in prudent administration you would be reasonable in your selection of consultants, where, as a captive consultant, why, you would not use him in the situation where the results of the work they are doing, even though advisory, could come to pass to the benefit of the companies he consulted with on Monday, Tuesday, and Wednesday.

Mrs. GRIFFITHS. I think it would relieve the minds of a lot of people, though, if they could see this in writing, see who these consultants have been. I think it would be helpful, myself.

I am happy to say that there is some concern over this problem in the scientific world and in a late May issue of Science, the publication of the American Association for the Advancement of Science, there is the following report:

SCIENCE IN THE NEWS—SCIENTISTS IN GOVERNMENT—GROWING CONCERN OVER CONFLICTS OF INTEREST

There is considerable and growing concern over the position of scientists with regard to the conflict-of-interest laws. The subject is talked of a good deal in private but only rarely in public, a situation which reflects the delicacy with which it is felt this potentially explosive issue must be handled.

The relevant laws are a group of seven poorly defined, vaguely interpreted statutes which, in their broadest interpretation, prohibit anyone working for the Government from having a financial interest in any group having dealings with the Government. They tend to put almost anyone working for the Government on less than a career civil service basis in an extremely awkward position. The situation is difficult for administrative and legal personnel, often preventing the Government from obtaining the services of an outstanding man because of the unreasonable financial sacrifices he would have to make in order to protect himself from a possible accusation of violating the law. But nowhere is the situation more touchy than in the case of scientific personnel.

The Government today relies on an intricate web of consultancies, contracts, and part-time and temporary employees to provide itself with the scientific and technical assistance it must have. It underwrites more than half the scientific research done in this country. It "employs" in some fashion a very large fraction of the leading scientists in the country, and a question of conflict of interest could be raised in almost every case. The institution or corporation with which the scientist is associated very probably is receiving a share of the more than $5 billion the Government spends annually on scientific work. Quite often it

is doing work for the Government in precisely the area in which the scientist is being asked to advise the Government.

CONFLICTS UNAVOIDABLE

The situation is awkward, but it is also absolutely unavoidable. The Government clearly needs the best scientific advice it can get, and it can get this advice only from men with the pertinent experience—that is, in most cases, precisely from the men who will find themselves in a conflict-of-interest situation. The problem is complicated further because many of these men will not only be associated with a group doing business with the Government in the area in which they are to serve, but they will also be serving, in addition, as consultants to one or more other corporations or institutions which, again, are doing business with the Government in the area in which the scientist is asked to advise the Government. And to complicate the picture still further, a significant and growing fraction of these scientists own stock, and sometimes large blocks of stock, in the space age research corporations that have sprung up in intellectual centers throughout the country.

NEW YORK BAR STUDY

The entire conflict-of-interest problem has been studied by a committee of the Bar Association of New York, whose detailed report, together with draft legislation for clarifying and updating the statutes, will be published next month by the Harvard University Press. This article reflects the feelings of that committee, confirmed by talks here in Washington, that the touchiest part of this problem relates to the position of scientists. This concern stems from the feeling that not only are scientists caught with other personnel in a badly outdated system of laws, but that, in the case of scientists, to a dangerous extent the laws have simply been ignored and no effort to comply with them has been made. The reason for this is clear: it is simply that in the area of executive or legal talent there are usually enough men qualified for a position that it is possible to find one who is reasonably free of conflict-of-interest problems; in the area of science the talent and experience the Government needs tend to be so specialized that the number of men qualified to fill a post is limited to a very few, all of whom will commonly have quite involved conflict-of-interest problems. But the dilemma does not disappear simply because it is recognized as unavoidable.

There has been no real concern over scientists as a class behaving improperly. Indeed the general feeling seems to be that the scientists have done an admirable job of seeing that their conflicts of interest do not affect their decisions. There is a good deal of concern, on the other hand, over the possible congressional and public reaction to a scandal in this area. There is a fear that among the several thousand scientists advising the Government there must be some who not only have made no effort to clear up a clear conflict of interests, but have allowed this conflict to influence their decisions. But aside from the concern over the possibility of outright scandal, there is the feeling that even the appearance of scandal, where no wrongdoing had actually taken place, could have extremely unfortunate repercussions. There is concern over the effect that a sensationalist congressional investigation could have on such matters as the recruitment of scientists for Government service, on the system of contracting with Government-supported corporations for work which the Government cannot handle effectively within its departments, and on the prestige of scientists in general.

POSSIBLE REPERCUSSIONS

No one knows how much the Government, and the Nation, would suffer if it were cut off from the services of scientists who were unable to comply strictly with the present conflict of interest regulations; or how many scientists would avoid Government service if it involved the risk of exposure to scandalmongers, no matter how honorably they served, because of an unavoidable conflict of interest. Nor does anyone know what the effect of a series of scandals, real or imagined, would have on the use of corporate devices like the Air Force supported, nonprofit Rand Corp., or the Space Technology Labs Inc., which handles a major share of the work on this country's space program. The use of such corporations for work that might normally be done within the Government is usually a device for paying higher salaries than the present civil service scale allows, and sometimes for avoiding close control of projects by the congressional appropriations committees. It is not hard to find Congressmen who are suspicious of the whole business, nor is it hard to imagine the effect on these suspicions of even a hint of scandal.

The question of scientific prestige is a special one, resting on the fact that although the scientist is an increasingly admired person, he is also sufficiently exotic in the public mind that there is a strong tendency to stereotype him. If a lawyer or business executive is caught with his hand in someone else's pocket, no one is led to question the ethics of lawyers or executives as a class. Whether the same will hold for scientists is open to question, particularly in view of the sharp contrast it will present to the current stereotype of the scientist as a man so engrossed wih dissecting atoms that he never concerns himself with such gross things as personal advancement and money.

No one knows the answers to these questions, and perhaps the concern of those who fear the worst is unwarranted. But no one seems to feel that even the New York bar group's proposal for revising the conflict-of-interest statutes, helpful though these proposals undoubtedly would be, is capable of really solving the dilemma of the scientists. It appears to be unavoidable that risks must be run, and under the present circumstances, when the mere mention of the phrase "conflict of interests" suggests to the public not merely a questionable situation but a full-blown scandal, it is understandable that there are a good many nervous people in Washington.

The problem is one that cannot be legislated out of existence. Some sort of rules governing conflicts of interest are necessary, and no matter how carefully they are framed there will still be a great many difficult situations, particularly in the case of scientists. The bar group's draft legislation hopes to help matters by giving the President broad powers to grant exemptions "in the national interest." But an exemption can only make a conflict of interest allowable; it does not make it disappear. What everyone seems to agree is needed, if and when sensational revelations, justified or not, begin to appear, is a clear understanding among the public and on Capitol Hill that the risk of an occasional scientist acting indiscreetly is trivial compared to the risks to the national security if, in order to strictly enforce the conflict-of-interest laws, the Government were forced to cut itself off from the soundest scientific assistance it can get.

Condemnation of Trujillo Dictatorship

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 9, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Blow for Trujillo," published in the New York Times of June 9, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BLOW FOR TRUJILLO

The Peace Committee of the Organization of the American States has condemned the Trujillo dictatorship in the Dominican Republic in terms that have no precedent in Latin-American history. This will be heartening for all the nations and all the forces in the hemisphere which hold democracy, freedom and human rights to be paramount.

The chairman of the Peace Committee is an American, Ambassador John C. Dreier. The United States is now lined up openly against the Trujillo tyranny for the first time, and in strong language. Of course, our statesmen never liked or approved of the brutal, corrupt and degrading tyranny that Generalissimo Trujillo has maintained in the Dominican Republic for more than three decades. However, the principle of "nonintervention" was considered too sacred to oppose. Now it is recognized that "flagrant and widespread violations of human rights," as the OAS report puts it, must be condemned on moral and practical grounds. Colombia, El Salvador, Mexico and Uruguay were reprtsented on the Peace Committee—a good cross-section of Latin-American opinion.

The question in everyone's mind will be: How much longer can Generalissimo Trujillo stand the powerful pressures being brought to bear against him in the face of a bad and steadily deteriorating economic situation? Six Latin-American nations have broken diplomatic relations with Ciudad Trujillo. The OAS is moving strongly for the first time. The Roman Catholic Church is in bitter opposition. The dictator may have intimidated and terrorized the internal opposition, but it is there and it represents the best elements in the country. The exiles are active, although still not united and still without strong leaders.

Then there is the economy. The foreign exchange position has deteriorated rapidly and continues to deteriorate. Reserves are almost gone. No international agency and no private banks will lend any money today. The fall in the price of coffee, the country's main source of income, has been a catastrophe. The huge expenditures on arms and on the Foreign Legion have been crippling. Tourism has fallen.

A dictator always looks strong until the last moment, but no dictator can long resist such pressures as Generalissimo Trujillo is being forced to bear.

Rural Electrification and Modern Life

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks I would like to call the attention of my colleagues to a particularly worthwhile essay written by a young constituent. She is writing about a subject which must seem foreign to most Americans living in cities; the lack of electricity.

Few of us in our lifetime have been without electricity as a normal part of our living. Once in a while there is a power failure and candles or lamps are

lit. It is usually a time for much merrymaking and laughter. But it wasn't so long ago in this country that literally millions of Americans were constantly without power; they had no light switches to turn on and they could not use such everyday implements as washing machines or vacuum sweepers. I refer to the farmers of America who were too far from powerlines to be able to afford the luxury of electricity.

Now, however, their number has dwindled to a very small point because of the activity of the Rural Electrification Administration which, through low-cost loans has made it possible for the farmers to bring the power to the farms of our land.

Miss Carol Lee Wall, of Haigler, Nebr., in an essay sponsored by the REA's of the State, has graphically outlined the situation in the following essay:

RURAL ELECTRIFICATION AND THE VALUE OF ELECTRICITY IN THE HOME AND ON THE FARM

How dark is the darkest night? Farmer Jones wakens from a fretful sleep needing a drink of water. He gets out of bed, searches through his overalls pockets trying to find a match to light the kerosene lamp. Finally he locates a broken match and by using extreme care, manages to strike it and reach for the smoky lamp chimney before the light flickers and dies. Oh well, he knows where the washstand and water bucket are. He can find his way in the dark. One, two, three, four steps across the living room and into the kitchen. One, two—whoops. He slips in a puddle of water and sprawls across the floor. Who forgot to empty that pan of drip water under the icebox anyway? Mrs. Farmer Jones had been completely exhausted at bedtime and is not exactly delighted at being wakened at 1:30 in the morning. After all, she had done the family ironing and baked a big batch of bread and it wasn't her fault that the old kitchen range wouldn't burn those wet cobs without putting out more smoke than heat. However, she is accustomed to such rude awakenings so she locates the little flashlight under her pillow and goes to the aid of Farmer Jones.

Sitting in a puddle of water in the middle of the night, he isn't conducive to joviality, and when he finally gets enough light to see a miller floating in the bucket of drinking water, his disposition isn't improved.

Remembering such incidents in the time before rural electrification became a part of our lives, seems amusing now but also makes us appreciate and realize the value of electricity to our farm homes.

Half of the world's supply of electricity is generated and used in the United States and about one-third of this supply is used in homes and on farms. More than 400 different chores in the farm home and barnyard are performed by electricity. The drudgery and tiring work are being taken out of farming but the farmer himself is only beginning to comprehend what electric power can mean in his occupation.

Little more than a generation ago, rural electrification was but a dream in the minds of a few public-spirited individuals. Nebraska is proud of Senator George Norris and others who had worked and planned for so long for a power project low enough in rates to benefit rural households. President Roosevelt signed the order that established the Rural Electrification Administration Act on May 11, 1935.

Let's look at Farmer Jones now: After a long day in the fields, the thought of milking the cows with the electric milking machine and separating with an electric cream separator is rather appealing. After chores, he goes into an air conditioned, vacuum cleaned house. A shower with plenty of hot water helps him relax and enjoy supper. Mrs. Farmer Jones had had a busy day, too, but she had the help of her washer-dryer, iron and mangle, and many other appliances. She can put the dishes in the electric dishwasher and join her husband for a time of reading (with good light), or watching television. Before retiring, Farmer Jones wants to look over the barnyard. He pushes the switch and light floods the farm. The sounds of the electric water pump, food freezer, and refrigerator are like a symphony to him. He can't help thinking how different his life is now from what it was before electricity came to the farm and a feeling of gratitude wells up inside as he thinks of REA.

Meadows which have been covered with water so late in the Spring and which previously affected the hay harvests, are now being drained by pumps powered by electricity.

If a piece of machinery breaks it goes to our own shop on the ranch where it is welded and put back into operation in less time than we could take it to town in the pre-REA era.

All of our corrals and cow barns are lighted simply by flicking a switch. Electricity provides automation to facilitate household chores, heats our homes, and supplies invaluable lighting. The school being better lighted lessens the eye strain and adds greatly to the comfort of the children and teachers.

Before REA came we had a windcharger and a few appliances, but to be able to iron it was necessary for the wind to blow in order to have sufficient power. It seemed that mother ironed accordingly to how hard the wind blew.

About the 20th of each month Dad gets our billing book, figures our kilowatt-hour consumption, and makes a check to Panhandle REA. I was looking over his shoulder and noticed the amount of the check and remarked, "Gee, Dad, electricity is very expensive, isn't it?" He answered, "No, it is probably the cheapest thing that we have today," and went on to explain that it is practically the only thing that costs less today than it did 10 years ago. He said our dollar today buys more electricity than it did at that time. I don't know much about that end of the business, but who am I to argue with Dad?

When I think of all the wonderful things REA makes available I'm so thankful and also realize that there is indeed a higher power than man. I know that it took man's money and initiative to get this to our homes but I also am reminded of this verse in the Bible: "In the beginning" God said, "Let there be light: and there was light."

How could anything so wonderful as REA be possible without divine blessing?

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

(By John D. Streiff)

When rural electrification came into our homes and on our places, it marked, not another milestone, but, a new era for us. An era of more modern living, work made easier, and conveniences never before possible.

Our homes blossomed out with hot and cold running water, food freezers, modern stoves, electric appliances, and to many, electric heat. The day of the "cow chip heat" is past. At Christmas time the gayly lighted Christmas trees add beauty to the televised Noel programs, which were probably even undreamed of by our forefathers who lighted their way and homes with candles. Air conditioning is no longer for city people only, but is available to 90-plus percent of Nebraska's rural families now served by rural electrification.

Among the thousand and one ways work was made easier for the house are the modern laundry, no more lamps to keep clean and fill, and ashes for father to carry out. Father also has his repair shop much more modern than he could possibly have it without electricity. He now brings his machines into the shop for welding or any repairs or changes he might want to make. Now a choice may be had of electric drills, saws, grinders, sickle sharpeners, and rundown batteries can be recharged at home.

On cold, wet, bone-chilling spring days and nights the newborn livestock is kept warm and dry under the modern heat lamps and brooders. A flip of the switch takes the place of the lantern. The yard lights light up the barnyards and makes the chores much easier to do.

Rural electrification has made it possible for the cattle to have warm fresh water all

The Value of Rural Electrification in Our Home and Community

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Thursday, June 9, 1960

Mr. HRUSKA. Mr. President, 1960 is the 25th anniversary of the rural electrification program.

In celebration of the event and of the benefits of this quarter century of effort on behalf of the farmers of our Nation, students have been invited to write suitable esays.

Mrs. Lucille A. Clema, of Lincoln, Nebr. has sent in two of the winning essays from my native State.

Charlain Ferguson, junior in the Hyannis (Nebr.) High School is the author of one of these essays.

I ask unanimous consent that it be printed in the Appendix of the RECORD.

The author of another of these essays is 16-year-old John D. Streiff, of Flats, Nebr., a student at the McPherson County High School.

I also ask unanimous consent that his essay be printed in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

(By Charlain Ferguson)

One would have to be a resident of our community to realize the value of rural electrification.

No power company was ever interested enough in our area to provide us with electricity, and if one would have considered it the rates would have been exorbitant, out of the reach of the average family. In 1951, our area was fortunate enough to be electrified. In 9 years how our community has changed.

Barren acres due to the lack of water have been made productive through irrigation which is derived from electricity. Ranchers are not inclined to be farm-minded, but I firmly believe that, in the future, the soil in our community which is adaptable will be studded with fields of alfalfa. This will be fed to cattle which as every one knowns is the main product of the Sandhills ranchers.

the time. It has made possible the convenience of milking machines, electric separators, pasteurizers, and what have you. Feed grinding, loading, and unloading are among the many, many labor saving duties performed by electricity which cannot be measured in value.

During the spring and summer months when guests are entertained for the evening meal an electric grill or broiler adds to the pleasures of a lawn party. The children can enjoy their games and contests on a well lighted yard long after dark.

Last but by no means least is the small towns served by the rural electric lines. Most of these were served by diesel plants which made the lights jump every time a cylinder fired.

Loads were limited on such plants and now, with rural electrification, locker plants serve hundreds of patrons thereby making such conveniences more easily accessible for those not having sufficient freezer space. The little stores have modern meatgrinders, cutters, coolers, as well as freezers and air conditioning to compete with larger cities.

Rural electrification is the realization of a dream shared by a few of our forefathers who candlelighted the frontier of the past. Its value cannot be measured by us who can and are reaping the luxuries, benefits, and privileges of using such a powerful, yet economical servant as rural electrification.

REA Still Rates

EXTENSION OF REMARKS
OF
HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. McGINLEY. Mr. Speaker, REA is now 25 years old. A whole new generation of rural people have enjoyed the benefits of electricity who never knew the life of wood ranges, kerosene lamps, and the other inconveniences of an almost primitive living.

But these young people appreciate the wonderful new life that was made possible by the rural electrification program. They have been regaled by the wonders wrought by this program which owes much of its existence to the great American, Senator George Norris, who served our State so magnificently for so many years.

Proof of the appreciation of REA can be found in the two winning essays of students from my hometown which were selected in a contest sponsored by the Midwest Electric Membership Corp., in cooperation with the Nebraska Rural Electric Association.

Cassie Fuller and Roger Bodke are both juniors at Ogallala High School and their families are well known and well liked members of the community.

Mr. Speaker, I would like to insert at this point the two winning essays:

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

(By Roger Bodke)

The value of electricity in our home and community means a lot to the people who live in the community itself. The people that live in the community are common, ordinary human beings just like you and me. These people are interested in a way of life to make life easier for everyone else, too.

Electricity is one of the main backbones of our Nation. It takes a lot of communities just like the one we live in, to make up this Nation in which we live. The rural community has more of a chance to use the electricity more often than does the city person, because he has more things to use it on, and with more tools to work with.

Electricity puts movement into the machines that are being turned and used over and over again each day. There is an essential need for it in lighting, so a person doesn't have to get a candle like in the older days, and nowadays, it is possible to get different colored light for the different rooms of the house. Another essential of electricity is in heating. Nowadays a person doesn't have to go out to chop some wood in order to get warm; all you have to do is just turn a little screw to turn up the heat to keep yourself comfortable. In the winter time, electricity is handy again if you have young livestock that has just been born in cold weather, as most of them will survive. Electricity is important. You can compare the number of animals saved to the low cost of the amount of electricity used.

After a while, I think that the people of the community just use electricity as if it were a natural thing, or as a natural element, but after the electricity has been shut off for a few hours, people really stop to think how handy, and how valuable that switch is that is in the wall or wherever it is that lights or heats anything in this modern changing world.

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

(By Cassie Fuller)

Electricity in and around our home and community is very important because of all the electrical appliances and tools that are needed to make our lives easier and safer in everyday living.

Better storage and quicker handling of crops with electric motors on elevators and blowers give the farmers more leisure time as do the better, more efficient lighting systems. The lights throughout the dairy barns provide enough light to lessen the liability of accidents. The lights in the feedlots allow the farmer to check and feed the livestock.

The yard lights serve many purposes such as providing light for more outdoor evening activities, the yard is light enough that visitors can see where to walk, and on a stormy night, a yard light will show a stranded traveler where he can reach help.

Electricity in the house makes the duties of cleaning house easier with vacuums, electric scrubber and waxing machines. It makes food preparations simpler with deep freezers, refrigerators, electric stoves, ovens, roasters, and skillets, all of which are electrically controlled.

There is less work and worry with electric washers and dryers which can be set for a certain amount of time and forgotten while you go about your work, entertainment, or even go to town.

The repairing of machinery and the building of many things at home is now made possible by the use of electrical saws, drills, sanders, welders, and soldering irons. All of these tools help the farmers by saving the many hours of transporting the broken piece of machinery to the professional welder and it also saves the farmer from paying the welder's fee.

The milking systems are made to produce faster and easier work. Because of the larger motors in the milking systems, more milking machines can be used to save time and labor. While several cows are being milked, the farmer may go do some other chores.

Electric heat bulbs, when used properly, help the farmer save many small animals such as pigs, calves, lambs, and colts that are born during the winter months. The heat bulb is also very effective as a brooder lamp which helps warm chickens and other types of poultry. These bulbs keep the poultry from crowding.

Electric fences are used by nearly everyone in our community to keep their cattle in, which, in turn, keeps the neighbor's cattle out and off their fields.

The many irrigation wells in our community help make the crops grow and produce much more than the dryland crops, even during years with plenty of natural moisture.

The domestic wells serve many purposes such as supplying water to the house, the barn, and the stock tanks. In the house, many uses are made of this water, but outside of the house, this water is used to wash cars and windows, water lawns, flowers, and shrubs, and to water the gardens which are very important to most farm families.

Our leisure time is spent in our living rooms watching television, listening to the hi-fi, or listening to the radio, all of which we would have to do without if we had no electricity.

Electricity is very important to all of us in all we do for it lessens our work, saves money, and lengthens our leisure time in providing a needed essential at just the right time.

Morgan City, La., High School Band Again Visiting Capital

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. WILLIS. Mr. Speaker, it is indeed a pleasure to again welcome to Washington from my congressional district the Morgan City, La., High School band and representatives of the Morgan City High School Music Boosters Club, sponsoring organization.

Members of the group, numbering over 100, arrived Wednesday morning for a busy 3-day itinerary of visits to major points of interest in and around the Capital. In general charge of the trip is Mrs. Steve Berniard, Boosters Club chairman. The band director is Richard Robichaux and also with the group is Principal L. T. Holmes of Morgan City High School.

A very popular and capable organization, with enthusiastic community support, the band previously visited Washington in 1956.

The visitors are taking time to boost the Morgan City Centennial August 27–September 5 of this year, and in recognition of that occasion some of the men in the group are wearing beards. The centennial will be held in conjunction with Morgan City's long-established annual shrimp festival which attracts widespread attention and draws throngs each year. The 1960 festival is scheduled for the Labor Day weekend.

The band members here this week are:

Bradley Achee, Karen Achee, Robert Adams, Dewey Aucoin, Jane Aucoin, Harry Badeaux, Audrey Beadle, Clarence Beadle, Ellen Belanger, Steve Berniard, Larry Broussard, Kathy Buckley, Sandra Cloutier, Sue Cloutier, Sherry Coleman, Brenda Comeaux, Janette Comeaux, Pat

Curfman, Jim Dalton, Huey Daigle, Pat DiMiceli, Renetta Dorion, Joann Dollahite, Karen Dupuis, Jerry Duval, Wayne Eues, Karen Forgey, Pat Green, Tim Gilmore, Joy Giroir, Betty Gorman, Johnny Gorman, Barbara Guidry, Conley Hardee, Connie Hebert, James Hylen, Joe D. Kimbrell, Jr., Wayne King, Kathy LeBlanc, Carol Lodrigue, Henry Paul Loeb, Judy Manfre, Judy Martin, Howard May, Bob McChesney, Pamela Meranta, Teresa Ann Metz, Hilton Michel, Jr., Eugene Morgan, Sandra Naquin, Horace Naquin, Clifford Olsen, Mary Jane Peebles, Kirby Phelps, Dianne Picou, Jerry Plessala, Carol Prestenback, Tommy Robison, Jerry Rock, Gaydell Roe, Lenny Roes, Kenneth Wayne Sellers, Kathleen Shepherd, Charles Teacle, Connie Joe Siracusa, Roland Stansbury, Russell Stoute, Pat Theriot, Beatrice Thompson, Garrett Topham, Janet Gayle Topham, Julia Wedaman, Dolores Westfall, Richard Rock, LeRoy Dupre, Jim White, all of Morgan City; and Celine Bourg, of Berwick, La.

Adults participating in the trip are:

Mrs. Steve Berniard, Mrs. Walter Gilmore, Mrs. Homer Achee, Mrs. Urban Prestenback, Mrs. Jean Picou, Mrs. W. J. LeBlanc, Mr. Joe Siracusa, Mr. Clive Cloutier, Mrs. Clive Cloutier, Mr. Erwin Beadle, Mr. Cyrus Giroir, Mrs. Cyrus Giroir, Mrs. George Buckley, Mrs. Oliver Bergeron, Mrs. Ivan Belanger, Mr. L. T. Holmes, Mr. Richard Robichaux, Mr. Horace Naquin, Mrs. Selma Blum, Mrs. Carl Loeb, Mrs. J. W. Peebles, Mr. J. J. Fontenot, Mr. Alvin Adams, Mrs. Alvin Adams, Mrs. Gerald Buford, Mrs. L. Cloutier, Mrs. Theresa Canty, and Mrs. Lynn Arceneaux, all of Morgan City; Miss Alice Landry, Mrs. Weston Landry, Mrs. Harry Bergeron, Mrs. William Theriot, Mrs. Ivy Nini, Mrs. Jeffry Theriot, Mrs. Oscar Hebert, all of Berwick; and Mrs. Lawrence Etie of New Iberia, La.

The Better Way

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. MONAGAN. Mr. Speaker, I borrow for the title of this extension of my remarks the title given to an editorial appearing in the Waterbury (Conn.) American, of May 27, 1960. This editorial points up the "better way" that our distinguished Senator from Connecticut, the Honorable THOMAS J. DODD, handled a situation which, in an earlier day and by other minds might well have resulted in unjustified and cruel injury to an individual or a group of individuals. Surely this is the "better" way. I am proud to know that this better way has been pointed out by Senator DODD and I commend its reading to all thoughtful citizens of the United States. Pursuant to permission previously granted I append this editorial:

THE BETTER WAY

No one questions the unqualified patriotism of the fine people banded together under the Committee for a Sane Nuclear Policy. They are well-meaning folks with an acute concern for the horrors which atomic fallout can inflict on all mankind. Nothing cheaper than to disparage them. And Senator THOMAS J. DODD was exceedingly careful not to do that when he called their attention to Communist infiltration in their ranks. He confined himself to pointing out the condition and calling upon them to clean house. And we have no doubt that they will.

What strikes us in this episode is the contrast it offers to other times and to other congressional Members in those times.

Many of the organizations which a few years ago were denounced as "Communist fronts" were dedicated to the causes of peace and international friendship. Many of their members were high-minded people innocent of any slightest design to betray American principles. Indeed the reason they gave their names and their contributions to the organizations they supported were commendably altruistic.

But because the Red brethren had duped people or crept into their organization a lot of such folks found themselves facing congressional inquisitors. And it was demanded of them that they submit fellow members whom they had every reason to believe were as innocent as themselves to the same kind of inquisition they were facing, with all its attendant embarrassment, or be held in contempt of the Congress.

That was the feverish way things were done then, when witch hunting was in flower.

There is a better way—a nondemagogic way. And Senator DODD has admirably exemplified it.

What Rural Electrification Means

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. WEAVER. Mr. Speaker, to those Americans who have lived their lives in our great cities and smaller towns, it is hardly conceivable that any American is so situated that he cannot flick on a switch and have light or power to turn the wheels of the countless gadgets in the modern home.

And yet, there are still Americans living on the small, remote farms of the Nation who do not have this electric power. There would be millions more who would not have it were it not for the Rural Electrification Administration program to bring electricity at a low cost to the farmers.

That the American farmers who have been able to take advantage of this program are deeply grateful to the American people for this privilege is ably demonstrated through the attitudes of their youngsters.

I would like at this point to place in the RECORD for my colleagues' attention an essay written by Miss Shirley Hadan, a 17-year-old high school junior from Franklin, Nebr. She is one of the Nebraska State REA essay contest winners.

Her essay, which I think merits wide circulation, follows:

WHAT RURAL ELECTRIFICATION MEANS TO ME AND MY COMMUNITY

In the beginning, God created the heaven and the earth. He said, "Let there be light, and there was light." I wonder if He knew then that today His tiny lamps would be dotting the rural countryside.

In 1948, I was a little girl of 6, but I can remember that thrilling night that REA was turned on at our farmstead. Mother and Daddy always speak of it as a thrill of a lifetime. Now that I'm older I, too, realize what rural electrification means to me and my community. Just let the electricity be off for a few minutes and I am at a loss. It just seems that everything is wrong. Well, it realy is; no lights, no water, no TV, no time, no refrigeration, and oh, so many advantages have been taken away. Then when the switch is thrown, so am I. I'm up at my regular routine again. I just can't imagine how pioneers or even my father and mother managed without rural electrification.

Without electricity, farmers would have to retire from the farm at an earlier age. But with all the conveniences of electricity such as lighted outbuildings, heat lamps, irrigation and all of the pushbutton feeding gadgets enables him to carry on. I don't think my father could do all the work he does today without the help of electricity. It is his cheapest paid hired help.

Mother, too, could not do so much community service work and enjoy life as much as she does without the help of electricity. She says it adds so much to family living.

When I stand out on our hilltop farmstead and look over the countryside, and see all of the yard lights around the community, it gives me a feeling of security and togetherness. This bad snowy winter, when we could not visit with our neighbors, it made us feel closer when we could see each other's lights.

I believe at sometime or another every REA user in our community has thanked the Lord—the giver of all good things—for the comfort and happiness that rural electrification has brought to him and his family.

A Program To Combat Illegitimacy

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. EVERETT. Mr. Speaker, for the past few years we have noticed with great alarm the rising number of illigitimate children that are born to unwed mothers, not only in Tennessee but the Nation as well.

A number of the commissioners of public welfare and other related agencies in several of the States have tried to do something about this problem and on every occasion the Department of Health, Education, and Welfare of our Government has turned thumbs down on the proposal.

In our State of Tennessee we have an outstanding Governor, Buford Ellington. He is one of the greatest Governors our

State has ever had. In selecting his cabinet to administer the department of public welfare he selected Mrs. C. Frank Scott, a former State senator of Memphis, who incidentally was born and raised in my hometown of Union City, Tenn.

In several conferences Governor Ellington and Mrs. Scott and their respective staffs have adopted a program which has met with the approval of the Department of Health, Education, and Welfare to do something about this problem. I have asked Mrs. Scott to write me a letter setting out in detail the way that they are meeting this problem. Governor Ellington and Mrs. Scott are operating under the slogan, "The difficult we will do today and the impossible will take a little longer."

I will insert this letter today and will at a future date insert editorials and other related materials on this outstanding accomplishment of Governor Ellington and Mrs. Scott in this field.

I believe that this problem is so great that we should not only bring this to the attention of the Members of this Congress but to the Nation as well.

Mrs. Scott's letter to me follows:

STATE OF TENNESSEE,
DEPARTMENT OF PUBLIC WELFARE,
Nashville, May 18, 1960.

Hon. ROBERT A. EVERETT,
House Office Building,
Washington, D.C.

DEAR FATS: I appreciated your long-distance call and your expression of interest in our new policy on suitability of the home. I am enclosing a copy of our policy statement which has been incorporated into our Public Assistance Manual and news releases which you requested.

The department's policy that a child receiving aid to dependent children shall be living in a suitable family home is based on a provision in our Tennessee Aid to Dependent Children Law. The new policy which is an expansion of our former policy provides for a plan of statistical reporting and review by regional and State office staff whenever one of the following factors is present:

1. Abuse of the child physically or mentally by beating, overwork, or other cruel treatment, or by improper relations with the child.

2. Exploitation of the child by having it beg on the streets, sell or make contracts for the sale of illegal products, or engage in prostitution.

3. Repeated conviction of the parent or other relative for disorderly conduct, alcoholism, prostitution, or other violations of law evincing a weakness or lack of moral structure in the home.

4. Neglect of the needs of the child by failing to provide proper food and clothing where this results, not from lack of income, but from use of the income or grant for purposes other than the procurement of necessities, or neglect of the child by failure to assist it in maintaining a satisfactory school attendance record when not prevented by factors outside the control of the parent or relative.

5. Neglect in care of the child by reason of the absence of the parents or relatives who leave the child alone in the home, on the streets, or frequently in the homes of neighbors, where such absence is not due to employment or other valid requirements, but to engagement in social activities or undesirable pursuits.

6. Feeblemindedness or disability of the parents or relatives to such extent that the parent cannot give the child the minimum care necessary to protect his physical and mental health.

7. Failure of the parent or relative to provide a stable moral environment for the child, by engaging in promiscuous conduct either in or outside of the home, or by having an illegitimate child while receiving an assistance payment from the department, or by otherwise failing to demonstrate an intent to establish a stable home. For purposes of determining suitability, an illegitimate child is defined as a child whose natural father is someone other than the mother's legal husband.

The Department of Public Welfare has a legal responsibility for protective services to children who are neglected and abused, and we are going to make a concerted effort to carry out the intent of our laws which give recognition to the right of a child to grow up in a family environment offering him opportunity for normal development.

We have a basic respect for the rights and responsibilities of parents and a deep interest in the well-being of children, and the Department is giving first priority to initiating intensive study and service in accomplishing the intent and purpose of the laws and policies governing the aid to dependent children program. Our reporting system provided under the new policy will enable us to obtain information in regard to the existing problems and needs and will be useful in future planning.

I shall be glad to have your reactions to this new policy, and please do not hesitate to write me regarding any questions you might have.

With best regards.

Sincerely yours,

MRS. C. FRANK SCOTT,
Commissioner.

Tribute to the Late Elizabeth L. Towne

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. CONTE. Mr. Speaker, one of the leading citizens of my district and, indeed of the Nation, Mrs. Elizabeth L. Towne, noted editor, author, lecturer, religious and civic leader, died Wednesday, June 1, in Holyoke, Mass. I should like to insert, under extension of remarks, a portion of an editorial paid to Mrs. Towne by the late Mrs. William G. Dwight, a close associate of Mrs. Towne's for over half a century in Holyoke affairs:

Elizabeth Towne was one of the leaders of the "new thought" movement in the United States, and she founded the Nautilus magazine which put the Holyoke, Mass., address on practically every newsstand in the country.

Travelers in far countries would be asked, when they said they came from Holyoke, if they knew Elizabeth Towne? Time was when followers of "New Thought," the title with which Mrs. Towne had popularized an ancient and enduring philosophy, accepted Elizabeth Towne in the measure with which Mary Baker Eddy has been held for her reinterpretation of one of the abiding truths of Christian teaching.

Born in Portland, Oreg., on May 11, 1865, the daughter of John Halsey and Jane Jones; Mrs. Towne had a long, full, and varied life. With the founding of her Nautilus magazine in 1898, she took her first step toward a dstinguished career which brought her national prominence as an editor, author, and lecturer. She had been instrumental in developing the modern philosophy of "new thought."

Mrs. Towne received her formal academic training in the grammar and high schools of Portland, Oreg., supplementing this instruction by intense study of the various subjects in which she became interested. She made a particular close study of the Bible, which was her source book and guide for more than half a century.

On May 26, 1900, she married William Elmer Towne, vice president and secretary of the Elizabeth Towne Co., Inc. Following this marriage, she went to Holyoke and centered her activities there. She brought with her the Nautilus which she has founded in Portland 2 years before her marriage. Her magazine was a journal of metaphysics whose original issue consisted of 2,800 copies. The magazine developed steadily and has filled a need in the lives of many readers.

The circulation grew until it exceeded 90,000 copies per month and has been distributed in every civilized country in the world. Many celebrated writers have contributed to its numbers, including Ella Wheeler Wilcox, Edward Markham, Dr. Frank Crane, Paul Ellsworth, Sinclair Lewis, Thomas Drier and others.

She was also the author of many volumes published between 1903 and 1926, including "Joy Philosophy," "Practical Methods for Self-Development," "How to Concentrate," "How to Train Children and Parents," and many more. The volumes cover many topics. Some cover "new thought" textbooks, some are religious treatises, and others are essays on various aspects of life. A number have been translated into German, French, Swedish, Italian, Spanish, Chinese, and Hindustani.

She was a pioneer among women in politics and, at the time of the progressive movement in American politics, she and her husband sat as delegates in the two conventions of 1912 at which the Progressive Party was formed and Theodore Roosevelt nominated for the presidency. Mrs. Towne was also one of the three women State committeemen of the Progressive Party in Massachusetts. In December 1926, she had the distinction of becoming the first woman alderman-at-large in Holyoke, and she took office for a 2-year term. In 1928, she became the first woman ever to run for mayor of that city. Running on a nonpartisan ticket, she faced the major disadvantage of having no party or machine organization to support her.

Yes, Elizabeth Towne will long be remembered. Probably there is no one teacher in the entire history of the new thought movement that is more beloved through the years than this gracious lady. Her name is a byword in the homes of most truth students, and anyone who has contacted her personally, remembers the joyous love which she unconsciously expressed toward them.

Mineowners and Labor Are Building Together

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an

article appearing in today's issue of the Washington Daily News titled "Coal Is a Giant," written by the distinguished and able president of the United Mine Workers of America, the Honorable Thomas Kennedy. This is a fine statement by President Kennedy, and I hope that my colleagues in the House will find time to read it:

[From the Washington Daily News, June 9, 1960]

COAL IS A GIANT—MINEOWNERS AND LABOR ARE BUILDING TOGETHER

(By Thomas Kennedy, president, United Mine Workers)

America's coal industry is a quiet giant—a colossus of strength, able and willing to provide the power and energy needed to keep the United States in the forefront as the greatest industrial nation in the world.

But the American people must be awakened to the dangers that threaten our most basic industry. The United Mine Workers of America and the coal industry are working together to overcome these dangers and to bring about economic stability for our great industry in the interest of the continuing freedom and security of America.

FEDERAL HELP

Many of the problems of the coal industry could be corrected by constructive legislative action by the Congress and the executive branch of the Federal Government.

The approximately 200,000 men working in our industry are now producing about 400 million tons of coal each year. Yet with some economic adjustments and recognition by the Federal Government of the vital role of coal in America's progress we could step up annual production to as much as 700 million tons. This jump in output is possible and may become necessary.

We can all recall the oil shortage in World War II. This was mild compared with what will happen if we continue to depend upon foreign sources of petroleum to the detriment of the well-being of our domestic coal industry.

A war between the free world and the Communists could, and probably would, cut off these foreign oil supplies virtually overnight. Right now, for example, the economy of the eastern part of the United States is dependent upon continuing shipments of this foreign oil as the major fuel to produce gasoline.

And foreign residual (waste) oil from Venezuela is still being dumped into coal's traditional eastern seaboard markets at cutthroat prices.

Yet American coal is virtually unlimited in supply. There are probably 2,000 years of recoverable coal reserves within our borders on the basis of the present rate of consumption. In contrast we may have only a 20-to-40-year supply of petroleum and less than that of natural gas, even including that which is coming into this country at below-cost prices by Canada and Mexico.

FAIR TREATMENT

There is no question about coal's future if our industry is given fair treatment. The productivity increases in our industry are the highest of any industry in the economy. These increases can and will continue, enabling coal to remain competitive with other energy sources. But there must be a halt to discrimination against coal in favor of the other fuels.

Despite lack of action by the present Congress, we of the coal industry will continue our fight for establishment of a national fuels policy. The objective of promulgating such a policy would be to bring about rational marketing and conservation of America's energy supplies.

We also are seeking final action by the Congress to expand the program of research and development of our coal industry, looking toward new markets for coal—both anthracite and bituminous.

PROGRESS

Union coal miners are proud of the progress made by our industry. The members of the United Mine Workers of America today are the best paid industrial workers in the world, working in one of the most productive and progressive basic industries in the Nation.

But as a union we also are aware of the continuing daily problems of the men who must go into the mines to bring out the coal. We know of the human tragedy caused by chronic unemployment in the coalfields of America. We know that this joblessness can be overcome only by an expanding economy.

Alaska and National Defense

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. RIVERS of Alaska. Mr. Speaker, the recent decision of the Air Force, presently under review by the Joint Chiefs of Staff, to inactivate the 449th Fighter Interceptor Squadron at Ladd Air Force Base, near Fairbanks, Alaska, has met not only with widespread opposition in Alaska and other States, but has opened to close scrutiny and analysis other phases bearing upon the question of the adequacy of our national defense effort in Alaska. The many implications affecting our country as a whole are ably set forth by the American Legion, Department of Alaska, in Resolution No. 60–19 adopted in convention assembled at Homer, Alaska, on June 4, 1960. The resolution follows:

It is inconceivable to thinking people in Alaska and elsewhere that America's top military strategists have apparently concluded that it would be preferable to allow an enemy to stage the air battle over densely populated areas of the eastern seaboard or over the Nation's industrial heartland instead of enforcing upon him the necessity for neutralizing destructive forces which could be aimed at him from Alaska.

In the 49th State, America possesses more than 500,000 square miles of territory under its own control and with vast uninhabited areas which could accommodate missile sites and other military facilities far distant from any vital populated nerve center. With Soviet Russia less than 100 miles distant intermediate range ballistic missiles (IRBM's) could be employed as effectively against enemy targets as intercontinental-type missiles (ICBM's) emplaced 3,000 or 4,000 miles away in the other States. The argument that manned aircraft and missiles emplaced in lower California or Wyoming or elsewhere can protect the State of Alaska or negate Alaska's strategic potential is in direct contradiction of other arguments advanced by Air Force spokesmen who claim that range is the big factor in determining the accuracy and effectiveness of ballistic missiles. Assuming the latter to be true, it makes no sense at all to reason that missiles should be placed in hardened sites in the south 48, thousands of miles away from any target, where a significant percentage of the weapon's fuel supply would be expended before it would reach a point as near to the potential enemy as an unfired missile stationed in Alaska.

The present concept of massive retaliation advanced so successfully by the Strategic Air Command during the last few years, has its advantages from a strict deterrent standpoint but it presupposes that heartland America will suffer the first blows. This means that millions of Americans would have to die while the lucky ones could take consolation in the knowledge that SAC bombers were off and away to wreak destruction on Russia.

The American people must be made to realize the full import of decisions being made in the Pentagon and what some of them could mean if war should come. By concentrating missile sites, fighter-interceptor forces and other defensive and offensive units in heartland USA instead of fortifying Alaska, the enemy is relieved of any significant worry about having to neutralize forces in Alaska before hitting the south 48.

The potential enemy should be forced to consider Alaska first and make preparations to deal with Alaska before daring to launch an attack in some other direction. The enemy should be made to face up to the fact that Alaska is fortified to the hilt with missiles aimed at specific targets and that first-line fighter interceptors such as F–105's are on hand in sufficient numbers to team with the Nike-Hercules and Pershing missiles to blunt any attempted assault and provide more time for alerting the other States. These forces could be augmented with submarines equipped with Polaris underwater-to-surface missiles which would constitute a deadly threat to the enemy right in his own back door.

As it stands today, the token military forces here are no threat to the enemy. These forces are not adequate to protect Alaska and are certainly not capable of assisting in the protection of the other States. The chief function is to warn the rest of the country of impending attack. Even so, without adequate first-line fighter-interceptors to make contact and establish positive identification, the fire order may not come until too late. Nike batteries can track blips on their radar screens but this does not establish positive enemy identification.

The American Legion and, indeed, all Alaskans, are deadly serious about this matter because we feel that decisions are being made in Washington which are of a life-and-death nature. We would prefer that the State of Alaska be developed into the highest type of priority target, from the enemy standpoint, rather than to stand by and watch decisions being made which would leave the enemy no choice but to strike America's heartland first. If given the choice of whether Alaska should be fortified or whether plans should continue which would guarantee that any future air battle would be fought over New York, Pittsburgh, Chicago, or Washington, D.C., there is no doubt that the majority of thinking Americans would insist upon having the missiles and fighters and troops in Alaska necessary to force the enemy to alter his whole concept of strategic planning in order to take into account the new fortified stature of the 49th State. The people cannot know about this and get concerned about it unless it is brought to their attention. Pentagon planners will not alter their plans to include Alaska unless tremendous pressures are brought to bear upon them from congressional sources and powerful organized groups. In fact, the trend seems to be in the opposite direction.

The citizens of Alaska and elsewhere cannot reconcile the actions of our officials in pleading with foreign nations to allow our Government to place missiles in their countries

and being denied because those governments do not want to become targets. At the same time elected representatives of Alaska in Washington are being told by Gen. Curtis LeMay, Vice Chief of Staff of the Air Force, that Alaska is not of much strategic value in the defense picture. This is contrary to what Gen. Billy Mitchell said, and, we believe, contrary to what the present Alaskan Commander, Lt. Gen. Frank A. Armstrong, Jr., believes. We insist upon some reasonable explanation of LeMay's thesis and will not be brushed off with statements such as "it costs too much" or "we can handle it from other locations." Many of the statements handed out to interested parties will simply not stand up if challenged for more specifics.

This is a crucial time for America and the free world. It is vital to our survival that Alaska's strategic importance as the closest American soil to Russia and to China be reviewed and reviewed thoroughly. The people of this State and of all the other States are entitled to know what is going on and the risks that are being taken. The citizens who pay the taxes and vote are not qualified to know precisely what type missiles and what type aircraft should be utilized in certain localities but even the most naive can look at a globe of the world and and ask some fairly intelligent questions about why no missiles in Alaska—why no firstline fighters—why no serious attempts to utilize this vast opportunity to force the enemy to redo his entire military concept. This is not a question of economic effect upon the new State, it is a question of blueprint for survival and time is running out. The Alaska Department of the American Legion calls upon all citizens of Alaska and on all Americans everywhere to assist our elected officials in obtaining a reevaluation of the military posture of Alaska.

Basil L. Whitener Honored

EXTENSION OF REMARKS
OF
HON. HUGH Q. ALEXANDER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. ALEXANDER. Mr. Speaker, on June 7, 1960, one of my distinguished colleagues from North Carolina, the Honorable BASIL L. WHITENER, Congressman from the 11th Congressional District of North Carolina, received an honorary degree of doctor of laws from Belmont-Abbey College, Belmont, N.C. Accompanying the honorary degree was a citation which exemplifies his character and service and the high respect in which Mr. WHITENER is held by the people he has the honor to represent. This citation, I believe, will be of interest to all of his colleagues and speaks more eloquently than anything I can say about my friend and colleague, Mr. WHITENER, and under leave to extend my remarks, I wish to include this citation, as follows:

BASIL LEE WHITENER, ESQ.

In contemporary civilization, the democratic process has operated best under a republican form of government where the individual is enabled to participate in his own governace, through elected representation. The elected representatives function as agents for the people, and the quality of goverament rests upon the judgments and wisdom of these servants of the electorate.

The moral burden of representation is to steer toward a balance between two responsibilities, often in conflict with each other: to work for the general welfare and, at the same time, to reflect the will of a constituency.

The fundamental principle of the American democratic philosophy of government is the inherent dignity of the human personality and the protection of individual rights, guaranteed by our Constitution. When an elected Delegate to our Federal Legislature directs his efforts, his energies, his judgments, his wisdom, to this end, he deserves the gratitude of all Americans, but especially of the citizens whom he represents.

As the only senior college in the 11th Congressional District, Belmont Abbey College deems it a duty, as well as an honor, to give public recognition to its elected Representative in the U.S. Congress. He is a man dedicated to the preservation of American liberties, and labors to broaden opportunities for human growth. Aware of the complexities of modern legislation, he, nevertheless, has the acumen to synthesize into a simplicity the basic aim of all government: the common good.

He has prepared himself well for his duties, both by study and experience. As a student of law, a teacher, a father, a naval officer, he has learned the stern disciplines so necessary for personal freedom, which have provided him the wisdom indispensable in an elected Representative. He has called forth praise and admiration in the Halls of our National Capitol, and thus he has merited the confidence of his friends and fellow citizens.

As a special tribute to his past accomplishments and a pledge of our confidence in his future good work, the president and faculty of Belmont Abbey College call him here to be recognized, and with honor have designated that BASIL LEE WHITENER, Esq., receive, with all its rights and privileges, the degree: doctor of laws.

Given at Belmont Abbey College this 7th day of June, in the year of our Lord 1960, and of the founding of this college, the 84th.

The Vanishing Passenger Train

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. DAVIS of Tennessee. Mr. Speaker, I am sure that a great many of my colleagues share my feeling about the passing of the steam locomotive on the railroads of this country. Many of us in our youth unquestionably had an ambition to be an engineer, flagman, or conductor.

Dr. Paul Flowers, who writes a most interesting and informative daily column in the Memphis (Tenn.) Commercial Appeal, has written feelingly about the vanishing passenger train.

So much did it stimulate me that I ask you to extend my remarks in the RECORD, and to include this column.

The article follows:

[From the Memphis (Tenn.) Commercial Appeal, Aug. 20, 1959]

PAUL FLOWERS' GREENHOUSE

Nostalgia grabbed hold with a fury after Greenhouse shed a tear for the vanishing passenger train.

"I was what they called a drummer," wrote W. A. Ulrich, 993 Monroe. "I never rode anything but trains back in those days. Sometimes I even snitched a ride in a caboose on a local freight, and then called on my customers while the crew was spotting or picking up cars, or handling less-than-carload lots at platforms and wagonyards.

"I began as traveling salesman at the age of 18, and kept at it 36 years.

"Those were the days, playing pitch in the smoker, sometimes moving to the more sedate ladies' car. I did enjoy traveling and selling, even living in old-fashioned hostelries with the train running alongside the hotel."

Then B. Frank Lynn, which is the pseudonym for a well-known Delta schoolmaster, harks back to days of the Peavine.

In my own archives I find a tribute to the Peavine, as the Yazoo & Mississippi Valley's Delta Express was known, which appeared in this column in 1945.

"(The train) is a sort of neighborhood affair, which plies between Memphis and Greenville. Mothers time baby feedings by that train, folks stop what they are doing to note its passing, for it is the old reliable link with the world to the north and south of the lush Delta land."

(Remember, this was in 1945.)

"The gray-haired flagman is sort of mentor, father confessor, friend, and guide to all mankind on the train. He has cultivated a pleasant, almost singsong to call out the stops, although folks who ride the Winemvee don't need anybody to call out stations.

"This Delta train has another distinction, a colony of friendly, reasonably tame mice. In prehistoric times, figured according to mouse chronology, some beady-eyed little varmint around Memphis Central Station discovered that Delta folks had the habit of eating light lunches in those day coaches. Naturally, there were crumbs and other goodies, so the mice moved in. There was always a puddle of water at the coolers, so the train was a natural for mouse comfort and happiness.

"You can see them scurrying back and forth in the aisles, nosing into peanut hulls and rattling scraps of paper on the floor in search of tidbits.

"You'll notice some lady passengers with their feet drawn up onto the plush, and you might even hear an occasional squeal when some flower of Southern womanhood sees a mouse at too close range. But nobody's ever been hurt.

"One heartless and unimaginative traveler once brought a mousetrap and a scrap of hoop cheese aboard to snare the little rodents, but outraged public opinion required him to put traps and bait back into his pocket."

Well, the old steam-drawn Peavine is one with Nineveh and Tyre, replaced by roaring diesels and streamlined coaches, but the memory lingers on.

The Value of Rural Electrification in Our Home and Community

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. BROCK. Mr. Speaker, in connection with the 25th anniversary of the Federal rural electrification program the Nebraska Rural Electric Association, in conjunction with the various rural public

power districts, sponsored an essay contest participated in by local high school students throughout the State of Nebraska.

I am very proud to state that two young ladies located in the Third District, which I have the honor to represent, were among the nine statewide winners whose essays were selected as best representing the thoughts and impressions the youth of Nebraska have of the benefits and conveniences brought to their homes, farms and their daily lives.

The two young ladies, Miss Cheryl Wallin, Tilden High School, Tilden, Nebr., and Miss Leola Evans, Plainview High School, Pierce, Nebr., by their contributions in a literary sense, are a distinct credit to their parents, teachers, school and the community in which they reside.

Their essays bring to mind the enlightened and deep-rooted thinking of the younger generation regard the lasting benefits that rural electrification has brought to the rural areas, the generally improved cultural level of rural families, which has moved with rapid strides since 1935 when only 11 percent of our farms were then electrified. Today, thanks to the rural electrification programs, 97 percent of America's farms have the benefits of light, heat and power.

May I, therefore, Mr. Speaker, and with the consent of my colleagues in the House, include the essays of the Misses Wallin and Evans in the daily CONGRESSIONAL RECORD.

THE VALUE OF RURAL ELECTRIFICATION IN OUR HOME AND COMMUNITY

(By Cheryl Wallin)

Electricity, with its multitude of uses, has become a miraculous wonder for many rural areas. All of this really started in 1935, when Congress created the Rural Electrification Administration to finance the cost of the distribution of electricity. During the following years turbines, generators, transformers, huge poles, wires, bulbs, and electric appliances made their appearance on the rural scene. For the first time farmers and farming communities were able to purchase electricity at low rates.

Rural Electrification Administration is such a useful, silent helper in our homes today that we sometimes fail to realize its value as the star role in our life.

In our homes Rural Electrification Administration makes possible these jobs; the washing and drying of clothes; the warming of water; the sewing of clothes; the showing of television programs; the cooking, refrigerating, and disposing of food; the cooling of air; the hearing of records; the typing of words; but, best of all, the washing of dishes.

In the yard outside the house Rural Electrification Administration is found performing tasks, such as the pumping of water; the grinding of feed; the milking of cows; the separating of milk and cream; the using of heat lamps to warm the pigs and chickens; the mowing of lawns and the feeding of livestock.

While electricity saves us work at home, it also enables us to enjoy life in our small community.

Farms are kept green and productive by irrigation pumps, pipes and sprinklers. This equipment works day and night to distribute water to the verdant plants in the fields. Yard lights in the various farms, send beacons to visitors. The bulbs perched high on the poles, light the yard for the laborer doing the chores. Welders enable the farmers to keep their machinery in repair.

Rural Electrification Administration has enabled many rural youths to obtain employment, yet remain in the rural communities. Men are employed to build, repair, and maintain lines. Officeworkers are needed to keep the huge rural administration functioning efficiently and smoothly. Others are hired to do the various tasks that are necessary.

It is hard to measure the value of service. There is no convenient yardstick. Yet, Rural Electrification Administration service is valuable—it is the right arm of the farming community today.

We, in the rural areas, owe a debt of gratuitous praise to the concientious Congressmen of the United States of America who voted for the Rural Electrification Administration bill. Without their endorsement our rural areas might have remained in the stagnant condition they were a generation ago.

THE VALUE OF RURAL ELECTRIFICATION

(By Leola Evans)

Imagine, if you can, a rural community without electricity. It casts a rather dull scene that seems almost primitive. Although our ancestors lived and survived without electrification, they led an unnecessary life of hand labor.

In this space age, we are in the midst of new fantasies which have been declared impossible. How would we have progressed thus far if we hadn't had inquisitive men like Benjamin Franklin or Thomas Edison? These men proved to our forefathers the luxuries we now use as everyday living.

Many rural communities, like ours, depend almost entirely upon electrification; consequently, many would be unable to live without these luxuries. The farmer would have no electric lights in his house, barn, or in any of his farm buildings. Many animals would have a difficult survival. Baby chicks wouldn't have as good a chance to survive without the use of heat lamps many of the farmers use.

A few years back, people were inclined to believe that the cost of light bills was too high. Although many people still believe this, they still continue to use their electrical appliances; and will keep on because they have become so accustomed to living in such a way. If those who complain of being overcharged would think it over, they would realize how much more efficient electrical appliances are than hand-powered ones.

Schools in the community would be unable to hold their basketball and football games, class plays and other activities at night. These would take place during the day and interfere with school hours if we had no electrification in our community. Most of these extracurricular activities would be absurd because of the interference with school hours.

Our food would be of a completely different nature. No frozen foods would be available for quick use if there was no electrification system. A deep freeze and refrigerator would be unheard of. Our meats and other foods would not keep well like they are capable of in a deep freeze or refrigerator. It is very true that our food would be completely different without all of our electrical appliances.

Hot running water, radios, television, lighting of entire home, food freezers, and many other household appliances would be useless and unheard of if it wasn't for electricity. We should be thankful we have these conveniences in our community. Linemen are on duty to do their job of replacing power in a short time.

I am proud to live in a community with such efficient public power. Our Elkhorn Rural Public Power District is what we make it. It is through cooperation, and only cooperation, that we can benefit from this power district. Again, I say, I am proud to live in this community and be able to be a part of this remarkable organization to better our lives and living conditions.

AMA Versus Social Security

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. FORAND. Mr. Speaker, in the May 1960 issue of Western Medicine, the medical journal of the West, appears a most thought-provoking article. It is a reprint of an address delivered by Dr. Aaron S. Leven, of California, before the medical staff, Beverly Hills Doctors Hospital, and the Bay Area Town Meeting.

In this address Dr. Leven takes sharp issue with the American Medical Association for its stand in opposition to my bill, H.R. 4700, to provide hospitalization for the aged.

Under leave to extend my remarks, I include Dr. Leven's address and invite all Members of Congress to read it. The address follows:

THE GREAT CHALLENGE: A CRITICAL ANALYSIS OF THE RELATION OF ORGANIZED MEDICINE TO AMERICAN WELFARE AND SOCIAL PROGRESS

(By Aaron S. Leven, M.D.)

Today organized medicine is at the crossroads of a great challenge to itself and to the American people. So far, in meeting the challenge, the medical profession shows inability to criticize its relationship to the social aspects of present-day medicine and medical practice. The science of medicine and the art of human relations in its practice are inseparable.

It behooves us to become more politically literate and astute—to be able to differentiate reality from flattery, confusion, distortion, and out-and-out lies. It is important to have profound knowledge and sympathetic understanding of the humanities and social sciences. Osler once said: "By neglect of the study of the humanities, which has been far too general, the profession of medicine loses much of this precious quality." The real tragedy concerning this precious quality is that many men in medicine today appear not even to have found it.

At the present time, a man of 60 unable to support himself and his dependents without employment faces the possibility of starvation. If he is employed, he is liable to lose his job and to refusal if he seeks another. If he reaches 70 he is definitely frowned upon by many segments of our society, and if he is unlucky enough to live until 80 or longer, he is often regarded as a freak. Better for a man if he dies at 50, for then he may be hailed with approval. At 75 years death is practically requested—if one lacks the financial means to live out a further life span.

Surgeon General Burney reports that "the number of people 45 and over has increased 3½ times since 1900. Today more than 40 million people, approximately 30 percent of the total population, are in this age group. By 1970 their number is expected to increase to 61 million. Moreover, 40 percent of the chronically ill in this country are persons over 65 years of age, of whom there are now

approximately 15 million in the United States."

Two years ago, addressing the Conference on Aging at the University of Michigan, Blakely foretold that "medicine will break the age barrier in the not too distant future, and we may find ourselves living to be 150 years old. But with no function in life after 65, we'll be saying that the last 100 years are the hardest, not the first. The problem is not only that old people are increasing in numbers, but that most of them have no personal philosophy for old age, and our society has no role for them."

Since the turn of the century, medical science has added two full decades to the average span of life. This blessing, however, confronts our youth-worshiping Nation with a new dilemma: The problems of an aging population. In 1900 it was a feat to live 65 years—only 3 million men and women managed it. Today there are over 15 million Americans over 65 and 5 million of them are over 75. And the number of senior citizens is still growing at a rapid pace. According to some authorities, 1 person in 10 will be more than 65 by 1975, as compared with 1 in 25 in 1900.

The gloomy significance of these statistics is obscured by our myth of the golden years. Here old age is depicted as a time when white-haired couples enjoy a life of well earned leisure. You see them playing shuffleboard with neighbors in a Florida or California retirement village or mailing postcards to the grandchildren during long-planned tours, etc. For a fortunate few, this may be an accurate picture of life after 65. But where in this picture are the 400,000 lonely oldsters staring at the ceilings of nursing homes? Or the 3 million who live with their married children or other relatives because they are unable, financially or physically, to maintain homes of their own? And what of the 7 million who try to get along on incomes of $80 or less a month? These are some of the people that Hobbs and other authorities have in mind when they say that Americans should quit kidding themselves about the problems of aging. At present, most 65-year oldsters quite properly feel that they are still a long way from old age. A custom, however, which dates back to the era when 65 was an advanced age holds that this is the time when men and women should retire from productive work. And in nearly all business and professional jobs, retirement at 65 is not merely customary but mandatory.

Social security came into being in the early thirties. This measure, and private pension programs, have helped, in a small measure, to cushion the financial shock of retirement. Nearly everyone, however, undergoes a drastic reduction of income when he stops drawing a salary check. At the time of the last census, the median income of the over-age group was about $960 a year—$80 a month. How to live on $80 a month without free medical care and remain healthy is too much of a problem for millions of oldsters today.

More than 15 million Americans are 65 years old or older. Too many reveal the story of the infirm, disabled, or discarded workers of both sexes, requiring public assistance to keep them from starving. Their plight varies with locality. California oldsters, with pensions ranging from $89 to $105 on proof of special need, are better off than many. The range in 24 States is from $60.57 (Idaho) to $95.56 (Colorado), while in 24 other States it is less than $60 and sinks to as little as $28.88 (Mississippi). The national average is $57.46.

Largely because of residential requirements, there are millions who desperately need these pensions and don't get them. In some counties a person must reside 15 years to receive the price of a dinner. One can imagine, for example in California, how this affects thousands of migrant workers and their families who have poured into the State seeking jobs and are now unemployed. When aid is granted, living on $89 a month means a starch diet, insufficient clothing, cramped and dingy quarters, relentless, nerve-racking battles with price gougers and at times with callous, arbitrary county and State welfare officials—and with the medical profession.

Presently, 39 of the States have adopted medical care programs under State and Federal laws. California became the 39th State to adopt such a plan, only after due deliberations with the organized medical groups of the State. This became law in California on October 1, 1957. Federal laws were designed to aid the needy. Each succeeding Congress has strengthened these laws and enlarged the scope of coverage to include more age groups, to enhance their income to meet their needs to survive. All these laws, State and national, were promulgated and adopted in the hope that these needy people might be helped to be more useful and to lead less precarious lives. The recipients and beneficiaries of social security under the law are not wage earners and must not be confused with wage earners.

How does organized medicine react to all this? The California medical assistance care program, known as bill No. 679, and the Forand bill, which is now known as H.R. 4700, which are directly linked up with the medical welfare program of our American people and are currently before legislative bodies, created such a furor among the doctors of California and the Nation, that there is a rumble in the ranks of organized medicine both on a local and national scale. In this regard the spotlight is on the Forand bill which is only one of many such bills, and the official stand of the American Medical Association is that it objects to this bill. The medical leadership of the local, State, and national organizations suddenly term these medical welfare programs, "The Itch To Regulate," "The CIO–AFL Socialized Medical Concoctions, etc." The ire is so great that much misinformation and distortion of facts have been fed to the rank and file medical membership and to the Nation as a whole, by certain powerful political segments of the organized medical profession. The AMA opposes any Federal legislation which would provide hospitalization and medical benefits under the social security program, and is therefore vehemently opposed to the Forand bill. It even created a "Task Force" to direct active, effective, opposition to such welfare measures.

The past president of our AMA and the spokesmen for our organization admit that the pressure for expansion of the social security system into the area of health and medical care benefits is formidable; that the Members of Congress will inevitably support such legislation because of pressure from their constituents, especially those over 65, who will be favorably impressed by the immediate benefits to be gained. Also, that the workers of America, the most dynamic segment of the national labor force, are for such legislation. On the other hand Dr. Allman states, "Allied with the AMA in its opposition are the American Farm Bureau Federation, the National Retailers' Federation, the U.S. Chamber of Commerce, the Life Insurance Industries, the National Association of Manufacturers, and innumerable other organizations and individual citizens who are opposed to Government intervention into medical and other "private affairs."

The health of the people is the concern of all the people, not just politicians, big industrial concerns, or the medical profession. Virchow, the great German pathologist, at the turn of the century argued, "Medicine is a social science, and politics is nothing else but medicine on a large scale." Medical science has become highly specialized and highly technical. It has progressed more in the past 50 years than ever before in history. We have learned to do marvelous operations, transplant kidneys, corneas, do open-heart operations. We have invented extraordinary apparatus like nuclear microscopes and atom-powered X-rays. But so far as social medical advancement is concerned, our medical notions and the medical profession of America are years behind time.

How valid is the objecton of organized medicine to social security and its programs? Isn't it a fact that bankers, industrialists, lawyers, farmers, dentists, and other groups (except the medical profession) which have as much at stake in the free enterprise system as the medical profession, are quite pleased to get social security coverage? Their acceptance of these benefits has not led to any public outcry that banks be nationalized, business enterprises socialized, or farms collectivized. Moreover, the objection of organized medicine to having the Government help those citizens who need it most, is that it makes it embarrassing for many individual physicians, and for the medical profession on a national level. Our medical leadership persists in explaining its enthusiasm for the Jenkins-Keogh type of tax-deferment plan because it favors the medical profession most, and at the same time tells Congress that social security is socialistic. American medicine goes to great lengths to point out gaps and deficiencies in the social security program. Of course there are. There are gaps and deficiencies in private enterprise too. For example, physicians and others who have serious ailments and need insurance most, are often turned down by private insurance companies, or have to pay exorbitant premiums if and when they are accepted for insurance coverage.

Social security has become a part of our American way of life, and the nation's top economists and insurance experts agree that it can be operated on a self-sustaining basis. The medical profession is the only agency that can ruin this program by demanding absurd, unreasonable, and exorbitant fees for services performed. It is absurd to think that the fate of our children and grandchildren is dependent upon whether we physicians do or do not participate in social security programs and their benefits, as advocated by some medical leadership.

The rules that govern the economic life of our Nation also apply to the doctor. Today medicine is big business. In 1958 AMA investments of nearly $10 million earned $362,064 in dividends; membership dues brought in $5,393,378 and advertising in the AMA Journals grossed $5,893,100. It can be seen that organized medicine runs into many millions more. As for the hospital and the pharmaceuticals take, the record throughout the nation speaks for itself. Yes, today medicine is a service, a commodity which is purchased under our competitive system.

In this scheme of affairs the doctor is exploited like all other Americans living under the same economic system. We are constantly reminded by some segments of our society that, "doctors have always given services to indigent sick even to the detriment of the medical profession, and purely from humanitarian motives." This may have been the case many years ago when the economic life of our Nation was of a different nature. Now we are definitely creating a myth which on close study is contradictory to the realities of life. Doctors hate to admit the fact that medicine today follows the line of trade. As physicians we try hard not to be dragged into the economic sphere of life, but as human beings and as a segment of our society, our efforts in this respect are wanting, and most of the time are in vain.

Isn't it unrealistic to imagine that a gesture by some 200,000 physicians in organized medicine out of a population of approximately 180 million would somehow halt the wheels of progress? If we are so afraid of socialized medicine (which has been with us for more than 25 years in some form or another) it would seem that our chances of warding off this dreaded event would be enhanced if our profession would integrate with the American people, and not stand aloof and apart from them by promulgating all sorts of obstacles aimed against the people in expressing their opinion as to the peoples' health problem. We physicians have our opinions as to health problems, but we must realize that the people also have their opinions on the subject.

The generosity of big business, industrial giants, and certain commercial insurance companies is indeed commendable in advocating various private schemes for aiding our indigent and sick oldsters. But charity in any form proves to be an unreliable, unworthy, and unsatisfactory system of protecting the peoples' health. Funds are always needed for this purpose and during times of economic depression are not readily available or forthcoming as evidenced by the 1932 depression. Americans do not want charity. At no time is it possible for charity to provide adequate medical care. The people's health cannot be protected adequately or efficiently under purely commercial systems of medical care. The American people do not expect charity or pity in any form, and abhor the paternalism of big business, which also includes the medical profession. What the American people do expect and want is the opportunity to earn a decent living with job security, no matter what age bracket one may be in. Only in this way will the American citizen be able to support himself and his loved ones, and enjoy the truly American way of life we hear so much about these days.

Throughout the years American medicine has taken on numerous tarnsformations. In the realm of scientific medicine, the tarnsformation has been excellent; in the realm of social medicine, especially the socio-medical, economico-medical and politico-medical phases it has constantly trailed. Has American medicine answered the call of the American people for a better life? Medicine has infinitely more to give than it actually bestows. Oliver Wendell Holmes once said, "The great thing in this world is not so much where we stand as it is in what direction we are going." It's about time that American medicine ceases to follow the tail of human events. Its choice of direction is the great challenge to American medicine today.

Public Debt and Tax Rate Extension Act of 1960

SPEECH
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12381) to increase for 1-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for 1 year the existing corporate normal-tax rate and certain excise-tax rates.

Mr. GEORGE. Mr. Chairman, in the consideration of H.R. 12381, it is difficult for me to vote against this measure, sponsored by the Ways and Means Committee and its outstanding and distinguished chairman, the Honorable Wilbur D. Mills.

Last year I voted against the temporary increase in the statutory debt limit for the reason that the administration could reduce its spending to the extent of the increase. The same situation now exists. Nearly the full amount could be saved by proper unification of the armed services. More savings could be made by eliminating the waste and extravagance in our foreign aid program. In addition, if the high interest rate policy of the administration were reversed, no extension would be necessary.

Because I feel that the administration should be compelled to effectively unify the armed services and because it may do so if this measure is defeated, I expect to oppose it.

Mr. Chairman, H.R. 12381 also continues in effect the excise taxes imposed during wartime on telephone service, transportation of persons, and in other areas, which I believe constitute a burden on business as well as the consumer.

With all due respect to Chairman MILLS and his excellent committee, I feel I must vote against this measure as not in the best interests of the economy of our country.

The Ideological Battlefield: The West and Communism

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. O'KONSKI. Mr. Speaker, I wish to call attention to a very important article which just appeared in the Free World Forum, written by Adm. Adolphus Staton. Admiral Staton is a holder of the Congressional Medal of Honor and the Navy Cross. Hs is one of the collaborators of the Moral Rearmament Assembly. I know that every American would greatly profit by reading this article. Leaders of the free world everywhere should read and reread this article, for it contains the true solution to world peace. I wish to thank the eminent editor of the Free World Forum, Dr. Z. Michael Szaz for bringing this statement of moral responsibility to my attention.

The article follows:

[From the Free World Forum, April–May 1960]

THE IDEOLOGICAL BATTLEFIELD: THE WEST AND COMMUNISM

(By Adolphus Staton)

As leaders of the free world meet with Khrushchev at the forthcoming summit conference, it is appropriate, once again, to emphasize that we are in a world war and that our freedom is at stake. This war is being waged on four recognized battlefields—political, military, economic, and psychological. Speaking from the experience of 40 years of naval service, and as a graduate of both Army and Navy War Colleges, I am convinced that this war can be won or lost on any of these battlefields.

It is to the last-mentioned, the psychological, that our special attention must be given. The emergence of the ideology of communism, with its rapid expansion among nations as a weapon of world conquest, belongs to this category. Khrushchev has publicly boasted that the Communists are winning the war against the free nations and that they owe their success to their ideology. The success of international communism in the past 50 years is truly frightening.

Unfortunately, the free world has had no recognized, unified, and trained force operating in the same field of ideology. All nations and peoples are targets of the Soviet march to world conquest. Under this heavy threat, it is easy to see that every nation must share in our mutual defense. But more important is the need for the free world to move into the offensive in the ideological field.

NO IDEOLOGICAL COMPROMISE POSSIBLE

Three questions, boldly faced and answered, can put matters in their proper perspective on the eye of this summit conference.

First, why can there be no ideological compromise between the free world and communism? Second, can the free world find an ideological platform from which to answer communism? Third, what is the evidence of effective positive action in the field of ideology?

To the first question, "Is ideological compromise possible?" the answer is a ringing "No".

Communism is an ideology with one definite, unvarying objective—world conquest; its tactics may switch, but its aims remain the same. On August 20, 1950, Radio Moscow stated: "From the point of view of Communist morality, only those acts are moral which contribute to the building of a new Communist society."

When the men of Moscow urge upon us "peaceful coexistence," they do so with the firm intention of continuing to advance toward their world goal through economic and cultural exchanges geared to that objective. "Peaceful coexistence" is but a temporary tactic in a global war.

In 1946 Molotov clearly outlined Communist policy when he said:

"We are not fighting America as yet. But once we deprive her of her markets, crisis will follow and cause confusion. After we have taken her markets in Europe, expelled her from Asia and elsewhere, she will have no market for her merchandise. She will curtail her production and then will follow unemployment. Our opportunity to square accounts with America will be at hand."

The World Marxist Review for December 1959, stated:

"Marxism-Leninism teaches: Nobody and nothing can halt the march of history which is leading to the triumph of communism. • • • Conflict between the bourgeois and the proletarian ideologies is inevitable. In this struggle the Communists will never retreat a single step from the principles of Communism, and will never abandon this struggle."

Another unpleasant reality challenges the free world. Communism knows well how to exploit the moral weaknesses of leaders and ordinary men alike. Chou En-lai has said, "We can slip in our Communist ideology through the weak spots in men's character." Lenin once stated, "We postpone operations until the moral disintegration of the enemy makes the delivery of the mortal blow both possible and easy." Any person who is not clear morally can be taken over

and used knowingly or unknowingly by communism.

From these considerations one thing is clear. Ideological compromise with communism by the free world is suicidal. Coexistence without a superior ideology inevitably leads to no existence, that is, to a Communist takeover. This has already been the tragic history of nation after nation.

AN IDEOLOGICAL ANSWER TO COMMUNISM

Now comes the second question, "Can we find an ideological platform to answer communism?" This time the answer is a confident "Yes." Bearing in mind the nature and aims of communism, it is important to consider what must be the nature and aims of an answering ideology.

Dr. Frank Buchman, the initiator of the ideology of Moral Re-Armament, has said: "Could it be that the hate, greed, fear, and selfishness which create confusion and division in our society, are the strength and essence of communism? Millions who would never join the Communist Party make its advance inevitable by the way they live."

The nations of freemen therefore must learn to cure these destructive forces in the human heart. In other words, the answering ideology must be a moral ideology.

It is my profound conviction, based not only on firsthand experience, but on conclusive evidence from many nations, that such a superior ideology exists. It is the ideology of Moral Re-Armament. There is a trained and dedicated force already in being.

Men vitally concerned with the defense of the free world—soldiers, scientists, statesmen—share this conviction.

The free world lost a great fighter on the recent death of General Guisan, wartime hero and commander in chief of the Swiss Army. Last year he wrote a foreword to the Swiss edition of the MRA handbook, Ideology and Co-Existence.[1]

"On the ideological plane neutrality can be dangerous, for refusal to fight for what is right plays the enemy's game. I long that our whole people should face realistically the forces which confront each other today, that we draw from our traditions a relentless determination to safeguard at all costs the freedoms we inherit."

In August 1959, Air Commodore Blair-Oliphant, director of weapons engineering of the British Air Ministry, said:

"World War III is a total war, because it is an ideological war that is being fought for the hearts and minds of men and nations. There is only one answer and that is Moral Re-Armament. In Britain, the Communist line is, 'Better Red than dead.' In America the line is, 'Coexistence or war.' But the real choice for America and Britain is whether we continue to allow communism to advance or whether we will match it with the superior ideology of Moral Re-Armament."

Mr. Eudocio Ravines—founder of the Communist Party of Peru who broke with communism and exposed its tactics in his book, "The Yenan Way"—speaking at the 1959 Moral Re-Armament World Assembly in Mackinac Island, Mich., declared:

"There is need for an ideology—a superior thinking that will satisfy the hunger for the absolute which burns in the heart of the illiterate and the educated alike. That is why Moral Re-Armament can and must make possible a new type of revolution—a revolution of the spirit. The only thing that can defend our hemisphere at this time when we face the greatest danger of our history is ideological armament. The task for all of us is to advance Moral Re-Armament throughout this hemisphere and the whole world."

Scientists say that the world can now be destroyed between the lunch and the cocktail hour. We need, of course, to maintain our armed, scientific, and productive strength. We need to develop them. But, as Admiral Radford, former Chairman of the Joint Chiefs of Staff, once said: "The most we can do by these means is to buy time. Victory must be won by other means."

"What is basically an ideological struggle," says Dr. Douglass Cornell, Executive Officer of the National Academy of Sciences in Washington, D.C., "can be won only by a superior ideology. Moral Re-Armament is that ideology."

ORIGINS OF MORAL RE-ARMAMENT

Dr. Frank Buchman, the father of Moral Re-Armament, was born in Pennsylvania. One of his ancestors fought at Valley Forge. Another was the first to enlist in Lincoln's army. For half a century Dr. Buchman has been building on a world scale a trained and dedicated force of men and women who have proved in their own lives that human nature can be changed, and are one in their commitment to restore God to leadership in the lives of men and nations.

He has told how, in 1938, he was walking in the Black Forest in Germany near Freudenstadt:

"The world was on the edge of chaos," he said. "Just as today, everyone longed for peace and prepared for war.

"As I walked in those quiet woods, one thought kept coming to me—'moral and spiritual rearmament, moral and spiritual rearmament. The next great movement in the world will be a movement of moral rearmament for all nations.'

"A few days later I was in London in the East End where the British Labor movement began. The workers responded. Moral Re-Armament went to the world."

The new type of man that Moral Re-Armament is producing finds that the basic problem is not economic, but moral. The four moral standards—absolute honesty, absolute purity, absolute unselfishness, absolute love—make it possible to decide issues on the basis of what is right and not who is right.

This is the alternative to the class struggle, whose grip can only be broken by men and women armed with the strategy, the unity, and the commitment of a superior ideology. This comes through the acceptance of the guidance of God when every man can know the immediate action he can and must take.

Needless to say, the Communists themselves recognize Moral Re-Armament for what it is and attack it bitterly and constantly. Speaking this month at the Moral Re-Armament assembly in Caux, Switzerland, Mr. Ole Bjorn Kraft, Vice President of the Danish Parliament and former chairman of NATO, said that in recent weeks 50 Soviet newspapers, such as Pravda, Izvestia, and Trud, have carried attacks on Moral Re-Armament. But even as they make these attacks, Communists have been forced grudgingly to acknowledge the power of MRA. Moscow and Taskent radio in 1953 warned the Communists of the world:

"Moral Re-Armament is a global ideology with bridgeheads in every nation in its final phase of total expansion throughout the world. It substitutes for the inevitable class war the eternal struggle between good and evil. It has the power to capture radical, revolutionary minds."

Attacks, however, only serve to show the effectiveness of Moral Re-Armament. Wherever in the world the two ideologies have come face to face, communism has been thrown on the defensive.

EFFECTS OF MORAL RE-ARMAMENT

What is the evidence of such positive action in the field of ideology? Here is the third question.

To this world statesmen provide the answer. Chancellor Adenauer of Germany and Robert Schuman, former Prime Minister of France and architect of the Schuman plan for Western Europe, both have testified to the part played by Moral Re-Armament in creating unity between their countries, divided by three bitter wars in less than a century. As a sign of their appreciation, both countries have conferred high decorations on Dr. Frank Buchman. Schuman wrote:

"Moral Re-Armament brings us a philosophy of life applied in action. It is the beginning of a far-reaching transformation of society in which the first steps have already been taken. My plan will never succeed unless hearts are changed on both sides of the Rhine."

Chancellor Adenauer in 1951 wrote to Dr. Buchman: "In recent months we have seen the conclusion, after some difficult negotiations, of important international agreements. Here, also, Moral Re-Armament has played an unseen but effective part in bridging differences of opinion between the negotiating parties." In June 1958, in another of his many messages to Dr. Buchman, Dr. Adenauer wrote: "Now is the time to work more strongly than ever for European unity through Moral Re-Armament. Unless the work of Moral Re-armament is carried forward, peace in the world cannot be maintained."

Less than 2 years ago Cyprus was a powder keg in the Mediterranean. Moral rearmament helped to bring about the end of bloodshed and the beginning of healing between British, Greeks, and Turks. The President-elect, Archbishop Makarios, leader of the Greek community, has stated: "We had the opportunity to follow closely the work of moral rearmament and particularly appreciate its contributions to the solution of the Cyprus problem."

Dr. Kutchuk, Vice President-elect and leader of the Turkish community, said: "Your power of reconciling countries and of giving a strong moral foundation to every nation is what Cyprus needs at this very crucial hour in her history. Today we see how the different communities can live together."

Sir Hugh Foot, British Governor of Cyprus, told an MRA delegation: "Cyprus will be regarded in the future not as a source of trouble but as a symbol of how trouble can be overcome. We congratulate you on your contribution."

Another victory for democracy was won in the province of Kerala in southern India. Here, too, moral rearmament played a decisive part. Kerala had elected a Communist government. Rioting and violence were erupting all over the province. All of India and all of the non-Communist world feared that the fate of Kerala might become the fate of all India. But, as a result of the activity of the moral rearmament forces in the province, the various political factions were drawn together to present a common front, which won a victory over communism in the elections.

Padmanabhan, leader of the liberation movement which ousted the Communists, has said: "Kerala can never be grateful enough to the ideology of MRA. Through transforming human nature it is answering forever the onrushing menace of communism."

In the Far East, Niro Hoshijima, senior member of the Japanese Diet, stated in January 1959: "History will record five events in the Pacific which have been brought about by the spirit of MRA—

---

[1] Seventy-five million copies of this handbook in 24 languages have gone out to every home in Canada, Britain, France, Germany, Holland, Italy, the Scandinavian countries and Switzerland, and to key areas of Africa, Asia, Australia, and Latin America. It has also gone to every home in Washington, D.C., and is being widely distributed throughout America.

1. Reconciliation between Japan and the Philippines and payment of reparation by Japan;

2. Relaxation of tension between Japan and Formosa;

3. Wresting of power from the Communists in the Seinendan (the 4,300,000-strong youth organization of Japan);

4. Signing of Japan's reparation agreements with Indonesia and Vietnam;

5. Giving the basis for diplomatic talks between Japan and South Korea.

Chancellor Adenauer, himself a close friend of Dr. Frank Buchman, in his courageous fight against ideological compromise offers a lesson to other leaders of the free world. When in the Ruhr industrial area between 1948 and 1952 the Communist vote in the works' councils dropped from 72 percent to 8 percent. Chancellor Adenauer spoke of this as "the test of the effectiveness of moral rearmament." His bold initiative in commissioning a force of German miners trained in moral rearmament to carry around the world their dramatized presentation of the superior ideology in the MRA play, "Hoffnung" (Hope), demonstrates Adenauer's realization of the need for a positive offensive by the democracies.

United in statesmanship with Dr. Adenauer is Prime Minister Kishi of Japan. Under the inspiration of moral rearmament he has put into practice what he has called "the statesmanship of the humble heart." In 1958 he visited nine southeast Asian countries, former enemies of Japan, and in each apologized for the wrongs done by his nation. Kishi's message to the 1959 moral rearmament assembly at Mackinac Island, Mich., stated:

"The democracies are on the defensive because of the lack of a moral ideology superior to communism. In the ideological war there is no neutrality nor coexistence. The leaders of the free nations must pay serious attention to the work of moral rearmament throughout the world if we are to win in the decisive struggle for the future of mankind."

Dr. Hans Koch, who was Chancellor Adenauer's adviser on Soviet affairs, said:

"What Moscow feared most was the ideology which could unite countries as far apart as Japan and Germany; which could unite all other nations with these two; which could unite free East and West and black and white in an ideological answer to communism. Moral rearmament is preparing the way for the next great phase in history. It provides the platform where East and West, Germany and France, the Anglo-Saxons and the colored races unite.

During his recent visit to Japan, Chancellor Adenauer joined Prime Minister Kishi in receiving German miners who had brought their play "Hoffnung" to Japan. This play, since its commissioning by the Chancellor, had been welcomed in many parts of Europe and Asia. Notable among these were the Catholic monasteries of Switzerland.

Eleven U.S. Senators cabled Chancellor Adenauer for support to "cement the unity of our two countries," by sending the moral rearmament play, "Hoffnung" to Washington: We warmly invite the miners to bring their play to Washington this spring, and would value your support for this important ideological move."

The great French Catholic philosopher, Gabriel Marcel,[2] has evaluated the work of moral rearmament in these words:

"What seems to me really marvelous and providential is the connection that has come about between Moral Re-Armament and the young nations which are now being born into freedom. I believe that in this, as in other instances, Frank Buchman has truly shown prophetic insight. And here I would like to emphasize what seems to me of great significance: that the leaders of these young states have preserved an awareness (which we Europeans have almost entirely lost) of the link which must exist between politics and moral principles."

John Amata, revolutionary African leader, speaking this month at the Moral Re-Armament Easter Conference in Caux, Switzerland, said: "Today when all Africa is inviting the white man to leave, leaders from all over the continent are inviting the MRA leader, Dr. Frank Buchman, and the force of moral rearmament to come." Mr. Amata told delegates from 29 countries that official invitations had been extended to Dr. Buchman by the Sultan of Morocco, the Emperor of Ethiopa, the President of Cameroon, the President of Dahomey, and the President of Liberia, as well as national leaders of Nigeria and the Belgian Congo, to visit their countries.

The question naturally arises: How is such a vast operation financed? Moral rearmament is entirely financed through voluntary contributions, made out of sacrifice, not surplus, by thousands of people in the free nations who are convinced of the basic necessity of this answer.

It should be emphasized that MRA is an ideology which enhances the primary loyalties of every man's own faith and is in competition with none. Christians, Moslems, Jews, Hindus—men indeed of every faith—find in Moral Re-Armament the unity of a common dedication to a global task.

Think what it would mean at the summit conference for Khrushchev to face men who were strong in the knowledge that behind each of them stood a nation united by the force of a superior ideology; that in every detail of their own lives there was the moral clarity of that ideology; and that with their fellow leaders of the free nations they were standing united, shoulder to shoulder, in a commitment to remake the world. Against such men no materialistic ideology could prevail.

CONCLUSIONS

What, then, can each of us do to take our place on the ideological battlefield? For the ordinary man, as for the statesman, old ways of doing things, idealism, and genuine goodwill have of themselves proved to be outmoded weapons on today's ideological battlefield.

Khrushchev says, "We will bury you," but we don't need to make it easy for him by sticking our heads in the sand. Moral Re-Armament has the best answer to communism I know. In this cold war, which is an ideological war, every man, woman, and child must have a battle station. There is no distinction between home front and battle front. Everyone is now on the front line.

Today millions in every continent are responding to the challenge and promise of these words of Frank Buchman: "Human nature can be changed; that is the root of the answer. National economies can be changed; that is the fruit of the answer. World history can be changed; that is the destiny of our age."

[2] Marcel's latest book, "Un Changement d'Espérance" ("Fresh Hope for the World"), published in Paris (1959) and London (1960), presents a comprehensive account and evaluation of the work of Moral Re-Armament in world affairs.

Summit Costly to Reds

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Kansas City Kansan of May 19, 1960, which represents a viewpoint that I think is extremely important to our country:

SUMMIT COSTLY TO REDS

(By Leon Dennen)

PARIS.—What is the meaning of the summit disaster? Here are the words of a member of Premier Nikita Khrushchev's entourage:

"For Khrushchev the end of the summit was a political defeat and a personal tragedy.

"It may eventually cost him his leadership in the Kremlin.

"It certainly makes a shambles of his policy of peaceful coexistence and international relaxation on which he staked his career."

I first met the man who made these statements when he was in the United States during Khrushchev's tour. I encountered him again at the Palais de Chaillot where hundreds of correspondents from the four corners of the globe were milling about.

Speaking rapidly in Russian, he left no doubt of his opinion.

"I know that the West will interpret Khrushchev's adamant position as a sign of strength and an act of courage," he continued. "This will not be the first time the West has completely misread events in Russia.

"Khrushchev is no Stalin. He is not the master of the Soviet but its public relations man.

"He was ordered by the Presidium to torpedo the summit.

"Even if Eisenhower had crawled on all fours in apology for the spy plane Khrushchev could not have kept the summit alive."

From French Communist sources I also get the view that Khrushchev's position at home is uncertain. They called my attention to a Tass agency announcement that Soviet Finance Minister Arseny Zverev resigned because of "ill health." The terse announcement of the resignation and replacement were made after Khrushchev had already been in Paris for 3 days.

A French Red said:

"Imagine the stir it would cause if a news agency, however official, announced in Washington that the Secretary of the Treasury had resigned and was immediately replaced while Eisenhower was in Paris."

Who, then, the Red asked, decided to accept Zverev's resignation—"obviously the reshuffled Presidium, which now is sole authority in Russia today."

The consensus of experts on communism here is that Khrushchev will hold his job as Moscow's front man for the present but his fate may be decided at the extraordinary session of the party's central committee scheduled to meet in Moscow in July. They believe he might win out but he will have to fight hard to avoid defeat.

An interesting sidelight on the manner in which the summit was blown up is shed by French Communists, who told me that Khrushchev's declaration including the withdrawal of the Eisenhower invitation to Moscow was prepared in Moscow. Even translations of the text into English and French were brought here.

President Charles de Gaulle of France was tipped off to full contents of the declarations 2 days before the Big Four met at the Elysse Palace. His efforts to induce Khrushchev to soften his words failed because, my source said. "He had only one mandate from the Presidium: wreck the conference."

A follower of French Communist leader Maurice Thorez, long an opponent of Khrushchev and supporter of Mao Tse-tung, threw out this interesting statement:

"If you read in the next few weeks that Khrushchev has made a hurried trip to Pieping to consult with his friend, Mao Tse-tung, you will know whose voice now is strongest in the ranks of world communism."

Our Distinguished Colleague, Hon. Leo W. O'Brien of New York, Is Honored by His Alma Mater, Niagara University, in the Conferring on Him of an Honorary Doctorate of Humane Letters

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. STRATTON. Mr. Speaker, it is always a source of great joy and satisfaction whenever an honor comes to one of our colleagues. It is a special source of pride and satisfaction when the colleague who is honored is one who is held in universal respect and affection by all of his colleagues on both sides of the political aisle, and one whose record of accomplishment in this body so fully justifies any kind of honor that might be conferred upon him.

For that reason, Mr. Speaker, I take special pleasure in bringing to the attention of the House the fact that our friend and colleague, the gentleman from New York [Mr. O'BRIEN], who is also my neighbor, was honored last Sunday, June 5, by his own alma mater, Niagara University, in New York State, with an honorary degree of doctor of humane letters.

Those of us who have had the privilege of serving in this body with the gentleman from New York know his warm and friendly personality; we know his eloquent command of the English language acquired through years spent in the newspaper profession before coming to this body, and we also know his tremendous qualities for leadership that have been demonstrated so fully in this body by his actions in pushing through the enabling legislation that made Alaska and Hawaii into our 49th and 50th States. I am sure we will want to congratulate our colleague for this new and well-deserved honor that has come to him. In fact, in honoring LEO O'BRIEN, Niagara University has honored itself in the character and the career of this outstanding and distinguished alumnus of hers, and has also indirectly honored this body of which Dr. O'BRIEN, as he now properly can be called, is such a distinguished an able Member.

Under leave to extend my remarks, I include herewith the full text of the citation for the honorary degree awarded to the gentleman from New York [Mr. O'BRIEN]:

DOCTOR OF HUMANE LETTERS—HON. LEO W. O'BRIEN

The dissemination of truth is a tremendous task, a tremendous responsibility. One who would undertake such a task must divest himself of all personal interest, prejudice, and bias. His object must be the common good. Such a one has the making of a true statesman.

Today the avenues of truth are many: The press, radio, television, the CONGRESSIONAL RECORD.

To be in control of these avenues of human expression and not to make a good use of them is to betray a trust that can only evoke from the mass of humanity a cry of dismay.

Fortunately, however, we have men who make the best use of these media; gentlemen who put aside selfish personal ambition and strive, through the best use of their personal talents and the available means of communication, to accomplish what they deem in conscience is best for the common good.

Today, Niagara University honors an uncompromising, unselfish alumnus, who from his newspaper, journalistic, and congressional experience has proven himself an instrument of the truth. His interest in his country and his zeal for its expansion have added Hawaii and Alaska to these United States of America.

Niagara University is proud that one of her graduates has attained national stature and confers upon the Honorable LEO W. O'BRIEN the degree, honoris causa, doctor of humane letters.

Civitan's Winning Essay

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. JENNINGS. Mr. Speaker, Civitan International, which has as one of its many worthwhile objectives the building of good citizenship, sponsors an annual essay contest among the Nation's young people.

This year, the first place winner in this contest is a young lady from the Ninth Congressional District of Virginia, Miss Attalee Smith, of Gate City, in Scott County. She was sponsored by the Gate City Civitan Club.

Miss Smith's thought provoking essay is titled "Intercommunication as a Factor in Citizenship Building."

Under leave to extend my remarks in the RECORD, I include Miss Smith's essay, and commend it to the attention of my colleagues:

INTERCOMMUNICATION AS A FACTOR IN CITIZENSHIP BUILDING

"East is East, and West is West
And never the twain shall meet."

When Rudyard Kipling wrote these lines, they so accurately expressed the realities of his day that they became a famous epigram. But it is the next two succeeding lines which most nearly suggest our world today, characterized by terrific atomic explosions, rocket ships, and attempted visits to remote planets. Put the lines together—

"East is East, and West is West
And never the twain shall meet
'Till earth and sky stand presently
At God's great judgment seat."

Yes, at least the poet's words have, in one sense, become reality. East and West have met, but in their meeting the gap has become more enlarged. The modern methods of communication have made neighbors, but not friends, of all mankind. Our material resources are extensive, but the spiritual values, necessary for effective communication, have fallen short.

Charles Dickens, in perhaps his most frequently quoted passage, said of the period in which he lived: "It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness; it was the spring of hope; it was the winter of despair; we have everything before us, we have nothing before us."

In such a paradox, the age of Dickens is not unique. Now in the middle of the 20th century, there are again combined the best good and the worst evil, the brightest promises and the most dreadful threats.

Advances in scientific discoveries and inventions are continually opening up new possibilities. Such rapid material progress opens alternative roads ahead: The one promises an age of plenty in which poverty and disease will finally have been conquered. The second road can lead to the possible destruction of civilization.

What the destiny of the world will be is likely to be decided by the way the United States exercises the leadership which has come to rest upon it.

It has taken two World Wars to make the people realize the great responsibility the United States has in the world as a whole. A world community cannot exist merely by shortwave facilities scattered all over the globe; a more enduring foundation is necessary. The United States must take the lead in educating citizens equipped to relate themselves to all peoples, all over the world. An uninformed citizen is a hindrance to any society. "As a brain is no stronger than its weakest think, a nation is no stronger than its weakest citizen."

Such a conception of communication is basically exemplified by the family relationship. When a new member is initiated into the society of a family, his one, and often misunderstood, method of communication is that of cries and gestures. By trial and error, the newcomer's desires are finally determined and satisfied. He is, however, to a degree a burden to the family society, because his ability to communicate is inadequate.

So it is with minorities in our world society. Because we do not understand the problems of others, we cannot deal with them in a just manner. Even in our own country, America, the land of the free, many people are persecuted because of their color or beliefs. Do we really have a true democracy in America? Is our Nation really a land of freedom and justice for all? If, in America, we continue to tolerate conditions such as these, the road to world understanding presents a rough and rugged terrain.

Good citizenship begins in the home; it is here that we learn to communicate with others. Good citizenship demands the best utilization of the talents of the individual who will place above his own interest the interests of his fellow citizens and of the society of which he is a member.

On his tour of South America, President Eisenhower was accompanied by Lt. Col. Vernon Walters, an Army officer who learned Spanish as a child and Portuguese overnight by order of the Pentagon during World War II. This is an example of the lack of intercommunication between nations, a contributing factor to the many misunderstandings on an international level. If man could speak a common language he would be better equipped to be a good citizen of the world. Man certainly can't communicate adequately with someone with whom he cannot talk. If the family of nations could learn to communicate as closely as the members of the average family, surely we would be a step nearer to peace on earth.

The desire for peace is as young as the rainbow and as endless as time. Every man wants peace. If there is to be peace on earth, man must find peace within himself; he must understand himself before he understands others. Peace depends upon understanding, and understanding cannot be accomplished without effective intercommunication. Understanding and sympathy are the first requisites of all peaceful existence; intercommunication is the prime requisite of understanding.

Communication is merely relaying an impression from one being to another; intercommunication, as it relates to citizenship,

is the sharing of knowledge, ideas, and aspirations for the common good.

It has always been man's hope that one day his imagination, his ingenuity, and his intelligence would bring world peace; and, with peace, international citizenship would finally exist among men.

The indisputable fact that must be faced at once is that man, with all his imagination, his ingenuity, and his intelligence, must be able to communicate his thoughts and desires to other men, or they will die a slow death in the narrow cell of a single brain.

The only real objective of a dedicated citizen must be to accomplish a world of peace and happiness for all people. All people are citizens of some group, large or small. Man needs to be made wise enough and strong enough, possible only through effective intercommunication, to bring about a rule of law and justice for all people.

Man has demonstrated that he can stand against the massed power of class, race, or nation and that he can refuse to bow to Baal. He possesses God-given reason and the ability to love. It is only through intercommunication that he is able to let others know about this gift. The union of love and reason and the ability to communicate are the only assurance of victory.

The voice at Gettysburg, a single voice, must be communicated to the millions. It must be heard in Hungary, Russia, and Poland. Government of the people, by the people, and for the people will not perish, unless the people themselves lose faith in man and his ability to intercommunicate.

We must take off our blindfolds and see the world as a whole, and life as a flowing stream for all. In my short span of years, I have learned that the people I feared the most and those from whom I turned in awe were really simple human beings, who thought, breathed, dreamed, and wanted much the same things from life that I want. All that was needed to make us friends was an awareness of each others' problems, thoughts, and far-reaching desires. This was brought about through intercommunication.

I believe that if it were possible to communicate with world neighbors in much the same way our world problems might one day be solved. The outcome may well be determined by the advances which we are able to make in intercommunication. If we believe that what we have is worth great sacrifice, if we have a real understanding of the cost of freedom and a compelling vision of tomorrow's world, we will devote our time, abilities, and prayers to the principles of intercommunication for all men, regardless of locale, race, creed, or color.

It is up to us—to you and to me—whether the world community will remain a dream or whether it will become a reality.

The Lord has made us neighbors; let intercommunication make us friends.

Collectivization as Subterfuge

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I insert a study prepared by Dr. Walter Becher, a member of the Bavarian Landtag, which points out the subterfuge of collectivization in the Soviet Zone of Germany. You will note that this was prepared before the recent summit collapse. In my opinion, Dr. Becher's article is very enlightening:

COLLECTIVIZATION AS SUBTERFUGE—THE CONCEPT OF MOSCOW'S GERMAN POLICY

The comprehensive collectivization taking place in the Soviet Zone is not only a process of expropriation and pauperization subduing the rural population of central Germany—it is, above all, an act camouflaging the foreign policy of the East and resembles in significance the Berlin provocation and the peace treaty tactics. The "class struggle in the village" (according to Lenin) is added to the great political combat between the unfree and the free world. Besides the strong arm measures liquidating individual rights to farm property and harvest returns, the decision "for peace"—for communism—against the Federal Republic and German unity features dominantly. Since in Communist interpretation Socialist states can only conduct "just wars," even when bearing all the marks of otherwise "aggressive and imperialist wars," socialist states can therefore conclude only "just peace treaties," even when bearing all the marks of national rape. "If you are for peace, then you are also for collectivization (and against Adenauer)," reads one of the standard slogans addressed to the farmers confronting the alternative of collectivization and expropriation.

During the eighth plenary meeting of SED's Central Committee (from March 30 to April 2, 1960) Ulbricht stated: "It can be said that the DDR has liberated the farmers from any capitalist exploitation. * * * The progressive step made by the DDR farmers meets the very interests of peace in unison with the spirit of Camp David. By making the excellent decision to adopt the cooperative mode of work before the summit conference, the farmers have expressed their desire for a lasting peace, for a firm peace. They have contributed to a solid establishment of peace in the DDR and to making this country a bulwark of peace. Said occurrence is particularly important before the summit conference inasmuch as the farmers' move has frustrated all the machinations of Bonn to undermine the DDR. By joining the LPGs and creating village unity our farmers have dealt a serious blow to the warmongers of West Germany."

Hardly ever in the history of Marxist dialectics, which certainly does not lack its instances of muddled speculation, has the "negation of negations" or "identification of opposites until their abolition" been demonstrated so cynically, brazenly and deviously; but hardly ever in Marxist history has an act of economic terror been used more baldly for purposes of political subterfuge. Agricultural collectivization as a means of diverting attention is likewise no innovation since in most agricultural states, now of Communist structure, the bulk of the population and still remaining individual property has been drawn into the class struggle.

The farmer question has been the mainstay of Communist propaganda since the inception of Marxism. The German peasant revolts of the Middle Ages against feudalism and clergy (including Protestantism because of Luther's censure of the "thieving peasants"), against emporer and empire were presented as the prime example of suppressed class struggle. Peasant expropriation, socage, serfdom, forced service by cottagers and midget farmers—these terms are militant ones in the Communist vocabulary before the usurpation of power, and they live on for rhetorical purposes ever afterward. According to Adolf Damaschke, Saxon land reformer, the Soviet Zone constitutes within the framework of the East the "first state of the workers and farmers in German history." "The ancient peasant dream of Junker land being turned into farmers' land" is the slogan utilized to ultimately transfer all land into the ownership of a single feudal master, the omnipotent and monolithic state.

The Communist Manifesto of more than a century ago states: "Among all classes * * * only the proletariat is a truly revolutionary class. * * * The middle class * * * the peasant, they all fight the bourgeoisie to assure their existence as a middle class. They are therefore not revolutionary, but conservative. Still more, they are reactionary." Karl Marx in his book "Das Kapital" shows his recognition of a most important economic-political factor in the Communist structural transormation, which prompts accelerated industrialization and comprehensive peasant expropriation in the various agricultural countries: "The capitalist mode of production is based upon land expropriation * * * creates an outlawed peasantry as the necessary labor supply for the factories in the cities." For communism, in form and structure an adaptation of early capitalism, from which the social market economy and industrialized society of the West has progressively deviated, the "emancipation of the the progressive farmers" into the "higher forms of collective work" was but a brutal act of camouflaging the creation of an uprooted industrial proletariat and of reducing the remaining independent farmers to agricultural wage earners.

The peasants are the great victim of the Bolshevist coup d'etat. Not Lenin's handful of professional revolutionaries and Peterburg workers and soldiers brought the czarist system to its downfall; the revolution came about only due to the peasants, their hunger for land, their miserable status, their longing for peace in a war incomprehensible to them. But already one of the first laws issued by SNK (Sovnjarkom, i.e., Council of People's Commissars)—the decree of November 7, 1917—though expropriating the feudal lords without indemnity and handing over their land to the peasants for gratuitous use—nationalized the ownership of all land. Initial collectivization endeavors did not get on. The obligatory delivery quota became the first heavy mortgage on farm life. "Carry the class struggle into the village. Fight the kulaks mericelessly," was Lenin's inflammatory slogan, which decimated the peasantry. The NEP interim (new economic policy) was followed by Stalin's fight for the Lenin heritage, a fight covering up the collectivization drive decided by the 50th party congress. The process is one of the most cruel periods in domestic Soviet affairs. Even Stalin, when exchanging reminiscences with Churchill in 1943, calls it a "terrible struggle," and Kennan, shifting between ludic vision and solid self-deception, reports that Stalin had his wife Svetlana killed for trying to intervene in favor of the peasants.

A frightful famine, the forced deportation of 5 million farmers, gigantic migrations from the country to the cities, the tragic fate of the besprisorni (homeless children), a 50-percent reduction in livestock and harvest returns, the rationing of bread until 1934 are the circumstances accompanying the utter terror of that forced collectivization. From the middle of 1928 until spring 1929, a million private farmers were caught by the murderous campaign, the figure rising to 2 million in the fall of that year, to 4 million at the outset of 1930, to approximately 11 million a month later. In an article "Dizzy With Success" Stalin explained the monstrous abuses by throwing the responsibility on the shoulders of his overzealous agents. After a short interval the procedure went on unmitigated. By 1933 already two-thirds, by 1936 nine-tenths of the rural population of 75 million souls had been pressed into 250,000 Kolkozes. The 1935 "Model Statute for Agricultural Artels" establishes the three forms of collectiviza-

tion: the kolkhoz (kollektivnoje Khasaistvo), the machine-tractor-station, abbreviated MTS (maszino-traktornaja stancija) and the sovkhoz (sovietskoje khasaistvo). The first form consists, besides the collectively cultivated area, of privately cultivated lots—usually 25–50 acres—and a very complicated system of remuneration based on "working days" (trudodjen). Turning agricultural labor completely into wage earners (as in the sovkhozes) would have far surpassed the financial strength of the state at that time. Said forms subsequently reappear—faithfully copied as to their relentless drive and integral terror—in some of the people's democracies. The merciless procedure, however, achieved the following: the party, its very existence or ruin depending on the struggle's outcome, was tied to Stalin, "the sources of a possible revival of capitalism were choked, new conditions for building up socialism were established" (short introduction to the history of the CPSU).

A newly created proletariat was driven into the urban industrial combines, the propertyless farmer became, once again, an "outlawed" land proletarian, a "dead soul." Those in the know estimate the population loss during that outrageous period at roughly 10 million dead. The ensuing era of "socialism advancing to communism"—interrupted for a while by the short-lived Malenkov regime—began with the 21st party congress. Kolkhozes transformed into sovkhozes, concentration of cooperatives, artels limited to garden patches, a standard delivery price, the progressive performance wage at an increased work norm remunerated in currency only—all these changes presage complete pauperization up to Khrushchev's agro city or agro commune, institutionalizing board and lodging, the training of children, the use of leisure time, exemplified—with the Marxist leap ahead—by the Chinese communes. The 1959 Comecon conferences to synchronize the 7-year plans, Khrushchev's tireless drive for the new agro structure in the people's republics, finally the agriculture meeting of the Communist and workers parties in February 1960, sharpen everywhere the class struggle in the village, not for a primary purpose, but to force all states into the great struggle between East and West. The West's effort to ward off such a design can then always be interpreted as being only an attack, an aggressive move against the peaceful construction of socialism, against peace generally. Thus the renewed class struggle in the village is an ubiquitous device to camouflage the provocation of the free world.

Ignacy Jan Paderewski

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. FULTON. Mr. Speaker, later this year, the Post Office Department will issue a "Champion of freedom" postage stamp honoring the centennial anniversary of the birth of Ignacy Jan Paderewski of Poland. This will take place here in Washington on Paderewski's birthday, November 6.

Under leave to extend my remarks in the RECORD, I am including a brief sketch about Paderewski and his close connection with our own freedom.

The statement follows:

IGNACE JAN PADEREWSKI

The year 1960 marks the centennial of Paderewski's birthday. Americans of Polish descent and all Americans will not only honor his memory but the freedom and justice seekers over the civilized world will pause to pay respects to one of the 20th centuries great men—a musician, composer statesman and humanitarian. To the world Ignace Paderewski was first a musician, world's greatest piano recitalist.

He was born on November 6, 1860 in Kurylowka, Podolia Poland. From an early age he showed musical talent, and his basic musical training was under the direction of great teachers at the Conservatory at Warsaw, then at Berlin and finally at Vienna under contemporary living piano teacher Leschetizky. Paderewski made his debut in Paris in the year of 1888 which proved in every respect a sensation. In 1891 he made his appearance at New York City and his recital was received with acclaim. At his Pittsburgh, Pa. debut in 1893 the music critic described his personality as the main factor and the essential attribute to his success; while another wrote of him "He is the great poet of the pianoforte. All his work seems to be done by his wrists and fingers which appear slender and delicate. His hair would mark him in any gathering but were it not for his gold cloud which stands out and makes him a conspicuous object for attention he could appear to be slender rather fragile young man."

PADEREWSKI LEADER AND FIGHTER FOR FREEDOM

With the outbreak of World War I, 1914 Paderewski devoted all of his energies toward raising of relief fund for Polish refugees. As the conflict progressed, he realized that if there was to be a free and independent Poland and it was to receive world's recognization as a nation, a concentrated movement toward the end was of paramount need. Practically all factions advocating Polish nationalism agreed that Paderewski was the only man that could unite all parties.

When the Polish Falcons and representatives of other Polish organizations in United States held a convention in Pittsburgh in April 1–4, 1917 at the Polish Falcons Hall No. 97, South 18th Street, there was unamity of opinion of need of leadership that would have contact with the world powers, especially with the United States.

PADEREWSKI'S APPEAL

The appeal went to Paderewski to take the leadership of Poles in the United States and abroad. Upon receiving the formal invitation he responded to the call and on April 2, 1917, appeared before the jammed Falcon Auditorium. The enthusiasm was unprecedented as he mounted the rostrum to speak. To the assembled Polish Falcons he spoke to the effect that if Poland was to be freed it would not be because of politicians, but only by a fighting sword.

He added "I have fullest confidence in United States, because of peoples' constant belief in ideals and surness of future, especially I am depending with fullest trust in President Woodrow Wilson whom I regard as the greatest living mortal among men. Again I assert I have placed my implicit trust in him. As I address you there exists a state of war between United States and Germany although no formal declaration has been made.

"In a few days you will be obliterated in the same manner as your brothers and sons, who are unknown in the European armies despite the fact that there are 2½ million fighting in the European front. Therefore, I call upon you now to form an army of Kosciuszko to fight beside the American forces.

"Therefore, with your permission I will take this opportunity to make a motion that the Polish Falcons of America offer to President Wilson 100,000 men to serve in the U.S. forces and to be known as Kosciuszko Army. I do not know if the offer will be accepted but this will be a proud moment in the Polish Falcons history."

President Wilson did accept the offer with fullest appreciation and gratitude and the Polish Falcons were ready to fight with the American forces. Because Russia was still an ally of the United States, any attempts to accept such an organized Polish Nationalist armed body was viewed as inimical to good diplomatic relationships and the offer was held in abeyance. It was not until October 8, 1917, after abdication of the czarist government that President Woodrow Wilson gave a formal consent for recruitment of the Polish Armed Forces in the United States.

The formation of the Polish Army was an idea conceived in Pittsburgh, and was the chief factor which led Paderewski to represent newly created Poland at signing of the Versailles Treaty and to be the first Prime Minister of modern Poland. This army fought with the allies in France 1917 and later in Poland against the Communists 1918–20.

On June 27, 1941 when returning from speech making at a Polish Army veterans outing at Oak Ridge, N.J., Paderewski took ill and died on June 29. He was buried with full military honors at Arlington Cemetery. Eventually he will be reinterred in Poland. It is therefore fitting and proper that the commemorative stamp will be issued by the United States in the fall marking this great champion of freedom in his 100th anniversary of his birthday November 6, 1960.

How Shall We Govern Ourselves

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. REES of Kansas. Mr. Speaker, under approval of the House, I am including an informative and interesting address delivered by the Honorable Arthur E. Summerfield, Postmaster General of the United States, on the occasion of the commencement exercises at Tusculum College, Greeneville, Tenn.

I am sure Members of the House and Senate will appreciate the opportunity to read this splendid statement:

The honor you have given me today is one I shall cherish all my life.

May I begin by expressing my profound gratitude to the board of trustees of Tusculum College.

Like all who know Tusculum College, I deeply admire this institution. It is a shining example of the greatness of higher education in our country.

In its 166 years of service, this college and its graduates have played a notable part in our Nation's incredible progress.

Standing here in this beautiful setting, where the highest standards of education and nature appear so perfectly blended, one can well understand the inspiration that comes to those who live, teach and study here.

Equally understandable is the ennobling and enduring influence that rises from the

opportunity to be associated, as student or faculty member, with a great humanist and scholar such as Dr. Raymond Rankin.

He is of the men who have enriched America with their genius beyond measure.

It is also a matter of real pride to me, as your Postmaster General, that our very able postmaster of the great post office in New York City, Dr. Robert K. Christenberry, is one of your distinguished alumni and a member of the board of trustees.

In considering this commencement occasion, it has occurred to me that the subject matter might be taken for granted. It would be easy to say to the members of this graduating class: There is great opportunity for success in America today. You are outstandingly prepared, scholastically, to build a fine career. Work hard, using well what you have learned, and you will achieve your goals.

This is time-honored advice that would be well meant and, I am sure, well received.

But the fact is, it would be only a half-truth. And indeed, the members of this class would quickly recognize it as such.

For this college itself has taught that more—much more—is involved in the opportunity and the obligation which fall upon the individual in this Republic.

I have noted, with great pleasure, that the Tusculum statement of purpose declares that its course of study "seeks to develop judgments, principles and experiences meaningful in preparation for fruitful living, and useful sevrice, in the complex social order."

Useful service, in these times as never before, means participation—intelligent and devoted participation—in the administration of this free society, through its government and its laws.

It means individual responsibility for taking part in the momentous decisions that will determine the course of this Nation tomorow, and in these years ahead.

This is a challenge of first magnitude. I want to talk with you briefly about it—and then I would dare to suggest, with a sense of urgency, the part you can play in meeting it.

In the past week we have seen again, in raw exposure, the great menace to the free world presented by the godless forces of communism.

Our President has met this venomous display with a firm dignity and a stanch dedication to world responsibility; and we may be proud that the whole American people have reflected this response.

We cannot, and will not, underestimate the danger before us. We must keep ourselves invincibly strong in every respect.

We have maintained a military power that is the greatest deterrent force on earth. We shall continue to do so.

But this is not, by any means, the whole of the challenge.

Physical strength is not enough. Our future will hinge as well on the economic and moral strength of this Nation and its people. And here the danger lies within ourselves—within what we do or fail to do over these months and years just before us, in the administration of this society of ours.

I say to you that the crucial decisions to be made are yours. We face, in this country today, a problem more grave than the threat of force expressed in the bluster of the leader of the Soviet Union. It is more serious because we assume less urgency to defend against it; and because, if we do not meet it squarely, no amount of military defense can keep us strong. We shall weaken fearfully the foundations upon which all our strength is built.

Let me define this problem by making two observations that are well known to you.

The first is that Government policy vitally affects the economy of any Nation. In a dictator state, of course, the effect is absolute. But even in a republic with a free enterprise system, the Government literally determines the broad conditions under which the economy shall operate.

The second point is that, in a republic, the elected representatives of the people presumably are to provide the kind of government the majority of the people want.

It is therefore to be assumed that the people have the right—if not the obligation—to insist upon getting the policies they want.

One natural consequence of this process is the formation of pressure groups—groups that may represent only a small fraction of the electorate, but that organize their efforts, vocally and actively, to advance their own self-interest.

When their self-interest is detrimental to the people as a whole, they may still succeed—and all too often do. They succeed because the interests of the people have too few champions—too few men and women with the talents and the willingness to speak up, to lead the fight in the people's behalf.

To the public officeholder, the self-interest groups appear to have the initiative; the public appears to be apathetic.

Not only does this influence the man already in office; it has its effect on the kind and quality of men who will become candidates for office.

And these are the men who make the most fundamental decisions for us, who determine whether we are to have economic folly through Government by pressure group, with recurring inflation, ever-higher taxation, and deadly monopoly power; or, whether, over the years, we are to have sound government, with sound economic policies that rid us of inflation, confiscatory taxation, and abuses of monopoly power.

At present our Nation has reached the highest level of prosperity in our history. We have the healthiest, strongest economy America has yet known.

Our people are enjoying better living standards—greater individual opportunities—than ever before.

The institutions which mean so much to us are making historic progress.

These are achievements made possible by sound policies of Government—policies maintained by a determined Federal administration. They are the result of a resolute and successful battle to bring rampant inflationary momentum under control; to keep the economy healthy and strong.

All are hard-won gains. And the continued advancement of sound policies will be harder still.

For the blunt fact is that we do not have throughout our Government, in all its areas, the numbers of men and women of capacity, integrity, and courage we must have to meet our challenge.

Government is not simply a process—it is people. Able people give us able government. Weak people will give us weak government. Courage in government can come only from courageous men and women.

We are seriously weakened when we have government by pressure group, rather than government for the people, in the Congress of the United States.

The result is a commitment to excessive spending of public money by a majority of the Congress, which can have the most serious consequences to the economic stability of our country.

Vast sums are voted which push government costs far above our means, which have nothing to do with the Nation's defense, and which put tremendous new tax burdens on every citizen, present, and future.

This is the situation which confronts us at this very time. Special-interest bills are being passed that can raise our annual spending by billions of dollars in 1961—and burden our Federal budgets over the years ahead with many, many more billions.

Already, in fact, the indebtedness of the United States stands at more than $292 billion. The interest, alone, each year, at present rates, is more than $9 billion.

But this is far from all. The full amount of commitments for the future—your future—has reached $750 billion—three-quarters of a trillion dollars.

But, the spenders say, we can eventually tighten our belt and make up this monstrous debt. The question is: Who will make it up eventually?

There is little doubt they must mean the young students of today, such as you, who will bear this burden in due time. It is you who will have to pay most dearly for the victories of the pressure groups now.

Such a pressure group, for example—and by far the most dominant in affecting the Congress—is the clique of men who exercise the great power of union monopoly leadership.

There is no question but that all conscientious Americans favor a responsible union movement.

But the people of America have suffered this movement to become a vast monopoly, used by its leaders to dictate the making of law in the legislative halls of our States and our Nation's Capital.

And the danger can only grow unless, and until, the Congress is persuaded to bring this power into balance.

The battle for sound government is always precarious when the number at the front is relatively small. In recent years, this fight has been led by the President, sustained by key members of his administration and some stalwart Members of the Congress.

I say to you that too much is being expected of too few.

No one man, nor small group of men, can uphold such a great burden indefinitely. More—many more—are needed.

A great American statesman has said: "Nothing will ruin the country if the people themselves will undertake its safety; and nothing can save it if they leave that safety in any hands but their own."

I believe the great majority of our people want the Nation's growth and security to be accomplished through sound and sensible government. But the people need articulate help and leadership in the effort to accomplish these goals. There must be leadership that will take an active, vigorous part in politics and in public affairs.

And here we come to the crux of the challenge to you:

It is the vital need for you to apply the genius, the talents and the dedication with which you leave this college, to the political life of your Nation.

There can be no real strength of government, no preponderance of able men and women in the Government, unless young men and women of your caliber take an active and durable interest in public affairs.

Nothing could be more valuable to this Nation than for some of you, who have the ability, to go directly into politics—and there serve the urgent cause of good government.

I have never sought or held elective office, but this I do know:

I have been a businessman who devoted much time over the past 24 years to politics and public affairs as an avocation, and all my time for almost 8 years in the Cabinet of President Eisenhower. And the most fruitful, satisfying, inspiring experience a man could have, in my opinion, is constituted in these years I have served in Washington and participated in the councils of this Government.

Whatever your calling, give of your time to the critical task of selecting men and

women who will render America the kind of government she must have in these years. No time you spend will be more vital to every purpose, every ambition, every dream you hold.

You have not obtained this superior education for the purpose of adjusting to the status quo. Higher education exists—or should—precisely in order that you will not be content to adjust yourselves to current standards, but will set about with courage and confidence to adjust society where you see it in need of change.

Consider when the first great democracy, in Athens, reached its full glory. It was in the period when political participation was a duty of every citizen of leadership ability.

The Athenian code demanded that the citizen attend council meetings. It required him to recognize his obligation to further the security and prosperity of his free society.

This duty was judged equally as important as military service, and to shirk either was a matter of personal disgrace.

Said the Athenians: "We regard the man who holds aloof from public affairs as useless."

During Athens' great years, the citizens entered into this participation with a deep sense of responsibility. At the open meetings, where decisions were made, the most important moment came when the presiding officer asked, "Does anyone wish to speak?"

As long as there were many who did wish to speak, and who spoke for strong and responsible government, the people of Athens remained strong and free.

But when indifference and corruption finally set in, and only those wished to speak who wanted to promote their own selfish interests, the decline came. This was the time when, as one observing philosopher put it, "the only freedom we now seek is freedom from responsibility."

And another declared sadly that there was "no champion of justice at whose side to fight."

The centuries have not altered those principles.

Today, in America, each of us must face this question squarely: "Does anyone wish to speak?"

And upon our response depends the course our country will follow.

I would appeal to you, in the exciting years into which you are moving, to speak, work, and fight for sound government and a stronger America.

Find the candidates for public office who stand for what you believe, whatever their political affiliation, and support them.

I have said again and again: We need 100 more men and women of courage in the Halls of Congress.

We need these men and women, to strengthen the hard-pressed forces of courage and integrity already in the Congress.

As you become active in the public affairs of your community, your State, and the Nation, help to give us more men and women of ability and courage in all levels of our governments.

Keep home the demagogues, the fuzzy thinkers, the irresponsible, the darlings of the pressure groups.

Send us the doers who will give America the true policies of sound leadership.

And give us your own leadership in the quality of national thinking and vision; leadership in finding the solutions to our economic, social, and political problems; leadership in welding our people together toward a common purpose.

This is your obligation, your opportunity. Above all, it is your sacred right.

With millions of other Americans, I am confident you will preserve this right—and in the process, you will give it great new luster as the most precious heritage known to mankind.

Address by Secretary of State Christian A. Herter at University of Pittsburgh Commencement

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. FULTON. Mr. Speaker, Wednesday morning, June 8, 1960, was the occasion of the annual commencement exercises of the University of Pittsburgh.

This fine university, whose trademark has been the cathedral of learning, this year had 2,282 graduates from its several undergraduate, graduate, and professional schools.

The principal speaker at the graduation was our good longtime friend and former colleague in the House, the Honorable Christian A. Herter, Secretary of State. The Secretary was also presented with an honorary degree.

I am calling the account of the graduation which appeared in the June 8 issue of the Pittsburgh Press to the attention of the Congress and the American people, and especially the excerpts from the Secretary's excellent speech on current international affairs.

The article follows:

REDS FEAR DISARMING, HERTER SAYS—SECRECY WOULD END WITH INSPECTIONS, PITT GRADUATES TOLD

(By Kenneth Eskey)

"The Soviets profess to want disarmament," the world, Secretary of State Christian A. Herter said here today.

"The Soviets pofess to want disarmament," Mr. Herter said, "but their obsession with secrecy has made them unwilling to accept the type of inspection arrangements which are absolutely indispensable to any safe and acceptable system of controlled disarmament."

One of the great issues of our times, he said, is the conflict between open and closed societies.

Speaking at University of Pittsburgh commencement exercises, Mr. Herter told the 2,282 graduates:

"One reason why a closed society is a danger to our world community is that it harbors secrecy; it cherishes estrangement from and hostility toward the outside world.

"In states so dominated, concealment becomes a fetish. Such states instill fears of other nations in their peoples."

According to Mr. Herter, Soviet secrecy has a practical purpose.

"Excessive secrecy is regarded as a great military asset," he said, "the equivalent of so many divisions or missiles."

The former Massachusetts governor did not touch directly on the U–2 spy plane incident. Of relations with Russia, he said:

"The important thing is to face our tasks of the future in a constructive frame of mind. Mutual recriminations about past actions are futile.

"Nor is it helpful to try to define our policy toward the Soviet Union as either 'hard' or 'soft,' nor to depict the international conflict in colors of black and white.

"Our posture should be calm, resolute and vigilant, at the same time that we explore every available opportunity to move our relationships on to a more hopeful plane of increased understanding and mutual cooperation."

Mr. Herter was greeted at Allegheny County Airport by four Pitt officials—Dr. Alan C. Rankin, vice chancellor; Dr. Holbert Carroll, who heads Pitt's political science department; Leon Falk Jr., vice president of the board of trustees, and Dr. Shepherd L. Witman, director of cultural and educational exchanges at the University.

The Secretary of State, attired in gray suit with blue tie, proceeded immediately from the plane ramp to an auto.

At Pitt he told newsmen he thinks President Eisenhower will follow through on plans to visit Japan, despite demonstrations there.

He said the Japanese wouldn't withdraw their invitation unless they feared the President would be in danger or suffer indignities.

AMBASSADOR PRESENT

Also attending the graduation exercises was Howard Jones, U.S. Ambassador to Indonesia, a friend of Dr. Edward H. Litchfield, Pitt chancellor.

Secretary Herter and his party lunched at Dr. Litchfield's home on Beechwood Boulevard with some 200 university and civic officials.

Most of Mr. Herter's commencement speech, "The University and the World Community," dealt with international exchange programs.

He urged the Pitt graduates to apply their learning to the great tasks of the future.

FATE AT STAKE, HE SAYS

"For we are truly engaged in a contest of which the stakes, and the outcome are the fate of our culture and our civilization," he said.

Mr. Herter made a strong plea for togetherness.

"The basic and central reality," he said, "is the essentially political fact that all nations now must live together and that a community of interests must come into existence."

Mr. Herter recalled our national goals.

"Aware as we must continue to be of the Communist threat, and with all our precautions to deal with it, we must never be so preoccupied with the Soviet challenge as to forget our own constructive purposes," he said.

"We have our vision of the future. We must press forward toward the new horizon. The values of our culture are not ours alone. They are a heritage which we must seek to conserve and pass on to coming generations."

Mr. Herter spoke glowingly of cultural exchange programs.

PRAISES DR. LITCHFIELD

"You are all aware of the special progress we have made in recent years in what are called East-West exchanges, or more properly, exchanges between the West and the Soviet bloc," he said.

Mr. Herter hailed contacts of all kinds—social, business, labor, cultural, educational, scientific, athletic, diplomatic and political.

He had particular praise for Pitt and its chancellor, Dr. Litchfield.

Pitt has contributed to international understanding "to a degree found in very few American universities," Mr. Herter said.

He commended Pitt for creating the Office of Cultural and Educational Exchange and organizing the Intercollegiate Regional Council for International Educational Exchange.

"Moreover," he said, "your university has not confined its interest to the campus, but has enlisted the support of the entire community through the Pittsburgh Council for International Visitors."

Mr. Herter thanked Dr. Litchfield for his work as chairman of the Governmental Affairs Institute.

The Secretary of State was one of four men receiving honorary degrees during the commencement ceremony on the Cathedral of Learning lawn.

Presenting the degree to Mr. Herter was Gov. David L. Lawrence, a Pitt trustee.

"In a time of turbulence and adversity," said Governor Lawrence, "he has distinguished himself and his office with sagacity and dignity."

Other honorary degree winners were:

Courtney Craig Smith, president of Swarthmore College; Henry J. Heinz II, chairman of the board of H. J. Heinz Co., and Robert Douglas Stuart, chairman of the board of Quaker Oats Co.

Adding an international tinge to commencement were 30 graduates from 18 foreign countries.

Highest honor graduates were:

Liberal arts: David Breakstone, Paul Harper, Bertram Nemitz, Gerry Sack, John Strauch, Richard Watson, Catherine Wilson, Richard Butera, James Greaves, James Harrison, Alice Jervis, Robert Sekerka and Winifred Little.

Engineering: Donald Jessep Jr., Harry Wetklow and Caroline Louise Rodder.

Business administration: Ray Rowney, Jr. and Harry Kaufman.

Education: Janet Hecht, Gloria Levinson, Rita Natale, Audrey Lang, Janis Markham and Elizabeth Irene Tassoney.

Graduate Social Work: Morton Coleman and Helen Warga.

Dentistry: Donald Pipko.

Nursing: Evelyn Hearn, Perina Chioldi and Norman Rodgers.

A fanfare of trumpets from the fourth floor parapets of the Cathedral of Learning opened the ceremonies at 9:30 a.m.

Black-robed graduates and faculty members marched in the processional.

Remarks of Bishop Zuroweste

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. PRICE. Mr. Speaker, the Catholic press of the United States has made a powerful contribution to the material and spiritual advancement of the Nation. Recently, many Members of Congress had the pleasure and privilege of attending a breakfast of the Golden Jubilee Convention of the Catholic Press Association at the Hotel Statler-Hilton, Washington, D.C.

The principal remarks on that occasion were made by the Most Reverend Albert R. Zuroweste, D.D., bishop of Belleville, Ill., Bishop Zuroweste is the Episcopal chairman, press department, of the National Catholic Welfare Conference.

The Senators and Representatives were guests of editors and publishers attending the Golden Jubilee Convention.

In his remarks, Bishop Zuroweste pointed out that the ideologies of communism are diametrically opposed to truth and democracy, and he pointed to the effective opposition of the Catholic press against the false teachings of atheistic communism. He asserted that the Catholic press record of the past half century is one of loyalty and service to church and our country.

For the benefit of the Members of the House, under unanimous consent of its membership, I herewith include the remarks which Bishop Zuroweste gave at the congressional breakfast on May 12, 1960:

REMARKS OF THE MOST REV. ALBERT R. ZUROWESTE, D.D., BISHOP OF BELLEVILLE, ILL., EPISCOPAL CHAIRMAN, PRESS DEPARTMENT, NATIONAL CATHOLIC WELFARE CONFERENCE AT CONGRESSIONAL BREAKFAST OF THE GOLDEN JUBILEE CONVENTION OF THE CATHOLIC PRESS ASSOCIATION, HOTEL STATLER-HILTON, WASHINGTON, D.C., MAY 12, 1960

It is an honor for me to greet our distinguished guests in the name of the Catholic Press Association. This particular convention marks our golden jubilee and we look back with pride and satisfaction on the accomplishments of the past 50 years. During this half century great progress and advancement have been noted both in our Nation and our church. In all sincerity, we believe that the Catholic press has been a truthful and powerful communication means in promoting those causes and programs that have aided the material and spiritual growth of our Nation.

Our organization has defended nobly our Nation during the strain and stress of war years, during days of depression and prosperity. It has helped immeasurably in upholding the dignity of man, in fighting for the social betterment of the lower and middle classes, and in seeking justice and rights, irrespective of race, creed, or color.

Today our subscribers number in excess of 25 million and are served by 131 newspapers and 150 magazines in the United States and Canada.

Every Catholic newspaper and magazine covering the field of missions, devotion, education, social sciences, philosophy, liturgy, current comment, and opinion, is staffed by competent and devoted editors, writers, and editorial contributors.

The National Catholic Welfare Conference press department, under the direction of the bishops, has established the National Catholic Welfare Conference News Service which is now in its 40th year. This news service issues dispatches daily utilizing radio, telegraph, teleprinter, and mail facilities. It is comparable to the AP, UPI, and other general worldwide newsgathering agencies. This NCWC service gathers its news through 146 foreign correspondents, 115 U.S. correspondents, and is accredited as a bona fide news agency in the press galleries of Congress at the White House, at other U.S. Government establishments, and at all other important centers of the United States and abroad.

Our association enjoys a freedom (of press) that is an enviable one. Difference of opinions on every subject, except that of defined doctrine of the church, makes for a healthy, progressive and aggressive press. Since true freedom is founded on truth we as Catholic editors are dedicated to the pursuit and propagation of truth.

The ideologies of communism are diametrically opposed to truth and democracy; there is no press, be it general or religious, more active and forceful against these false teachings of atheistic communism than we of the Catholic press. Our record of the past half century is one of loyalty and service to our church and our country, and this policy will ever be the standard under which we will continue to function. There is no group in the world more dedicated and appreciative of the freedom of religion and freedom of the press than the Catholic Press Association.

We are grateful to our distinguished guests who have honored us by their presence at this breakfast. Aware of your very pressing problems and busy schedules, we're all the more thankful to each and every one for making this our golden jubilee a truly noteworthy and historic one.

President Kennedy Asks Commerce Department Not To Use Foreign Goods on Highways

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. DENT. Mr. Speaker, I believe this letter from President Kennedy of the UMWA to Secretary of Commerce Frederick H. Mueller is of such importance that every Member of Congress should be given an opportunity to read it.

I believe the time for reappraisal of foreign import business and policy is slipping away and unless we heed the warnings contained in the message that follows, this Nation will have a ruder economic awakening in the very near future.

The letter follows without further comment:

PRESIDENT KENNEDY ASKS COMMERCE DEPARTMENT NOT TO USE FOREIGN GOODS ON HIGHWAYS

(EDITOR'S NOTE.—One of the problems facing the United States today is increasing use by big business of cheap foreign commodities, including such basic items as steel and cement. The Federal Government plans to use foreign imports on roads built in conjunction with the States under the jointly financed highway building program. On April 22, UMWA President Thomas Kennedy wrote a letter to Secretary of Commerce Frederick H. Mueller protesting the use of such materials. No final decision had been given by Mueller as the journal went to press. The text of President Kennedy's letter of protest is printed below.)

Through Gov. David L. Lawrence of the Commonwealth of Pennsylvania, I am aware of the fact that he and other officials of his administration conferred with you recently concerning the question of importing foreign materials for use in construction of Federal aid highways in Pennsylvania. Assuredly, I am in complete accord with the protest which was lodged with you because I am fully aware that the importation of cement, steel, or any other foreign product for highway purposes in Pennsylvania would be a terrific mistake. By the same token, I am not dealing with Pennsylvania alone, because I am cognizant of the fact that the pursuance of such a policy anywhere in the country would have devastating effects that might severely impair our national security.

It is a positive fact that Pennsylvania is first in steel and cement production in the United States. It is also definitely known that the steel industry in this Commonwealth employs 243,600 individuals and the cement industry employs 13,500. Certainly, in view of these facts, the earning power of over 257,000 persons cannot be regarded lightly. By the same token, if you were to delve into the employment situation which prevails in these two industries in other States, I am quite sure conclusions would be reached that the employment which prevails there comprises a vast segment of the Nation's economy.

In view of these circumstances, I am therefore, appealing to you to do everything in your power to impress upon those who are responsible for the regulations of the U.S. Bureau of Public Roads that such action is absolutely contradictory to good commonsense. I make this assertion because you know and I know that reckless

importation of any foreign-made product to this country works detrimentally against our industry, especially when we take into consideration that the earnings of American workers, the profits of American industry and business, as well as the taxes derived therefrom are responsible for the success of this Nation. Certainly, these factors should receive primary consideration before any attempt is made to place foreign-made products, which are produced under cheap labor conditions, on our markets in unfair competition against American-made goods simply for the purpose of catering to the will of special interests whose primary goal is huge profits.

The devastating effect which importation of residual oil from foreign nations has had on the American coal industry, and the huge problems of unemployment which have been created as a result, should be convincing evidence to your office that there should be no toleration of importing foreign-made products for highway purposes, because the end result will bring about further grave problems of unemployment. It is, therefore, my sincere hope that you will cooperate to the fullest extent to abolish such practices which are now in effect and that you will take whatever steps are necessary to wipe out the possibility of further ventures of this character.

Aid to the Suffering People of Chile

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. ANFUSO. Mr. Speaker, one of the great tragedies of recent years is the havoc created in Chile by the series of earthquakes, seismic waves, floods, and rains which caused untold damage there in the last few weeks. Thousands of people have been killed, many more thousands are wounded, while hundreds of thousands are homeless.

Throughout our history the people of the United States have always responded generously to help stricken nations with food, clothing, shelter, medical supplies, and the like. This is being done now, too, chiefly by the Red Cross and others. From reports reaching us from Chile, I believe that we are not fully aware of the extent of the tragedy and the size of the damage done, both to people and property. I am afraid that what we are doing under the present circumstances is far from enough and will reach only a limited number of people.

We are in the fortunate position of being blessed with surpluses in various agricultural commodities, such as wheat, corn, rice, edible beans, certain dairy products, also cotton which could be used for clothing and other purposes. We have available feedstuffs for animals and building materials for the construction of new homes. All of this may mean the difference between life and death for the people of Chile.

Mr. Speaker, I am addressing a letter to President Eisenhower urging him to instruct the Secretary of Agriculture to make available some of our agricultural surpluses to the people of Chile, who are not only our good neighbor but good friends and allies of the people of the United States. Let us share our blessings with them in this very tragic hour they are experiencing and show them that we have not forgotten them. Large-scale aid to the people of Chile now will also serve as a manifestation of our generosity to other peoples all over the world.

Under leave to extend my remarks, I wish to insert into the RECORD an editorial appearing in today's issue of the Washington Daily News, June 9, 1960, dealing with the same subject:

NEEDED: "OPERACION AMIGOS"

The convulsive temblors that racked Chile with death and destruction left perhaps 200,000 persons homeless and defenseless against the cruel winter season just beginning.

America's response to this disaster was, as always, generous and warm-hearteded. But as fine as has been our effort to help these stricken people, it has been inadequate to cope with the appalling havoc created by nature gone wild.

Individuals can, of course, continue to help through local Red Cross chapters and organized religious charities. But the need in Chile is of such overpowering proportions that it is doubtful individual help alone can turn the trick. Instead, what is needed here is a major effort on the part of our Government—a major effort to rebuild shattered lives and, let's not kid ourselves, to refresh Uncle Sam's somewhat tattered image in the minds of the world's needy people.

Our warehouses are bulging with commodities and building materials that can mean the difference between life and death to countless men, women, and children in Chile. The Government should at once organize a humanitarian D-day—an "Operacion Amigos," if you will—to get, by ships or planes, these supplies in the hands of the homeless people of Chile before winter extracts its toll of suffering and death.

Whatever it costs this Government, this mission of mercy is going to be a bargain. It cannot help but create a needed reservoir of goodwill toward our country throughout Latin America. It will give the lie to Communist slurs about the callous materialism of our society. It will reaffirm in the eyes of the world the fact that good neighbors come to each other's help in time of crisis.

But time is of the essence if "Operacion Amigos" is to do the job. It must be undertaken at once, and with the skill and generosity that is the true hallmark of the United States.

City Tries To Repeal State Milk Law

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, the attempt of New York City to repeal a New York State milk law is just another example of the weird maze of conflicting sanitary standards which hamper the free flow of high-quality milk from State to State. Writing in the St. Paul Pioneer Press, Associate Editor Alfred Stedman pointed out that enactment of my national milk sanitation legislation would free interstate milk from such absurd legal entanglements by establishing a Federal quality standard for fluid milk shipped in interstate trade. Under leave to extend my remarks, I would like to include Mr. Stedman's editorial in the RECORD:

NEW MILK LAW TANGLE

In New York, the weirdest of city-State conflicts has produced a new reason why Congress is so strongly impelled to set dairying free from the maze of contradictory State and local sanitary regulations that are hamstringing interstate commerce in milk. Establishing uniform Federal sanitary regulations for milk, as already is being done for meat and poultry, would do the job.

The New York State Legislature passed and Governor Rockefeller signed an act prohibiting State or local health agencies from requiring the dating of milk. Such requirements mean that each bottle or carton must be stamped with the date of pasteurization.

No doubt at one time justified on health grounds, this requirement now has been made obsolete and senseless by modern methods of sanitation and distribution. These methods enable milk to retain its high quality, flavor and freshness for far longer periods than formerly was the case. They make dating a needless expense to the farmers and consumers, who profit from or pay for milk and cream that are consumed by the public.

But of course the requirement does create a certain number of jobs in dating and handling and hauling outdated milk. And, in the eyes of New York City Council, these advantages were deemed to outweigh all the glaring disadvantages of dating. So the council by a vote of 20 to 1 has reenacted or voted to reenact the dating requirement which was specifically outlawed by the legislature of the State of New York.

The absurd legal tangle that results seems to cry aloud for enactment by Congress of the Lester Johnson bill whose uniform Federal sanitary code on interstate milk shipments would sweep aside all such conflicting and contradictory local regulations. Representative JOHNSON, Senator HUMPHREY, and other members of both political parties who are supporting the bill could properly call this situation to the attention of Congress as a conclusive argument in behalf of their measure.

When New York City tries to repeal New York State milk law it seems high time for the Federal Government to step in with national requirements for free trade in wholesome dairy products.

Twenty-fifth Anniversary of Griffith Park Observatory

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1960

Mr. LIPSCOMB. Mr. Speaker, the Griffith Park Observatory and Planetarium, which is located in the congressional district I represent, recently observed its 25th anniversary.

Situated in Griffith Park, high above surrounding areas of Los Angeles and nearby cities, the observatory has over the years become the center of attrac-

tion to millions of local residents and visitors.

Under leave to extend my remarks, I submit for inclusion in the RECORD the following editorial that appeared in the May 20, 1960, Los Angeles Times which pays well deserved tribute to the observatory and its staff:

GRIFFITH OBSERVATORY'S SILVER ANNIVERSARY

Twenty-five years ago this month the Griffith Park Observatory and Planetarium was opened to the public. Since then 13,750,000 persons, including residents of this city and visitors from throughout the world, have seen the fascinating exhibits in the Hall of Science and 4.25 million adults and children have attended the popular shows in the planetarium theater.

A quarter century is an almost unnoticeable period in the infinite history of the universe but it is a fair span in the life of man. In that time our knowledge of astronomy has increased to a remarkable degree, and much understanding of a complex science has been passed on to the general public by the talented staff of the Griffith Observatory.

Among the most popular features of the planetarium are its "trips" to various solar bodies. This summer, in commemoration of its anniversary, the planetarium will present the interesting and realistically illustrated trips to the Moon and Mars. More than 17,500 of these informative shows have been put on since 1935.

The work of the Griffith Observatory staff has entertained and instructed millions over the years, and undoubtedly it has also been responsible for planting the first seeds of wonder in many of tomorrow's young astronomers and space technicians. We add our congratulations to the observatory for its work of a quarter century in bringing the stars closer to man and, perhaps, man a little closer to the stars.

The Story of Chief Joseph: From Where the Sun Now Stands—Part VI

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am presenting the final article of the story of Chief Joseph, leader of the famous Nez Perce Indian Tribe and one of America's most distinguished Indian leaders.

This excellent article was authored by Mr. Bruce A. Wilson, editor of the Omak (Wash.) Chronicle newspaper, and it has received wide acclaim. Mr. Wilson depicted the last year of struggle of the mighty Nez Perces during which they were forced to give up their carefree living in Oregon and, after bitter armed conflict with American troops, settle on a reservation.

Mr. Wilson did a fine job, I believe, in describing Chief Joseph when he stated that Joseph was not a ruthless savage; a Red Napoleon, as he was often called. Rather, he was more comparable to Lincoln—a man of peace, gravely concerned with the welfare of his people.

The concluding article follows:

The Nez Perces who surrendered with Joseph were taken by horseback and Missouri River flatboats to Fort Leavenworth where they spent the winter in a squalid camp so suffused with malaria that more than half became sick and 20 or 30 died. Gradually it dawned on those still able to think about anything except surviving that the field army's promise to return them to Lapwai was not worth the buffalo chips needed to roast a chestnut.

Howard was now arguing that a lot of white settlers would boil up their own version of justice if the nontreaty Nez Perces reappeared in Idaho, where a dozen of them were still under indictment for murder. Besides, he said, even if he had promised a return to Lapwai, the hostiles had violated the surrender terms by permitting so many to escape to Canada. (In the Nez Perce mind, of course, Joseph ultimately had surrendered only himself and everyone else could do what he wished.) Miles said the army ought to keep its word.

But General of the Army Sherman refused to consider sending the prisoners west, though he admitted: "The Indians throughout (the war) displayed a courage and skill that elicited universal praise; they abstained from scalping; let captive women go free; did not commit indiscriminate murders of peaceful families; and fought with almost scientific skill, using advance and rear guards, skirmish lines and field fortifications."

This fraternal slap on the back afforded thin comfort to the emaciated Nez Perces when in July, 1878, the army released them to the Indian bureau. This agency felt the early atrocities in Idaho made a return impossible. For the next 7 years the Nez Perces, far from the wild, fresh mountain air, were situated in Indian territory (for the most part in present-day Oklahoma). There they were allocated a dismal diet of tepid drinking water, poor rations, searing heat, soaking rains, cold winds and virtually no medical supplies. More than a hundred of them died.

Meanwhile many of the tribesmen who had fled to Canada now were drifting back to Idaho where all the whites seemed too busy farming, mining, and logging to concern themselves with revenge.

During all this time Joseph was fulfilling the role of a leader whose stature increases with the despondency and helplessness of his people. Early in the period of exile he traveled to Washington, D.C. Dignitaries gawked but saw no solution. In the early 1880's, however, the rather lonesome campaign Miles (now a general) and Howard's aid, Wood (now a Portland, Oreg., attorney), had launched on behalf of the Nez Perces spread into a persistent philanthropic movement with the Indian Rights Association and Presbyterian Church, among others, demanding action. Soon citizens' groups from Kansas to Connecticut were up in arms. Following an outburst of responsive leadership by Congress, the Indian Commissioner in April 1885 ordered the Nez Perces returned to the Northwest.

A month later 268 Nez Perces, survivors of nearly 500 who had surrendered with Joseph or were later delivered to Indian Territory, left Arkansas City by train with 35,000 pounds of baggage. At Pocatello, Idaho, there came another parting—118 continued to the Nez Perces Reservation at Lapwai while 150 were sent to the Colville Reservation Agency, then located at Spokane Falls. The Indian Bureau, still fearing reprisals, insisted that Joseph, many leading warriors, and others who might be accused of atrocities in Idaho be delivered to the Colville Reservation.

Religion may also have entered the picture. Yellow Wolf said an interpreter asked each of the exiles: "Where you want to go? Lapwai and be Christian, or Colville and just be yourself?"

The refugees who chose or were assigned Lapwai received a warm welcome from others of their blood. Soon some were well on their way toward becoming self-sufficient farmers. Those who followed Joseph to Fort Spokane were greeted by a blast from the Colville agent: the Nez Perces had become used to Oklahoma, "sickly sentimentality" forced their return, insufficient funds were available to feed them, etc. After 6 months of this the weary Nez Perces, at their own request, were transferred to Nespelem; and one day in December 1885 about 120, of whom all except the younger children had heard the shots echoing through White Bird Canyon, awakened in stark terror at Big Hole, shivered from cold and fear at Bear Paw, crossed into Okanogan County to live their remaining years.

The Colville Reservation, sprawling through north central Washington from the Columbia River to Canada, had been created in 1872 for local tribes, including the Nespelems, Okanogans, Methows, and San Poils, and for any other bands the Commissioner of Indian Affairs might wish to place there.

Arriving at the subagency at Nespelem, the Nez Perces easily detected a certain amount of resentment on the part of some of the resident Indians. It is entirely probable the feeling was mutual, for the Nez Perces no more wished to be there than the native tribes wish to see them coming.

Chief Moses, another outstanding figure in Northwest Indian history, became friendly with Joseph and did much to ease friction between the two groups. But for some years the Nez Perces kept pretty well to themselves, pitching their tepees along several miles of Nespelem Creek, southeast of the subagency, and riding alone on fall deer hunts into the San Poil country.

Joseph and many others from his band were heartsick because they had not been returned to the Wallowas, whose ownership they had never relinquished. But as an alternative, they could hardly have been assigned better country than the Colville Reservation. Here were the same sweeping forests of ponderosa pine, Douglas-fir and lodgepole, with ample pasture and at least a scattering of lakes. "On the Colville we found wild game aplenty," Yellow Wolf said. "Fish, berries, and all kinds of roots * * *. Deer everywhere, and good salmon at Keller. It was better than Idaho, where all Christian Nez Perces and whites were against us."

But the more spectacular beauty of the Wallowas was missing, and the winters seemed colder. Here the Nez Perces found no sheltered Imnaha, virtually without snow at an elevation of only a few hundred feet. Most of all, the Wallowas had been theirs. This land was not.

In 1892 a 13-year-old white boy from Portland, Oreg., spent 6 months living in Joseph's tepee. He was Erskine Wood, son of the lieutenant who had written down Joseph's surrender speech and later urged returning the Nez Perces to the Northwest. Now, 15 years after the war which had torn apart his life, Joseph welcomed the son of one of his former enemies. Erskine spent 3 more months with Joseph the following year. Today a 90-year-old Portland attorney, he supplied much of the following material during a recent interview.

In the early 1890's, Nespelem consisted of a flour mill, sawmill, a corral for slaughtering beef, a Government warehouse, and a single residence for two white Government employes. To the warehouse rode the Nez Perces, once a month, to be issued rations, salt, sugar, bacon, flour, coffee, hard-bread, beef, and the like, to supplement the food they provided for themselves * * * wild roots (camas, chaweet, kows, bitterroot, all of

them boiled); wild berries; venison, duck, pheasants, and grouse when available; trout, and salmon. Occasionally clothing was issued. These supplies were packed to the tepees, made of twill cloth, unbroken by decorations.

"In the center was a bare earth for a fire," Wood recalled. "Around the circumference were stacked rawhide iktas bags, used for storing things and as suitcases when traveling. These bags also helped keep out the wind. Food and cooking utensils were piled near the entrance. Between the supplies and fire, we slept like spokes in a wheel, each on wild ryegrass covered by older blankets with better blankets on top. The tepees were warm and comfortable though sometimes smoky when you stood up. Nearby, in some cases, thatched ryegrass roofs had been mounted on upright posts to provide shade in the heat of summer. After the fall deer hunt, winter camp was set up closer to Nespelem where the rations were issued. Several families would live together during the winter, with four or five tepees combined into a single long one. Fires would be spaced through its length. The same arrangement was used during the fall deer hunt. Then a frame of willows was built above each fire. From the frames hung strips of freshly killed venison, curing in the smoke.

With Joseph lived his two wives and a lad about Erskine's age named Cool-Cool-Smool-Mool. Apparently he was an orphan. Joseph left no descendants. A daughter born a few days before the battle at White Bird Canyon died 5 years later in Indian territory. During Erskine's first visit, Looking Down and his wife also shared Joseph's tepee. Looking Down had been shot in an ankle during the war. But the wound never healed, and drained continually through an ever-present bandage.

"Joseph was well built, slightly heavy set, maybe a little overweight, dignified as a Roman senator, with a forelock and two long braids of black hair. Usually he wore a dark blue flannel shirt, breechcloth, blanket leggins and buckskin moccasins. He never talked to me about the war or the Wallowas (I was only a boy). But he often sat staring into space. I am sure he was thinking of the Wallowas, where his father and mother were buried. Joseph's leadership was never questioned. Many of the band consulted him. When a need for decisions arose, such as how to divide a venison, all others stood back while Joseph cut into the deer."

The young Erskine spent much of his time trapping muskrats, shooting ducks and pheasants, and riding with Cool-Cool-Smool-Mool. One of his chores was to locate Joseph's 40 or 50 horses in the hills and bring them down to a water hole in Nespelem Creek. There thick willows formed a natural corral, making it easy to lasso fresh ponies before turning back the used ones.

Whatever Sundays meant to Joseph, they were usually the occasion for a special breakfast followed by horseraces. Perhaps half a dozen other Nez Perce leaders would come to Joseph's tepee for breakfast. One might be Two Moons: would you guess this aging visitor had led the howling attack that crumpled Perry's left flank in White Bird Canyon, or helped steal Howard's pack mules from under the general's nose at Camas Prairie? Often Yellow Wolfe came, slowly moving, in a white man's flannel shirt and pants: had he fought like a painted demon along the Clearwater Bluffs, and crushed troopers' skulls with his warclub at the Big Hole? Even had Erskine been old enough to know these things, he could hardly have believed them as he joined these time-creased elders for frying pan bread cooked in grease, boiled meat, stewed huckleberries, coffee and sugar.

Breakfast was followed by a slow, cheerful ride to the racing flats (probably today's encampment site) where older boys, stripped to their breechcloths, raced ponies out and back again while the spectators shouted and wagered blankets. The afternoon sun settling behind the Cascades, everyone mounted again and in the finest of spirits swept at breakneck speed back to their tepees.

In the crisp air of late November, the Nez Perce men brought in their horses while squaws struck the tepees and packed supplies for fall hunting. The caravan headed northeast, the families about 75 yards apart to keep the horses from getting tangled. In the wooded hills of the San Poil country, tepees were pitched winter-style while the men and boys set out to stalk deer across slopes and through ravines.

"During summer," Wood recalled, "we took sweat baths about once a week. They were no ordeal because the outside air was warm. But deer hunting meant a sweat bath the first thing every morning, before it was light, to remove scent from our bodies. The sweathouse consisted of saplings stuck in the ground and bent over to form a circular hut about 4 feet high. The saplings were covered with blankets. Another blanket hung over the entrance. Inside the hut, a hole was dug and filled with rocks heated by a fire. Then five or six of us, naked, crawled inside. One would dribble warm water from a tin can onto the rocks (cold water might break them). This produced great clouds of steam. Sweat poured from our bodies. Everyone crouched low with his nose close to the ground to breathe. I didn't know this at first, kept my head high and almost choked to death. After 10 or 15 minutes, we walked from the sweathouse to a creek and plunged in, sometimes having to break through a layer of ice. The shock was petrifying. But our bodies were thoroughly cleansed."

Apparently neither Joseph nor any of his band, in those early days at Nespelem, ever crossed west of the Okanogan River, where Ruby and Conconully were booming and the Cascadian foothills rang with the shouts of miners. By 1890 30 Nez Perce families were farming 200 acres and horse herds were thriving.

But adjustment came slowly. For too long the Nez Perces had been wards of the Government, standing in line to receive most of their sustenance. Their initiative drained away. As many died among Joseph's people as were born. An 1890 census turned up only 32 males over 18 years of age. Only four could read English; nine could speak it. A few wooden houses were built (in the $62 class, according to the agent's cost records). One was assigned to Joseph. He preferred his tepee.

In 1900 Joseph traveled by train to the East. He was at once a 60-year-old incongruity wearing a suit of black broadcloth, pitifully out of place in crowded hotel lobbies, and a splendid Indian specimen as he rode with his full war bonnet and other native accoutrement in a New York parade to dedicate Grant's tomb. Joseph talked about returning to the Wallowas with President McKinley and with General Miles, one of the few whites whose word he trusted. (Four years earlier the north half of the Colville Reservation had been opened to settlement, and whites again were hemming in the Nez Perces.)

Following his return to Nespelem, Joseph and James McLaughlin, an Indian Bureau inspector, visited the Wallowas to see if land could be purchased. For the first time in 23 years Joseph rode through the land of Winding Water. A thousand memories must have washed through his mind. But the Wallowa River as it left the lake was now an irrigation channel. Land was expensive. "There are 1,107 votes (in the district)," a report warned. There could be no return.

In 1903 Joseph again traveled east, probably back for lack of anything better to do. He was entertained lavishly by General and Mrs. Miles, and appeared briefly with John Cummins' Indian Congress and Life on the Plains exhibition at Madison Square garden. Returning, Joseph and a white-bearded General Howard were together a few hours at the Carlisle Indian school.

This was followed by a trip to Seattle where Prof. Edmond S. Meaney hoped a public appearance might drum up support for the better-forgotten Wallowa proposal. Covering the program at a downtown theater, a caustic Post-Intelligencer reporter, wrote:

"After a long drink of water, Joseph folded his hands over his stomach and with Henry Steele, a former Indian agent, as interpreter, said what sounded like, 'Um mum mum halo tum tum um mum,' interpreted as 'Today my heart is far away from here.' 'Um mum cumtux sicamoose tar ra ra,' meaning, 'I would like to be back in my old home in the Wallowa country.' 'Hi-yu mum um tum tum,' translated as, 'The white father promised me long ago that I could go back to my home, but the white men are big liars' (laughter). 'Kopet,' translated as, 'That's all,' and he sadly sat down."

It was no use.

WEDNESDAY, SEPTEMBER 21, 1904

Joseph, greatest of the Nez Perce chiefs, his bronze skin wrinkled by 64 summers, his spirit weakened by a cancerous melancholy, steps slowly from his tepee along Nespelem Creek, feels the pain in his heart and a sickening fear which cannot be denied, sags heavily to the ground. Soon he is dead.

In his younger days, when Old Joseph solved all problems and the wild, free world of the Wallowas spread in every direction, this man must have been happy. With the chieftain's mantle came inescapable concerns and a deep-rooted dread of failing his station. From that instance on, his life was a struggle in which the welfare of the people entrusted to him was the only thing that mattered. He bore no hate for early settlers in the Wallowa Valley. He feared them, for he knew what they meant. He would bury his independence and surrender a treasured homeland to spare his people the blood-smeared stains of a war. Forced into flight, he would try to see that should the warriors win, their victory would have a meaning. Beaten, he never ceased hoping he might return his people to the mountains from which he had taken them. But near the end, his hope grew dim.

Now the struggle was ended. Joseph had won and had lost. Whatever a leader of intelligence and compassion could do, he had done. The future was for others. "From where the sun now stands, I will fight no more forever."

Why New Laws Are Needed To Curb Chain Monopoly

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. PATMAN. Mr. Speaker, our distinguished colleague, JAMES ROOSEVELT, of California, has laid bare a most disturbing march of events in the business life of our country. Too little attention

is paid, I think, to what is happening to small and independent business. It is tending to disappear; it is being squeezed out and being pushed to a minor, ineffectual competitive role in the business life of the Nation. JIMMY ROOSEVELT has, with hard work and rare insight, intensive and patient investigation brought to light the exact nature of the problems small firms in the distribution fields are up against. More than that, he has advanced some very stimulating and fairminded proposals for coping with these problems.

I believe that the Members will find both stimulating and extremely instructive JIMMY ROOSEVELT'S expressions on a wide range of problems confronting small business today, as these appear in an exclusive interview with Larston D. Farrar, the noted writer and business analyst, and Washington correspondent for Food Merchandising. This interview, on the subject of the growing chainstore monopoly, appears in the May 1960 issue of Food Merchandising, a trade magazine which is read by tens of thousands of independent food retailers throughout the United States.

As matters now stand, the future of independent food retailing is anything but bright. A new survey of the food retailing industry recently made by the Federal Trade Commission shows that in the 10 years from 1948 to 1958, independent retailers' share of food store sales dropped from 58 to 25 percent. On the other side of the coin, corporate chains with 11 or more retail outlets increased their share of food store sales from 29 to 44 percent in the same period. These facts should dispel any notion that the prospect of a chain monopoly in food distribution is merely a remote and fanciful spector. The problems which are knocking on our doors today should concern every Member of Congress, every housewife—in fact, all citizens in all walks of life.

A word about Mr. Larston Farrar: In this interview he has again turned his noted talents to exposing and analyzing the half-hidden problems which affect the welfare of the whole Nation, as distinguished from problems raised by the ambitions and campaigns of some special interest group. Mr. Farrar is, of course, the author of many books, such as "Washington Lowdown," which have attracted national attention.

Needless to say, I am personally very proud of the fact that JIMMY ROOSEVELT is a Member of our Select Committee on Small Business. For almost 10 years now he has been chairman of the subcommittee dealing with small-business problems in the distribution fields, and I doubt if there is anyone in the country who can match his knowledge and expertness in this field.

The interview from Food Merchandising is as follows:

OUTLAW CHAIN MONOPOLY?

(Representative ROOSEVELT leads the Government fight to limit power of the chains. In this exclusive interview, ROOSEVELT answers such vital questions as: Why are new laws needed to curb chain monopoly? What are these new controls that should be put into law? How do we know these won't smother free competition instead of helping it?)

(By Larston D. Farrar)

JAMES ROOSEVELT, Democrat, eldest son of Franklin D. Roosevelt, has served as Representative of California's 26th District since elected in 1954. He was former chairman of the California Democratic Central Committee and was Democratic national committeeman. A Marine Corps veteran, he now heads Subcommittee No. 5 of the House Small Business Committee and has been conducting an investigation of the food field. His new bills would regualte competition through increased U.S. control of the industry.

Larston D. Farrar, Washington correspondent for Food Merchandising, is one of the most noted wrtiers on the Capitol scene. He has been called "1 of the 10 best-informed men on economic and national affairs in the country." His "Washington Lowdown" was a fast-selling pocket edition and his latest book is "Successful Writers and How They Work." His interviews and feature articles have appeared in leading magazines. Mr. Farrar's interview with Representative ROOSEVELT follows:

"LARSTON D. FARRAR. Mr. Roosevelt, our readers are aware of your energetic investigation of food distribution practices. We hope, through this interview, to gain a better understanding of your work.

"Representatives JAMES ROOSEVELT. I'm delighted with this interview because the more we all know about our problems, the better we can agree on solutions. One thing is certain: Sound action comes from sound thinking which is based on adequate and reliable information. I congratulate Food Merchandising for probing into this. I feel you are fulfilling the true function of a magazine serving a tremendously important industry faced with a multitude of problems.

"Question. To lead off, what specific legislation have you introduced to thwart the forces of monopoly you feel are at work?

"Mr. ROOSEVELT. There are three main bills which affect the food industry. First, H.R. 9896 would give the Attorney General and the FTC the chance to review, in advance, any mergers of firms with capital, surplus, and undivided profits exceeding $10 million. Its purpose, of course, is to prevent mergers which might lessen competition or tend to create a monopoly.

"Second, there is H.R. 9898 which is aimed at 'vertical integration.' If enacted the FTC could prevent a company in the retailing business from going into the manufacturing or processing business if this activity would tend to create monopoly or affect competition adversely.

"The third bill, H.R. 11315, would prevent any packer or any wholesale firm marketing meat, dairy goods, or poultry products, with gross annual sales of $10 million or more, from selling these products at retail. This would eliminate the retail chain from getting into the business of meatpacking and would also keep packers from getting into the retail business—if the firm's sales are $10 million a year or more.

"Question. What findings have you made that justify these controls?

"Mr. ROOSEVELT. The 10 largest chains account for almost 30 percent of U.S. grocery sales. The three largest chains account for approximately 47 percent of total chain sales.

"There is considerable evidence that most large chains have integrated vertically until they now are in business at every stage, from the farm to the home. These chains handle a piece of meat from the time the calf is born until the steak is eaten at home—eliminating independent marketmen, brokers and processors at every step. As a result, independent business operators at all levels of the industry have been disappearing at a rapid and alarming rate, with the resulting threat to free competition. In time, this is bound to be disastrous to the ultimate consumer.

"Let's not make any mistake about it, if the time comes when a few men, in effect, can set prices on all groceries, they will not hesitate to do so. There is more than one way to come to a collusive agreement—a knowing wink, reference to the same 'suggestions' in bulletins, and so forth.

"Question. What specific actions have you uncovered that would be corrected by your new legislation?

"Mr. Roosevelt. There are ample findings to justify not only these bills but even more stringent legislation. My subcommittee's evidence shows that there has been buyer-seller collusion; that there is no shelf space available in many chainstores for independent manufacturers but plenty of room for private brands; that there is preferential pricing for favored buyers; that there are many sales below cost on specific items; and that there are many other practices to fully show the need for this legislation. The small independent retailer doesn't need a congressional committee to tell him what he can see with his own eyes and what he feels in his own profits.

"Question. In your proposal to divorce retailing from manufacturing, what would you do about the small retail baker who makes all, or most, of his products in his own store? What about the independent retailer who makes some specialty item in his backroom kitchen?

"Mr. ROOSEVELT. The answer is fairly simple. No one in his right mind would confuse a small retail baker or grocer with huge companies doing tens of millions of dollars worth of business each year. The small businessman who isn't aiming at monopoly has no reason for fear. There is a tendency on the part of big business to throw up smoke screens and to strive to show that the legislation would affect the small businessman. The only way this would affect him would be that it gives him a chance to compete and stay in business against the tremendous power of the big businessman.

"Question. What would prevent chains from setting up wholly-owned subsidiaries for manufacturing purposes? In a family-owned chain, what would prevent the members of the family from making a substantial investment in (and thus control to some extent) a food manufacturer?

"Mr. ROOSEVELT. Of course, any person can violate a law. But any such subterfuge as you have outlined would be classified as such by the courts. Nothing in a law automatically guarantees that it will be obeyed; but just because individuals try to get around a law, this does not mean they will get away with it. Still, people will probably try it.

"Question. What about chains which already own packing plants? Would they have to get rid of them?

"Mr. ROOSEVELT. Yes, if they did an annual gross business of $10 million or more. Otherwise, the law would not apply to them.

"Question. What about packing plants which sell such a large portion of their production to one chain that they must depend on that chain? Isn't that the same thing as control?

Mr. ROOSEVELT. The answer is the same; such control would be allowed if the business had not grown to the point of having $10 million gross sales or more in a year.

"Question. You want to require notification of impending mergers. Would this also apply to small chains and individuals who may have a chance to buy another store nearby?

"Mr. ROOSEVELT. The small chain or individual would have no difficulty in buying another store unless he or the other party were large enough to have capital, surplus and undivided profits totaling more than $10 million.

"Question. Let's pursue this further. Suppose a small firm is doing badly, has exhausted its money source and the owner decides he must merge with the competition.

The merger is refused by the Government. How would this protect the public interest?

"Mr. ROOSEVELT. The Government could not deny any such merger unless it would tend to establish a monopoly and/or eliminate competition. If the monopoly already exists, the law does not apply. On the other hand, if the firm is small, it could not honestly be accused of affecting competition or establishing a monopoly.

"Question. In this matter of mergers, many people feel that the Government itself is to blame—that the present tax structure encourages mergers and almost makes them necessary because growth cannot be financed out of earnings after the tax takes its bite. Any comment?

"Mr. ROOSEVELT. For months, I have suggested and supported changes in the tax structure to deal with this. I would give small business the opportunity to grow through retaining large amounts of earnings before payment of taxes * * * the incentive and necessity to merge would be greatly lessened.

"Question. Your present bill is aimed at the merger itself; wouldn't it be better to aim at the taxes which foster the mergers?

"Mr. ROOSEVELT. We must remember that the appetite for power is sometimes as great as the appetite for profit. Our approach to the problem must be on both fronts.

"Question. In your investigation, did you uncover illegal pricing? Do you plan additional legislation dealing with grocery pricing?

"Mr. ROOSEVELT. Yes; we uncovered pricing arrangements which definitely tend to destroy competition. I believe that we should first pass the bills I have proposed and see how they work before considering any additional legislation. I am in favor, however, of a concerted effort to improve law enforcement operations.

"Question. What is your thinking about mandatory functional discounts—forcing manufacturers to give more favorable prices to wholesalers than to direct buying retailers?

"Mr. ROOSEVELT. This is a controversial matter on which there are two sound opinions. I have not reached any conclusion.

"Question. Are you in favor of Federal fair trade—putting a floor under all food prices and thus removing price from the competitive arena?

"Mr. ROOSEVELT. I am concentrating on Representative WRIGHT PATMAN'S proposal to forbid below-cost selling. In general, I do not believe that a Federal fair trade law would remove all price from the competitive arena.

"Question. Many businessmen, large and small, are worried these days about the trend to protect free enterprise by putting Government more into control than it already is. The worry is that the effect of new laws would be just opposite to the intent—that they would restrict competition rather than free it. Any comment on this?

"Mr. ROOSEVELT. This is exactly what the big businessmen want the small businessmen to believe. Big business is constantly putting out propaganda to lull the many small businessmen and, in effect, use them. Any small businessman who holds such a view is under the influence of false propaganda or else he suffers dismally from lack of information about what is going on today.

"This legislation, with the exception of the merger bill, gives the Federal Government no added controls whatever. It merely prohibits practices which eliminate competition from the economic picture. I believe that most small businessmen who read and think will understand that this proposed legislation will not hurt free enterprise but will increase competition, keep it within bounds and enable the small businessmen to stay in business.

"The Government has been getting into the economic field—by necessity—ever since the first antitrust laws were passed in the 19th century. This is not due to Government planning but to the excesses and abuses by men of financial power who would stop at nothing to bring about monopoly. If the Government had not acted through the years, it seems plain that there would be very little economic freedom left.

"Many times, those who talk of free enterprise really are talking about freedom to loot or freedom to take over and monopolize. If the little businessman falls for this propaganda and cooperates with those who want to gobble him up, then we can only voice our sympathy for him.

"Question. Do you seriously feel that present laws, if enforced, cannot cope with the problems of the big getting bigger and the small getting weaker?

"Mr. ROOSEVELT. I not only feel this is so but the record proves it beyond any question. This does not, however, excuse us from all efforts to enforce present laws—or from trying to streamline the procedures and discourage delays.

"Question. Earl Kintner, Chairman of the Federal Trade Commission, has said: 'That government is best which governs least—too much further regulation, the passage of too much restrictive legislation, is apt to whittle away at the free enterprise system—to erode it until too little is left to permit a healthy competitive economy.' Does that statement put you and the man who would enforce the laws your sponsor on opposite sides of the fence?

"Mr. ROOSEVELT. Certainly not, unless Mr. Kintner means that there is need for better law and better enforcement. I can't believe he reached such a conclusion. I believe he would join us in our overall objectives. I would join him in being against overrestrictive legislation.

"Question. If you had the chance to address some well-chosen words to the independent retailers of the country, what would you say to them?

"Mr. ROOSEVELT. I appreciate this opportunity to make a comment: Our American enterprise system has been responsible for our national development because of the existence and preservation of true competition. Free competition is the essence of what we call freedom in our economic system. Without it, all that means America would quickly disappear. A monopolistic economy would lead rapidly to a Communist or Fascist dictatorship. The independent grocer should work to convince the housewife that in the long run, elimination of small businessmen would bring economic slavery.

"The trend toward monopoly, unknown to most citizens, is growing at an alarming rate. There's an old saying: 'Forewarned is forearmed.' Let us arm ourselves now to preserve our freedoms and our way of life."

Sacramento Is Host to National JACL Convention

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. MOSS. Mr. Speaker, under leave to extend my remarks, may I invite the attention of my colleagues in the Congress to the 16th Biennial National Convention of the Japanese American Citizens League, more popularly known as the JACL, which is to be held at the newly constructed Hotel El Dorado in Sacramento, Calif., June 28 to July 3.

As most of my colleagues are aware, the JACL is the only national organization of Americans of Japanese ancestry in this country, with members and chapters in 32 States, including the newest, Hawaii. Its name identifies most of its constituency, for all of its members are native-born or naturalized citizens, most of whom are also of Japanese ancestry. Its name too delineates its reasons for being, to keep watch and ward over the welfare of those of Japanese ancestry in this Nation and to promote, in the words of its national slogan, "Better Americans in a Greater America."

APPROPRIATE CONVENTION SITE

The historic capitol city of Sacramento is an especially appropriate site for the JACL convention, for no other State in the Union has had a more intimate association with Americans of Japanese ancestry on the continental mainland of California. Today, it is estimated that one-half or more of all persons of Japanese ancestry residing on the U.S. mainland live in California.

One hundred years ago, the first Japanese Embassy to this country landed in San Francisco preparatory to traveling to Washington, D.C., to sign the first treaty of friendship and commerce with our Nation. It is this centennial of diplomatic and commercial relations that we are celebrating this year, which includes exchange visits by President Eisenhower to Tokyo this month and by the Crown Prince and Princess to Washington in September.

It was 75 years ago that the first Japanese immigrants were brought over to this country through the port of San Francisco, which has come to be known as the Gateway to the Orient. And, it was in the Sacramento Valley and the surrounding hills that they first made their great contributions to the agriculture of the West, settling on unwanted wastelands and transforming them into productive farms and orchards, thereby demonstrating the value of irrigation and intensive cultivation. It was around Sacramento and the rugged mountain barriers to the East that the Japanese immigrants first joined in laying the tracks that enabled this Nation to bind itself together in an intercontinental network of iron rails. It was also in these rich mountains that these immigrants first joined to mine the ores that helped to make Western America the treasure house of the world.

Indeed, the once frontier West in general and California in particular owes much to the many and varied contributions of these so-called Japanese pioneers. And, it is to their greater credit that they accomplished and achieved so much under the handicaps of the anti-oriental discrimination and prejudice that they inherited from the Chinese immigrants of an earlier day. And, few of us will ever recall with pride our wartime mistreatment of this tiny minority, when Americans and their parents of Japanese ancestry were arbitrarily eva-

cuated from their homes and associations on the West coast in the spring of 1942.

Since World War II, the legislative halls of the State House which once spawned persecution of the Japanese have resounded with corrective and remedial acts for the benefit of those of Japanese ancestry in California. The courts of our State, too, have joined in striking down discriminatory statutes directed against our fellow Americans of Japanese ancestry.

Perhaps no city in America stands as a more eloquent reminder of the vicissitudes and the triumphs of Americans of Japanese ancestry than Sacramento.

SACRAMENTO LONG IDENTIFIED WITH JACL

Although the JACL movement began during World War I and local clubs were established under various names to promote the citizenship of the then very young Japanese-American minority, it was not until 1930 that the National JACL was organized at its first biennial national convention in Seattle, Wash.

The next year, in October of 1931, the Sacramento chapter of the JACL was formally organized and Walter T. Tsukamoto, a Japanese-American attorney who is now a lieutenant colonel in the Judge Advocate General's Department of the Army, was elected its first president. Except for the World War II years when the group was inactive because of the exclusion of American Japanese ancestry from the west coast, the Sacramento chapter has been an active participant in the league's activities, particularly insofar as representing the interests of Americans of Japanese ancestry in California were concerned before the State legislature. The minutes of the Sacramento chapter reflect the changing attitudes of Californians and other Americans to their fellow citizens of Japanese ancestry.

The various chapter presidents from Tsukamoto to the present include Dr. Jiro Muramoto, Henry Taketa, Dr. George Takahashi, Edward Kitazume, Dr. Goro Muramota, Mitsuru Nishio, Dr. Alvin Sato, Kiyo Sato, William Matsumoto, Toko Fujii, George Tabmara, Dean Itano, Percy Masaki, Mamoru Sakuma, Katsuro Murakami, Richard Matsumoto, and Tak Tsujita, the present chief executive.

Of particular note is the chapter's joint sponsorship recently with the Veterans of Foreign Wars Nisei—Japanese American—Post No. 8985 in the securing and the maintenance of the Nisei War Memorial Hall to honor the Japanese-American war dead of World War II, most of whom volunteered for combat duty from the confines of war relocation camps to which they and their families had been evacuated, with the now famous 442d Regimental Combat Team, often cited as the most decorated military unit for its size and length of service in American annals.

CONVENTION THEME "DECISIONS FOR TOMORROW"

The theme for this biennial national convention is "Decisions for Tomorrow," which reflects JACL's concern for the immediate future not only as an organization but also as Americans of Japanese ancestry.

Only 18 years ago, these Japanese Americans were an unwanted, suspect minority confined to virtual prison camps. That today they are the accepted Americans that they are, enjoying equality in and under the law and opportunities that never before existed for members of their nationality is a tribute not just to the JACL, which provided the leadership during the dark and troublesome days of their travail, but to the American way of democracy that has enabled these fellow Americans to overcome the bigotry and hatred of a recent era and to enjoy their status today as one of America's more fortunate minorities.

Some 1,000 delegates from the 88 chapters that comprise the National Organization are expected to convene in Sacramento later this month to chart their "Decisions for Tomorrow." The recommendations of a specially-appointed National JACL 1960–1970 Planning Commission are to be considered by the delegates who are not only aware of their opportunities as Americans but also that this is the dawn of the space and nuclear age, as well as the beginning of the second century of diplomatic and commercial relations between Japan and the United States.

SPECIAL CONVENTION EVENTS

Traditionally, the climax event is the convention banquet, to be held the evening of July 2. Guest speaker will be our esteemed colleague, DANIEL K. INOUYE, of Hawaii, the first American of Japanese ancestry to be elected to the U.S. Congress. As most of you know, the JACL was among the forefront of organizations that labored long in behalf of statehood for this long deserving territory. At the last or 15th biennial national convention which was held in Salt Lake City, Utah, 2 years ago, the guest speaker was also a distinguished colleague, D. S. "JUDGE" SAUND, of California, the first person of Asian ancestry to win election to the Congress.

In addition to the announcement and installation of the national officers for the next 2 years, the highlight of this affair is the naming of the Nisei of the biennium 1958–60, the highest honor that is presented by the JACL to the American of Japanese ancestry who in the past 2 years by his achievements or his services has contributed most to the welfare or to the credit of persons of Japanese ancestry. Congressman INOUYE, who was named as one of the 10 outstanding young men of America this past January by the U.S. Chamber of Commerce, by the way, is an outstanding candidate for this recognition, for he was nominated by the Washington, D.C. chapter for this honor. William Hosokawa, assistant managing editor of the Denver Post of Denver, Colo., was the Nisei of the 1956–58 biennium. A previous winner was Hiroshi Miyamura of Gallup, N. Mex., the only living Japanese American Congressional Medal of Honor holder who was also named as one of the 10 outstanding young men of America a few years ago.

A special feature of the Sacramento convention will be the pioneer banquet, which will be held the evening of June 28. This event will pay tribute to those remaining Japanese immigrants who have not only helped to make thel and of their adoption a better place in which to live but also raised their children into the loyal, exemplary citizens that they are. The Honorable Dr. Koto Matsudaira, Permanent Representative and Ambassador of Japan to the United Nations, will be the principal speaker. As former chairman of the United Nations Committee on the Peaceful Use of Space and a member of the United Nations Economic and Social Council, as well as the former Japanese representative on the Security Council during the crucial debates on the Suez crisis, Ambassador Matsudaira should be in an excellent position to suggest to JACL some of the vital challenges of these troubled times.

The customary Convention Luncheon which honors the JACL'er of the biennium and other organizational leaders is being converted into a testimonial to Dr. Thomas T. Yatabe, now of Chicago, Ill., for some 40 years of active leadership in JACL. Dr. Yatabe, a dentist, helped found the predecessor American Loyalty League in Fresno, Calif., in 1918 and was the first constitutional president of the National JACL. During and immediately after the war, he voluntarily gave up his professional work to help Japanese-Americans from the camps find housing and employment in the Midwest and East. He has served longer—some 28 years—on the national board than any individual.

Another Convention event will be a panel on housing and employment discrimination, the two remaining major areas in whieh the Japanese-American still faces prejudice, featuring Tad T. Masaoka, Intergroup Relations Specialist of the Housing and Home Finance Agency of the Urban Renewal Administration for region six, which embraces the Pacific Coast States and Alaska and Hawaii, of San Francisco, and John Yoshino, liaison officer for the President's Committee on Government Contracts, of Washington, D.C.

NATIONAL BOARD MEMBERS

Typical of the cross section of America that comprises the JACL is its national board members.

Shigeo Wakamatsu, national president, Chicago, Ill., is a chemist with Lever Bros.

Akiji Yoshimura, national first vice president, Colusa, Calif., is proprietor of the Vogue Cleaners.

Toru Sakahara, national second vice president, Seattle, Wash., is an attorney at law.

George Sugai, national third vice president, Payette, Idaho, is a produce dealer and shipper with the Central Produce Distributors.

Aki Hayashi, national treasurer, New York, N.Y., is merchandise manager for Noritake Chinaware Co.

Lilly Okura, secretary to the national board, Omaha, Nebr., is the administrative assistant and secretary to Hospital Administrators.

William Matsumoto, National Thousand Club chairman, Sacramento, Calif., is an insurance agent and assistant district manager of the West Coast Life Insurance Co. He is also the chairman of the convention committee.

Dr. Roy Nishikawa, immediate past national president, Los Angeles, Calif., is an optometrist.

George Inagaki, past national president, Los Angeles, Calif., is an investment counsellor and area manager of the Financial Industrial Fund.

Frank Chuman, national legal counsel, Los Angeles, Calif., is an attorney at law.

William Marutani, chairman, eastern district council, Philadelphia, Pa., is also an attorney at law.

Joe Kadowski, chairman, midwest district council, Cleveland, Ohio, is purchasing and production manager of the Jones Optical Co.

Minoru Yasui, chairman, mountain plains district council, Denver, Colo., is another attorney at law.

Joe Nishioka, chairman, intermountain district council, Idaho Falls, Idaho, is a farmer.

Kay Nakagiri, chairman, Pacific southwest district council, Burbank, Calif., is an aeronautical engineer at Lockheed Aircraft.

Fred Hirasuna, chairman, central California district council, Fresno, Calif., is a shipper of fruits and vegetables for the Sunnyside Packing Co.

Yone Satoda, chairman, northern California-western Nevada district council, San Francisco, Calif., is an accountant and office manager for the House of Rib.

George Azumano, chairman, Pacific Northwest district council, Portland, Oreg., is a travel agent and insurance salesman.

Masao Satow, national director, San Francisco, Calif.; Daisy Uyeda, administrative assistant, national headquarters, San Francisco, Calif.; Mike Masaoka, Washington representative, Washington, D.C.; Fred Takata, southern California regional representative, Los Angeles, Calif.; Esther Hagiwara, Midwest regional office, Chicago, Ill.; and Sam Ishikawa, New York office, New York, N.Y., are among the staff officers. Harry Honda is the editor of the Pacific Citizen, official weekly publication, of Los Angeles, Calif.

Miss Linda Yatabe, a student at the University of California at Berkeley, Calif., will be the official hostess as the convention queen.

JAPANESE AMERICAN CREED

I know that Members of Congress join in wishing the delegates to the 16th biennial national JACL convention a successful and constructive 6 days in Sacramento and express the hope that they will be as successful in determining their decisions for tomorrow as they have in their past plans, for most Americans can take pride in the living example of democracy in action that is the JACL.

If, in their deliberations, they live up to the spirit of the Japanese American Creed, which was authored by Mike Masaoka, whom many of us respect as the able Washington JACL representative who is so responsible for many of the legislative and other gains made by Americans of Japanese ancestry since the end of World War II, then the delegates will not fail their trust as custodians of the JACL destiny.

The creed, which may be well commended to other Americans, too, reads as follows:

I am proud that I am an American citizen of Japanese ancestry, for my very background makes me appreciate more fully the wonderful advantages of this Nation. I believe in her institutions, ideals, and traditions; I glory in her heritage; I boast of her history; I trust in her future. She has granted me liberties and opportunities such as no individual enjoys in this world today. She has given me an education befitting kings. She has entrusted me with the responsibilities of the franchise. She has permitted me to build a home, to earn a livelihood, to worship, think, speak, and act as I please—as a free man equal to every other man.

Although some individuals may discriminate against me, I shall never become bitter or lose faith, for I know that such persons are not representative of the majority of the American people. True, I shall do all in my power to discourage such practices, but I shall do it in the American way: aboveboard, in the open, through courts of law, by education, by proving myself to be worthy of equal treatment and consideration. I am firm in my belief that American sportsmanship and attitude of fair play will judge citizenship and patriotism on the basis of action and achievement, and not on the basis of physical characteristics.

Because I believe in America, and I trust she believes in me, and because I have received innumerable benefits from her, I pledge myself to do honor to her at all times and in all places; to support her Constitution; to obey her laws; to respect her flag; to defend her against all enemies, foreign or domestic; to actively assume my duties and obligations as a citizen, cheerfully and without any reservations whatsoever, in the hope that I may become a better American in a greater America.

H.R. 5636

EXTENSION OF REMARKS
OF
HON. STUYVESANT WAINWRIGHT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. WAINWRIGHT. Mr. Speaker, on several occasions I have taken the liberty to express the purposes upon which I was motivated to introduce H.R. 5636 in the 86th Congress, being legislation designed to afford relief to certain American nationals whose property was damaged in Central Europe as a result of World War II and providing a means for return of a limited amount of sequestered German assets arising out of that conflict. In this latter regard, as a condition precedent to returning these assets to Germany, H.R. 5636 provided that the West German Government should honor certain long-existing debt obligations to American nationals.

It did not come with complete surprise that the Reichsbank and the Deutschgolddiskontbank liquidation law was defeated in the Bundestag. This most recent disinclination on the part of the German Government to discharge Germany's prewar debts emphasizes and further justifies the conditions precedent contained in my bill, H.R. 5636. Because of this most recent action, I am now more than ever convinced that there should be no further discussions concerning the return of German property until the West German Government has discharged its prewar obligations to U.S. nationals. This refusal on the part of West Germany is, as I have emphasized before, something of a less-than-scrupulous pattern in fulfilling its longstanding obligations to the international community, especially those in connection with the Reichsbank's guarantee to non-German investors in the Golddiskontbank whose dividends continue to be in default and remain unpaid solely because of the delay in the liquidation of the Hitler banks, all of which have been a great prejudice to many American investors.

Because of this recent action by the legislative body of the West German Government, I will submit new legislation in the next Congress, as well as respectfully requesting the Senate Foreign Relations Committee to defer any action upon any treaty arrangement with Germany and defer any arrangement to return sequestered or vested assets until the German Government has met its obligations to our citizens. This position is not only reasonable but is further motivated by the desire to protect American investments abroad and to announce to the world that the Congress of the United States will, on every occasion possible, support its American nationals in doing business abroad and making investments overseas.

Conservation of Our Greatest Resource

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. PORTER. Mr. Speaker, it is often said that the greatest resource which this Nation has is the ability of its children. It is clear that the abilities of many children will not be properly developed and that this will be a tremendous loss to our Nation at a time when it is competing with the Soviet Union.

Robert P. Crossley says that college costs are our next nightmare and he has taken a long, hard look at a problem that's going to get worse.

Under unanimous consent I am including a page from the June 1960 issue of McCall's. I commend it to my colleagues and strongly recommend that we make ready to take appropriate action:

I have a friend who has seven kids. The two oldest were graduated recently from a private university in the South. It cost him $10,200 apiece—$20,400 for the pair. If the other five go to college and cost no more, his total bill will be $71,400. He wants his children to have the best, although he had only 2 years of high school himself. The $71,400 doesn't stagger him; he makes $50,000 a year.

I have another friend. He has six children, all under 6. (There's a pair of twins.) He makes about $8,000. He says if his kids get to college, they'll have to make it on their own, the way he did.

"College costs are getting crueler and crueler," a newspaperman said to me the other day. He has two girls in private colleges in the East and a son who will be ready in a couple of years.

"There's getting to be a real fellowship among parents," he went on. "I meet a stranger, find he has a son or daughter in college, and right away we have a nice profane chat."

Three months ago, I started to write a simple report on how parents can save up or put aside enough money to send their children to college. How naive can you get?

I questioned nearly 300 families in every State, college presidents, financial-aid directors, students themselves, bankers, Government experts, and investment counselors.

Here are some of the jolts I got, some of the paradoxes I ran into, some of the conclusions I was forced to draw. They scare me.

1. Tuition and fees have gone up an average of 129 percent in publicly supported colleges and 165 percent in private ones in the past 9 years. During this period, many colleges have raised their charges more than they did in the preceding 200 years.

2. The cost boom is just getting started, and will go up faster than prices in general and family incomes. The U.S. Office of Education expects total costs at both public and private colleges to double by 1970. That means $3,400 a year at a State university; $4,600 at a private one.

3. College costs five times what is did 50 years ago (so do a lot of other things); but professors' salaries are worth only half as much.

4. Most parents feel "obligated" to provide their children with a college education, but have no idea of the cost or where the money will come from. Unless you make more than $10,000 a year, don't count on saving up enough to send more than one child through college. No matter what kind of savings plan you have, it will probably prove too small.

5. Scholarships are fine, but there aren't enough to go around, and they aren't big enough. And as costs go up, even upper-income students are going to need scholarships' financial help.

6. Most parents think working your way through college builds character, but don't want their kids to do it.

7. More and more students will borrow for an education. The family of the future will be paying on three mortgages, house, car, and college.

8. Private colleges are in a desperate squeeze; their struggle to escape endangers our tradition of democratic low-cost education. Never has there been such bitterness between the two.

9. Everybody wants the Government to keep its hands off higher education, but our most famous engineering school is getting three-fourths of its total income from Uncle Sam—and our largest State university nearly half.

10. The best thing a man with three kids can do is move to California. Why? Where else can you find 64 free junior colleges, 10 State colleges, and a State university with 8 campuses?

11. Young people who really burn with a desire for education will still find a way to get one.

The full report on which the preceding comments are based is being made available in mimeographed form. Many of the findings are startling, the misconceptions widespread. If you would like a copy of this special McCall's report, write to "College Costs," McCall's, 230 Park Avenue, New York 17, N.Y. Please enclose 8 cents' postage to cover mailing.

Soviet Regime's Work in East Germany

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 2, 1960

Mr. BOSCH. Mr. Speaker, I have recently inserted in the RECORD two articles by Dr. Walter Becher, of Munich, Germany, on the Soviet regime's work in East Germany. Under leave to extend my remarks, I include additional information on the Soviet machinations in Germany:

The process of forced collectivization has entered the final stage in almost all people's democracies, but signs of the next step, the trend toward concentration and the sovkhoz system—the "transfer from socialism to unfolded communism" in Khrushchev's words—are already visible. In Bulgaria, after military suppression of farmer revolts in many places, over 90 percent of the farmers have been collectivized. The first form of the TKZP (agricultural labor cooperatives), comparable to the kolkhoz or the Soviet Zone's LPG grade I, was confirmed by the CC plenary session of January 1959. As in all other people's democracies, the procedure followed the Soviet pattern: After 1945 expropriation of the large and middle-sized farms and their transfer to the peasants who sustained the agricultural setup—as yet lacking any investments and installations for collectivization—and kept the food supply going. Since the end of 1948, simultaneously with the first attack on Berlin and the total Communist absorption of the satellite states by suppression and physical annihilation of all democratic forces, irresistible collectivization sets in. It transforms partially or completely these agrarian states into industrial countries and moves labor, hitherto agricultural, into the cities. In Czechoslovakia, subsequent to the expropriation period, there arise four different types of cooperatives, types I and II being transitory and abandoned after 1955, types III and IV being dominant today and constituting the initial form of concentrating the usable area, collectivized by 80 percent. In Rumania approximately 70 percent of the tillable land was collectivized or nationalized by the end of 1959. In Hungary, during the party congress of December 1959, Kadar announced (in the presence of Khrushchev): "The still independent farmers know quite well that they are going to be collective farmers sooner or later."

In Poland the October revolution had led to the complete decline of collectivization, especially since fictive bookkeeping (Cyrankiewicz) left the plan figures almost a quarter behind the actual result of the first agricultural measures. The pressure of the class struggle in the village did not industrialize the Polish population to even a half, much less to two-thirds as intended by the economic planners of the Stalinist type, now largely reinstated in power. The new collectivization was prepared at the CC plenary surprise session called last year shortly after the Third Party Congress. As in all Socialist countries, the difference between the obligatory delivery price and the free market price came to nothing and was merely a calculated amount added to the agriculture fund, which the Agricultural Circles (Kolka Rolnicze) control, thereby deciding all matters such as seed, fertilizer, machinery and installations, livestock, electrification, amelioration of the soil and boundary improvements. In addition, most of the midget economy (three-fourths of the privately owned usable area being less than 10 hectares, one-fourth less than 5 hectares) had class struggle enough. Even in view of the special situation of the Polish peasantry, the financial preponderance will decisively influence the still moderate degree of collectivization there. Considering the East Block as a whole, the dismaying collectivization drive in the Soviet Zone assumes particular significance. Its murderous speed recalls the terrible period in the U.S.S.R. Though disowning a whole stratum of Germans beyond the River Elbe, the collectivization as such is not the most important angle of the procedure. The white book of the federal government reveals all details and figures concerning the pauperization process. We don't have to elaborate on it.

But, as already mentioned, collectivization as such is not the prime point. Ulbricht clearly said in his declaration before the people's chamber: "The entrance of the farmers, male and female alike, into the LPG was, in a sense, also a preliminary plebiscite in favor of the Germany plan." His concluding words clarify entirely why collectivization is only a challenging camouflage: "All farmers in Germany wholeheartedly wish that the summit conference will lead to agreements regarding nuclear and general disarmament and that, above all, in West Germany nuclear armament and the installation of rocket artillery be canceled and the military forces reduced. The Germany plan of the people also reveals to the farmers the road to a peaceful solution of the German question."

There we have it—the exact concept of Moscow's German policy as the actual issue. Collectivization, effected at this time and speed, is quite clearly a subterfuge for creating faits accomplis.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

A Continuing Responsibility—The World's Homeless

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 10, 1960

Mr. HUMPHREY. Mr. President, World Refugee Year is drawing to a close. We have still to pass refugee relief legislation of even a modest nature and object in this Congress. The President has still to advance plans for using almost one-half of the special World Refugee Year fund of $10 million authorized by the Congress last year.

In plain language, World Refugee Year has met its major objective to call to the attention of the entire world its responsibilities for those without home or country, but these responsibilities have not been fulfilled in this one year. There are continuing responsibilities and they are ours as Americans, as brothers of all who suffer because they have been deprived of freedom and rights.

Mr. President, our distinguished colleague, the Senator from Michigan [Mr. HART] eloquently set forth the needs of the world's refugees and the great and continuing heritage and strength which new immigrants have brought to our Nation, in an address before the New York Committee for World Refugee Year at the United Nations on May 24.

Mr. President, I ask unanimous consent that this excellent address by the junior Senator from Michigan [Mr. HART] be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR PHILIP A. HART AT THE DINNER FOR WORLD REFUGEE YEAR AT UNITED NATIONS, SPONSORED BY THE NEW YORK COMMITTEE FOR WORLD REFUGEE YEAR, DELEGATES DINING ROOM, UNITED NATIONS, MAY 24, 1960

We from Michigan have a very special reason this year to be reminded that there is a continuing heritage in our Midwest, as there is here in the East, of strength drawn from new immigrants to our States. The one-millionth person brought to a new home by ICEM has come to live in Kalamazoo, Mich., and arrived last week.

Writing to this young Latvian boy to welcome him to our State reminded me again that there is no satisfactory short-term way to look at the opportunities and responsibilities of the United States in this controversial field of refugee and immigration legislation.

It starts at the beginning of America. Our Declaration of Independence proclaimed one of the grievances against England as the fact that the Crown attempted to hinder free immigration into the Colonies.

Since the end of World War II our Nation has been immeasurably strengthened, both in fact and in spirit, by the admission of well over a million homeless persons welcomed to our shores and, I hope, our hearts.

Each of you knows that this accomplishment has not been without bitterness and often immense effort every time new laws needed enactment or amendment.

There are always those in Congress who loudly proclaim, "We have done our share;" "Only the special interest organizations want more refugees admitted;" "This is not the kind of people we need in the United States." And they echo persons not in Congress. These cries were echoed again, not long ago as the sadly reduced House Joint Resolution 387 passed the House and came to the Senate.

There is some very real, and not too pleasant truth in the critics' charge that only once every 4 years are messages on revising and liberalizing our basic immigration and citizenship laws forwarded to the Congress from the White House.

House Joint Resolution 387, should be reported from the Senate Judiciary Committee shortly. Hopefully, we will succeed in eliminating the concept that U.S. participation in refugee resettlement should be contingent on a percentage of what other nations do. This is a cruel concept, one which should not be introduced as part of our immigration policies.

The Senate should also broaden the areas of the world from which persons can be admitted, liberalize the definition of persons eligible and assure that we do not ignore the most difficult cases left in the camps of Europe.

This is the program for the next few weeks. But what of the program for the next decade; yes, the next quarter of a century?

This presidential election year quite properly is the time to raise our sights; to see beyond the crisis of the moment and build into our laws permanent policies for admitting the homeless and the oppressed as a matter of continuing public policy.

There would seem to me to be real reason to believe that the American public is further advanced in accepting basic reforms in our immigration laws than most of our leaders in the Congress or the executive branch realize.

The record since World War II has shown a willingness in the United States to accept—over the quotas set by the national origins quota system—more than a million displaced persons, refugees, escapees and homeless.

Fact is, the national origins quota system has not been operative in the postwar years. The further fact is that it is time that we junked it as the basis for our long-range immigration policies.

The post-World War II displaced persons law, and amendments to that law, marked the meeting of one crisis. The Refugee Relief Act, the special Hungarian action, orphan's bills, and now the legislation for World Refugee Year, all were designed to fit some emergency.

All of us know of the long and sometimes heated disagreement among persons of good will as to when it is proper to press for basic change in our laws, and when to meet crisis with emergency bills. But from the data and information collected by groups such as yours, it is clear that refugees in this troubled world are a permanent problem. For as long as we can see, our tomorrows will have trouble areas. And tomorrow's trouble area will have tomorrow's refugees.

How do we know that the events of last week in Paris will not bring new refugee movements overnight? Hopefully this will not be so, but certainly one thing is clear: We have no permanent law or policy of our Government to meet this possibility.

May I propose that 1960 be the year when all of us work to shift our basic efforts to that of achieving this shift, to build in these long-needed reforms in our immigration and citizenship laws. Especially should we push to rid the laws of the national origin and racial restrictions, while building in flexibility that will permit the United States to express as part of our spirit to the world a continual open door to apparent oncoming years when assuredly there will be the homeless.

If I am correct that there is already a willingness of the American people to underwrite such a change of law and policy, how do we capture and effectively use this disposition? First, as in so many of the national problems which touch no single region or part of our Nation but affect each unequally, we must have the vigorous and continuing support of the President of the Nation.

Each candidate for the Presidency, as he develops his programs and plans before the American people this fall will have an opportunity to sound this need. Many of you here tonight can influence a change in an unhealthy political tradition—a tradition which has a paragraph on immigration reform included only in those speeches to be given in cities with large foreign born populations. The 1960 presidential campaign offers both candidates the chance to demonstrate to all Americans the role our immigration and refuge policies will play in the decade ahead.

Beyond this the continuing programs, not only of migration, but of rehabilitation, relief, resettlement, all the projects being undertaken as part of World Refugee Year, present exciting and potent forces for the United States to support through the United Nations, and through its own direct actions.

To increase the likelihood that the fall campaign might result in action, an additional agreement is needed. In the weeks immediately ahead, I believe the President should consider the appointment of a top-level Presidential commission to consider the broad sweep of our immigration and refugee policies.

It is often "old hat" to propose another "study" commission. Sometimes it is a way of escaping responsibility. Nonetheless, in this case I believe the President should establish a commission of responsible citizens to report sometime next year just before the new administration has taken office. It has been 8 years since we have had such a review of our immigration and refugee practices and policies. President Truman's 1952 Commission on Immigration rendered great service, and set many goals. It is unfortunate that the interest and activity it generated did not result in broader legislative reform. But a new impetus now, together with firm pledges to carry through from both presidential candidates, could reverse the old trend of a message every 4 years. We could have a message in 1961, with 4 years of presidential leadership to bring its recommendations to fruition.

What sort of commission? It could include the president of the AFL–CIO; and the president of the NAM; the president of the Foreign Policy Association; the president of the Association of Land-Grant Colleges; two or three Governors; the publishers of one or more of our national newspapers or magazines.

The recommendations of such a group could not be ignored by the President from either party in 1961.

This might be the "hypodermic needle" that is really needed to get us out of this crisis-to-crisis merry-go-round that we have been on with immigration and refugee legislation. And it is not even a predictable merry-go-round, because it is creaking and slowing down to a very dangerous point. Soon we may be arguing over emergency bills to let in only a hundred persons.

The events of the past 2 weeks have underscored the kind of crisis-ridden world which is ours. The United States is not the most populous nation. Most of the peoples of the world are not white, they are not literate, they are not well fed, they are not free from fear. In this latter we show signs of joining.

As immigrants and sons of immigrants, we in America are blessed with U.S. citizenship. We are not able to say to all or even very many of the peoples of the world, "Come be citizens of our Nation." But we must not foreclose that possibility to any person because of his color or place of birth.

Our Nation's laws and policies must be a reflection of the kind of world we hope all mankind wants to achieve in the 20th century and beyond. No more clear evidence could be given than in how we assume responsibilities for the homeless of the world.

We can do better than we have, much better. I repeat my belief that the people of America are prepared to support leadership which sets these goals and policies. No better time to start can be found than now, for the world rushes toward us at frightening speed.

Growing Red Influence Places Extra Responsibility on Parents, Educators

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a fine editorial which appeared in the Granite City (Ill.) Press Record of June 6, 1960.

I agree with the sentiments which are expressed in this editorial by the publisher of the Press Record, the Honorable C. E. Townsend, who has been frequently recognized by Illinois and national press associations for his progressive and outstanding contributions in the field of journalism. Mr. Townsend has been a recognized leader for good in his home community and in the State of Illinois. The thoughts expressed in this editorial indicate the reason he is so well respected.

I am in complete agreement with Mr. Townsend in the expressions contained in his editorial:

GROWING RED INFLUENCE PLACES EXTRA RESPONSIBILITY ON PARENTS, EDUCATORS

A report by Senator THURMOND to the House Un-American Activities Committee on his observation of last month's riots at the committee hearings in San Francisco emphasized that most of the participants were students. He testified that the riots were "inspired and incited by Communists or fellow travelers," and he placed most of the blame on "the lack of self-discipline and moral training of the young people involved."

The South Carolina Senator viewed as a disturbing development enemy agents' success in distorting American concepts and influencing the minds of yonug Americans. "This should impress on our minds the fact that Communist efforts to misdirect and mislead the formative minds of the youth of the United States is every bit as dangerous, if not more so, than their spying and espionage activities in this country," he said.

Most American youths have self-discipline and moral stamina, but the riots and the rousing welcome accorded Russian leaders in the same city indicate that some youths are susceptible to the Communist line. The Biblical saying that "the truth shall make you free" has always applied to this Nation; its success in establishing and maintaining freedom reflects the fact that democracy is a better and fairer way of life than dictatorship, and that this truth has been widely disseminated and believed.

An answer to the problem typified by the riots may be greater emphasis on democratic principles and the need to defend them; citizens of all ages must use commonsense, and not just oppose for the sake of opposing. Student action has been responsible for the return of freedom to some countries, but it has done harm in other lands. Certainly, an uprising against democratic concepts, with use of mob force in a nation dedicated to law and order, is greatly out of place.

The situation imposes a responsibility on parents, schools, colleges, and churches. Everyone, in fact, is involved in the education and indoctrination of each new generation. We should all know something—and probably we ought to learn more than we know now—about democracy, communism, free enterprise, economics, and other topics affecting our own and our country's future. Parents have the greatest reesponsibility and can do more than anyone else to properly orient their sons and daughters.

Richard Nixon: "We Believe in the Creative Genius of a Free People"

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, June 10, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "RICHARD NIXON: 'We Believe in the Creative Genius of a Free People,'" published in the U.S. News & World Report of June 13, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RICHARD NIXON: "WE BELIEVE IN THE CREATIVE GENIUS OF A FREE PEOPLE"

(The following by Vice President NIXON gives his view of the 1960 issues and the differences between the major parties—in foreign and domestic policy and policy toward business. The statement was in response to the questions asked by U.S. News & World Report.)

What is the best way to achieve the goals that all Americans want?

As Republicans and Democrats, as conservatives and liberals, we do not necessarily disagree about goals. All of us want to secure a just and honorable peace; we want to preserve and extend a life of freedom; we all want to share in the abundance of sustained economic growth and progress.

But the key difference—and here is the issue that ought to be sharply debated in the 1960 campaign—centers on the best way to achieve these goals. I am convinced that the right way can be summed up in one phrase—the principle of freedom.

On this score, the Republican Party has a proud tradition and a great record of achievement to offer.

We believe that freedom for the individual is the dynamic of real progress in every area of human action. We equate progress, not with increased activity by the Government in Washington, but with increased opportunity for individual initiative, for private enterprise, and for people working through their highly responsive local and State institutions.

We believe the role of the Federal Government should be limited to creating a proper climate for individual and private enterprise, and to supplementing it only when the public interest is unquestionably paramount.

We believe in a maximum of individual enterprise and a minimum of Government intervention—not because we are afraid of Government, but because of our supreme confidence in the creative genius of a free people.

We are economic conservatives—not because we want to stand pat with what we have, but precisely because we are convinced that a sound currency and a pay-as-you-go budget are absolutely essential for sustained economic progress.

For us, the choice is not progress or freedom; it is progress with and because of freedom. Conservatism works—it preserves what is good from the past and then builds on that foundation—and we think the record of the last 8 years proves it.

That record, in terms of economic progress for 69 million American wage earners: More jobs at higher rates of real take-home pay than ever before in history. As I said to Mr. Khrushchev and the Russian people a year ago in Moscow, we in America have achieved through free institutions the widely shared abundance in a classless society that socialism merely poses as a future goal.

U.S. News & World Report asks: "Would business be better under a Republican or under a Democratic administration?"

My answer is that business always flourishes best in an atmosphere of freedom. Government fiscal and tax policy must provide a solid floor, but the only ceiling on American growth and progress ought to be the productive capacities of a free people.

The same principle applies to every aspect of human activity. For Americans, a life of cultural and spiritual freedom, and of true social mobility, is infinitely more important than mere economic well-being. Material abundance is only the foundation for the fullest and freest development of the human spirit.

Republican foreign policy—I prefer to call it American foreign policy—carries this principle of freedom forward into every corner of the world. We will maintain the military strength we need to defend freedom. We will use our economic resources, public and private, to assist others in their quest for progress with freedom and for national self-determination, free of all outside domination. And we put the enemies of freedom on warning, worldwide, that we will tolerate neither subversion nor overt aggression against the integrity of free nations.

If the American people want leadership dedicated to a maximum of freedom—in every aspect of our national life—if they reject the idea of Government intervention

as a panacea for all our problems, then I think 1960 will be a Republican year. And the years ahead will be years, for all of us, of sustained progress.

Sand and Politics

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. PORTER. Mr. Speaker, the editorial included below by unanimous consent was written by T. Jeff Williams, a senior at the University of Oregon School of Journalism. His home is Santa Fe, N. Mex. It was printed in the Umpqua Courier for May 26, 1960, and is, in my opinion, a clear-headed, factual analysis of the development of the proposal to establish a national seashore park in the Florence-Reedsport area in my district, a matter now before the Interior and Insular Affairs Committees of both Houses:

SAND AND POLITICS

(By T. Jeff Williams, a senior at the University of Oregon School of Journalism; his home is Santa Fe, N. Mex.)

A National Park Service survey of the Pacific coast in 1958 selected the Oregon sand dunes and inland lakes in the vicinity of Florence as an area of national recreational significance. Shortly following this survey, the late Senator Richard L. Neuberger, Democrat, of Oregon, proposed in a bill (S. 1526) to make this area a national seashore under the auspices of the Park Service.

The 40,000 acres requested for inclusion in the national seashore by Neuberger encompass four inland fresh-water lakes—Tahkenitch, Siltcoos, Woahink, and Cleawox. Some 25 miles of ocean beach form the western boundary and behind the beach towering dunes form an intricate landscape pattern of outstanding scenic and geologic interest.

A storm of controversy broke in Oregon over this proposal and began seething on all levels—local, State, and Federal.

But why, some might ask, should this proposal create such widespread opposition?

The whole controversy revolves around the economy of Florence and its vicinity. Basically, the problem is whether, in long-range economic terms, Florence will benefit or lose by the establishment of a national seashore.

When Neuberger's proposal was first made public, the leading opponents of the bill were the Western Lane Taxpayer's Association, the Governor's committee on natural resources, and behind the scenes, the U.S. Forest Service.

The most outspoken of the three is the Western Lane Taxpayer's Association, an organization formed by Florence residents for the express purpose of combating the proposed national seashore. Jack Hayes, a wiry, quick-minded, and persuasive speaker, was elected chairman.

The association's principal argument charged that if the dunes park were established it would have unfavorable effects upon the private citizens and landholders in the area.

The Park Service, whose main purpose is to preserve scenic lands for public recreational use, cites the population trend in Oregon in its argument for the national seashore; by 1990 the U.S. Bureau of Census estimates Oregon's population will be some 3 million compared to 1,773,000 in 1958. Increased travel is expected in conjunction with the population expansion. In 1990, it is predicted, some 7 million tourists will visit the coast compared to the 1,500,000 visitors in 1957.

The Park Service predicts that the establishment of a national seashore would attract more tourists and would greatly benefit the local economy through tourist trade.

The Western Lane Taxpayer's Association spokesmen say the economy would suffer because of the loss of income from the land and resources that would be taken in by the proposed park.

On the State level, Governor Hatfield asked his committee on natural resources, headed by Dan Allen, to investigate the problem and give him its recommendations. From all evidence, it appears that in his investigation Allen talked primarily to those who opposed the park. Many community leaders in the Florence area who favor the park proposal say Allen never approached them. The resource committee recommended to Hatfield that a national seashore should not be established in the Florence vicinity.

Meanwhile, NEUBERGER and Congressman CHARLES O. PORTER, Democrat, of Oregon, who were working together on the proposed park, held hearings in Florence, Reedsport, and Eugene in an attempt to determine what problems would face the residents if a park were established in the Florence area.

Initially, it appeared that NEUBERGER had made little, if any, headway in establishing the dunes park from his encounter with the opposition in these hearings. But the effects were to be far reaching.

From March through November, Dan Allen and his resource committee had flatly opposed a national seashore in the Florence area, and Hatfield accordingly agreed with Allen. The final decision in Oregon on the proposed national seashore rested with Hatfield; it could not be established without his authorization.

But, after three committee hearings and statewide notice, the developing situation was putting Hatfield in an untenable position. Figures from a questionnaire on the park circulated by PORTER showed a majority of people in seven counties predominantly favored the park.

Thus, it began to appear that if Hatfield remained opposed to the park he could alienate a large number of voters. But if he switched his position, it might be interpreted as an admission of hasty and ill-considered earlier actions.

NEUBERGER, intentionally or not, had forced Hatfield into an awkward position. This was the turning point: To which side would Hatfield move?

He began a slow swing in favor of the park proposal—with amendments, of course.

From this time forward the resource committee approached the park proposal with a positive philosophy. There was now room for further negotiations between the Park Service and the resource committee where there had been a near stalemate prior to the change. Hatfield presented NEUBERGER with a bill of minimum standards which would need to be satisfied before he would allow the establishment of the national seashore. Changes in acquisition of land, tax payments, provisions of ownership, and administration of game were major suggestions.

Jack Hayes and his association continued to oppose the seashore proposal primarily because Hatfield didn't specify in his bill that the Park Service's right of condemnation should not be allowed. But Hayes was fighting a losing battle now. He and his association stand alone against the Park Service, the resource committee and many of the Florence residents who favor the park.

The Forest Service continues to oppose the park but apparently it realizes there is little it can actually do, for Congress has the right to turn the Forest Service land over to the Park Service.

The arguments for a final settlement will continue, but basically to be considered is this: is a national seashore desirable here?

The answer, in the judgment of this writer, is yes.

Expanding population and increasing tourist travel in Oregon are pressing present recreational facilities to the limit. And hand in hand with the population increase goes the continual buying of land for private homes and the erection of new industries. What appears to be a considerable amount of public land still available on the coast is rapidly being bought for private homesites.

Even though the beaches are held free by Oregon law, the intervening land, if made private, will block access to the beach in large sections.

With the responsibility dispersed among local and State agencies and the Forest Service there is no guarantee that the recreational potential in this area will be protected. There are too many loopholes through which private interests can encroach where the land is not protected by Congress.

With all the natural resources available in the Florence area there has been remarkably little development done by the existing agencies in the past 5 years. To fully protect this area from private interests that could control or spoil this scenic wonderland of dunes and lakes, it should be placed under a unified administration.

Only under the administration of the Park Service can the lakes and dunes be fully developed—and protected—for the recreational development that Oregon so badly needs.

Wisconsin Farms Bank Three-fourths Million Acres

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, June 10, 1960

Mr. WILEY. Mr. President, we recall that the conservation reserve of the soil bank, a controversial program, was "stopped in its tracks" by a 59 to 32 vote yesterday.

During its brief lifetime, an accumulation of about 28 million acres in the reserve will have been reached in the 1960 program.

Overall, the conservation reserve had attempted to serve multiple objectives, including first, taking cropland out of production to "hold down" surpluses; second, establishing a reservoir of fertile soil for the future; and third, permitting a broadened program for watershed, reforestation, preservation of wildlife, extension of grasslands.

We realize, of course, that the conservation reserve did not make a "big dent" in the surplus stockpiles. In addition, there have been severe criticisms on the way in which the conservation program has operated in some areas of the Nation.

Frankly, I have felt that, insofar as is feasible, greater efforts should be directed toward the major surplus crops, particularly wheat and corn.

However, we must face the fact that if the conservation reserve is not extended, and no adequate alternative is adopted, and the 28 million acres in the

reserve gradually come back into product, the country may well face an increasingly difficult surplus problem.

This is a serious matter not only to the American farmer but to the economy of the country.

Recently the Wisconsin Agriculturist published an informative article entitled, "Wisconsin Farms Bank Three-fourths Million Acres." Reviewing the way the conservation reserve has been operating in our State, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WISCONSIN FARMS BANK THREE-FOURTHS MILLION ACRES

Taxpayers are getting more for their money now that the conservation reserve is streamlined. An example is the extra million or so acres that came into the conservation reserve this year.

There was enough money appropriated for 1960 contracts to cover 5.1 million acres, according to early estimates. But competitive bidding for the contracts brought the rental payments down enough for 6.3 million acres to be signed up. Lower costs of establishing conservation practices have helped, too.

The national average rate for conservation reserve land was set at $13.50 per acre early in the year. Competitive bidding brought the average national rate down to $12.90 per acre by the time all the contracts were signed.

Here in Wisconsin 4,002 contracts were signed, at an average rental of just over $14 per acre. Whole farms accounted for 3,867 contracts. The acres brought in this year add up to 251,795. Total conservation reserve acreage in Wisconsin, for all contracts now in effect is 767,135 acres.

NEW PURPOSE FOR PROGRAM

The reduced cost of establishing conservation practices comes from a new concept of the purpose of these practices, according to Nick Calabresa, a Government soil bank specialist. He points out that the conservation reserve no longer pays for lime and fertilizer on the establishment of a vegetative cover. The new line of thinking is that all the Government expects is erosion protection and possibly a litle wildlife cover.

On whole farms there are generally several fields already in grass and legume cover. This part of the farm doesn't require cost sharing payments, as the cover's aleady there. So right now only about 20 percent of the land being signed up requires cost sharing payments on cover work.

Wisconsin land going into the conservation reserve is higher quality than it used to be, says Calabresa. One reason is that under the old system of a single State rate, the better cropland often stayed out.

Even with the extra acreage for a higher proportion of the Nation's total cropland going into the conservation reserve than does that went into the conservation reserve this year, there was some money left over at the deadline. In Wisconsin, the money authorized for conservation reserve payments is $11,123,613. But only $11,024,635 worth of land was signed up. This left a balance of almost $100,000.

Oats, barley, grain sorghum, and flax are taking the biggest acreage cuts in proportion to the total acreage devoted to these crops.

SMALL FORAGE ACREAGE

Corn, wheat, soybean, vegetable and peanut land is going into reserve at about an average rate. Cropland hay, rotation pasture, and marginal land in the reserve is low in proportion to total acreages.

These figures seem to indicate that the conservation reserve is helping a higher percentage of cash croppers get out of business than livestock producers.

None of the figures given here are final. They were figured on March 15, a month ahead of the deadline for signing conservation reserve contracts. Preliminary figures indicate well over 28 million acres will be in the conservation reserve this year.

Good-Will Message

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1960

Mr. REES of Kansas. Mr. Speaker, my attention has been called to a good-will message from the children of Wales to the children of the world. It seems this message is worthy of our attention, especially in view of the need of good will and friendship throughout the world. It is also of importance because it is a message from children of one country to children of other countries. The contents of the message and the facts concerning it are especially interesting:

GOODWILL MESSAGE OF THE CHILDREN OF WALES TO THE CHILDREN OF THE WORLD

This is "Goodwill Day." Once again, we, the boys and girls of Wales, send to you, the boys and girls of all nations, our warmest greetings.

This year, the nations of the world are making a united effort to help the refugees who have suffered as the result of war. We too, in our goodwill message, wish to remember those boys and girls who are today without homes, without comfort, and without hope.

There is a great deal we can do to help. We can write to them, and we can send them gifts of money and clothes. We could also invite some of them to spend a holiday in our homes and make them our friends. In doing this, we would bring new hope to some of the millions who are today in despair.

Will you, therefore, join with us, as members of one big family, in a special effort to help the refugees this year? Where today there is despair, let us bring hope, and where there is sorrow, let us bring joy.

FACTS ABOUT THE MESSAGE, 1922–60

1. The idea that the children of Wales might one day call the children of the world in the name of peace and good will came to the Reverend Gwilym Davies in 1918 as he watched an officer in a YMCA camp in Pembrokeshire, South Wales, receiving, by earphones, messages in Morse code from Cornwall and Ireland.

2. At a youth conference of the Welsh School of Social Service held at Llandrindod in 1922, it was unanimously decided to adopt the Reverend Gwilym Davies' suggestion that a message of good will be sent by wireless from the children of Wales to the children of other countries. That was before the days of the BBC.

3. At dawn on June 28, 1922, the first Welsh children's good will message was sent out by wireless from Leafield Station in Oxfordshire. It was heard by at least one person—the director of the Eiffel Tower Station in Paris, who repeated it by wireless telephony at 10:15 a.m. on the same day. But there was no reply. The same thing was done in 1923, and again there was no reply.

4. The goodwill message was first broadcast by the BBC in 1924. Two replies were received—one from the Archbishop of Uppsala, Sweden, and the other from the Minister of Education, Poland. The message had caught on, and the decision to broadcast it on May 18 every year helped to make this date an International Children's Goodwill Day throughout the world. May 18 was chosen to commemorate the anniversary of the opening of the first official peace conference at The Hague in Holland in 1899.

5. From 1925 to 1939 the message was widely heard and an increasing number of replies were received year by year. Goodwill festivals were held in many countries, goodwill magazines were published in many languages, and there were broadcasts by the radio systems of five continents.

6. Then came the Second World War, and silence fell upon many lands. But the BBC in Wales never failed to broadcast the message and a special goodwill program on May 18, even in the darkest years of the war. But the replies were few and far between.

7. In 1946, when the war had ended, the links that had been broken began to be restored. Many old friends of the message renewed their contacts with the founder, and many new friends came forward, with the result that more and more replies poured in from all parts of the world.

8. Then the message suffered its greatest loss. In January 1955 the Reverend Gwilym Davies passed away, but not before arranging for the continuance of the goodwill message by a special committee composed of representatives of the Welsh National Council of U.N.A. and of "Urdd Gobaith Cymru" (the Welsh League of Youth).

9. In 1960 the message will be broadcast from the Wales region of the BBC on May 18 in "Children's Hour," commencing at 5 p.m.—1700 hours summer time, on a wavelength of 341 meters.

10. Many other radio systems will give out the message on May 18. There will be different times in different countries. Inquiries should be made, well in advance, of the broadcasting authorities in each country.

National Maritime Policy

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Friday, June 10, 1960

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement on maritime policy.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

In its declaration of national maritime policy in the Merchant Marine Act of 1936, Congress envisioned a U.S. merchant marine sufficient to carry a "substantial portion" of the Nation's foreign commerce. To this end, it enacted, within the framework of the 1936 act, a farsighted program of assistance for our Nation's shipping designed to achieve for it at least some degree of parity with its foreign competitors.

Historically, and, I think, most reasonably, the "substantial portion" of ocean-freight carriage set as a goal in the 1936 act has been considered to be "at least 50 percent" of the Nation's export and import cargoes. Yet today, instead of 50 percent, vessels under U.S. registry are carrying little more than 10 percent of the Nation's foreign trade.

The handicaps under which U.S. vessels labor in competition with their foreign counterparts are many and severe. Wages, for instance, on many foreign vessels are only one-third, or even one-fourth, as much as wages on U.S. vessels. And certain other costs of operation on foreign vessels are relatively as low. With three-fourths of U.S. commerce now in bulk cargoes—grains, ores, coal, petroleum, etc.—where vessels must bid for cargoes on a shipload basis, it can readily be appreciated that low-cost foreign vessels can underbid our operators every time.

When the maritime nations of Europe following the close of World War II began to blossom forth with large, modern vessels as replacements for their war-shattered commercial fleets—with the aid of U.S. foreign-aid moneys in some cases—the competitive deficiencies of our war-built commercial vessels became even more pronounced. Then it was that Congress decided it was necessary to take a further step to preserve our dwindling merchant marine from extinction.

First, on a piecemeal basis, in the various foreign aid and mutual security acts, and, later, in 1954, as a permanent policy, there were enacted statutes which required that at least 50 percent of all Government-aid and Government-financed cargoes be transported in U.S.-flag vessels. But it should be borne in mind that, while we were reserving 50 percent of these cargoes for our own vessels, we were, at the same time, making available to other nations, recipients of these aid and financed cargoes included, half of the cargoes involved. I doubt very sincerely that any of these nations who now protest so vigorously at this minimum reservation for our own vessels would have allowed even 1 percent of cargoes to go in U.S.-flag vessels if they had been the donors instead of being, in many instances, recipients of these aid or financed cargoes.

They would have been no more generous to our shipping insofar as any aid cargoes they exported than they are by and large with their commercial exports and imports—a type of cargoes to which our 50–50 acts never extended. These nations do not pass laws to restrict carriage of their cargoes to their own merchant ships—they have more subtle ways to accomplish it. But the net result is that we do not carry any perceptible percentage of their ocean cargoes. Even with the 50 percent of aid and financed cargoes, the total percentage of our country's imports and exports transported in U.S. flag vessels is, as I have said, little more than 10 percent.

Inasmuch as they refuse to be satisfied with 50 percent of our aid and financed cargoes perhaps it might be in order, as one U.S. shipping leader has suggested, to change our policy and require that all aid and financed cargoes go in U.S. ships. We certainly need badly the cargoes which we so generously have permitted foreign ships to carry.

Along the lines of the views which I have expressed are two editorials which deserve the attention of Senators and citizens alike. One, from the Merchant Marine Bulletin of the National Security Commission, the American Legion, is from the pen of a long-time stanch supporter of the American merchant marine, Mr. Henry C. Parke, who is chairman of the Legion's national merchant marine committee and president of the Propeller Club of the United States. The other editorial is from the Alabama Register, of Mobile, Ala., a State which has contributed vastly to the advancements of the American shipping and shipbuilding industries.

I append hereto two editorials to be printed in the RECORD:

[From the Merchant Marine Bulletin, May 1960]

CHIPPING AWAY

(By Henry C. Parke, chairman, National Merchant Marine Committee)

Each year the American Legion, at its national convention, adopts a merchant marine resolution, reaffirming its support of privately owned U.S.-flag shipping and specifying areas of necessary action to keep it strong for both commerce and defense. This year's resolution included the following clauses: "Assure the appropriation of adequate funds to enable the Government to meet its obligations and proceed in an accelerated vessel-replacement program" and "Effectively administer the 50–50 law." Events in Washington so far this year suggest that some straight thinking and talking on both these subjects is called for, from citizens with the Nation's and the merchant marine's interest at heart.

So far as ship replacement is concerned, it cannot be said that the funds called for this year were adequate, or that they could have any other effect than to decelerate the program. Actually, to replace even the subsidized part of our fleet in the time left before it becomes obsolete, by the standards of every major shipping country, would require us to build well over 30 ships a year. It is understood that the Maritime Administration recommended 26. The 1961 budget finally called for only 14—2 less than the average number for which funds have been appropriated annually since the inception of the program. This is "acceleration" with a vengeance, and we may live to regret it.

So far as 50–50 is concerned, we seem to be witnessing similar lack of concern on the part of the administration and the State Department about maintaining this life-or-death form of aid to the merchant marine. The Department's attempt—already successful in both Houses—to gain authority to disregard the cargo preference law in the case of the huge Indus Basin project is too much in keeping with its historic apathy or opposition to 50–50 from the start for us to be much impressed with the excuse given. This is that, since funds of several nations will be contributed to the project, it will not be feasible to apply the law to the contribution of the United States. Yet the administration is understood to favor an increasing number of such commingled ventures in order that other advanced nations may be made to share the burden of aid to underdeveloped countries. What happens to 50–50 if this policy succeeds? The answer is altogether too clear. Once the entering wedge has been driven in the Indus Basin case, the Government can excuse itself in every similar future instance, with the result that American-flag ships will receive less and less of the benefits Congress intended from the 50–50 law, as Uncle Sam extricates himself more and more from singlehanded foreign aid.

These are serious threats to our welfare and security, and they are the very threats against which our resolutions were directed. All Legionnaires, please note.

[From the Mobile (Ala.) Register, Mar. 15, 1960]

HISTORY REPEATING ITSELF IN U.S. MARITIME FIELD

What of the future of the American merchant marine?

This is a question to be seriously asked today.

It actually suggests itself, appearing against the background of a whole set of somber facts.

Some of these facts are contained in a report of the American Merchant Marine Institute, just issued.

The report shows:

1. In the past 12 months 5,500 shipboard workers on privately owned U.S. vessels have been laid off.

2. Employment in the merchant fleet as of the past January 1 was only about one-half the peak reached during the Korean war.

3. As of January 1 this year, 115 privately owned vessels were inactive, compared with 72 inactive vessels 1 year earlier.

In Congress, Senator JOHN J. WILLIAMS of Delaware, a member of the Senate Finance Committee, has been criticizing the Maritime Administration for a new policy in reacquiring old vessels.

This agency, he complained, in some instances is now accepting old ships as trade-in allowances on newly constructed vessels at prices averaging from 30 to 50 percent higher than that for which the Government sold these same ships to the companies several years ago.

This liberal policy is being carried out under a decision made at the management level of the Maritime Administration, rather than by legislative authority.

Congress, the Senator said, rejected a Maritime Administration request several years ago for legislative authority to make these liberal allowances and later their counsel ruled that they did not need congressional approval anyway, and they proceeded with their original intentions.

Senator WILLIAMS declared that the Maritime Commission's trade-in policy represents nothing other than an outright gift at the taxpayers' expense.

He also said, this is only one of the many examples which have been called to the attention of the Congress of the careless and irresponsible manner in which the Maritime Administration handles public funds.

He took the position that the time is long overdue when the appropriate committees of the Congress should direct their attention toward an examination of the policies and activities of this agency.

While Senator WILLIAMS of Delaware is criticizing the Maritime Commission and more and more American merchant vessels are becoming inactive and more and more workers on American merchant vessels are being laid off, take a look at the American shipbuilding industry.

The shipbuilding decline in the United States has been such that Representative JOHN W. MCCORMACK, of Massachusetts, the House majority floor leader is urging that appropriate committees of Congress study that situation.

Taking note at the same time that the United States now ranks eighth as a shipbuilding nation, he calls on the administration for some action to put our country back to the position that it formerly occupied.

Statistics in a recent New York Times article by John P. Callahan help illustrate what the House majority floor leader terms the terrible plight that the shipbuilding industry of our country is now in.

Mr. Callahan wrote that few of the 15 major yards throughout the country have any future business to talk about, and most of them complain that there is not enough current business.

This country's shipbuilding industry, he pointed out, entered 1960 with contracts for the construction of 60 vessels—a drop of 15 below the number of contracts on hand at the beginning of 1959.

Moreover, according to the Times article, not a single new contract was reported during the entire final quarter last year.

The dismal maritime picture currently witnessed in the United States is another unhappy example of history repeating itself. Time and again down through the years, this country in peacetime has lost much maritime vigor and strength.

Before it's too late, the Nation should resolve not to let itself go to secd as a maritime power.

Defense Preparation and Waste Prevention

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. DONOHUE. Mr. Speaker, in the wake of the unhappy collapse of the Paris summit meeting, and the apparent cancellation of the U–2 intelligence information flights, there is much talk about the necessity for increasing the proposed military budget of $39.3 billion.

Indeed, there is no question about the imperative necessity, in the light of the belligerent and threatening attitude of the Kremlin, of our military forces being fully prepared to protect the security of the United States against any surprise move by the Soviets. It would seem logical in the consideration of our recent experiences with Russia that the proposal to maintain an airborne alert at all times to be reexamined, and that our research and development activities in the space field be accelerated.

If these, and other proposed military security provisions, require additional appropriations, over and above what the House has appropriated, then, of course, such additions must be seriously entertained. It is evident, from the recent actions of the Senate Defense Appropriations Subcommittee, that the Members of that body feel that the Nation's military power should be boosted.

When the House returns to the consideration of this grave subject, in the near future, I most earnestly hope we will not be of a spirit to disregard the necessity for including every reasonable safeguard against and restriction upon wasteful and extravagant military spending that we can. Thirty-nine and a third billion dollars is an awful lot of money and its very enormity provides an avenue for careless and negligent expenditures.

As you all realize, this House levied a 3-percent cut in the $13 billion military procurement fund in the bill in an attempt to force the Defense Department to adopt more economical and frugal procurement practices.

On this score the Comptroller General, in his recent report, pointed out the existence of waste and inefficiency, by the Defense Department, in its management of electronic supplies of the military services.

He revealed that a recent review disclosed that electronic equipment valued at $2.5 million was being unnecessarily repaired at a cost of $680,000 when usable items were available in large quantities in the other services.

He indicated that unnecessary administrative costs were being incurred because there are six independent organizations performing the same or similar stock management functions.

In past reports multitudinous examples of extravagance and waste by the Defense Department have been disclosed through the use of negotiated contracts instead of competitive bidding and confused and antiquated bookkeeping methods.

Mr. Speaker, it is the duty of the Congress, and of the administration itself, to insure that the purse strings operated by the various departments of the Defense Department are kept sensibly and economically tight. Closer supervision of negotiated contracts to prevent exorbitant profits and a wider use of competitive bidding practices would do much to save the taxpayers' money.

A more strict adherence to the provisions of the Budget and Accounting Procedures Act of 1950, and a better organized central procurement unit would go far toward preventing duplication and waste.

Adequate national defense is indeed vital but the people of this country are seriously disturbed by the continuing revelations of wasteful and extravagant spending by the military without regard to the fact that each and every penny spent comes out of the hard earned, and highly taxed, pay of the average American workingman and business. The duty of the Defense Department to guarantee our security does not carry with it any license to indulge in loose and careless financial practices.

With past experience in mind, and with due respect to whatever action the Senate may take, I hope that this House will continue to impress upon the Defense Department that economic frugality and wise spending can be a mark of efficiency in the military field as well as it is of an enterprising business.

If and when an emergency hour should come immediate authorization can always and readily be given to place the military on an actual war spending scale.

Miss Frances Knight, Director of the U.S. Passport Office

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. BOW. Mr. Speaker, the Department of State may well be proud of Miss Frances Knight, Director of the U.S. Passport Office.

In many instances State Department personnel are subject to criticism and ridicule, many times without justification. My knowledge of them is that they are generally a very fine group of devoted public servants, good Americans.

However, Miss Knight's article, "Don't Be an 'Ugly American,'" inserted in the CONGRESSIONAL RECORD of June 6, 1960, on page A4779, is proof positive of a sincere desire to create a proper and true image of Americans abroad. As in the State Department, so among our tourists abroad, a small minority cast unfortunate shadows on the unoffending majority.

If my colleagues have not already done so, I urge them to read the article to which I have referred.

I hope the Department of State will recognize that Miss Knight has made a real contribution to its prestige and that if her admonitions are followed its job will be more pleasant throughout the world.

Our Water Resources Program for the Future

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, June 10, 1960

Mr. HART. Mr. President, on May 26 General Itschner, Chief of Engineers, U.S. Army, addressed the Rivers and Harbors Congress on the subject, "Our Water Resources Program for the Future." General Itschner's remarks are so pertinent to the work of the Senate Select Committee on National Water Resources and are so informative that I believe they deserve a much wider audience. I ask unanimous consent that his speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR WATER RESOURCES PROGRAM FOR THE FUTURE

(Remarks by Lt. Gen. E. C. Itschner, Chief of Engineers, U.S. Army, before Rivers and Harbors Congress, Washington, D.C., May 26, 1960)

I was particularly pleased when your president, Mr. Henry H. Buckman, asked me to speak on future water resources development programs. For the past several months, the Corps of Engineers has been cooperating with the Senate Select Water Resources Committee in an endeavor to estimate our future national water resources needs and how best to meet them.

We know that U.S. waterways are the most efficient and productive in existence. The modern tow will commonly carry as much as three freight trains, each a mile long, or 50 times as much as one of Mark Twain's river packets. The trend is toward even greater efficiency. On the deeper and wider waterways, giant barges are now coming into service, each one carrying as much as a good sized freight train.

All but a small portion of our 20,000-mile commercial waterway system has been improved and is now operated and maintained by the Federal Government. About a third of it has channels 12 feet or over in depth. Another third has from 9 to 12 feet depth, still suitable for modern traffic. While the remainder is obsolescent by modern standards, don't write it off. These smaller water-

ways have become very valuable for growing recreational traffic, one of the mainstays of the $2.5 billion per year recreational boating industry. Moreover, these waterways were needed at the time they were built and they met that need very well.

Traffic on our waterways increased markedly after World War II. By 1957 tonnage had grown to four times the amount being carried a decade earlier. The average annual increase in barge freight, alone, was comparable to adding to the Nation's transportation system each year the freight-carrying capacity of a brandnew transcontinental railroad. And this was achieved without adding any new waterways, although some of the existing waterways were improved. Sometimes it is represented that the railroads could take over all of the waterway traffic without additional expenditures for new tracks and equipment. Our study shows that the railroads could not absorb even the annual increase in waterway traffic without making additional capital expenditures—much less absorb the entire 109 billion ton-miles of traffic carried by the waterways in 1958. And the cost would have been far greater than the corresponding cost of waterway improvements.

Anyway you measure it, the United States has a big bargain in its inland waterway investment. The entire cost of our inland waterways, exclusive of the Great Lakes facilities—including every cent spent for construction, operation, and maintenance since the Corps of Engineers began work 135 years ago—comes to less than $3 billion.

The waterways are just beginning to enter their period of greatest value. The rapid increase during the past 15 years reflects a dynamic growth of industry along the waterways. I am confident that this growth will continue with the expansion of the population and the economy of the United States. It follows that the use of the waterways will continue to grow, and this, in turn, will stimulate economic growth.

As we look ahead, 20 years from now—which is scarcely tomorrow in terms of time required for major waterways improvements—it is anticipated that the United States will need a combined transportation system with a capacity about double the present freight traffic moved by all carriers. In 40 years, the traffic load is expected to be four times what it is now.

An appraisal of project opportunities shows the physical possibility of extensive increases in waterway capacity through improvement of the present system and the construction of some new waterways. For the most part, these will be extensions to existing waterways. However, economic, rather than engineering, feasibility must control the rate at which this is done.

It appears physically feasible to increase the capacity of about half the commercial waterway system through enlarging the present channels. Also, the physical possibilities for building new waterway units appear to aggregate some 3,000 miles or about a 15 percent increase. The price tag on all these improvements would be on the order of $8 billion.

If need were imperative, all of these projects could be built by 1980, but it is not anticipated that such rapid progress will be required. However, we should maintain a continuing program of investigations so that we are prepared to proceed with new projects as they become necessary.

In the meantime, we can gain much in transportation efficiency from the modernization efforts already underway or pending such as on the Ohio and the Illinois. There are other things that can be done, such as better maintenance to preserve efficiency, and improved terminal facilities, particularly to cut the cost of interchanging freight between water and rail carriers.

You are aware of the growing apprehension as to the adequacy of dependable streamflows to meet increasing demands on our rivers for all the many purposes they serve. Recent estimates by the U.S. Geological Survey indicate that total U.S. water demands by 1980 will approach 600 billion gallons daily. This is the equivalent of 1.9 million acre-feet of water, or of using an entire big reservoir such as Norfolk in Arkansas and Missouri or more than Dale Hollow, in Tennessee and Kentucky, every day. Looking at it another way, it is equivalent to a constant flow of 930,000 cubic feet of water per second, which is 1½ times the average flow of the Mississippi at Baton Rouge, almost 5 times the Columbia at The Dalles, or 83 times the Potomac here at Washington. It is evident that our rivers will have to be regulated to a high degree to meet this need, and this will, of course, make necessary the construction of many more reservoirs than we now have.

The specific estimates of water requirements within each river basin are now being analyzed for the Senate select committee by the Resources for the Future, Inc., a research agency endowed by the Ford Foundation. The respective estimates are being consolidated and compared with forecasts of the amount of water that can be made available through conservation storage, so that we might have an idea of the necessary size and scope of future reservoir programs. This study, the first of its kind ever made, may have considerable effect upon the future flood control and water conservation activities of the Corps of Engineers.

In general, we have sufficient water potentially available to meet growth requirements in this country, if we but conserve it wisely and keep it clean. There are certain areas in the West, however, which undoubtedly will not have enough to meet all desired uses.

But all of us, including the relatively well-watered East, can expect that most of our rivers will have to be brought under virtually complete reservoir control, to the extent that it is economically feasible.

I cannot predict, at this time, the rate of progress in reservoir construction that will be necessary. However, we may have some fairly good indications after we will have had an opportunity to study the Senate committee's findings, scheduled for issuance in January 1961.

It would appear that the Federal Government will be obliged to bear the basic responsibility for building adequate storage to assure required riverflows. Of course, there are the problems of proper cost sharing to be worked out, but the answer to effective control and conservation of water lies in integrated, comprehensive river basin development. All interested Federal agencies, the States, and local governments should share in the responsibility and participate in the planning.

The trend toward increasing emphasis on water supply has already been reflected by the Water Supply Act of 1958. This act provides for restudy of existing or authorized projects to ascertain whether changes should be made for including water supply in reservoirs. It granted authority to recommend storage for future water demands even though no immediate users were ready to share the costs. Such foresight is necessary if full use is to be made of scarce storage sites. Of course, users will ultimately have to pay their share.

Municipal water supply is only a fraction of the demand on river flows which must be met by storage. Enormous quantities will also be needed for industrial purposes, including cooling water for electric power generation, and water to dilute sewage and industrial waste. And, of course, the needs for fish and wildlife and public recreation must be considered.

The fact that the water must be reused over and over again as it flows down our rivers places a premium on effective handling of the pollution problem. We must find and apply practical measures other than mere dilution of waste flows with clean water, because there won't be enough water for that method.

While we can greatly increase our dependable water supply by building reservoirs, there are practical limits to our ability to do so. Some of the Western rivers already have been developed nearly to their economic and physical limits. In the more congested and rapidly growing areas, particularly in the East, industry, housing, highways, and other improvements are overrunning potential reservoir sites at an alarming rate.

Our studies show that we still have a long way to go in providing adequate flood protection. Floods annually cause damages averaging $700 million—over and above the $600 million yearly damages prevented by existing projects.

River flood plains remain attractive for human use despite the flood hazard. It is probable that even if all the works found feasible are built over the next 20 years, we will still have an annual residual flood loss of about $300 million as people move into unprotected areas. This figure, however, might be cut down by more orderly use of the flood plains achieved by regulation, a program that merits considerable attention.

In conclusion, let me outline what I believe to be an orderly approach to our water resources problems:

1. Economically sound and progressive modernization and expansion of our waterways as the need occurs.
2. Reduction in the waste of water.
3. Full consideration of the need for river regulation as a primary purpose of river development and prompt construction of reservoirs as required.
4. Forthright measures to clean up pollution.
5. Preservation of essential reservoir sites.
6. Completion of feasible and necessary flood control works.
7. Sensible regulation of the use of river-flood plains.

With these measures we can have a sound and adequate water resources base for national growth.

West Virginia Primary Election

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, June 10, 1960

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that three editorials concerning the West Virginia primary election be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Sunset News-Observer, May 13, 1960]

THEY COULD BE WRONG

This should be borne in kind: The pollsters and the pundits said that Senator KENNEDY was going to lose in West Virginia. They were wrong. And they are the same pollsters and pundits who are now saying that with his overwhelming victory in West Virginia he is practically in as the Demo-

cratic presidential nominee. They could be wrong again.

It is true that Senator KENNEDY has been given a psychological boost for the nomination—but there are a lot of smoke-filled rooms between here and Los Angeles. The powerful State leaders who control delegations will be the deciding factor.

The West Virginia results argued powerfully against the church-State issue as a major drawback for KENNEDY. But some influential Democratic leaders have already spoken up in the wake of his victory here to voice doubts as to whether the Nation is ready to elect a Roman Catholic president. Their views—and their votes—must be reckoned with.

The other principal arguments advanced against KENNEDY have not been altered in any way by the West Virginia results. One is his youth and the other his lack of any administrative or executive experience. KENNEDY himself argues the vital importance of the president's job. A fair question is: Does his experience fit him for it. After all, the qualifications for the presidency demand more than a winsome personality, a prize-winning book, and campaign pledges unlimited.

At least three Democrats we can think of without much prompting are better qualified than he—Lyndon Johnson, Stuart Symington, and Adlai Stevenson. Government is the art of politics, and LYNDON JOHNSON is the best practitioner of that art in America. He is mature, seasoned, a man whose leadership has been thoroughly tested and proven. The same can be said for SYMINGTON and Stevenson. Both are men of rare ability, with long backgrounds of executive responsibility in business and Government.

This writer was particularly impressed with Senator SYMINGTON when he appeared last week at the Ninth District Democratic convention in Abington. He even looks like a President.

The poll takers will have their day. But they were wrong about KENNEDY in West Virginia and they may be wrong about KENNEDY in California.

[From the Morgantown (W. Va.) Dominion News, May 20, 1960]

IT MAY INTEREST YOU

(By Bill Hart and staff)

West Virginians are a rugged breed of people and that goes double for that great army that takes its politics under the banner of the Democratic Party—a classic example—and there have been many and we hope there will always continue to be—of independent thinking—wearing no man's collar, bending the knee to no one, as it were—may be seen in the election returns of the Democratic primary of May 10. Senator JOHN KENNEDY ran away with the marbles in the popularity contest against HUBERT HUMPHREY—everybody knows that, of course, but what many do not know is the man who was supposed to have broken his political plate because he was for LYNDON JOHNSON—Senator ROBERT BYRD is leading the list of delegates to the Democratic national convention on the basis of receiving the most votes—now, how does one square that?

BYRD, the man who confessed long ago that in his youth he once was a member of the Ku Klux Klan, came out for his senatorial friend, LYNDON JOHNSON of Texas—immediately, there were those who declared that BYRD was merely for JOHNSON because he, a former Kluxer, was against KENNEDY because KENNEDY is a Catholic—in other words, BYRD, because of his admitted membership in the days of long ago, could not be for anyone; he had to be against the man because he is a Catholic, and because of that, so said the experts in all camps. "BYRD has cooked his goose; he is finished." Well, let's look at the goose and the goose's record:

BYRD, of all running for places as delegates to the Democratic National Convention, at last account was out in front with the most votes of any of the group. Would this be an indication he was through in politics? Of course, this performance shows what all of us who take the trouble to find out what is going on knew all along. The West Virginia voter is an independent person and he and she will make up his or her own mind as to what to be done and the reasons thereto, the reason so many missed the full import of what was happening in West Virginia during the primary battle was they were talking about themselves too much. They had made up their minds before they had enough facts, bringing the matter closer home. Z–1 deeply resented the statement of one friend who said "of course, you'll have to be for KENNEDY because you're both Catholic"; z–1 has to be for no one on any score including religion and that goes for everyone else, too.

So it will be most interesting to note how those who have already written off BOB BYRD as a political force in West Virginia explain this great vote for him and the sweeping wonderful vote for KENNEDY? If any person can really explain that on any ground other than the West Virginia voters make up their minds as to merits of charges and performances z–1 will be most happy to entertain such a dissertation. And so let us pass to some other pressing matters and confine our remarks chiefly to the Democratic Party for this period:

First, it will be most unwise for Senator KENNEDY or anyone to assume he has the West Virginia delegation to the national convention wrapped up in his hip pocket because of his wonderful victory. West Virginia's delegation will go to Los Angeles uninhibited as well as uninstructed and it could be definitely faulty for any candidate to assume he has the delegation or inversely he has lost it—let this be a statement for the record and let no one miss its meaning and import—now, some State problems: the State Democratic committee will meet soon and, as tradition and custom has it, the nominees, such as those for Governor and the U.S. Senate and the Congress, will make known their desires as to leaders in the campaign.

Most will agree that the campaign director and chairman should come from south of the Kanawha River—this would provide more balance from a standpoint of geography since three of the major nominees are from north of the river and the river means the Kanawha River, in politics—but these selections will be the responsibility of the new committee and the nominees and we are quite certain they will understand and meet the problems with wisdom and courage.

[From the Moorefield Examiner, June 1, 1960]

CRYSTAL GAZING

West Virginia has been through the unique experience of being important in a presidential primary for the first time in its history. Anyone would have thought that West Virginia had just joined the union along with Hawaii and Alaska for it was certainly the only time in memory when our State held the limelight nationally for weeks before an election, had scores of out-of-State reporters and correspondents solemnly telling people how the State would vote and in general giving us a feeling of importance. At least the Nation found out there is a West Virginia.

Apparently what is forgotten is that West Virginians didn't have the chance to really express a preference for the man they wanted to run for President on the Democratic ticket. The only choice they had was between two politicians who became carried away with the importance of getting more "X's" on a ballot than the other. Candidates become infected with a strange virus at election time which actually changes them from rational thinking beings to wound up characters as alien to average people as men from outer space. It is a contagious malady which infects their coterie of followers into thinking the same way.

Our point is that Mr. KENNEDY does not have the Democratic nomination for President yet. With his win in West Virginia he doesn't even have the West Virginia delegation vote. We recall a candidate a few years ago who appeared to be a shoo-in as a presidential nominee. Senator KEFAUVER rushed around the country campaigning in primaries in a score of States collecting delegates like mad and the average citizen presumed it was a foregone conclusion that KEFAUVER would be the nominee. That was before the practical and professional politicians got in their licks at the convention. Sure, KEFAUVER came up with an impressive total of votes on the first ballot but if you recall it was safely under the necessary total to nominate. After that first ballot even the uninitiated could see the pattern.

Our prediction now is that LYNDON JOHNSON will be the Democratic nominee for President after the convention on the west coast. This guy JOHNSON is a might savvy sort of a guy. He is acknowledged to be head and shoulder above anybody in the field and he isn't exactly sitting idly in Washington doing nothing about it.

In the first place, he is majority leader in the Senate and charged with getting legislation through the mill. That is an 18-hour-a-day job and he hasn't time to be whooping it up all over the country declaiming on any and all subjects. He is one of the few Democrats on speaking terms with the administration and is a wizard at getting fractious Democrats together when it really counts. He lets them have their fun, their show, and their shouting; but when the chips are down he quietly has them in line. All his years of devoting full time to his job necessarily makes him the best informed man in our country. He undoubtedly knows three times as much about our Nation, its policies, its resources, its Government, and its probabilities than Ike himself, who is too busy playing golf and running around to know what is really going on in the store.

You can bet your bottom buck that JOHNSON and his powerful supporters haven't been idle when it comes to lining up delegates for the convention and with 10 times the efficiency as candidates waging popularity contests in a few scattered States. Any guy smart enough to keep the South appeased on the racial problem without losing support from the Yankees is smart enough to be able to handle Khrushchev, Gromyko, De Gaulle, Castro, or Nasser, or any other problem people. JOHNSON is the best in the business, and certainly we are going to need the best in the business over the next few years.

The really serious members of the Democratic Party inevitably end up with JOHNSON as the logical candidate this fall and as our next President. We predict JOHNSON on the 6th to the 10th ballot and KENNEDY as the Veep.

Clock Turned Back 20 Years by Air Force

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Friday, June 10, 1960

Mr. BARTLETT. Mr. President, on several occasions in recent weeks I have

called the attention of my colleagues to a decision of the Air Force to withdraw the 449th Interceptor Command from Ladd Air Force Base in Alaska. This decision of the Air Force has caused deep concern among many of our citizens and has been the subject of editorial comments in papers particularly in the Pacific Northwest. On June 6 the Anchorage (Alaska) Daily Times carried an editorial which I would like to call to the attention of the Members of this body. Mr. President, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Anchorage (Alaska) Daily Times, June 6, 1960]

CLOCK TURNED BACK 20 YEARS BY AIR FORCE

Latest strategy expressed by military authorities at Washington seems to make Alaska one of the world's safest places for people to live.

It will be safe because there is to be no target here to attract an enemy. It stands a good chance of being untouched in the event of war, because the enemy will be too busy in other areas.

Reduction and removal of military forces from Alaska is an effective way of making this State safe from attack. The enemy would have no reason to attack.

Alaska, with nothing but a handful of fighter interceptors and a big collection of electronic warning equipment would be no target. There would not be enough here for the enemy to give heed even during the later cleanup activities.

One might expect that this policy would make for happiness and relaxation in Alaska. Perhaps it does in some instances.

At the same time, the policy should make the populous industrial centers of the Nation mighty uneasy. It earmarks for the skies over their homes the first battles in the next war.

This is a result of the change in U.S. policy regarding Alaska. Until recently, Alaska was recognized as a gateway from Russia to the United States. Indeed, it is the short way to the heart of the Nation—via the Arctic Ocean. The military planned to deny Russia the use of this gateway.

The old policy was to fight the first battles in the skies over Alaska instead of over the industrial centers of the Nation.

For more than 20 years this policy was accepted as sensible. The United States spent more than $2 billion in effecting and maintaining it.

It has been within the last 6 months or so that some change has taken place.

The new policy turns the clock back more than 20 years.

When World War II started, Alaska had 200 infantrymen stationed at Chilkoot Barracks as its total defense force. The troops had a 20-year-old tug as their only transportation.

The deficiency was obvious and the military tried to overcome it by the expenditure of a billion dollars. Things were built in many places. Troops and airplanes were moved to Alaska. But the effort was too little and too late.

The enemy landed in the Aleutian Islands. The United States was compelled to spend many more millions of dollars, and use more than 60,000 troops, hundreds of ships and airplanes to dislodge them. The loss of life was another cost.

Will the next war allow time for the Nation to make up deficiencies through expenditures of dollars and lives?

The Nation must see that the lessons of the past are not forgotten, and that the Alaska gateway should be closed to the Russians as the military told us until the last couple of months.

Constructive Program for Crime Prevention

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, June 10, 1960

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me on a constructive program for crime prevention.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

CONSTRUCTIVE PROGRAM FOR CRIME PREVENTION

Since the end of the Second World War the crime rate in this Nation has been increasing at an alarming rate. Especially disturbing is the increase of juvenile crime. Seven hundred eighty-five thousand of our children will be referred to police and juvenile courts in 1960, according to recent projections of the Senate Subcommittee on Juvenile Delinquency.

In the past 5 years there has been almost a 24 percent increase in known crime. During 1958 alone crime increased 7.4 percent while the population increased only 1.7 percent, which means that crime has increased five times as fast as the population. This increase in the crime rate is reflected especially among the young people. During 1958 arrests of persons aged 18 years and over increased only about 1 percent, while the arrests of persons under 18 years increased 10 percent.

The cost of crime is tremendous. It is impossible to place a cash value on the damages caused through physicial violence and mental trauma. But crime entails not only a danger to the life, physical well-being, and property of those suffering from it, crime is also a threat to the Nation's sense of security. Furthermore, we are also paying astronomical amounts to house and care for the criminals with whom society catches up. Last year, for example, it cost the Federal taxpayer an average of $3,488 for each prisoner in a Federal institution. This is a tremendous cost when we remember that there are over one quarter of a million adult prisoners in State and Federal institutions.

With this state of affairs, it is obvious that we must search for the reasons of crime, for it is imperative that we deal not only with the punishment of crime but with the means of preventing it.

Social scientists inform us that the most obvious factor for this tremendous upsurge in crime is the population explosion which was produced by the high birth rate during the Second World War and after. This population increase, together with the socio-economic changes produced by the war years and the postwar economic growth, have much deteriorated the influence of the home and family on the younger generation.

It is apparent that our crime problem can be also attributed to the cultural lag in America, about which sociologists have been warning us for many years now. The physical sciences have made tremendous strides forward in improving and extending our mechanical and scientific knowledge. At the same time, there has been much more limited progress in the social sciences. We have not developed the science of human and social behavior fast enough to keep pace with our scientific progress.

The youth learns from the adult, and the social and moral climates to which our youngsters are exposed are not always conducive to healthy growth. A recent issue of Look magazine, in an article dealing with "The Age of Payola," commented that "payola is just one phase of an epidemic of immorality." Our youngsters are being infested with a diseased social attitude which tells them that anything is alright so long as they can get away with it.

The fashion among youngsters today is to go along with the crowd and with the standards of the crowd. In most older societies, time-tested standards established by the father, the chief of the clan, the community head, or some other respected leader provided guidance for the young generation. The accepted pattern today is for the young to be guided by the moral standards of the gang. Unfortunately, the standards of the juvenile or youth group without proper guidance tend to deteriorate toward the lowest common denominator.

It is clear, therefore, that in the American community we must again reassert the duty of the church, the home, the school, and the other character-building agencies for educating, for guiding, and for providing our youth with proper public and private morals.

Recently, Mr. George J. Reed, Chairman of the U.S. Board of Parole, discussed the relationship between crime, law enforcement corrections, and the community in an address before the National Institute on Police-Community Relations. Our community is now producing more criminals than the correctional agencies are geared to accommodate. The answer, therefore, is not correction but prevention. The duty of the policeman is not merely to catch the criminal after the crime has been committed but to aid in instilling lawfulness in our youth and in the prevention of crime.

Mr. Reed discusses also the use of parole instead of incarceration as a means of restoring the criminal to beneficial social existence. He states very wisely that "detention for a long period after the individual is capable and willing to live a law-abiding life may generate an understandable bitterness and perhaps a cooling of his desire to live a respectable and law-abiding life." It is interesting to note that on the Federal level approximately 80 percent of the parolees complete their supervision periods without any mishaps and without the need for incarceration.

I want to call especial attention to the following conclusions:

1. The unusual population increase occurring right after World War II and the related economic changes are responsible for the disruptions in our social organization and the increase in juvenile crime. But this pattern should now be leveling off.

2. In the education of our youth we are swinging back away from progressive education and all the extreme permissiveness which that trend implied.

3. There is a need for community programs that would give our youth constructive missions for the utilization of their energies.

4. The home, the church, and the school must reassert their influence in providing socially accepted standards for our youth.

5. Our legislatures and citizens seem to be more and more aware of the need for better training of policemen and other correctional personnel.

6. The processes of probation and parole are proving to be effective methods of rehabilitation.

7. Colleges and universities are expanding the number and type of training programs for professional, correctional, and police work.

8. Citizens' action committees on a statewide basis are starting to study the crime problem on the State and local level. Thus, the citizens as well as the administrators are jointly attempting to solve our problems.

9. Legislators, community leaders, parents, and correctional people alike are beginning to realize that they must also coordinate their programs if we are to be effective in meeting the ever-increasing challenge of crime within an orderly society.

Senator Kefauver's Philosophy of Government

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 10, 1960

Mr. YARBOROUGH. Mr. President, the distinguished senior Senator from Tennessee [Mr. KEFAUVER] has again put his finger upon a vital point in American governmental philosophy. He has called for greater participation in government by the citizens of the Nation.

The great record in the Senate of the senior Senator from Tennessee has benefited the people of the entire Nation. His invaluable service is recognized by the Nation, and not merely by his native State of Tennessee.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Mysterious 'They' Is Very Often Us," published in the Oak Ridger (Tenn.) of May 23, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MYSTERIOUS "THEY" IS VERY OFTEN US

Senator ESTES KEFAUVER has hit on an important point.

In a recent address to the Tennessee Junior Chamber of Commerce in Knoxville, the Senator talked of the " 'they' philosophy of people toward government."

He defined it as the philosophy that seems to satisfy people, particularly Americans, that they are not responsible for what government does.

He said:

"The 'they' philosophy is the height of cynicism. If we assume our officials are cynical and corrupt, we become cynics ourselves. In fact, we may thereby take a mental step toward corruption."

His remedy is simple: more participation in politics by individuals; participation at the local level.

How true.

How often we hear ourselves criticize and berate and blame the cause of our troubles, the community's troubles, the world's troubles on some mysterious "they."

We very seldom stop to define and identify "they." The handy pronoun scapegoat is always purposely vague.

Senator KEFAUVER suggests that we stop and analyze. It will likely hurt, but it will do us good. For, in most cases, this convenient "they-type" whipping boy, if we look closely, turns out to be "us."

This applies particularly in the case of government. We rant and rave about what "they" have done, what "they" haven't done.

Who are "they"? Most often "they" are the public officeholders we have elected either by indifferent, selfish, or unintelligent votes—no votes at all.

Or "they" are the public officeholder who got elected because nobody else would run—because he had no opposition in the primary, or even in the general election, and thus we had no choice. But what did we do in advance to guarantee a choice—a positive choice? So often "they" are a policy project, that we are responsible for "them" adopting because we have been too concerned with urging our own immediate interest, or no interest at all, and failing to look at the long-range benefits, or detriments.

Building Up Competition

EXTENSION OF REMARKS
OF
HON. OLIN D. JOHNSTON
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, June 10, 1960

Mr. JOHNSTON of South Carolina. Mr. President, I wish to call to the attention of the Senate an excellent editorial, published in the Richmond News Leader of June 8, 1960. The editorial speaks very highly of the attitude taken by the distinguished senior Senator from New Hampshire [Mr. BRIDGES]. I wish to add my commendation to what the editorial states concerning the position of the Senator from New Hampshire. We are facing a serious situation in regard to competition from foreign countries, especially in the textile industry.

I ask unanimous consent that the editorial may be published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUILDING UP COMPETITION

Senator STYLES BRIDGES, writing in the currrent Human Events, makes a novel and persuasive argument: The concept of "internationalism," he contends, has gone out of style; the free world "is more and more being divided into separate, autonomous, and violently nationalistic units." A foreign policy based upon the giveaway benevolence of recent years is less effective now than it ever was.

The New Hampshire Senator marshals a convincing case. France, West Germany, Belgium, the Netherlands, Italy, and Spain are going through an astonishing period of resurgent nationalism. In Africa and the Middle East, new nations are spawning at an incredible pace. Pakistan, India, Cambodia, Vietnam, Indonesia are part of this wave. In our own hemisphere, the nations of Latin America and South America are seeking individual recognition in their own right.

This nationalism is having a profound effect upon the economy of the United States. Members of the European Common Market, to mention one example only, have put their own self-interest first and relegated theories of global brotherhood to a poor second place. They are applying discriminatory tariffs and cold-eyed policies of currency exchange not only to the United States but to other nations also. One consequence is that the ECM's export trade is booming while the United States have a substantial trade deficit.

Facing these conditions of fact, what does our foreign policy propose? Why, our foreign policy proposes basically what it proposed 15 years ago. This is to subsidize foreign competition through grants, loans, and heavy foreign spending on defense.

The lunatic results can be seen in the textile industry. Textile workers are heavily taxed to provide funds for foreign aid; these funds wind up in textile factories abroad, where labor rates are a small fraction of labor rates here at home; finished goods pour into American markets at prices the domestic industry scarcely can meet. And when American mills begin to shut down, the only answer that occurs to the Congress is to inject further public funds into the community through a Depressed Areas Act. The steel and optics industries have suffered from the same suicidal process in action.

Senator BRIDGES predicts an increase in this worldwide industrial competition. He foresees the day when Russia will be able to create deliberate chaos in consumed goods by dumping Russian-made products where such dumping would hurt Western nations most severely. He urges that these conditions be met by a foreign policy that is hard-headed and not soft-hearted.

He does not mean by this a "return to isolationism." National defense requirements alone, he remarks, would make such a proposition absurd. He does urge that foreign policymakers face the facts of life: "We are not living in an international-minded world. We are trying to be an internationally oriented nation in a world rampant with nationalism."

The first order of business for the United States, he submits, is to get our own fiscal house in order. A second step would be to insist that those free nations whose economies have been restored "assume a fair share of their responsibilities toward the underdeveloped nations." Third, reciprocal trade programs must be revised to make them truly reciprocal: "If discrimnated against by our friends, we must institute appropriate countermeasures."

Mr. BRIDGES also calls for tax reforms that will reduce the outflow of American capital, and for a renewed dedication by American labor to those principles of efficient quality craftsmanship that established this Nation's industrial reputation long ago.

None of the recommendations advanced by Mr. BRIDGES is new. Grouped together, they provide the basis for an intelligent and respectable foreign policy. The dogmas of pure internationalism have application these days only in such lofty realms as disarmament and in the empty reaches of space where science knows no frontiers. Here on earth, nations are brothers as Macy's loves Gimbel's, and the sooner we revise our tariff and foreign polices to take this resurgent competition into full account, the stronger America is bound to become.

Forest Products Laboratory's Research Hailed as Key for a New, Creative Forestry

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, June 10, 1960

Mr. WILEY. Mr. President, on June 4, the Forest Products Research Laboratory

at Madison, Wis., celebrated its 50th anniversary.

Research by the Laboratory—and by the forest industry itself—has opened the way to a new and better life for more Americans.

The outstanding record of the Laboratory—since its establishment on June 4, 1910—deserves the commendation of the people not only of Wisconsin but of the Nation.

Within its brief lifetime, the Laboratory has made outstanding contributions to more effective utilization of wood and wood products throughout the country, through efforts aimed toward:

First. More efficient utilization of wood, beginning with the harvesting of trees, continuing through the various manufacturing processes, and including means of improving service to the customer.

Second. Maintenance of markets for forest products under competitive conditions with other material.

Third. Use of our woodlands in such ways as to stimulate good forest management.

More specifically, the accomplishments have included:

First. Development of prefabricated home construction. Approximately 10 percent of the homes built in the country now are prefabricated. This principle is a publicly patented, stress-cover system of roof, wall, and floor construction, developed by the Forest Products Laboratory.

Second. The Laboratory also did the basic work which resulted in the development of chlorinated phenol type of wood preservative which is one of the major wood preservatives used today.

Third. The factors used for the design and fabrication of laminated beams and arches were developed by the Laboratory.

Fourth. Lumber manufacturers use some 8,000 dry kilns of a type on which basic patents were granted the Laboratory. The gross value of products seasoned in these kilns is over a half billion dollars per year.

Fifth. Annually the cost of packaging industrial and agricultural products runs about $7½ billion. The Laboratory has developed scientific principles of box and crate construction which are in wide use by industry, saving many millions of dollars. To illustrate this: In World War II, a determination was made for military use. Due to the work of the Laboratory, they were able to cut down the size of packaging to a point where four Liberty ships were required where five had been required previously.

Sixth. The Laboratory has developed two processes for making pulp products from little used hardwoods. As a result of this development, approximately 20 percent of our pulp production is now from hardwoods.

These, of course, are only a few of the highlights of research accomplishments of great significance to American families, business, industry, and the Government.

Today, forest research projects, as all things—are costly. However, the Government, according to best estimates, gets back in taxes about $70 for every dollar spent for forest research. This revenue would be further multiplied if the wage factors of additional jobs that are created could also be accurately computed.

Overall, the effective forest research, as carried on by the Forest Products Laboratory of Madison, Wis., is a good investment for the American people.

Recently, the Green Bay Press-Gazette carried an informative article entitled "Knowledge Can Protect Nation's Wood Supply." I ask unanimous consent to have the thought-provoking article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KNOWLEDGE CAN PROTECT NATION'S WOOD SUPPLY—FEDERAL OFFICIAL SPEAKS AT FOREST LAB ANNIVERSARY

MADISON.—The great forests that existed when the United States was founded have been replaced with inferior species of little economic value, Assistant Secretary of Agriculture Ervin Peterson said here last week.

Peterson told 450 persons gathered from around the world for the 50th anniversary of the founding of the Forest Products Laboratory here that "in addition, pests, diseases, fire, and remoteness from market all in their own way take a heavy toll of our wood supply."

The Secretary said, "As a nation richly endowed with an abundance of natural resources, we have used them with profligate abandon. We have grown rich and strong. It is for us now to exploit a new and limitless resource so as to assure our continued prosperity and strength. That new resource is knowledge."

SAVE NATURAL CAPITAL

Peterson said that with knowledge provided by exhaustive investigation and experimentation, the United States can use resources without destroying them or impairing our natural capital. He said research would show us how to get more use from each unit of product while increasing the units as our needs for them continue to expand.

Peterson said the Forest Products Laboratory, founded at the University of Wisconsin 50 years ago this month, "was the first research institution created anywhere in the world for the specific purpose of applying the findings of science to the problems of producers and users of forest products."

OTHER FOREST VALUES

He said that forests were vital to the Nation's economy not only for their wood, but as regulators of watersheds, a home for wildlife, and a source of raw products to sustain a highly industrialized society that distributed more goods among more persons than anywhere else on earth.

"Present forestry leadership, both public and private, needs a thorough biting by the hurry-up bug. Time is growing shorter," Peterson said.

He said much of the present forest lands would be lost in the future to expansion of cities, farm lands, and industries required to support a predicted population of 400 million persons by the year 2000.

Peterson said that private enterprise has enabled the United States to produce and distribute more goods and services than any other nation in history.

He said that were it not for the profits of this system, from which is provided taxes to support Government services, a substitute will have to be found.

The Secretary warned that government as a substitute for private enterprise would be "the road to mediocrity and stagnation. Government is not the creator of wealth, but the user of wealth. We must remember that if government is big enough to give us everything we want, it can also be big enough to take everything we want."

Peterson said the private enterprise system is the best vehicle for the application of knowledge and creative forestry that will lead to a fuller life for all mankind.

Dewey Short, Orator in the Classic Manner

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, June 10, 1960

Mr. BEALL. Mr. President, eloquence has been described as a combination of "thoughts that breathe and words that burn."

If this is a valid definition, then the reigning master of eloquence must surely be the gentleman from Missouri whose profound thoughts have helped breathe new ideas into every corner of our land and whose epithets have seared our memories—Dewey Short.

Having had the good fortune to serve with Dewey Short in the House of Representatives, I can remember vividly how the galleries would fill with eager listeners when the word was passed that he was to speak.

These audiences were never disappointed.

The object of their attention consistently had something to say—a remarkable feat in itself—and he said it in a manner which was truly unforgettable.

An extremely interesting article on this amazing oratorical ability was published in the June 2, 1960, edition of the Kansas City Star, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

In view of the difficulties which prophets traditionally experience in their own lands, I would like to make special reference to the source of the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEWEY SHORT, ORATOR IN THE CLASSIC MANNER

(By Ira B. McCarty)

Very probably some Democrats will be in the balcony of the municipal auditorium arena Saturday morning when Dewey Short delivers the keynote address of the Missouri Republican Convention.

The Democrats will be drawn there for the pure pleasure of watching and listening to one of the last orators still practicing in the classic manner. It was Short's platform ability that carried him from the pulpit of the Methodist Church at Springfield, Mo., into a career of 24 years in Congress. He now is the Assistant Secretary of the Army assigned to civil functions.

Dewey Short's reputation as an orator played a major part in the decision to hold the State convention on the floor of the arena, with the balconies left open to the public, said Vincent E. Baker, chairman of the distinguished guests committee.

Short's reputation as an orator is based on three things: His broad education (he attended three universities in Europe); his unexpected shifting of gears from flowing classic allusions to homey and sometimes even barnyard terms, and his ability to project his voice in great rolling waves of sound into the highest balcony or the farthest reaches of a county fair grandstand, even without the aid of a microphone.

SOME PUNGENT SIMILES

Here are two samples of his phrase-turning:

"The happiest and warmest hour of Harry Truman's Fair Deal was at the inauguration. Since that Belshazzar's feast and bacchanalian revelry the heat has turned to cold and rejoicing has given way to weeping."

His knowledge of national affairs attacked on the House floor by a Brooklyn Congressman, Short retorted:

"Why, I have been farther back under the barn looking for eggs than you have been from Brooklyn."

Every time Short took the floor of the House the word spread quickly. Republicans and Democrats hurried to get in on the fun. Long before the "give 'em hell" line came to be attached in the public mind with the performances of Harry Truman, the phrase had echoed through the Ozarks as Dewey Short made his campaign rounds of the courthouses, the county fairs, and the weekly auction sales.

Followers of Short say that he "can give a man more unshirted hell, lacerate, slash, rip, and tear," than any other practitioner of the art of oratory. And all this without resort to even so much as a cussword.

EARNED WAY IN SCHOOL

Short was born in Galena, Mo., April 7, 1898, the eighth of 10 children. In those years money was hard to come by that far back in the Ozarks. Short did a variety of small jobs to assist the family income. The funds that took him beyond the local high school he earned selling ice from a wagon.

His first college work was at the State's first teachers' college, a Methodist school at Marionville, Mo. There he won a scholarship to Baker University at Baldwin, Kans., where he was graduated. He then entered Boston University's School of Theology on a scholarship. In taking this degree, Short won the Frank D. Howard scholarship that took him to Heidelberg University, then the University of Berlin, and finally to Oxford. By lecturing on his foreign travels he managed to earn enough to finance a year's study of law at Harvard.

A PROFESSOR 5 YEARS

From 1923 to 1928 Short served as professor of psychology and moral and political philosophy at Southwestern College, Winfield, Kans. It was during this period that he began preaching, first as a supply pastor. His sermons drew wide attention.

Short's father was by this time a powerful Republican leader in the Ozarks. The father and his friends were able to persuade Short to run for Congress in 1928. He won, but was defeated when he sought a second term. He tried again in 1934 and won. He continued to win reelection every 2 years until his defeat in 1956.

It was with some misgivings that Short took over his job with the Army. He had been an officer in World War I, but through all his years he has been a bitter foe of universal military training, believing that the armed services can be better maintained by a voluntary force.

Some of his congressional votes earned him a classification as an isolationist. He credits the isolationists with delaying the entrance of the United States into World War II for the period of time it took to make the Nation strong.

As long ago as May 24, 1940, 18 months before Pearl Harbor, he was on record demanding something be done to strengthen our fighting forces. In a speech to the House that day he asserted that "in the present hour our defense is woefully and pitifully inadequate." He called for more aircraft, more guns and ammunition, and all the other tools of war, and when the time came he voted for taxes to pay for those things.

ARMED SERVICES CHAIRMAN

At one time Short served as chairman of the House Armed Services Committee. His attitude on military affairs seems to have been better understood by his colleagues in Congress than by some military-minded persons.

When he appeared before a Senate committee considering his appointment to the Army post only one questioning voice was raised. It was that of MARGARET CHASE SMITH, of Maine. Short has rather old-fashioned, chivalrous views about the proper place of women in our society. He managed to persuade the Senator that the splendid performance of women in the Armed Forces during World War II had led him to a change of viewpoint on the matter of women in military service.

In his new office since March 1957, Short has performed without any major criticism coming his way.

Where's Our Offensive Team?

EXTENSION OF REMARKS

OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Friday, June 10, 1960

Mr. HARTKE. Mr. President, in today's Washington Post there is an article by George Dixon entitled "Where's Our Offensive Team?" I think we have been on the defensive too long. It is time that we became more positive, and instead of trying to answer insult after insult and all the other propaganda brick bats thrown at us by Khrushchev we should speak out boldly. We should show the world that the purpose of this great propaganda offensive of the Soviet Union is to cause turmoil in our ranks and dissention among the free nations of the world.

We should not, of course, weaken our defensive position because many times answers are required. But, let us not lower our guard and depend on answers alone. We must have a strong, positive approach. Mr. Dixon's column discusses this matter and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE'S OUR OFFENSIVE TEAM?

(By George Dixon)

We used to have a War Department. Now we have a Defense Department. We used to talk about taking the initiative. Now we talk about taking the defensive. Almost every day we issue a note, a reply, an explanation or a "cover story" in our defense. We're becoming too conditioned to being on the defensive.

Have we forgotten the defensive team can't score?

It seems to me that domestically as well as internationally we're letting the wrong side run with the ball. We let the most unworthy opponents keep the offensive while we stay on the defensive.

On the home front, Jimmy Hoffa keeps the forces of reform on the defensive by issuing statement after statement. Instead of taking the initiative from the Teamster dictator, the clean-up forces allow themselves to be kept on the defensive, issuing answers.

On the international front, Nikita S. Khrushchev employs the same technique. Whether Hoffa learned it from Khrushchev or Khrushchev from Hoffa, or whether they developed it indepndently should concern us little. It's the effect it's having that should worry us.

I am bloody tired of hearing that Secretary of State Christian A. Herter has answered Khrushchev; that Secretary of Defense Thomas S. Gates, Jr., has answered Khrushchev; that Central Intelligence Director Allen W. Dulles has answeredf Khrushchev, and that Senate Foreign Relations Chairman J. WILLIAM FULBRIGHT is debating how we should answer Khrushchev.

I'm just as sick of this Khrushchev-answering as I am of answering Jimmy Hoffa. I would no longer dignify either of them with an answer. Why let them have permanent possession of the ball and allow them to throw pass after pass over our defenses?

Khrushchev gets a headline a day by holding the offensive. We keep him in the game by answering. The cause of eradicating labor union corruption isn't being advanced by answering Jimmy Hoffa. If he was kept busy defending himself he wouldn't be so offensive.

We have a great defensive backfield in Herter, Gates, and Dulles, but what we could also use are a couple of good offensive halfbacks. We could use them to run some plays around Fidel Castro. And while they're at it they might do a little stiff-arming to Dominican Dictator Trujillo.

My undercover men inform me Trujillo is ripe to be knocked over anyway. We could get the credit for helping crowd him out. I hear he can't last much more than another 60 days before becoming one with Batista, Peron and Perez Jiminez.

Let's take the offensive now and give him advance notification he could go anywhere he can flee to—but not here. Let's take the ball away from him and keep him hopping on the defensive.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

Appendix

Recognition of June Dairy Month

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 13, 1960

Mr. WILEY. Mr. President, today the dairy industry is of tremendous significance to the health of our people, as well as to the economy of Wisconsin and the country.

Basically, dairy products—one of nature's most nearly perfect foods—are serving to strengthen and revitalize the health of our people. At the same time, the dairy industry is tremendously important to our economy. Nationwide, over a million farm families make a substantial part of their income from dairying. In addition, a great many Main Streets of the Nation depend upon the buying power of our dairy and other farmers.

Traditionally, June has been observed as Dairy Month across the Nation. The purpose is to increase programs for, first, paying tribute to the significance of dairying to our economy and the health of the Nation, and, second, carrying on sales and promotion programs of dairy foods to improve the health of the dairy industry and, thus, better enable it to meet the needs of our citizens.

Recently I was privileged to discuss the significance of dairying—as well as to make recommendations for improving the outlook through June Dairy Month observances—in a broadcast over Wisconsin radio stations. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS PREPARED FOR DELIVERY BY SENATOR ALEXANDER WILEY, REPUBLICAN, OF CHIPPEWA FALLS, OVER WISCONSIN RADIO STATIONS

Friends, as you know, this is June Dairy Month.

Over the years, our dairy industry has contributed —to a large degree—to bringing fame and recognition to our Badger State.

We realize, of course, that all the industrial, manufacturing, educational, cultural, scenic, commercial, and other features of our "land of milk, honey, and other fine products and great people" are significant to our progress.

However, because this is June Dairy Month, and because of dairying's significance, past, present, and future, to our progress, I'd like to discuss with you briefly, the outlook in this field, statewide and national.

SIGNIFICANCE OF DAIRYING TO OUR STATE AND NATIONAL ECONOMY

Question. Senator WILEY, what is the significance of dairying to our State and National economy?

Answer. Across the country, over 1 million farm families—including more than 100,000 in Wisconsin, make all or a substantial part of their income from dairying. In addition, a great many "main streets" of America depend, to a large degree, upon the buying power of our dairy and other farmers. These include the local hardware store, grocers, equipment sales and service, auto dealers, drugstores, and other businesses.

In Wisconsin, for example, farming itself is a $1 billion industry, ranking fifth in the Nation in cash received from livestock and livestock products; and ranking sixth in farm income from all sources.

Question. Does the dairy industry create any additional jobs?

Answer. Very definitely.

The processing and delivery of fresh milk employs about 200,000 persons.

The processing of butter, cheese, dried milk, also creates jobs for an additional 100,000 workers.

In addition, about 380,000 motor vehicles are used in transporting milk and dairy products from farm to plants, and from plant to consumer. These are only a few of the wide effects of dairying on our economy.

Question. Is Wisconsin continuing its tradition as a major dairying State?

Answer. Yes. Currently Wisconsin is the No. 1 milk producer in the Nation, with an output of about 18 billion pounds annually; we produce over 50 percent of the Nation's cheese, with an annual output of about 615 million pounds, and about 21 percent of the butter.

Question. Dairy foods, of course, continue to be a highly important part of the diet of the American family.

Answer. Yes. As nature's most nearly perfect food, milk products contain nearly all of the elements necessary for energy, growth, vitality, and health. This includes muscle-building proteins, as well as minerals, vitamins, and other nutrients.

Question. You feel, then, that the dairy industry will continue to play a significant role not only in our economy, but in further improving the health of our people?

Answer. Yes. I want to stress, however, that it is absolutely essential that efforts be made to brighten the outlook for the dairy farmer economically. This is essential—if the farmer is to continue to provide healthful dairy foods for the people of our country—and if he is to continue contributing significantly to our economic progress.

POINT PROGRAM FOR JUNE DAIRY MONTH

Question. Now, Senator WILEY, as a long-time booster for dairying, do you have any specific recommendations for a June Dairy Month program?

Answer. During June Dairy Month, a great many promotion activities are underway, sponsored by the dairy industry itself, as well as by State departments of agriculture, including Wisconsin, and the U.S. Department of Agriculture.

We recognize, of course, that the job of increasing consumption and utilizing of dairy products is not just a 1-month, but a 12-month job. To help brighten the outlook, I believe promotional activities as well as a wide variety of other steps should be carried forward:

First, we need to expand efforts to "sell the dairy food story," stressing that dairy products are a "best buy" for the family budget; and dairy foods provide over one-half of our total food needs for less than one-fourth of the food budget.

ESTABLISHING A SUPPLY-DEMAND BALANCE FOR MILK

Question. In addition to its health giving benefits for the American family, what are other ways in which consumption of milk can be expanded?

Answer. The sales and promotion activities, of course, can go a long way toward increasing consumption of milk. According to surveys, it has been estimated that a swallow a day—think of it, one swallow a day per person in the United States—would balance the supply of milk.

Consequently, I continue to believe that greater consumption of milk and other dairy products by the general public is the best answer to our supply-demand inbalance.

However, there are additional ways in which we can constructively increase the consumption of milk. These include:

Further expanding the Federal-State-locally sponsored special milk programs, distributing milk to schools, child care centers, summer camps, and similar nonprofit institutions.

Incidentally, you will recall a measure was passed this session along the lines of a bill I introduced, for carrying forward and expanding this program.

In addition, a greater effort must be made to provide dairy foods—particularly from any surplus supplies—for needy people at home and abroad.

Also, we need to educate the public "out of the outmoded idea" that there is an age limit on milk consumption. To the contrary, dairy foods are good for people of all age brackets—babies, teenagers, mature folks, and individuals in their golden years.

EXPANDING DAIRY RESEARCH

Question. Now, what about research, Senator WILEY?

Answer. Personally, I feel that expanding research holds a key to our difficulties in dairying. You may recall that I introduced legislation in Congress to establish a dairy research laboratory at Madison, Wis., the heart of the dairyland.

The purpose of much-needed expanded research facilities would be to find better ways and means of utilizing, processing, distributing, and marketing dairy products. In addition, the purpose of the laboratory here would offer an opportunity to better coordinate the many efforts now scattered across the country.

NEEDED: FAIR PARITY FOR DAIRY FARMERS

Question. What about farm parity, Senator Wiley?

Answer. Through the years, I have felt that the dairy farmer was entitled to a fair price for his milk and other dairy products—a price that would provide him the cost of production plus a reasonable profit. Unfortunately, the high cost of labor, taxes, equipment and other farm expenses have made it increasingly difficult for farmers to make a living in dairying.

To help deal more effectively with this situation I have cosponsored legislation to improve the support price level. The overall objective, of course, is to provide the farmer with a fair proportion of the retail price of his products—as well as to continue to make dairy foods available at reasonable cost to consumers.

ADDITIONAL STEPS FOR IMPROVING THE DAIRY OUTLOOK

Question. Recognizing that it is important to keep the dairy farmer happy economically, do you have additional recommendations?

Answer. Yes; I believe that maintaining a healthy dairy economy serves not only this special, but also the public, interests. Consequently, I believe this can be done in the following ways:

1. Maintain a strong dairy cooperative program;

2. Improve the Federal milk marketing order system to better reflect production costs and provide more equitable prices to the dairymen, particularly in Wisconsin and elsewhere in the Midwest;

3. Protect the dairy industry from a dangerously large volume of imports that would displace markets for U.S.-produced commodities;

4. Prevent oleo and other substitutes from usurping dairy markets. Incidentally, we recently defeated such a move in the Senate;

5. Expand the use of milk-vending machines and other devices and special techniques for distributing milk products to the American people;

6. Establish realistic policies by the Food and Drug Administration to avoid public scares; but at the same time, assuring a healthful flow of dairy foods to the American public.

7. Improve educational opportunities including better libraries, extension services, from local universities, and availability of publications from State and Federal departments of agriculture;

8. And, finally, I believe we must create greater opportunity in dairying to encourage young, dynamic, imaginative youth to enter the field vocationally, to further strengthen our dairy economy and provide a reservoir of rich, healthful, tasty dairy foods for the future.

CONCLUSION

This, then is a brief look at the major features of the dairy picture.

Again, I emphasize that maintaining a healthy economy in dairying benefits not only the farmer but the public and the general economy as well.

Thank you very much.

Nixon No Question Mark

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. MICHEL. Mr. Speaker, under unanimous consent I insert the following editorial entitled "Nixon No Question Mark" in the Appendix of the RECORD.

[From the Chicago Sun-Times, June 13, 1960]

NIXON NO QUESTION MARK

A television discussion of the issues of the day by Vice President NIXON and his challenger, Governor Rockefeller, could have served a useful public service. We are disappointed that the Governor turned down NIXON's offer to answer Rockefeller's questions in a public forum. We suspect, however, that the New York Governor may have backed away from a face-to-face appearance with NIXON because such an appearance would have dispelled Rockefeller's contention that NIXON's banner is a question mark.

The fact is that NIXON's position on major issues has been spelled out time and again. He has had a better opportunity than Rockefeller to go on record on public policy questions; as a Member of Congress he had to stand up and be counted. As Vice President he has stood before innumerable groups of citizens and answered questions from the floor. (A 22-page record of NIXON's public stands is available for $1 from Congressional Quarterly, 1156 10th Street NW., Washington, 6, D.C.)

If a public debate between NIXON and Rockefeller were held, it would be helpful also in delineating the Rockefeller policies as well as NIXON's. Although Rockefeller demands that NIXON be specific, Rockefeller himself is not specific on many issues.

Rockefeller accuses NIXON of being a question mark, but he himself speaks in vague terms in discussing foreign policy, farm problems, civil rights, and arms control. Rockefeller said he would not be willing to debate NIXON until NIXON had made his position clear on these and other issues. But Rockefeller hasn't made his own position clear. In many cases he merely has stated the problem without proposing a solution.

For example, Rockefeller criticized the Eisenhower administration for having no prepared American position a month before the disarmament conference at Geneva.

Rockefeller's solution: "The machinery of free government can and must be geared to do better than this."

He who criticizes should certainly be able to do better than that.

Rockefeller is more specific on arms control in the April issue of Foreign Affairs but he concedes: "The field of arms control is technically so complex and still so incompletely understood that it would be irresponsible to make specific proposals."

In those areas where Rockefeller grows specific, NIXON is just as specific.

Rockefeller is for the Democratic Forand bill for medical help to the aged. NIXON supports another plan providing Federal-State sharing of part of the cost of volunteer health insurance.

Rockefeller is for Federal aid for school construction and for scholarships. NIXON is for Federal aid to school construction.

Rockefeller is for government compulsory arbitration in strikes that cause national emergencies. NIXON is against this, saying "Government wage fixing inevitably means Government price fixing." We agree with NIXON. Rockefeller wants tax changes to encourage investments. NIXON says he has urged tax revisions, too. Rockefeller is for racial equality; so is NIXON.

On the farm problem, Rockefeller says, there should be "redefinition to make low-income farmers more productive members of the economy." How?

NIXON has endorsed the farm views expressed by the Republican committee on program and progress. He is waiting to see what Congress does on Mr. Eisenhower's farm recommendations. The farm problem is one area in which NIXON probably will assert a modified line since what Congress is willing to do has not solved the problem.

Governor Rockefeller says featherbedding in industry must be eliminated. He doesn't say how this can be done, but presumably he wants an answer from NIXON on this.

The Rockefeller challenge to NIXON so far has merely raised a question mark over many of his own positions. Perhaps in the weeks that remain before the Republican convention Rockefeller can clarify his own views so that they can be presented to the platform committee.

Health Care for the Aged

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, June 13, 1960

Mr. JAVITS. Mr. President, there is general recognition that adequate health and medical care for the aged should be available to all over 65 who need it at a cost they can afford. However, it is becoming increasingly clear that with the mounting costs of medical care and the growing pressure on our medical facilities, most of our older citizens cannot get the kind of health care they need without some form of Government help.

The bill which I have introduced offers a comprehensive way to provide senior citizens with the health care they need at a cost they and the Government can afford. It places emphasis on preventive care, as the doctors say should be done, by providing that at least one-third of the coverage under this program include care in the physicians' office or in the home. This is the kind of coverage senior citizens need more than any other, because modern medicine can do a great deal preventively to keep aging persons well enough to make institutional care unnecessary. Doctors can treat many conditions better and less expensively in the office or home.

Hospitalization or the equivalent cost care in the nursing home or home for the aged, surgery, laboratory tests, diagnostic X-rays, drugs, visiting nurse service, and other benefits will also be available under this bill.

An examination of some of the proposals before the Congress has been made by Dr. Merle D. Evans, of Rochester, N.Y. He is the past president and present legislative chairman of the Monroe County Medical Society, and his remarks were made before the platform committee of the Monroe County Republican Party on June 2.

I ask unanimous consent that the remarks of Dr. Evans be printed in the Appendix of the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

The present interest in providing health care for the aged should be guided and directed by a logical and methodical study of the needs for such care rather than a policy based on political expediency. The low income, over-65 citizen is, to some extent, the creation of society's enforced retirement age policy. Medical care is but one of the many needs that confront this group of enforced retirees. Medical care has become a basic need of society, along with food, clothing and shelter. It is a basic tenet of the medical profession to provide care to all regardless of economic status.

That help is needed by many to obtain adequate health care for themselves and their families is admitted. Naturally, the average citizen would rather provide for his own care than depend upon the community to care for him. But just how great is the need for help in providing necessary medical

care among the over-65 group? In January 1960, a study here in Rochester of all hospital admissions for that month showed that 81 percent of those over 65 paid their own hospital bills. Most had some form of prepaid insurance. Countrywide studies show that over 70 percent of the population carries some type of prepaid health care insurance. The growth of these insurance plans has been rapid.

In January 1961, a White House conference for the study of the needs and associated problems of the aging is to be held. As an adjunct to this conference or in addition to it, I would recommend that an advisory council be created composed of representatives of medicine, social services, economists, labor, industry and government to make a study in depth of the health needs of this group. Once the need has been established, a sound program could be devised to meet the problem.

In the present Congress, much pressure is being brought to bear for legislation this year to provide a medical care program for the senior citizens. The first suggestion—the Forand bill—is planned to give hospital services and nursing home care and surgery performed in the hospital to those eligible for social security benefits. A modification, proposed by Senators McNAMARA and KENNEDY, would provide hospital and nursing home care and would cover all over 65, including those who are not eligible for social security benefits. Both of these bills would be financed by an increase in the social security tax paid by the employer and the employee. This tax already is scheduled to rise to 9 percent in the next few years.

Financing any such plan through social security is wrong. The basic philosophy of social security is to provide the retiree with money which he can use at his own discretion. This addition would be giving him a service. It is compulsory. No one can say with certainty right now what such a program will cost. It would create a huge Federal bureau that would subsidize many who do not need it. Under the McNamara and Kennedy bills, those paying social security taxes would have to provide for many who have had no hand in providing the taxes. In short, there are many unresolved problems in this approach.

The other two plans under study—the administration's plan and the Javits-Keating-Weis, et al., plan—are Federal and State subsidy plans, financed out of general taxation funds. They are voluntary in participation, coinsurance in form, more extensive in provision of benefits, use existing agencies and facilities for provision of benefits and services and would be locally autonomous in administration to a great extent.

The administration plan, excluding the indigent or actual needy who are cared for completely by total subsidy, is a major medical insurance plan providing protection against catastrophic illness but without the benefit of coverage for basic needs.

The Javits-Keating-Weis plan has much merit in that in it there is a relationship between the premium and the income of the subscriber. It provides a subsidy only for those in need of one and is built upon basic health care coverage.

None of these proposals is ideal. Nor can parts be picked from any or all of them to create an ideal plan because the exact needs are not known. Any legislation passed at this time—in the absence of data on the need—could prove far from satisfactory in the future. Before committing ourselves to a course of action, we should know where we are going.

Rather than rush through hasty legislation, now that the Nation is aroused to the desirability of providing help in getting medical care for our over-65 citizens, let this problem be seriously studied. Out of such study, a plan can be evolved that will be: (1) Voluntary in participation; (2) broad and all inclusive in the provision of benefits; (3) coinsurance in form; (4) designed to use existing agencies and facilities; (5) financed by joint State and Federal payments from general funds; (6) as local as possible in administration so as to avoid unnecessary Federal bureaucracy; (7) a real help to those over 65.

Areas to be studied in the preparation of legislation having to do with this problem of a medical care program for the senior citizen should include:

A. Inflation: This must be controlled before any reasonable solution to the economic difficulties besetting a fixed income group can be arranged. Retirement programs that were adequate when set up years ago are no longer sufficient to supply even the necessities in the face of the inflated dollar. To take further inflationary steps only compounds the problem.

B. Needs of senior citizens: Subjectively, the needs, wants, and desires of this group should be explored in order that the specific help needed can be determined.

C. Attitude toward retirees: We should reevaluate the attitude of society regarding this group. Is the fact that a man has reached a certain age any criterion of his economic productivity? Must he be put on the shelf and be cared for because he has attained a certain chronological age? Is an antisocial policy which takes these persons out of the labor market a good policy to retain?

D. A breakdown of senior citizens by economic status: Because of the complicated personal budget problem that is common to all American families, the aged can be separated into several groups:

1. The indigent aged: To this group, the cost of medical care is not a problem because it, along with other living costs, is met by public assistance programs, by relatives and by religious and community agencies.

2. The near indigent who cannot fit the cost of an annual premium for health insurance into their budget. Some subsidy to help this group pay annual premiums would be of great benefit.

3. The nonindigent who might become indigent if confronted with a prolonged illness. This group would be helped enormously by prepaid medical insurance plans.

4. The nonindigent group of people who are able and want to work beyond normal retirement age. If they could work to supplement their social security benefits, the increased income would solve many budgetary problems for them.

5. The nonindigent with no particular budget problem and no need of a Government subsidy.

Such classification as this could be done by using data obtained in the 1960 Federal census taken in the last few weeks. This information is not yet available and won't be in time for its consideration by this session of Congress.

E. Our social securtiy structure: It is evident that the social security program is not functioning in accord with sound actuarial policy. It has been altered so many times—usually under political pressures of an election year—that its original concept can no longer be recognized. Does the public really want to alter the philosophy of this program which was intended to provide our citizens with an income in retirement?

These are but a few suggestions of the approach which I feel should be made to this most important problem. Others will develop during the actual study.

There is no alternative, in our estimation, to the fact that this matter should not be entered into lightly but deserves a thorough study in depth before any legislation is approved.

The Pennsylvania Farmer and the Green Acres Farm Program

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. MUMMA. Mr. Speaker, I have sent a copy of the green acres farm program to each of the county agricultural agents in my congressional district, as well as to the officers of the Pennsylvania Farmers' Association. In the near future, I am going to send out 300 copies of Mr. Andersen's proposal to other farmers in my district. I can readily see where there can be a difference of opinion between our relatively small Pennsylvania area farmers as compared to the larger ranches, and so forth, in the West. The smallness of our Pennsylvania farms is shown by the tabulation of "Value of Products Sold from Commercial Farms in Juniata County, Pa."

The comments submitted to me are interesting, especially so, in the light of the authoritativeness of the views expressed.

Mr. Speaker, here are the letters I received from the extension agents from Dauphin, Juniata, Lebanon, and Perry Counties and from the Pennsylvania Farmers' Association:

DAUPHIN COUNTY AGRICULTURAL EXTENSION ASSOCIATION,
Harrisburg, Pa., May 25, 1960.

Hon. WALTER M. MUMMA,
Congress of the United States, House of Representatives, Washington, D.C.

SIR: Thank you very much for the information on the Anderson-Jensen green acres farm program.

The program looks as though it would have a lot of merit, and I believe would work better than the present soil bank.

I would question, however, if it will solve the present wheat surplus, since I note the wheat quotas will not be changed. I also question whether we can increase supports to 90 percent of parity without running into the problem of surplus production.

I have not had an opportunity to talk with any of our Dauphin County farmers on this program, but it looks as though they would be favorable since most of them would have 20 percent of their land in hay and pasture crops at present.

Sincerely,

HAROLD E. STEWART,
County Agent.

JUNIATA COUNTY AGRICULTURAL EXTENSION ASSOCIATION,
Mifflintown, Pa., June 7, 1960.

Hon. WALTER MUMMA,
Member, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN MUMMA: This letter is an atttempt to give you some of my impressions of Congressman ANDERSEN'S green acres proposal in response to your request. I would also like to make some additional comments on the whole farm problem especially as it relates to Juniata County.

There are two aspects to the farm problem. The one that receives the most attention is the so-called surpluses of certain crops with resultant low prices. I will call this the price problem. The most critical problem appears to be wheat with the other grain

crops of corn, soybeans, sorghum, and so forth, also involved. This is more a Midwest than an Eastern problem. However the east is concerned with egg and milk prices.

The second aspect is the small farm or low income problem, which exists everywhere in the Nation. I feel it is even more important to us here than the price problem.

The following table rates the farms by value of products sold. It was taken from the 1954 census of agriculture. Approximately two-thirds of our farms are rated commercial by the Bureau of Census.

Value of products sold from commercial[1] farms in Juniata County, Pa.

	Percent of farms
$250 to $1,199 (55 percent below $5,000)	8
$1,200 to $4,999 (55 percent below $5,000)	47
$5,000 to $9,999	27
$10,000 to $24,999	15
$25,000 and over	3

Our farm management studies show that $5,000 gross income is about the breaking point between profit and loss. The figures in the table indicate that the major problem on over half the farms is that their enterprises are too small. Their gross income does well to cover such fixed overhead expenses as taxes and insurance plus the cash operating expenses such as gasoline, seeds, fertilizer, and feed. There is little left for family living and depreciation.

Prices are relatively less important to the small operator than to the large operator. A small dairy farm may produce about 80,000 pounds of milk per year worth about $3,600. Assume some program, Government or private, or a combination of both, raised the farm price of milk 1 cent per quart. This would only increase the gross income of the farm about $400, to $4,000, which is still not enough to put this farm in a sound financial position.

The conservation reserve program is being criticized because it is removing whole farms from production. However, I feel that, especially for these small farms, the whole farm approach is a better solution than restrictive programs that require every farmer to cut back a stated percent. Again, the slightly higher prices that may be realized as a result of the program won't do much more than offset the loss of income from the present total production.

The entire farm problem is complicated by the different interests of the different parts of the Nation. The eastern farmer has usually not voted in favor of the wheat allotments, but has been outvoted by the western wheat farmer. Each has been trying to protect his interests as he sees them.

The green acres program, in my opinion, is another program more specifically prepared for the West than for us. The comment by Mr. Andersen, on page 9166 of the CONGRESSIONAL RECORD, about eliminating the 600,000 producers who grow less than 15 acres of wheat is an example of what I mean. He assumes that each one of them will quit growing wheat and take a payment in kind.

However, I don't think that will have much appeal in this area because much of our wheat is grown as a nurse crop to establish a new seeding of alfalfa or clover. It is the best crop we have for late fall seeding for this purpose. So unless the production of wheat is specifically prohibited, many of our less than 15 acre producers will stay in business.

I am not certain, either, that if the green acres program does cut back somewhat on the current surplus that the increased price supports and relaxation of controls at the end of the 5-year program will not soon have us back in the same situation again.

Nor am I certain that the 50-percent penalty for noncompliance will not make it impossible to get green acres approved at the proposed referendum. In general the producers have favored price support programs with rather ineffective controls. The only controls that would really be effective would be allotments based on bushels rather than acres. As yet no one has been able to get enough support to have such controls established.

There are so many angles to all this that it is impossible to do more than comment very briefly on a few of them in letters such as this.

I would be glad to comment on any specific questions you may ask.

Sincerely yours,

GEORGE L. SETTLEMYER,
County Agent.

LEBANON COUNTY
AGRICULTURAL EXTENSION ASSOCIATION,
Lebanon, Pa., May 24, 1960.

Hon. WALTER M. MUMMA,
Congress of the United States,
House of Representatives, Washington, D.C.

DEAR MR. MUMMA: The four words, "what do you think," written in your recent letter presented a real challenge. It was the first time a Member of the Congress of the United States asked for my opinion and I feel honored, but a bit uneasy in attempting to tackle a problem with so many involvements.

Mr. Anderson gave a very real review of the farm problem, but I'm not too sure that his program will work. We got into this mess through controls and I'm not convinced that more controls will get us out. He is speaking of a grain surplus area, while we are in a grain deficient area. Great quantities of feed for livestock and poultry are imported each year—Lebanon County alone spends over $4 million. He must not like little people.

Farm legislation has limited wheat acreage here little by little until farms that normally grew 40 acres can now grow only 15 acres, and now Mr. Anderson wants to, "eliminate the 600,000 15-acre farmers."

Bedding is in short supply for our livestock and presently is costing as much as hay. Mr. Anderson didn't even mention this item, but he did mention enforcement, "a penalty of 50 percent of the total production on any farm not in compliance." I wonder how he would like to pay a fine like that for going 36 miles an hour in a 35-mile speed zone. I don't believe he ever did explain how the Vermont farmer with 85.8 percent of his farm in hay and pasture can take an additional 20 percent of his farm out of grain production.

The big problem is in the West and Mr. Anderson wants the West to benefit by new legislation as they have in the past. They get the lion's share of money to build dams to irrigate more land to create more surpluses. Why not stop bringing new land into production until it's needed?

His program is much too complicated for a farmer to understand, and it would be very costly to administer.

That's the way I see this proposal, WALTER. Thanks for asking, "what do you think."

Very truly yours,

GLENN E. MILLER,
County Agricultural Agent.

PERRY COUNTY AGRICULTURAL
EXTENSION ASSOCIATION,
New Bloomfield, Pa., June 1, 1960.

CONGRESS OF THE UNITED STATES,
House of Representatives,
Washington, D.C.

(Attention: Congressman WALTER M. MUMMA, 16th District, Pennsylvania).

DEAR CONGRESSMAN MUMMA: Received your letter dated May 17, 1960, relative to the green acres program as outlined by Congressman ANDERSON of Minnesota. I should have answered you prior to this date, but I have been thinking about the matter and discussing it with a number of people in the county.

It would appear to me that in designing a program for agriculture certain desirable features should be kept in mind. These would include: (1) Supplying the people with adequate amounts of high quality food and fiber to maintain the health and welfare of the Nation. (2) To provide the farmer with a fair share of the gross national income. (3) To maintain freedom of operation. (4) That the production of food and fiber be done in such a way that prices to the consumer will be reasonable.

As you probably know, the demand for agricultural products is of such a nature that if you increase the supply 1 percent the price decreases approximately 3 percent. It is also fairly evident that if the prices of agricultural products decrease farmers tend to try to overcome this decrease by further increasing the level of production. This is done by changing the inputs of capital, land, labor, and management in such a way that the total output will be greater.

It is also fairly evident that if you reverse the process, that is, decrease the total supply of agricultural products by 1 percent the price level will increase approximately 3 percent. In other words, I am convinced that any program which is to contribute to the solution of the agricultural problem must cut down total production. During the past 25 years there have been programs introduced which would solve the problem if properly administered. For example; I believe that the soil bank program would solve the problem if 50 to 60 million acres of agricultural land were taken out of production. To date only 28 million acres have been put into the soil bank. Farmers have taken labor, capital, and management which would have been used on the soil bank acres and added them to the production process on their remaining acres. This has resulted in increased yields per acre so that the total production has not been cut. If twice this amount of land were in the bank you can see that the farmers could not increase their yields enough to maintain total production. By the same token, allotment and price support programs would also do the job, if allotments were cut sufficiently to curtail total production.

The green acres program as outlined by Congressman ANDERSON should work because I believe the principle is sound. There are two problems in relation to the green acres program. First, the 20-percent requirement is not high enough to affect total production. Second, if this percentage is made high enough I question whether farmers on a nationwide referendum would give the necessary two-thirds vote in favor of it.

In general I feel that farmers do not understand the tremendous effect of a surplus production on agricultural prices. I believe if a good sound program were devised and an effort made to explain the objectives of the program to the farmers as well as the general public that it would be accepted. Conditions of the program should be such that you are absolutely sure that total production would be cut and that the program be maintained long enough for its adoption across the Nation.

The U.S. Department of Agriculture each year issues a yearbook. The last issue was devoted to food. I would appreciate it very much if you could obtain and send me a copy of this yearbook. I appreciate your letter and I hope that what I have written will be of some help to you.

Yours truly,

ROY F. SNYDER,
County Agent.

---

[1] A commercial farm is one where the operator worked off the farm less than 100 days per year, sold over $250 worth of farm products, and reported no other income exceeding the value of agricultural products sold.

PENNSYLVANIA FARMERS' ASSOCIATION,
May 31, 1960.

Hon. Congressman WALTER H. MUMMA,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN MUMMA: Thank you very much for sending me the CONGRESSIONAL RECORD containing Congressman ANDERSON'S proposed farm bill the green acres program.

My general reaction to the Congressman's program is that it appears to assume that farmers must continue to rely on the Federal Government for a portion of their annual income.

Although the program appears to be an improvement in some respects over some of the Brannan-type proposals we have seen in the past, it still advocates support prices at relatively high levels.

The green acres program calls for continued strict controls, with various incentives which will continue to induce a certain element in agriculture to think the answer to our problem is to be found in the Federal Treasury.

I doubt that Pennsylvania farmers would find much in Congressman ANDERSON'S program that would appeal to them.

Kindest personal regards.

Sincerely yours,

C. M. WILSON,
Secretary-Treasurer.

A Sixth Column

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, June 13, 1960

Mr. BRIDGES. Mr. President, I wish to invite the attention of Senators to some extremely important and timely remarks delivered recently by a distinguished public servant and citizen of my State.

The Honorable Stewart Lamprey, speaker of the New Hampshire House of Representatives, in a recent address to the Laconia Chamber of Commerce pointed to the peril of what he described as a Sixth Column movement in this country. I think the term is very appropriate for the group of so-called Americans who, knowingly or unknowingly, are bent upon discrediting America and our way of life. Mr. Lamprey's comments are the subject of a recent laudatory editorial which appeared in the Manchester (N.H.) Union Leader.

The editorial is an excellent commentary and, therefore, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Manchester (N.H.) Union Leader, June 13, 1960]

A SIXTH COLUMN

House Speaker Steward Lamprey has performed a distinct public service in warning of an insidious Sixth Column at work in the United States today. In a recent address to the Laconia Chamber of Commerce, Mr. Lamprey described the Sixth Column as distinct from the well-known Fifth Column as a person or persons who wittingly or unwittingly, sow the seeds of revolutionary philosophy and thus weaken us morally, spiritually, and even militarily.

To illustrate his warning that such a Sixth Column is real and, moreover, close at hand, Mr. Lamprey read to his audience a most astonishing paragraph taken from an address recently delivered in Meredith. The paragraph follows:

"Our final hope cannot be in America. It will fall, as other nations before it have fallen. Nor can our hope be in democracy. Is this the perfect political system? God help us if it is."

This paragraph is representative of the pratings of the extreme liberal, the fuzzy thinker, the harkers of doubt and doom and the avowed Communist. Mr. Lamprey did not disclose the name of the Merideth speaker, leaving us, for the present at least, to hope he does disclose the speaker's name to the Attorney General so that this sort of rotten business, this Sixth Column as Mr. Lamprey calls it, can be ferreted out and flushed away.

National Defense Aspects of Sea Coach Transatlantic Lines Superliners

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I am pleased to include an interesting, informative, and challenging address made by H. B. Carter, president of the Carter Hotels Operating Corp. of New York City, on June 3, 1960, to the New York Chapter of the National Defense Transportation Association, which address was entitled "The National Defense Aspects of the Sea Coach Transatlantic Lines, Inc., Superliners."

Mr. Hilly, honored guests and gentlemen, I was extremely gratified to receive your very kind invitation to visit with you and discuss my project of building two superliners to provide a $50 fare to Europe. For the first time since my plan was formulated I will explore this evening some of the national defense aspects involved.

It is a pleasure to address such a knowledgeable audience on the defense transportation situation, a situation which must be of vital concern to every one of you. The woeful inadequacy of marine transportation for American troops in case of emergency is very serious indeed.

At superliner hearings before the Bonner committee in Congress, Admiral Wilson of the Navy testified that the United States has only 10 passenger ships which can exceed 20 knots-per-hour speed. This is the minimum speed required for transports swift enough to evade attack by modern submarines. Gentlemen, only 10 ships in the entire United States are available to handle troop transport to every corner of the globe. During the last war when we were faced with a similar emergency, we paid England hundreds of millions of dollars to transport our troops under generally deplorable conditions. Should the need arise, Sea Coach Transatlantic Lines superliners could carry a full division each with four men to a cabin, each cabin air conditioned, with private toilet and shower facilities: substantially more civilized and modern than in the past.

As for peacetime—or cold-war time, if you prefer—we find that the Military Sea Transport Service carries 20,000 to 30,000 passengers every month to and from foreign ports. This figure includes not only service men, but their dependents as well. A considerable portion of these passengers are carried on avowed luxury liner ships with extras in service and facilities that are simply incompatible with efficient Government transportation economies, and it all adds up to burdensome costs to the taxpayer.

The MATS has no choice; it requires mass passenger space, space that often is not sufficient to warrant requisition of an entire MATS transport. It must then turn to the only form of large passenger carrier available, namely, the luxury liner or airplane, at many times the cost of our proposed superliner Sea Coach fares.

Here we have two interrelated situations: First a wartime emergency and, second, a peacetime waste, both focusing on inadequacy of wholesale low-cost ocean transport facilities. Sea Coach has the only solution to both these problems. Its superliners could serve with dignity, comfort, speed, and protection as modern troop carriers at great savings to the American taxpayer.

I offer here the greatest bargain for the American Government.

Two of the largest troopships with standby capability of the largest aircraft carriers in case of emergency, always on call to the American Government—and provided at private cost, private operation, privately trained crew, all free to the American people.

In addition to these national defense aspects, there are national economic aspects to be examined in connection with these ships. The employment activated by their construction and operation, the supplies consumed, and business generated all could create income and additional tax revenue for this country. What has the Government done about these proposals?

Well, there have been six bills before the Congress which had 1 day of hearings which were aborted and the time wasted. Remember, we will require no operating or construction subsidy. The profitability I have checked and tested from every possible angle, and from the deluge of mail and inquiries I daily receive I can easily demonstrate a 5-year all-around complete sellout.

Each Sea Coach superliner will be capable of carrying a full division plus 50 interceptor aircraft for protection. This can be expanded to even 150 interceptor aircraft. With 34 knots service speed and 40 knots of forced speed, protection is guaranteed from submarine attack. I had offered Washington a design similar to a flattop aircraft carrier; the stacks and other superdeck fittings could be retractible for a cleared flight deck. All of this I offered to the American Government at no cost to the taxpayer, but I could not get it done. I was forced to take my project to Hamburg, Germany, where I have signed a construction contract with the Deutsche Werft Shipyards, Dr. William Scholz, president. They guarantee delivery in 36 months after final plans for the first vessel, and the second vessel will be delivered 12 to 15 months after the first one.

You all have been provided with cards and brochures explaining my $50-to-Europe project, and the scale models are on display in my Dixie Hotel, West 42d Street, and at various points around the city. The newspapers, radio, television, and magazines all have carried a steady flow of information on this project, which will be the greatest boon both to the American public and to the nations across the Atlantic for peace, good will, and human understanding on the one side, and education, culture, and trade on the other.

President Eisenhower, Vice President NIXON and Senators JAVITS and MAGNUSON are constantly emphasizing the need for more "Peo-

ple to People" visits and intermingling, thereby fostering peacetime understanding. But how is this possible when the masses—the average people, the little fellows—are not provided with the low cost facility to do it. Again the Cantor superliners are the answer.

One American steamship line receives $28½ million a year in subsidies, and there are 15 other ocean lines receiving similarly large operating subsidies. This same line advertises luxury service in the New York Times, to wit: "One steward to every couple," which means that they cater to clients such as chairmen of the boards and presidents of rather large corporations, in other words, catering to perhaps not even 5 percent of our population. But no facility has thus far been provided at low cost for the masses, for the little fellow. But you are permitted to pay the tax to support this luxury service. Seems incredible doesn't it? I cannot understand it.

New ship construction is in the doldrums. During April: not one new ocean ship contract, and 5 months prior to February, not one new ship contract—and America has gone from first to eighth place in world shipbuilding. Why? Because of lack of financing; or lack of interest on the part of Washington, and practically and basically because we do not build ships as we do everything else in America, large volume and little price, catering to the masses, which is exactly what I am advocating here.

FHA and title I financing make it possible to construct new apartment houses and other real estate. Under these acts the Government permits a responsible operator a 90-percent guarantee of loan for 30 years at a reasonable interest rate, which is exactly the type of financing I will accept, and build two additional ships in America, besides the two I will build in Germany. Why isn't this same type of financing available for shipbuilding? What good is all this housing without having the weapons—such as these ships—to defend them? Under this proposal I will require no operating or construction subsidy and will build two additional ships in my country and keep the employment here where we might soon badly need it.

The American merchant marine provides annually a payroll of over $1 billion. American foreign trade employes over 4½ million people, generating wages of over $13 billion annually. Many of you make your living from the sea. With ship construction in America in the doldrums, a lack of ships might eventually strike a mortal blow to our economy: In fact, we are beginning to feel the effects right now.

Fifty-dollar fare to Europe for the little people of the world is the goal to which I have dedicated myself and I will leave no stone unturned to get it accomplished both in Germany and in America. Why can't we get it done in our own country?

I repeat, here is the greatest defense facility. It is convertible and useful and extremely important either in peacetime or in wartime. We will require no operating nor construction subsidy.

Why can't we get it done in America?

The Emergence of West Africa

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, June 13, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered at a conference on world tensions held at the University of Chicago. Dr. Lewis is one of the most experienced professional and practical observers of events in West Africa, and this address sets forth with clarity the present and looming requirements of policy in Africa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EMERGENCE OF WEST AFRICA

(This is the text of an address given by Dr. W. Arthur Lewis, principal, University College of the West Indies, Kingston, Jamaica, at 8:30 p.m., Thursday, May 12, at the University of Chicago. Dr. Lewis is one of the participants in the Conference on World Tensions, sponsored jointly by World Brotherhood, Inc. and the University of Chicago.)

My subject is west Africa, the vast area lying below the Sahara desert, and stretching from the Atlantic Ocean in the west to the Cameroons in the east. Here live 65 million people, in 16 different countries. Half this population lives in one country, the British colony of Nigeria, which has 32 million people. Next in size is Ghana, with only 5 million. Only three others have more than 3 million people. So with the exception of Nigeria, we are dealing with a large number of small countries, whose typical population is only about 2 million, spread rather thinly over the ground.

All these countries are now self-governing with the exception of 2, and it is probable that by the end of next year 14 of them will be independent members of the United Nations. This is an astonishingly swift development. At the beginning of the year 1957, there was only one independent country in west Africa; namely, Liberia. Today there are five, namely Liberia, Ghana, Guinea, Cameroon, and Togoland; four others will join the list this year; namely Senegal and Sudan, who have federated under the name of Mali, Nigeria, and Mauritania. Next year for certain there will be Sierra Leone, and probably also the remaining French territories of Ivory Coast, Dahomey, Volta, and Niger. The arrival of all these west African countries in the United Nations will, by the end of next year, give Africa the largest block of votes in the General Assembly, when you include North, West, and Central Africa.

My instructions tonight are to say a few words about the tensions existing in this area which has burst so dramatically upon the world stage. I shall first describe the situation and then tackle the question, What help the outside world can give.

From the many problems of the area, I will focus tonight on five sources of tension, as follows:

First, the division of the area into British and French spheres of influence.

Second, the lack of education, which helps to maintain that division.

Third, the mix-up of tribes and religions, which menaces the stability of each of these states.

Fourth, frontier questions.

Fifth, the Federal idea, which is meant to reduce tensions, but which actually increases them.

First let me take the division of the area among the metropolitan powers. In 1957 there was one independent state, Liberia, which was really a satellite of the United States of America. Apart from this there were 4 British colonies, 10 French colonies, and 1 Portuguese colony. These divisions still have important cultural, economic, and political consequences. Culturally, there is virtually no exchange between French and British. French Africans and British Africans have no means of communication with each other. The British African intellectuals know what is happening in London, whether in the markets, or in the theater, or in politics, and the French Africans know what is happening in Paris, whether in philosophy, or at the opera; but neither knows anything about what is happening in the other countries. There is similar economic isolation. Currencies are exchanged into each other only with difficulty. Transport facilities, whether roads, railways or harbors, have been designed for political and not for economic convenience. Trade is parcelled up by tariffs. Above all, there is political isolation, which is a continuing obstacle to the removal of other barriers. The French territories, although claiming independence, remain deeply attached to France, by sentimental as well as by economic ties, and are a little frightened of Ghana and Nigeria. French Africans and British Africans do not feel at home with each other, and it is going to take a lot of working together as independent states before they agree to break down some of the barriers which now separate them.

The second weakness of these countries is their lack of education. When Ghana became independent only 1 percent of her children were receiving a high school education, and that is typical of the whole area. It has several consequences. First, though these countries become independent, they continue to depend upon the outside world to run their affairs. In the government, the ministers are African, but the civil servants and technicians are still British or French. So also the whole of large scale private business is run by foreigners. Thus the dependence on Britain or on France is maintained. A second consequence is that the cost of any kind of development is very high, since it has to be done with foreign staffs paid at higher rates than they earn in their own countries; this, for example, is a formidable obstacle to industrialization on a competitive basis. Another consequence is that some desirable developments cannot be undertaken. Every society is kept going by the products of the high school, who become teachers, nurses, secretaries, or junior administrators or technicians. Most of the obvious types of development are hindered by shortage of people at these levels. Nothing could do more to put West Africa on its feet than a large program of high school education.

The third source of tension on which we are focusing is the fact that none of these countries is homogeneous. Each is a mixture of tribes, languages, and religions, without any sense of common history or of common nationhood. This is poor material for democracy. Many adjacent tribes are traditional enemies, having fought each other regularly right up to the beginning of the 20th century. The new rulers in West Africa are trying to create modern states where national loyalties are to take the place of tribal loyalties. At the same time they are for the most part revolutionaries, in the sense that they wish to break the power of tribal chiefs, and to advance the status of the common man as against the old family oligarchies. In these circumstances, politics is inevitably rough; its weapons are not so much the newspaper and the microphone, as the knife, the club, and the prison cell. At my last count, in five of these countries the opposition had no seats in parliament, and in three other parliaments the government had more than 80 percent of the seats. This has external, as well as internal consequences, for the attitude of the dictator of one country toward the dictator of another country is more often enmity than fellow feeling. Each country praises its own democracy, while looking with scorn and fear at the other's dictatorship.

This hostility is at its greatest where frontiers are disputed—my fourth source of tension. This occurs in three areas, involving Ghana, the Cameroons, and Gambia. The metropolitan powers kept only small forces in West Africa—even now Ghana's

Army has only 6,000 men. Unfortunately these are signs that this happy state may not long persist. In view of current threats, this is just the right time to promote in West Africa a convention for the limitation of armaments.

I come lastly to the fifth source of tension, which might be a solution for all the others—namely, the idea of a federation of West African states. Three federal solutions have competed in West Africa. First, there was the possibility that the French territories would form one federation, and the British territories another. This was decisively rejected. As soon as Ghana became independent it proceeded to destroy all its links with the other British territories—the common airline, the common currency, and the common research services—claiming that it could not continue in partnership with other territories which were still in colonial status. In the same way, as soon as the French territories received self-government, they destroyed the existing federation of French West Africa. In place of this latter was offered the possibility of federation with France, in the French community. This was at first accepted by all the French territories except Guinea, who became independent. Now the others are following suit. Mauretania, Senegal, and Sudan are contracting out of the federal arrangements of the French community, and the others will probably follow soon. Finally, there is the idea, championed by Ghana and by Guinea, of a federation of all West African states. In present circumstances this can hardly come to pass. The leaders distrust each other too much, and are not being subjected to the kind of outside pressures which seem to be a necessary prerequisite of federations. Nevertheless, this is the topic of the day. Ghana and Guinea have already announced a union, and though this has not come to much, they are busily engaged in summoning conferences of other African leaders to work out a wider West African union. They can expect no help from Britain or from France whose Commonwealth aspirations are at first sight incompatible with local unions. However, the more serious danger is that aggressive initiatives by Ghana and by Guinea may frighten rather than conciliate other West African countries.

So much for this brief account of these five sources of tension. But before I go on to speak of how the outside world might help, I must pause to set the picture straight. Because I focused exclusively on tensions, I must have created in your minds a false picture of West Africa as a country grimy with hatreds and oppressions. This is not how most West Africans feel. Politics touches the lives of very few. In West Africa, as in so many other parts of the world, the rule of life, for the great majority of the people, is to find out who is in power and vote for him. While life in the capital cities is politically exciting, and the newspapers resound with speeches and threats, the exertments of life in the country, for the great mass of the people, are in economic progress—in new roads, new water supplies, new schools, buses, electricity, hospitals and other such fruits of progress, which are expanding rapidly throughout this area. West Africa is really a quite and prosperous place, except for handfuls of political leaders who are jockeying for position with each other. This jockeying has dangerous potentialities, because it may inflame the area, but at present its dangers are confined to the relatively few who chose to play this game.

Until independence came, the outside world was represented by Britain and by France, who were anxious to maintain their monopoly. When it was proposed, shortly after the war, that the United Nations should enter the area, either through a Regional Commission, or through establishing regional headquarters of the Specialized Agencies, Britain and France refused, and hastily created, along with other colonial powers, a new body, called by Committee for Technical Cooperation in Africa South of the Sahara, to keep the United Nations, the United States, and all other intruders out of Africa. However, the withdrawal of Britain and of France from parts of West Africa has at once been followed by the entry of the United States, of the United Nations, and of the U.S.S.R.

Russia is well established in Guinea, and is about to open an Embassy in Ghana. West African politicians have a divided mind on this subject. Some, as in Nigeria, or the ivory coast, argue that if you play with fire you will get burned, and they will therefore not establish relations with Russia. Others, as in Guinea and in Ghana, believe that the dignity of Africans requires them to have the same freedom to have embassies from Communist nations as is enjoyed by London or Paris or Washington. Besides, a Russian Embassy has its uses in the quest for economic aid. Ghanaian politicians say to London and to Washington, "If you do not lend us £150 million to build our new aluminum works, we will get the money from Moscow." Since there is no evidence that Moscow is willing to fork out £150 million, the British merely smile at this, but Americans are probably more nervous. What is certain is that no African politician wants his country to become a Russian satellite. The Russians have not yet carried the cold war into West Africa, and if they did, they would probably gain very little by doing so.

The outside world can help West Africa by giving aid, by helping to create an international framework, and by maintaining friendly criticism.

Technical aid is very necessary in view of the lack of education. West Africa needs hundreds of administrators and scientists, and has specially welcomed the beginnings of the United Nations civil service—the OPEX. Thousands of teachers are needed. And, of course, a considerable inflow of capital, both private and public. West Africans would welcome a considerable enlargement of United Nations aid in all these fields, but they will take aid from whatever source it comes, provided that it does not menace their independence. Current flows are small; a mere fraction of what is needed.

I have mentioned the difficulties West Africans have in coming together to solve their own problems, because of mutual jealousies. Here the outside world helps by extending the services of existing international organizations, on a regional basis.

The United Nations Economic Commission for Africa, and the regional conference of such bodies as the FAO and the ILO provide a framework for bringing West Africans together against a wider world background. Private international organizations, and private foundations are also effective in bringing West Africans together in circumstances where purely African initiatives might be less effective. It is still possible that the West Africans may create sufficient of a Federal system of their own to grapple with such obstacles as tariffs, currencies, passports, transmissible diseases, the nationalistic organization of scientific research, and the peculiar design of transportation systems. All these are matters, however, which can be hammered at within the framework of existing international institutions.

Indeed the United Nations has also the opportunity to show what it can do in solving frontier problems, and in preventing war. If the cold war can be kept out of West Africa, as it has been so far, the Security Council may find itself quite usefully occupied in sorting out West African political disputes over the next 10 years or so, such as the disputes between Ghana and her neighbors, or between Gambia and Senegal. Thus the Security Council, which seems almost to have withered away, may find new life in Africa.

This brings me to my final point, which is that the outside world can help West Africa by insisting on judging Africans by the same standards as other people. I say this because the relations which now exist between Africans and liberals in the rest of the world are somewhat unbalanced. Africans, like Asians and Latin Americans, tend to take a holier-than-thou attitude toward Europe and North America, which are freely criticized for their shortcomings. Indeed, in recent months in the U.N., the African bloc has tended to take a holier-than-thou attitude even to the Asians and the Latin Americans, which is quite some achievement. On the other hand, liberals in Europe and America tend to be mealy-mouthed about what is going on in West Africa, as if to say that an African nationalist can do no wrong. This ignores the fact that African nationalists do not think alike. Some are ruthless bosses, of the type of Huey Long. Others, like Olympio in Togoland, or Awolowo in Nigeria, are subtle and sophisticated liberal statesmen, who would bring distinction to political office in any country in the world. Such men are seeking to set new political standards in West Africa, and to create new and healthy political traditions. They are not helped when liberals in the outside world pay homage to men who behave like gangsters, or keep silent in face of African atrocities. The West has a long political tradition, of a kind which West Africa is just learning, and criticism of African mistakes is an important form of aid. The best way to treat West Africans is to treat them as equals, recognizing that some are good and some bad, some are highly educated while others are illiterate, some have good sense while others are silly—in short that they are just like other people, neither better nor worse. The unequal treatment of the past underlies most of the current tensions; in the same way a friendly and helping hand now can set West Africa on a firm road to happiness and prosperity.

New Welfare Department Rule Worthy of Test

EXTENSION OF REMARKS

OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 8, 1960

Mr. EVERETT. Mr. Speaker, on last Thursday I inserted in the RECORD on page A4918 information relative to the new program that has been initiated in Tennessee by Gov. Buford Ellington and Mrs. C. Frank Scott, Commissioner of Public Welfare.

Two editorials appeared in the Nashville Banner and the Nashville Tennessean, two outstanding newspapers of the Nation, praising their initiative in this matter. The Nashville Banner editorial and also the editorial that appeared in the Nashville Tennessean follow:

[From the Nashville Banner, Apr. 21, 1960]

NEW WELFARE DEPARTMENT RULE WORTHY OF TEST

The State welfare department deserves recognition for its action in tightening regulations governing the aid to dependent children (ADC) program.

The ADC program always has been beset by problems. In the past administrators have been hesitant to take action, being fearful that correction would penalize the innocent child for the sins of his parents.

One of the most vexing situations is created by the numbers of illegitimate children on the rolls. There has been a feeling among many legislators that certain women are bringing illegitimate children into the world for the purpose of gaining additional public money.

An effort was made in the 1957 legislature to do something about it, but was killed by veto; the reason given was that it was the innocent child who would be the loser.

This new regulation, put into effect by Mrs. C. Frank Scott, welfare commissioner, gets at the root of the evil—the parent—and continues to aid the child or children.

If all efforts to correct unsuitable home conditions are resisted by the parent, the welfare department is empowered to stop assistance, seek to remove the child from the home and place him in a foster home or institution.

The department plans a home-by-home investigation to determine eligibility. This statewide check will take a year, but the investigating team will move fast in emergency cases.

And it should be pointed out that the department is not taking a hardhearted approach to the problem. Mrs. Scott has said that welfare workers will exhaust every resource to correct an unsuitable situation before initiating court action for removal of a child from his home.

The ADC program is expensive from both a State and Federal viewpoint. In Tennessee alone $17 million will be spent this year. Of this amount the State contributes $2.8 million and the Federal Government $11 million with the balance coming from the local level.

Mrs. Scott believes that the announcement of the pending investigation will cut the roll to some degree, for many of these homes would be fearful of scrutiny.

This is a step in the right direction and possibly may prove to be the answer to a serious problem which calls for protection of the individual child, but not the rewarding of an errant parent.

If this is not the solution, then the field should be thoroughly investigated again with the thought of passing controlling and workable legislation.

[From the Nashville Tennessean, Apr. 21, 1960]

CHANGE WORTHY OF A TRIAL

The State welfare department has announced that it will tighten its regulations on aid to dependent children. In the future, says Mrs. C. Frank Scott, welfare commissioner, greater emphasis will be given to "suitability of the home" in determining assistance eligibility.

The success of this experiment will depend to a very large degree, if not exclusively, upon the opinions of welfare department social workers. Indeed the program has always hinged upon those opinions. For there simply is no way that an objective rock-bound formula can be devised which is capable of determining without dispute that this case is eligible and deserving, that one is not.

This proposed reform should be subject to review and future reappraisal. But it is worthy of a trial.

The growth of aid to dependent children rolls in the face of a national prosperity is a paradox which confounds sociologists and throws psychologists into disputes.

It is true that the national population is growing. But in Tennessee it is not growing with the rapidity of child dependency rolls and the birth rate is not keeping pace, percentagewise, with the rate of illegitimacy.

The upshot of the situation, unfortunately, falls out in cold, hard statistics and public dollars when human lives are involved. For this reason, extreme caution should be exercised by the department in interpreting its own new policy.

We do not believe there is a person in Tennessee who wants a child to go hungry because that child, through no fault of its own, was born out of wedlock, or because shiftless fathers and mothers refuse to live up to their responsibilities.

However, there is a limit to which society can be pressed in assuming, through its tax bill, the responsibility of parents who refuse to make any attempt toward improvement.

Somehow, this problem must be attached at the source root. It would seem that an improved and broadened educational system would produce a more responsible citizenry, and a strengthening of home influenses. For some reason, the reverse seems to have occurred too often.

Society, therefore, may well feel that since it has allowed these factors to emerge, it must assume financial responsibility. But there is a measure of merit in the countering argument that public sibsidy of moral decay has done little to halt the rotting process.

Let's All Register—Let's All Vote

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 13, 1960

Mr. WILEY. Mr. President, I am greatly encouraged by the growing number of responsible organizations attempting to encourage greater voter participation in elections.

There are, of course, a great number of reasons—more often excuses—why a great many American voters do not go to the polls.

The Nation, however, cannot be proud of its poor showing at election time. Fortunately, an increasing awareness of a lack of public responsibility is motivating more and more individuals and organizations to do something about it.

For example, I was recently privileged to have forwarded to me by Stephen Slipher, legislative director, U.S. Savings & Loan League, a program, endorsed by the league, entitled "Backing the Vote." The article reflects the fact that such public service efforts not only express good citizenship but also are good public relations. I ask unanimous consent to have the article, by Robert R. Sprague, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"BACKING THE VOTE"—WINS VOTES FOR YOUR ASSOCIATION

(By Robert R. Sprague)

Public relations is the most nebulous facet of business operation, and savings and loan is no exception. Too often we in the savings and loan business embark on a public relations program that is vague or cloudy and, at best, will produce results that are strictly in the intangible category.

Therefore, a public relations program that produces tangibles for us is indeed a revolutionary one. Such a program is the "Let's All Register, Let's All Vote" campaign which has received the enthusiastic endorsement and support of both the U.S. Savings & Loan League and the California Savings & Loan League and which we have been requested to present to the savings and loan business throughtout the Nation.

This is a program which will result in tremendous goodwill for savings and loan associations. It will result in civic betterment and will produce the finest publicity and public relations for our business. Speaking selfishly, it will also result in more business for savings and loan associations through increased awareness of our business. Our experience at Pioneer Savings, where we have been privileged to serve as a test case for the program, has proved this.

Basically, the "Let's All Register, Let's All Vote" program is a simple one and a very inexpensive public relations endeavor for savings and loan associations. What the individual association does, at very little cost, is perform a great public service by serving as the information headquarters to help get out the vote. We can either encourage people to register and vote through inexpensive signs in our offices and through our regular advertising media, or we can also provide one of our staff members (where State, county, or local regulations permit) to actually register the voters. Since voting regulations vary extensively, the public will welcome information centers that are easily accessible, as well as easily accessible registration places.

When we at Pioneer first heard about the program, we were enthusiastic, but had no idea of the tremendous response it was to have from customers and the general public. The program, as presented to us, had been previously approved by the American Heritage Foundation, the American Legion, both major political parties, and the League of Women Voters.

At first glance, "Let's All Register, Let's All Vote" seemed to be in the realm of an idealistic venture, rather than a venture that would produce tangible business results for us. We orginally entered into the program, motivated by the shocking fact that millions of citizens do not take advantage of their right to vote. This situation has been a disgrace to our country and the subject of criticism from other countries in the world. For example, in 1956 only 60 percent of the qualified voters turned out in the general election. The other 40 percent either were not registered or did not bother to exercise the most important privilege a citizen in a democracy has.

The more we thought about it, after we had agreed to participate, the more we realized that getting people to vote would not be just an idealistic gesture one our part. It is, instead, a logical one from a cold, business standpoint, since businessmen should be vitally interested in getting the right representation and the right government. If we don't get such government, we cannot remain in business, and it is up to us to see that the special pressure groups, voting en masse, do not sway the future of our Nation.

Briefly, what we did at Pioneer Savings was this: At a very small cost ($1.50) we obtained one of the large, three color boards which contained three categories of "Who Must Register," "Where and When To Register," "Where To Vote." This information for our local area was readily available to us from the office of the registrar of voters, and we merely tacked it on the board. The latter was placed on an easel easily seen from the street or by customers entering our association. Subsequently we purchased boards for our other offices.

Basically, the plan is that simply for associations wishing to participate in the program—you purchase one or more boards and obtain the information to tack on the boards.

At Pioneer Savings, in addition to purchasing boards for our main office and our branches, we also had smaller cards printed with the name of the association and the

"Let's All Register, Let's All Vote" theme. These were placed in our offices and are used on our television newscast. We are also planning to mention the program in our regular newspaper advertising.

Although as yet we have not promoted the program to the extent it would be possible, associations joining the program could have their local newspapers take pictures of the board and the association manager who might pose with leaders of both political parties or the mayor or some such civic official. The publicity possibilities are endless.

Each association sponsoring the campaign should have someone from their office available to give information to the prospective registrant or voter. This, obviously, would require little of the employee's time. At Pioneer Savings we also sent one of our staff members down to the registrar's office for a 2-hour briefing, after which she was made a deputy registrar who can actually register those who come in for voting information which includes registration. While this is not absolutely necessary, it has proved an additional service appreciated by our customers and the general public, alike.

We have been overwhelmed by the response to this program and have received highly complimentary comments from civic and government leaders, from the public, and from leaders of both major political parties. It is still another service to the public that we can talk about and that our advertising and public relations agencies can talk about for us. Obviously, it has certainly built up traffic into all of our offices.

Both U.S. league President W. O. DuVall and California league President Lewis S. Eaton have strongly urged 100-percent participation in the program by each individual member association. Other State leagues and savings and loan associations throughout the country are invited to participate.

* * * * *

We sincerely believe that "Let's All Register, Let's All Vote" will prove to be one of the most successful public relations campaigns undertaken by our business. Although very uncomplicated and inexpensive, the rewards from both an altruistic and strictly business standpoint are many.

We have proved this at Pioneer Savings and hope that all savings associations in the Nation will take advantage of the industry-sponsored program.

Rockefeller: Suicide Plunge?

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. MICHEL. Mr. Speaker, I ask unanimous consent to insert the following editorial entitled "Rockefeller: Suicide Plunge?" in the Appendix of the RECORD:

[From the Peoria Journal Star, June 10, 1960]

ROCKEFELLER: SUICIDE PLUNGE?

Nelson Rockefeller's attempt to bomb Vice President NIXON may turn out to be a kamikaze attack—and a miss at that.

It may well mark the downturn of this fast-budding new career as a national political figure.

The stunt, including the trickery of a visit with Eisenhower earlier in the day, may look like smart politics to the slick public relations experts on Rockefeller's staff in New York, but here in the grassroots it smacks too much of the familiar picture of the spoiled brat who'll take his bat and ball and refuse to play unless you let him pitch.

That is the worst kind of picture and performance a man can make when, like Rockefeller, his chief public identity is as a man with fabulous inherited wealth.

In his own right, Rockefeller has won a single election in his life and that in the peculiar political climate of New York—a climate unlike that of any other State in the Union.

From personal experience, we know that his staff immediately assumed that the New York governorship entitled him, as a sort of divine right, or perhaps a natural inheritance, to the Presidency of the United States.

In this arrogant attitude, they revealed a shocking blindness to the rights, attitudes, and even the feelings of those millions of Americans living in the other 49 second-class States. It is no accident that the record shows, in fact, that New York has provided this country with more losing presidential candidates for both parties than any other State in the Union.

NIXON will, of course, be attacked by people with a right to attack him—and be attacked on his record, which is reasonable—but it was singularly out of place for a man who didn't have the courage to challenge NIXON openly or face him in a single primary test anytime, anywhere, to throw an 11th-hour stab-in-the-back.

His final folly, as a man in his first season in the public eyes, was to charge NIXON with secrecy about his intentions. By contrast, NIXON has been in the glaring light of public office for 15 years, and has had a widely publicized record as an outstanding young Congressman, a respected Senator, and as a man who for 8 years has raised the level of the Office of Vice President to a standard never known before in American History, and on that point, even his opponents must agree.

NIXON has a record. Rockefeller has none.

In addition, while Rockefeller offers a late in the day carefully concocted catchall for a program, NIXON has been facing batteries of questions repeatedly, recently right here in central Illinois, and answering them frankly, openly, out of his own mouth, with no scrip and no prompting.

This is as open as possible, and certainly in contrast with Rockefeller's New York stage effects.

Because of the facts, Rockefeller's attempt at a stab-in-the-back may turn out to be a sort of unintentional hara-kari.

C. L. DANCEY.

Visit of Canadian Prime Minister Diefenbaker to Washington and International Cooperation

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, June 13, 1960

Mr. KEATING. Mr. President, at a time when the eyes of the world are focused on the bitter words now being exchanged between East and West, it is indeed heartening to have some kind words and good relations steal a bit of the spotlight.

Canadian Prime Minister Diefenbaker's visit to Washington afforded a much-needed dramatization of the friendship and cooperation which can and does exist between two neighbors. I'm sure we can all agree with Mr. Diefenbaker's remarks describing the way our two countries live together as a "model relationship."

It is especially gratifying to have this example of friendliness and good will stressed now, coming as it does in the wake of a series of arrogant and belligerent insults cast upon our country by Soviet Premier Nikita Khrushchev.

Not only does Mr. Diefenbaker's visit exemplify the way two countries ought to get along with each other, but it also emphasizes the strengthened Western unity forged, albeit unwittingly, by Khrushchev's insolence. If this bully thinks for a moment that he can intimidate the American people into losing confidence in their leadership or divide the allies of the free world, he has been badly misinformed.

Let Khrushchev look at the way Canada and the United States coexist peacefully, so that he may know what those words really mean before he uses them again. To Prime Minister Diefenbaker and the people of Canada, I want to express the hope that our model relationship will continue to serve as an inspiration to people everywhere for many years to come.

A recent editorial in the Rochester Democrat-Chronicle points out that there are problems between the United States and Canada and cautions that we cannot take Canada for granted. It contains some very constructive insights into these problems and suggests that the Prime Minister's recent visit will "help focus American attention a bit more on our northern neighbor." I know this editorial will be of interest to many Senators, and I ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Rochester Democrat-Chronicle, June 3, 1960]

LET'S COOPERATE WITH CANADA

Successful tests of the Bomarc antiaircraft missile yesterday provided an excellent greeting for Canada's Prime Minister John Diefenbaker, who arrives in Washington today for a visit wtih President Eisenhower. The missile's success should help solve one of the visitor's pressing political problems.

About 14 months ago Canada had to scrap plans to build its own jet interceptor, developed by Canadians at a cost of a half billion dollars. It couldn't sell the plane to U.S. military planners who were switching to missiles, Canada could not afford to produce the aircraft for itself alone, so it was forced to drop the plane of which Canadians were very proud, and instead buy American Bomarc missiles.

The missiles hadn't checked out very well in previous tests, so Diefenbaker has been under political attack for the switch to Bomarc.

Canada has other pressing problems concerning here relations with the United States, notably the fact that Canadians buy so much more from us than we do from them. Diefenbaker himself was elected Prime Minister in a great upset over the Canadian Liberal party, largely as a symbol of dissatisfaction with United States-Canadian rela-

tions. A great many Canadians were not and still are not at all happy with us, for many reasons.

When we give away surplus wheat, Canadians can't sell theirs. That hurts their pocketbooks, unfairly, they believe. There is a joint Canadian-American defense planping, but Canadians say they don't get a fair share of defense contracts to supply both nations. Since Canada has a fairly large unemployment problem, this issue arouses ire against Americans. American dollars have flooded into Canada to develop oil and gas fields and other natural resources and many American firms have large branch plants in Canada. This hurts Canadian pride, although the American money is needed.

Talks between the President and Prime Minister Diefenbaker can't make a large dent in such problems, and there are others, but they can help focus American attention a bit more on our northern neighbor. That in itself should help. We need to know more about Canada and take her loss for granted.

Is the United States Becoming a Second Best Military Power?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. McCORMACK. Mr. Speaker, one of the ablest Members of Congress, possessing vision and courage and truly "A People's Congressman" is the gentleman from Pennsylvania [Mr. FLOOD]. In addition, there is no Member of either branch of the Congress who has a more profound knowledge of the strength and weaknesses of our national defense and of our relative position in the field of national defense to the Soviet Union than our friend from Pennsylvania [Mr. FLOOD].

DAN FLOOD recognizes the sinister intent and purpose of international and atheistic communism under the direction and guidance of the determined and evil minds in the Kremlin. He recognizes that the only thing the Communists respect is what they fear and that is military strength and power greater than they possess themselves. Congressman FLOOD also recognizes that you cannot deal with Soviet leaders on a moral level because they have no moral origin or concept and he also knows that you cannot deal with them on the level of idealism. Congressman FLOOD recognizes, as any logical mind should, that the only level on which you can deal with Soviet leaders is the law of self-preservation. Even the Soviet leaders cannot deny that the law of self-preservation applies to the Soviet Union and her people just the same as it applies to any other nation of the world and their people. With this sound, logical thinking on the part of DAN FLOOD, he has reached a logical conclusion that the only journey toward future peace is by putting into active application, the policy of peace through strength.

In a number of newspapers in Massachusetts and elsewhere throughout the country, an excellent article on national defense and our relative position with reference to the Soviet Union, written by Congressman FLOOD, was published. It is a pleasure for me to include in my remarks the article written by our friend, DAN FLOOD, and carried by the Tribune Publications of Massachusetts which company publishes 22 newspapers in the Commonwealth of Massachusetts:

IS THE UNITED STATES BECOMING A SECOND BEST MILITARY POWER?

(By DANIEL J. FLOOD, Member of Congress, key member of the all-important Department of Defense Subcommittee of the National House Appropriations Committee)

For the first time in the proud history of our country, responsible military and civilian leaders are sounding solemn and repeated warnings that a hostile foreign nation may soon be able to threaten our very national survival, while we lack sufficient retaliatory power effectively to deter such threats. They see the next few years as a time of gravest national danger. They call for an all-out effort to increase our military strength before it is too late.

At the same time, President Eisenhower, Vice President NIXON, and our top official military authorities are giving flat assurances that our military strength is adequate to any challenge; that there is no serious threat to continued "peace and prosperity"; that no special or additional effort is called for.

This difference in view certainly involves the highest stakes of any question which has ever divided our Nation's leaders. Even the grave issues at stake in the Civil or in World War I and II did not involve possible threats to the basic survival of our country.

This is a miserable dilemma to be in. My purpose is to assemble some of the most impressive statements which have been made to date on both sides of this vital question in its various aspects, in order to assist each reader to make up his own mind on where the weight of the evidence lies.

The following specific questions point up the issue:

1. Is there a missile gap?—No one denies this and there will be for several years.

2. Is there a lag in space exploration?—Again, no one denies this and there will be for several years.

3. Has the United States suffered a significant loss of world prestige as a result of recent space and missile developments?—absolutely.

4. Are we properly using our intelligence estimates?—Indeed not. The "Achilles heel" of our intelligence operations is not the collection of raw intelligence, but its analysis at the Washington level.

5. Has our military position been weakened by giving priority to budget considerations?—Beyond intelligent debate and this is the crux of the whole issue.

6. Are these appropriate subjects for political and public discussion?—A thousand times yes. These are questions of our very survival as a nation.

What are the facts on the missile gap?

The latest, most powerful and dangerous weapon of warfare is the ballistic missile with a nuclear warhead. This missile is being made today by the United States and by the Soviet Union in two types, the Intercontinental (ICBM) with a range of more than 5,500 miles and the intermediate range (IRBM) which can travel more than 1,200 miles.

The United States at present has one type of ICBM—the Atlas—in operational position. Our total current operational force is reliably reported to be "less than a handful" and these are in exposed bases. In the IRBM range, our total current operational force consists of a few dozen Thor missiles in the United Kingdom. By the end of 1960 the United States hopes to have two nuclear submarines armed with Polaris missiles in operation, with others following in 1961 and 1962. The Minuteman, a "second generation" solid-fueled ICBM to operate from hardened bases, is in stages of research and development.

SOVIET IN LEAD

It is uniformly agreed that the Soviet Union currently has more powerful rocket engines at its disposal than does the United States. The number of Soviet ICBM's currently in operational position is believed to be at least three times as many as the United States has, and this disproportion is expected at least through 1962. In addition, the U.S.S.R. has hundreds of IRBM's in operational positions.

Former Secretary of Defense Neil H. McElroy reluctantly conceded in a public news conference early in 1959 that the Soviet Union's lead in ICBM's would grow to a 3-to-1 advantage in a few years compared to the U.S. position.

Secretary of Defense Thomas S. Gates, Jr., in testimony before my House Subcommittee on Department of Defense Appropriations on January 13, 1960, admitted that a missile gap will exist during the next 3 years.

Lt. Gen. James M. Gavin, former Chief of the Army's Research and Development, said: "We are now entering a missile-lag period in which the Soviets will have a steadily increasing ICBM striking capability which we will be unable to match for several years. We are in mortal danger, and the missile lag portends trouble of a serious nature."

Gen. Maxwell D. Taylor, former Chief of Staff, U.S. Army, said: "We are now threatened with a missile gap that leaves us in a position of potentially grave danger."

The conclusion is clear.

The controversy about defense arises from the fact, which nobody denies, that the Soviet Union is several years ahead of us in the production of missiles and in the exploration of outer space. The Russians have more missiles. They have bigger missiles capable of carrying bigger loads, and they are far ahead in the whole art of guidance of missiles. The real situation, which is the source of our peril, is that because in this vast field (missiles) the Soviet Union has gotten its research and development effectively organized; and because the Soviet Union is allocating to it all the resources that it requires, the gap is not becoming narrower; it is becoming wider. Not only did they have a head start, but they are now running faster.

They Never Change

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, June 13, 1960

Mr. BRIDGES. Mr. President, recently there appeared in the Oakland Tribune an editorial commenting on the addresses delivered before the graduates of the U.S. Naval Academy and the National Academy of the Federal Bureau of Investigation.

I think the conclusions drawn in the editorial are very interesting, and are worthy of the attention of my colleagues.

Therefore, I ask unanimous consent that the text of the editorial entitled "They Never Change" be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Oakland (Calif.) Tribune, June 9, 1960]

THEY NEVER CHANGE

In a way, graduates of the U.S. Naval Academy and the Academy of the Federal Bureau of Investigation serve the country in identical ways. It was appropriate therefore that what those two graduating classes heard yesterday was devoted to the same theme: that of the continuing dongers to the free world from Communist designs upon it.

At Annapolis, U.S. Ambassador Henry Cabot Lodge pointed out that Nikita Khrushchev's attacks upon President Eisenhower, and all that underlay those attacks serve as a healthy reminder that the basic Soviet aims have never changed—and never will.

In Washington, addressing the FBI Academy graduates, Senator STYLES BRIDGES warned that too many Western leaders "still make the mistake of assuming that Communists think, act, and react like normal beings." He added:

"It is high time that we stopped kidding ourselves that through endless talks with Communist leaders we might be able to find areas of mutual agreement and accommodation."

The combination of those two thoughts, that Russian aims have never changed and talking to the Russians will never get them to change, is something for everyone, not only the graduating classes that heard them, never to forget.

Inflation Is Devouring Our Incoming Pay

EXTENSION OF REMARKS

OF

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. NELSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Union, an independent labor newspaper, State edition of December 1959, referring to a speech by J. Russell Duncan, president of Minneapolis-Moline Co.:

In going through the papers on my desk, I found among them an independent labor newspaper, the Union. On the front page was an article by J. R. Duncan, president of Minneapolis-Moline Co., a very fine firm that manufactures farm machinery.

This article on inflation seemed to me to merit attention and I attach it for insertion in the Appendix of the RECORD:

INFLATION IS DEVOURING OUR INCOMING PAY

"Rampant inflation is as dangerous to our Nation as the threat of Russia. It eats up personal savings, shrinks incomes, undermines financial institutions, and breeds financial immorality."

That is the view of J. Russell Duncan, president of Minneapolis-Moline Co. He adds: "Our gross national income, an estimated $480 billion this year, is being devoured by an omnivorous Government, extravagant business practices, and a luxury-loving domestic economy."

Mr. Duncan goes into some of the specifics of the matter. In the case of business, he finds, many executives grew up in an extremely favorable economic climate. They often tend to favor practices which add unnecessarily to overhead. Plants are loaded with high-priced frills. He cites the case of his own company where, due to a rigorous reduction in needless overhead, more business is being done with 25 percent fewer employees. Without this surgery, he goes on, all of the company's employees would have been out of work.

Labor must bear its share of the blame for inflation—and it's a big share. When payroll costs increase beyond increases in productivity, prices can go nowhere save up.

Last, but certainly not least, Mr. Duncan deals with Government spending. He says: "For every instance of excess overhead in business that we have mentioned, you can multiply it a thousandfold when talking about excess overhead in Government." Here is the most fruitful of all areas for economies and reforms that will protect what is left of the American dollar's shrunken worth.

Boyce House Writes Brilliant, Timely Article on Bryan's Political Miracle

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 13, 1960

Mr. YARBOROUGH. Mr. President, with the national political conventions scheduled within a few weeks and, since this year is the 100th anniversary of the birth of William Jennings Bryan, I feel that many Members of Congress will be especially interested in a brilliant historical feature recently written by one of Texas' most distinquished journalists, Mr. Boyce House.

He wrote:

How a 36-year-old lawyer-editor stampeded a national political convention with a speech and became the youngest man ever nominated for President is the greatest Cinderella story in all the annals of American politics.

From that opening paragraph, Mr. House goes on to deftly chronicle the tremendous excitement and eloquence of Bryan's famous "Cross of Gold" speech which rocketed him from virtual obscurity to the presidential nomination.

Mr. House vividly captures the convention scene and the power of Bryan's opening salvo:

The humblest citizen in all the land, when clad in the armor of a righteous cause, is stronger than all the hosts of error. I come to speak to you in a cause of humanity.

And, not unlike some of the major legislative issues facing our Nation today, Bryan pointed out the different views on the gold-silver standard held by those residing in the metropolitan centers and the rural areas. He said:

You come to us and tell us that the great cities are in favor of the gold standard; we reply that the great cities rest upon our broad and fertile prairies. Burn down your cities and leave our farms, and your cities will spring up again as if by magic; but destroy our farms, and the grass will grow in the streets of every city in the country.

Mr. President, I will not take the time to read the full report here, but I ask unanimous consent to have printed in the Appendix of the RECORD the text of Mr. House's outstanding article as it appeared in the Houston Post of June 5, 1960, under the heading "Bryan's Epic Day: A Political Miracle."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRYAN'S EPIC DAY: A POLITICAL MIRACLE

(Since 1960 is the 100th anniversary of the birth of William Jennings Bryan, this article is of timely interest, especially in view of the approaching national conventions.)

(By Boyce House)

How a 36-year-old lawyer-editor stampeded a national political convention with a speech and became the youngest man ever nominated for President is the greatest Cinderella story in all the annals of American politics.

It was 1896. A panic gripped the land. The farmers, especially of the West and South, in desperate straits, felt that if there were more money, conditions would improve. Silver had been demonetized years before and many came to believe that the country's economic salvation depended on its restoration; so "free silver" became the cry—"the free and unlimited coinage of silver at the ratio of 16 to 1." Many opposed this bitterly and feeling grew intense.

Congressman Richard P. (Dick) Bland of Missouri had been the leading advocate of the white metal. Others in the race for the Democratic nomination for the Presidency included former Gov. Horace Boies, of Iowa, Gov. Claude Matthews, of Indiana, Senator J. C. S. Blackburn, of Kentucky, Robert E. Pattison, of Pennsylvania, John A. McLean, of Ohio, and former Gov. Sylvester Pennoyer, of Oregon.

There was still another, William Jennings Bryan, who considered himself a candidate but this idea was shared by almost no one except faithful friends from his home State of Nebraska. He had been elected to Congress in 1890, reelected in 1892 and was his party's candidate for U.S. Senator in 1894 but the Republicans won the Legislature—(Senators were elected by the Legislature in those days).

During his first term in Congress, Bryan made a masterly speech on the tariff. Then he became interested in the silver question and, during his second term, he made a brilliant address on silver.

Beside his acquaintance with the Members of his party in Congress, Bryan had, through a series of speeches in the South and West, come to know free silver leaders in those sections. He participated in a conference in Memphis to organize the silver forces of the country; he sent out a draft of a free silver plank for the national platform and, as editor of the Omaha World-Herald, he mailed copies of his editorials to editors and many other influential men.

In addition, he carried on a heavy correspondence. Bryan knew personally more delegates to the convention than any other man.

Yet he was not regarded as a contender. When Bryan told Champ Clark that he held some hope of being the choice of the convention, the Missouri Congressman was amazed. But Bryan was sufficiently optimistic that he persuaded his wife to attend.

He brought along $100 to defray his expenses while in Chicago. The Palmer House was full so they registered at a small hotel close by.

He arrived several days ahead of time in order to help plan the stategy of the silver forces; and, before the convention opened, he went to a Nebraska town to debate the

money question. There was a passage which he had used a time or two before and then had, as he himself later said, "laid it away for a proper occasion," and, in this debate, he gave the passage a final tryout.

Bryan had been named a delegate, and his Nebraska friends were confident that if the "boy orator of the Platte" could be heard, he would make a great impression. He himself, however, states in his memoirs, "While I had, before the convention met, regarded my nomination as a possibility, I had relied upon what I called the logic of the situation rather than upon the influence of a speech." There was a serious obstacle to his addressing the convention. The "gold crowd" had sent a contesting delegation from Nebraska. Bryan had hoped to be temporary chairman of the convention and make the keynote address, but he had not been seated as a delegate when the convention began.

In fact, it was not until 2 days later that he won his fight before the credentials committee.

Then he hoped to be named permanent chairman of the convention since this would give him the privilege of a speech; but, by that time, he was receiving some slight mention as an aspirant for the presidential nomination and so friends of other candidates objected that it would be unfair to make him the permanent chairman.

Another was chosen for the honor. It appeared, therefore, that Bryan was not to have an opportunity to speak.

And then an unlooked-for development occurred. Senator James K. Jones of Arkansas, chairman of the resolutions committee, asked Bryan to take charge of the debate for the silver forces.

Afterward, Jones said he made this request because Bryan, alone among the silver leaders, had not addressed the convention; the others had been called on while the delegates were marking time—waiting for committee reports—which was during the period that Bryan had been waging his fight for a seat before the credentials committee and, afterward, had been serving as a member of the committee drawing up the platform.

The only speakers for silver in the debate were to be Senator Ben (Pitchfork) Tillman of South Carolina and Bryan. Tillman wished to close and, of the hour and a quarter allotted to each side, he desired 50 minutes. Senator David B. Hill of New York, in charge of the debate for the gold side, objected to a closing speech of such length, so Tillman agreed to open. Bryan, therefore, would get to make the final speech of the debate. Thus had fate, after tantalizing delay, fitted the pieces, one by one, into place.

Another stroke of fortune for Bryan came when the convention adjourned until the next day, which gave him time to plan his address. He put into the proper place his definition of a businessman and for the close, he chose the passage which he had laid away for a proper occasion.

Besides being a delegate and a candidate, Bryan was covering the convention for the Omaha World-Herald, of which he was editor, at a salary of $30 a week. Picture him then in a room, in his shirt sleeves, collar and tie discarded, as he was writing an account of the day's events when a delegation of Senators and Congressmen entered.

They came to urge him to support, for the nomination, Senator Teller of Colorado, a Republican who had bolted the GOP convention on the silver issue. The young man listened courteously, then said that he did not think Teller could be nominated.

"Then who do you think can be?" one asked.

In a mild tone, Bryan replied, "I think I have as good a chance as anyone."

Amazed, the visitors looked at him as though they had not heard aright. One managed the politeness to inquire on what he based his hope. Bryan answered, "I have my own State's delegation and, on the second ballot, I expect to have half the votes of Indian Territory."

There was an interruption and he did not finish; though, truth to tell, he had very little more on which to base his prediction.

Back on the sidewalk, the distinguished men looked from one to another and then burst into laughter at thought of a man who hoped to be nominated because he had the small delegation of his own State—and half of Indian Territory on the second ballot.

Eighteen thousand packed the coliseum for the debate on the platform. Bryan had his customary feeling before a speech of unusual importance: Weakness at the pit of the stomach and a desire to lie down. This of course was not possible so he busied himself with a sandwich and a cup of coffee as he waited for the debate to get underway.

The silver men constituted two-thirds of the delegates and they were confident that Tillman, a forceful speaker, would rise to the occasion. Imagine then how great was their disappointment when, picturing the struggle as a sectional fight, he was actually hissed, whereupon he became angry.

After Tillman had finished, Senator Jones went to the platform and rebuked him by stating, "I protest the charge that this is sectional."

Hill then spoke but he could scarcely be heard beyond the small area occupied by the delegates.

He was followed by Senator William F. Vilas of Wisconsin. Former Governor Russell of Massachusetts, who was to close for that side, complained to Hill that Vilas was taking his (Russell's) time. Bryan, sitting across the aisle, heard the complaint and offered to extend the time 10 minutes if a like extension was granted him.

Hill and Russell agreed—another fortunate circumstance for Bryan as he needed that much more time for the speech he had planned.

Among those who beheld the unfolding drama was a young newspaperman of North Carolina who was destined to become one of the South's outstanding editors, Secretary of Navy in World War I and Ambassador to Mexico.

Josephus Daniels (in his "Editor in Politics," University of North Carolina Press, quoted by permission) said that Russell's speech "was a classic; his every sentence was chiseled and he spoke with a sincerity and earnestness that captivated those who heard him."

But the thousands in the galleries had to strain their ears to catch his words; and this had been the case also when Vilas was on the platform. Hill, as has already been noted, could not be heard by the galleries at all. (This was, of course, long before public address systems.)

An Atlanta newspaperman, Clark Howell, scribbled on the back of an envelope, "This is a great opportunity" and handed it to Bryan, who wrote underneath, "You will not be disappointed" and handed the envelope back.

As the able addresses of the gold advocates were given, the convention majority sat in sullen and ever-growing frustration. The New York World correspondent had depicted the situation perfectly when, the day before, he wrote, "The silverites have neither machine nor boss; the opportunity is here; the man is lacking."

Bryan himself knew what the occasion called for. "All that was necessary to success was to put into words the sentiments of a majority of the delegates—to be the voice of a triumphant majority"—("Memoirs," Bryan, completed by his wife, Mary Baird Bryan, John C. Winston Co., quoted by permission.)

And now it was Bryan's turn. The hoped-for moment had arrived. He walked down the aisle with quick tread, climbed the steps to the platform two at a time, turned and faced the audience. They saw one who "was every inch an Apollo, young, lithe, with flashing eyes."

A faint smile upon his lips, he at once began speaking. "Mr. Chairman and gentlemen of the convention"—the words rolling to the farthest reaches of the auditorium—"I would be presumptuous, indeed, to present myself against the distinguished gentlemen to whom you have listened if this were a mere measuring of abilities; but this is not a contest between persons.

"The humblest citizen in all the land, when clad in the armor of a righteous cause, is stronger than all the hosts of error. I come to speak to you in a cause of humanity."

Bryan (says Daniels) "did not seem to raise his voice at all. He seemed to be speaking with less effort than anyone who had preceded him. His voice was made for great gatherings."

Not only was it an instrument of volume, of carrying power, but there were resonance, flexibility, and organ-like melody, perhaps the most superb voice that American oratory has ever known. Truly, the orator of silver's cause was silver-toned.

His nervousness had left him and he felt as composed as if he were speaking to "a small audience on an unimportant occasion." The silver delegates began to smile and to nod with satisfaction.

To one side in the audience was former Gov. James Stephen Hogg of Texas, a huge man, and at the other side, equally huge, was Ollie James of Kentucky. The sight of these two, their faces beaming with delight, was very heartening to Bryan throughout the speech.

In the preconvention campaign, Bryan said, the silver Democrats, with a zeal rivaling that of the Crusaders who followed Peter the Hermit, had gone "from victory unto victory until now they are assembled, not to discuss, not to debate, but to enter up the judgment already rendered by the plain people of this country."

These militant words were what the majority had been waiting for and there was terrific cheering. Daniels records, "Bryan had not been speaking 5 minutes before he held the convention rapt. I had never dreamed that a mortal man could so grip and fill with enthusiasm thousands of men."

The audience seemed to rise and sit down as one man, rising and shouting at the close of a sentence; then, as another sentence began, the auditorium was as still as a church.

Bryan proclaimed, "there are two ideas of government. There are those who believe that, if you will only legislate to make the well-to-do prosperous, their prosperity will leak through to those below. The Democratic idea, however, has been that if you legislate to make the masses prosperous, their prosperity will find its way up through every class which rests upon them.

"You come to us and tell us that the great cities are in favor of the gold standard; we reply that the great cities rest upon our broad and fertile prairies. Burn down your cities and leave our farms, and your cities will spring up again as if by magic; but destroy our farms, and the grass will grow in the streets of every city in the country."

His closing words were: "Having behind us the producing masses of this Nation and the world, supported by the commercial interests, the laboring interests and the toilers everywhere, we will answer their demand for a gold standard by saying to them: You shall not press down upon the brow of labor

this crown of thorns; you shall not crucify mankind upon a cross of gold."

There was silence and he had walked almost to his seat when someone shouted; then bedlam broke loose. A parade around the hall began, led by the Nebraska delegation. Bryan was lifted on the shoulders of admirers.

Pale from his effort, he had to hold to keep from falling and asked to be put down. Men hugged him, shook his hand, shouted in his ears. For 30 minutes, the wild demonstration continued.

While the tumult was raging, a delegate said, "You can be nominated if your friends will prevent adjournment."

Bryan replied, "If their desire to nominate me will not last until tomorrow, would it last during the campaign?" The platform was adopted, then the convention adjourned until the next day. Bryan was nominated.

And, after paying his hotel bill and other expenses, he had $40 left of his original $100.

The famed editor of Emporia, Kans., Willian Allen White, stanch Republican, has recorded that the speech "fired the hearts of that convention and, tingling over the telegraph wires of the land, enthralled the Nation. * * * Up to that moment, probably, no single speech in American history, by any man in any case—not even by Webster, by Clay or by Calhoun in the Senate in their noblest moments, tuned into the will of Americans so much moving emotion as that Bryan speech in the Democratic National Convention of 1896."

To the present-day reader who wonders how a speech on a money question could have been so stirring and so tremendous, these words of Daniels may be illuminating:

"The truth is, free silver was the expression of the hope for legislation of a people who had been through the panic and hard times and were seeking to strike at government by privilege. * * * It was a conflict, rather, of man versus money. * * * They believed that Bryan was a young David with his sling, who had come to slay the giants that oppressed the people."

As to the campaign itself, Bryan waged, almost single-handed, the most spectacular fight in the Nation's annals. He traveled 18,000 miles by train, and made over 500 speeches to more than 5 million persons. No man in the history of the world had ever before spoken to so many in the same space of time. And he polled the largest vote a Democrat had ever received until then—but William McKinley was elected.

Twice more, Bryan was his party's nominee and, in 1912, he played a major part in bringing about the nomination of Woodrow Wilson.

No other man was ever the foremost figure in the affairs of a major party as long as William Jennings Bryan, the darkest of dark horses who captured the presidential nomination with the magic of a speech which, occasion and purpose considered, was probably the greatest masterpiece since Mark Antony spoke over the corpse of Caesar.

The Stassen of 1960

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. MICHEL. Mr. Speaker, under unanimous consent I include the following editorial, entitled "The Stassen of 1960," in the Appendix of the RECORD at this point:

[From the Chicago Daily Tribune, June 10, 1960]

THE STASSEN OF 1960

Gov. Nelson Rockefeller of New York takes himself seriously, if few others do. The measure of his ambition was disclosed in his all but incredible performance Wednesday. In effect, he called upon Vice President RICHARD NIXON to subscribe to a loyalty oath committing him to the Rockefeller version of Republicanism.

The effrontery of this petition cannot be matched. Mr. NIXON already has many more convention votes than he needs for nomination. As Rockefeller spoke, the returns from the California primary were showing another Nixon triumph. And Governor Rockefeller has no visible support at all, except what he can muster among his New York payrollers. Even some of the party leaders in the State cut his staged attack on NIXON.

The script was prepared with a careful attention to detail. First, Rockefeller arranged a breakfast conference with President Eisenhower in Washington. Then he flew back to New York City, where the assembled members of his organization were waiting.

The speech he read to them was not only an attack on NIXON but also on the policies of the Eisenhower administration. So Rockefeller not only sought, by implication, to bring the prestige and sanction of the White House to his distillation of sour grapes, but he doublecrossed Mr. Eisenhower by making the President an accessory before the fact to an attack on his own administration.

This churlish cargo was unloaded with the sanctimonious statement that national unity is no excuse for stifling debate. As the criticism was almost wholly directed at the Republican Party and at its present and prospective leaders, Rockefeller could have been under no illusion that he was contributing to party unity or making the Republican path to victory in November easier.

His evident intention was to inform Republicans that only Rockefeller, in Rockefeller's estimation, will do for President. If the party won't take him—as it will not—then he will sulk on the sidelines. This may win Democratic acclaim, but it is not likely to endear Rockefeller to Republicans, now or in the future.

The Governor's principal allegation was that NIXON had not disclosed his program and policies and had indicated he would not do so until after the nomination. NIXON is not only a candidate for President in his own right but he is an officer of the present administration and a loyal adjutant to Mr. Eisenhower. If his views differ in any marked particular from those of the President, a sense of propriety certainly justifies discretion, the more so in that the party nominee must run both on the Eisenhower record and on the platform drafted at the national convention.

But it simply is not a fact that NIXON's views and policies are a mystery. The Vice President has been in public life since 1947. He has served two terms in the House, has served as U.S. Senator, and has served 7 years as Vice President. His voting record and his position on public questions are plain to read. He has addressed scores of audiences, asked for questions from the floor, and answered them with a candor that must be almost unprecedented in a candidate. His travels to Russia, to Latin America, to Africa, to more than 50 countries, have given him a wide experience. Yet Rockefeller persists in ignoring all this when he proclaims that the Nixon candidacy is being pursued under a banner whose emblem is a question mark.

Rockefeller's outline of his own preferred program is a hodgepodge of devices to attract every pressure group, combined with more foreign aid and more military spending. You can get the same stuff from Jack Kennedy, Adlai Stevenson, or Stu Symington.

In 1956 Harold Stassen sought an interview with Mr. Eisenhower and then tried to improve the occasion by launching his own stop NIXON campaign. It never got off the ground. Rockefeller's ambition seems to be that of being the Stassen of 1960. Mr. NIXON should rejoice in the thought that, if he must have enemies, they are always so implausible and inept.

Houston Post Praises Mrs. R. D. Randolph, National Committeewoman From Texas

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 13, 1960

Mr. YARBOROUGH. Mr. President, at this time the Democratic Party in Texas is indeed fortunate to have the most dedicated and hardest working Democratic national committeewoman that the State has ever had. She is Mrs. R. D. Randolph, of Houston.

To say that Mrs. Randolph is the most dedicated Democrat ever to hold office as national committeewoman from Texas is saying a great deal. Yet in her case, I say it without fear of valid contradiction. As a matter of fact, I will take in even more territory than Texas. It is probable that we could search the country over and not find a single other person who has put in as many hours of hard work as she has the last several years as a volunteer worker in the interest of the Democratic Party.

In my State, Mrs. Randolph has taken the lead in the fight for honest government and party integrity. She has fought for honest government for all the people of my State. She has worked for a dynamic progressive Democratic Party. In keeping with her great, unstinting, and devoted service to the Democratic Party, she has won thousands of friends.

Recently the Houston Post, one of Texas' finest daily newspapers, published a front-page story concerning Mrs. Randolph, written by Charlotte Phelan. It is an excellent feature story about Mrs. Randolph as a longtime leader in the city of Houston. I ask unanimous consent to have it printed in the Appendix of the RECORD. It appeared in the Sunday, May 29, 1960, issue of the Houston Post under the heading "Mrs. Randolph Is Controversial and Dedicated Person."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AS A DEMOCRAT MRS. RANDOLPH IS CONTROVERSIAL AND DEDICATED PERSON

(By Charlotte Phelan)

"Have you ever been in a roomful of Democrats when she walked in?" a Harris County Democrat said recently in trying to assess the depth and range of Mrs. R. D. Randolph's influence over liberal Democrats, from precinct level to the national hierarchy.

"There's a wave of feeling and affection for her that's really hard to describe. I think the key word is dedication. Hers is a daily dedication, around the clock, around the year. It goes on day after day after day.

"She's a peacemaker and holder-together. Where there are personality conflicts within the ranks, she's a wonderful catalyst. People tend to want to find areas of agreement, rather than make things hard for her."

In recent years that internal harmony and cohesiveness among the loyal-liberal Democrats of Texas, of which Mrs. Randolph is chairman, and the Harris County Democrats—of which she describes herself as a mere member—was a source of strength and certain power, and a bulwark against continuous onslaughts from party conservatives, who consider themselves the real Democrats, too.

Liberal Democrats failed in retaining that strength in a majority of precinct conventions throughout the State May 7 and, it is almost certain, a majority of delegates to the State Democratic convention in Austin June 14 will want to elect another Democratic national committeewoman, a conservative, instead of Mrs. Randolph.

She takes the same practical, direct view of that possibility that she has taken of other setbacks, and successes, in a political career that has given her plenty of both. And she will go to the State convention—and national convention in Los Angeles—full of the same fighting spirit that won for her a seat on the Democratic National Committee in 1956.

Her return to the national committee, she said the other day, was "very doubtful, but I hate to say that because of my own people."

Mrs. Randolph, a 66-year-old grandmother whose close-cropped iron-gray hair, husky voice and gray-eyed gaze, squinted in a smile or against smoke from a constant cigarette, give her a mien of utmost casualness and self-effacement, sat at a cluttered desk at the headquarters of the Harris County Democrats.

Her conversation was broken frequently by a ringing telephone, which she would answer, "Harris County Democrats," or by a dropper-in, a candidate still working for the upcoming Democratic run-off, an office worker, or one of the innumerable volunteers who inhabit the extensive premises at all hours of the night or day.

It turned out she was sitting in someone else's office. "I have a private office back there but I hardly ever use it. Someone else is in there now. There's nothing private around here. "We're very democratic," she added with one of her frequent chuckles.

Friends and colleagues, who freely and affectionately use her given name, Frankie, think one of Mrs. Randolph's most valuable characteristics is her "organizational ability," a term that is used frequently, just that way.

Mrs. Randolph herself regards it as "more or less of a gift. It's something I like to do. I got into it back in the days of the city charter committee, when we brought in the council-manager form of government for awhile.

"We also had a hard fight on city planning—which we lost—for more public housing and for improvement of drainage conditions and the like in the poorer parts of town."

Her job on the city charter committee was as chairman of precinct work. She still considers this her organizational, to use the inevitable term, specialty. She also regards it as her chief function with the Harris County Democrats, where she can be found from 9 to 5—and later—every week day, and frequently on Saturdays and Sundays, the year around.

"This is a permanent organization," Mrs. Randolph says, "and it has to function all the time."

Before she turned "my one-track mind" to politics, and to the Democrats in particular, Mrs. Randolph helped spur other groups to success in varied undertakings during her years in Houston. She has lived here since early childhood.

A member of a socially prominent family with varied East Texas lumber interests and the wife of the senior vice president of the Texas National Bank, she is a long-standing member of the assembly, the Bayou Club, River Oaks Country Club and a sustaining member of the Junior League.

"I served a stint on the old Community Chest, like everybody else did. I think it was 2 years. During the depression I was a volunteer for the Social Service Bureau, when they asked volunteers to take so many families—I think I had eight—and report on their needs."

It was during a lunch of cold smoked salmon with capers and the inevitable coffee at Rudi's that Mrs. Randolph was moved to reminiscence about her work in founding the Junior League of Houston and other activities, far afield from politics.

"I think it was in the early twenties when some of us were approached about a Junior League for Houston. I said, 'I don't know what a Junior League is but let's do it.' Lottie (Mrs. S. P.) Farish and I were talking to my brother, Will (the late W. T. Carter, Jr.) about it when he still had the Gibraltar building there on San Jacinto.

"He told us he had all the room in the world there in the basement, so we took it over, to put in a tearoom. A few days later he heard all the noise down there and came down. 'What's going on?' he wanted to know.

" 'You told us we could have it,' we told him, and went right on with what we were doing. Lottie and I would look in at lunch and just hope those ladies couldn't see all that dust filtering down from the streets above.

"I think we built the present building around 1928, 4 or 5 years after we had organized. I was president at one time and chairman of the finance committee. We borrowed money to build, right in the middle of the depression, but paid off the debt with a series of fund-raising benefits.

"I haven't been over there in 10 years or more. It's supposed to be a Junior League," she added with that easy, throaty chuckle.

"I used to do quite a bit of riding. Mr. Randolph played polo, when they had the old polo club out on Westheimer, and we had a stable out there on Post Oak Road. That's when the children were quite young, it must have been 30 years ago.

"I used to enjoy horse racing, too. I remember one summer, when my mother had a place at Lake George, N.Y., which was only an hour and a half from Saratoga. Some friends from Houston were up there, visiting, and we didn't have anybody to bother us. We had a lot of fun.

"I made a killing. I put my whole wad on a horse named Sarazan. We went on from Saratoga, to Aqueduct and Belmont. I bet on another horse that came in first, but he was disqualified. That's when I quit the races.

Mrs. Randolph, who was born in Polk County and attended the Baldwin School at Bryn Mawr, Pa., married Randolph, a pilot in the young Naval Air Corps during World War I, in 1918. They have two children, Mrs. James Parker Cushman of 2317 Drexel Drive, and Mrs. David Longmaid of Bryn Mawr.

These days the one interest that can keep her away from Democratic headquarters, or divert her attention from the pursuit of politics are the Cushman children: Frances, 17; Molly, 13, and Jim, 8. Another grandson, Harry, 14, lives with his parents in Bryn Mawr.

"They spend the night with me every Friday night," Mrs. Randolph explains, and one of three bedrooms in the Randolph home at 3726 Meadowlake Lane, is called "the children's room." One of the first things a visitor encounters, chained to a front porch lock at the rambling, one-story red brick and Lambert green home, is a small motor-driven buckboard.

"It has a lawn mower motor," Mrs. Randolph explained, lifting a corner of a protective cover to display the low, two-seated vehicle.

For many years the Randolphs lived in the family mansion in Courtland Place, which Mrs. Randolph inherited from her mother, Mrs. W. T. Carter. It is one of four homes that stand side by side in the handsome, tree-grown, boulevard belonging to Carter sons and daughters.

Wanting a home with fewer demands, the Randolphs spent several years in apartment living and finally bought the "simple, convenient, one-level home" on Meadowlake.

The pleasant, informal household, which has been run by Mrs. Annabelle Tapscott, maid and cook for some 35 years, is furnished generally with handsome family pieces brought from the old home on Courtland.

"It was an enormous house and we couldn't begin to get all those things in here."

Oil portraits of children and grandchildren hang on walls in living room and library. Paintings of the Carter hardwood mill, done by Cushman, hang in a glassed-in extension of the long dining room and over the sofa in the living room.

Randolph, she said, does not share her preoccupation with politics.

"We get up at 6 and the first one up puts the coffee on. We have a chance to visit over breakfast. It's very pleasant. He goes to the bank and I go to the office, and we're usually home about the same time. We do our work and then we have our life together.

"I'm a very early-to-bedder. If I don't have to go to a meeting, I'm asleep by 9 o'clock. My sleeping pills are detective stories. They keep most people awake, but they put me to sleep. Sometimes I get awakened, with long-distance calls mostly.

"I usually have several hours of work here before I go down. I do a lot of telephoning early in the morning. They don't love it, but I can always get them at that time. I write letters, too. I'm not very good at dictating, so I write them out. Then I have a girl who types them for me.

"I work a little in the garden on Sunday. Sunday morning is about the only time I have free. I'm no great shakes at gardening. My rose garden has three bushes, and they look like death.

"We have a place up at the sawmill and we get up there from time to time. We're going up there this weekend. It will be the only chance I'll have to go this summer, I think. We have a swimming pool, or I play some tennis up there and walk and chop down a tree occasionally."

Mrs. Randolph spotted a small black cat with a yellow collar, stalking a lizard in the backyard. "That's Jupe. His name comes from an old story I used to read the children. He turned up, collar and all, at the children's home over here on Drexel.

"They have two Chesapeakes, and when they couldn't find the kitten's owner, they gave him to me. They say now they want to take him home and I say, 'Not after I've raised him.'

"See that metal shield there on the trunk of that tree? We put it there to keep him from jumping up in the tree and over the fence. If he ever got over there on San Felipe with all that traffic, it would be 'good night, Jupe.' "

Earlier, in the office at Democratic headquarters—where two portraits of Franklin D.

Roosevelt and one of Adlai E. Stevenson share walls with the usual maps of precincts and State districts and voting records, posters of election dates and a card declaring "No Sales Tax."—talk never strayed far from Mrs. Randolph's Democrats, at home and afield.

The defeat of liberal forces at the recent precinct conventions—making her relinquishment of the post of national committeewoman virtually a foregone conclusion—she ascribed to heavily increased organizational efforts of conservative opponents and "the pretty sanguine" attitude of "some of our people."

"We tried to begin the reorganization of all our precincts May a year ago. Success is always dangerous. It made some of us feel that we didn't have to worry.

"Being national committeewoman is not an end in itself. It has made it possible for me to help the liberal cause a great deal. Through personal friendship we have been able to bring speakers here that couldn't have been brought by others, people like PROXMIRE (Senator WILLIAM PROXMIRE of Wisconsin), Mennen Williams, and Paul Butler, whom I have helped in every way.

"They have come because they know I am fearless, and what I have been able to do for our people."

On the other hand, being national committeewoman has been "expensive and tiring. I'm a poor traveler. And I don't care anything about saving money," she added with obvious levity. "That's what Mr. Randolph says."

Had she any predictions on the Democratic presidential nominee?

"That's what all these people ask me—to make a prediction along those lines. I haven't come out for anybody. It's been said I was for Stevenson. I just said he was a great statesman. I will support the candidate of the party and your guess is as good as mine."

And what about the toe-to-toe slugging matches, the often bitter and always active controversy that has swirled around her in the acrid atmosphere of politics?

"That part has never bothered me," Frankie Randolph smiled, as a gentlewoman would. "As my friend say, I like that."

Rockefeller Ambush

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. MICHEL. Mr. Speaker, under unanimous consent I insert the following editorial entitled "Rockefeller Ambush" in the Appendix of the RECORD at this point:

[From the Peoria Journal Star, June 12, 1960]

ROCKEFELLER AMBUSH

Rockefeller and his gang of experts took up a carefully selected position and opened fire on NIXON from the side streets while the Vice President stood alone in the center of the wide main street as the only admitted candidate for President.

NIXON's immediate, direct response exposes an . outwits Rockefeller and his whole stable of hot shots.

He has simply challenged Rocky to come out, alone, into the middle of the street at high noon and meet him face to face—and then draw if he wishes.

Rockefeller has shouted, "No, No, No" and headed deeper into the shadows of the sidelines.

This NIXON did by cutting through the whole business and challenging Rockefeller to sit down with him before the TV cameras and the Nation and discuss the issues in depth.

Thus, once again, NIXON has demonstrated his remarkable skill and courage and political instinct on meeting a challenge head on, and going to the heart of his opponent's game with deadly accuracy and with deadly effect.

If Rockefeller accepted the challenge, it would provide NIXON with the most tremendous platform and national audience any candidate has ever had—since NIXON did it before in 1952.

In such an areana, NIXON is skilled. He has lived intimately with Government problems for 14 years. He has faced panels of politicians, panels of newspapermen, and panels of college professors fearlessly and off the cuff in questions and answers, or discussions in depth on U.S. problems over and over again—and would make Rockefeller look pretty sick in such a presentation.

On the other hand, when Rockefeller refuses the challenge, he stands exposed as a fake in his prewritten program and his charge that NIXON hasn't spoken up in the campaign.

What is more, in refusing, Rockefeller invites the earthy criticism that he is afraid to meet NIXON man to man, and afraid to attempt any discussion of national affairs without his writers, his idea men, his public relations experts, and the rest of his battery of advisers. In short, people are already wondering if Rockefeller is a man or an image created by paid professionals.

Ingemar Johansson once said that he never throws a knockout punch—his right hand does it all by itself when the opening appears without waiting for orders from Ingemar. In the political arena, NIXON is a lot like Johansson. His instinct is amazing.

Richard E. Mooney Analyzes Foreign Competition Problems

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 13, 1960

Mr. KEATING. Mr. President, in recent months, considerable concern has been expressed about the rate and distribution of low-wage-produced imports coming into the United States. Many Members of Congress, including myself, have taken an active interest in this problem.

I wish to point out here that I have always supported our reciprocal trade programs and policies and our mutual security endeavors. I intend to continue to do so.

However, I feel strongly that certain changes are presently needed to bring our trade agreements statutes up to date and to prevent certain specific industries from bearing the full burden of increased foreign competition. I have introduced a bill (S. 2882), which is a bipartisan measure and which, while conforming with the basic principles of our trade agreements legislation, would, I believe, help us to strike a better and fairer balance between our domestic and international economic policies.

Mr. President, in drafting S. 2882, I received much valuable assistance from Mr. Jacob Potofsky, president of the Amalgamated Clothing Workers, whose industry is very much concerned about low-wage-produced imports. I want to call the attention of the Members today to a very excellent article in Sunday's New York Times, which places considerable emphasis on the problems faced by the Amalgamated Clothing Workers and the position which this union has taken on them. This article was written by Mr. Richard E. Mooney, the very distinguished and able economic reporter for the Times, and is one which I feel is very much worthy of the attention of all of us.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 12, 1960]

MADE-IN-JAPAN DILEMMA—UNITED STATES SEEKS TO REDUCE COMPETING JAPANESE IMPORTS WITHOUT ABANDONING ITS FREE TRADE POSITION

(By Richard E. Mooney)

WASHINGTON, June 11.—Ten years ago the United States imported not quite $200 million worth of goods from Japan. This year the figure will be something more than $1 billion. For a year now, and for the first time, Japan has been selling more than she buys in this country. She remains, however, the United States second best customer, second only to our natural trading partner to the north.

The movement of more and more Japanese wares over American sales counters has not escaped notice by the American makers of similar wares—most of all the makers of cloth and clothing, from head to toe, from caps to Zori sandals.

Jacob S. Potofsky, president of the Amalgamated Clothing Workers of America, has noticed it, too. Seeing a new threat to his members' jobs, he threatened 2 weeks ago to have the members refuse to work on clothing or fabrics made in Japan.

MORE MANUFACTURERS

Textiles and wearing apparel are one-third of what Japan sells here, roughly $330 million of last year's $1 billion total. But the emphasis is shifting: Japan's pre-World War II ambition for major industrial status has become post-war policy. She has developed a number of highly specialized industries—among them cameras, sewing machines, and transistor radios for the consumer market, and scientific instruments, heavy equipment, and metals for industry.

What are the Japanese advantages that permit her to sell certain things so successfully in this country?

Wages are always mentioned first. Mr. Potofsky said that the average wage of Japanese clothing workers is less than the 17½-cent hourly raise that American clothing workers started collecting on Wednesday—14 cents an hour in Japan compared to $2 or more here.

The advantage of low wages may be canceled out if the workers' productivity is low, because it takes more workers or more hours, or both, to produce the goods. It might be noted that despite the disparity in electrical machinery wages—33 cents an hour in Japan, $2.22 in the United States—it is the United States that is selling such machinery to Japan, not Japan to the United States. (This may change as Japanese productivity rises.)

Two U.S. programs particularly rankle the American manufacturers who are hurting from Japanese competition: taxpayer contributions to the development of that competition through foreign aid and cotton subsidies.

The favorite aid example is stainless steel flatware—knives, forks and spoons—the product of an aid missionary's guidance to a once small industry. Was the aid missionary wrong to counsel on development of a new product? That's what he was there for.

The subsidy issue, now before the U.S. Tariff Commission, arises because the U.S. Government sells surplus cotton to foreigners at the going price for cotton on world markets, which is lower than what American textile makers pay for it on the supported American market. The American textile industry is understandably aroused by this artifice, which can be explained—not very satisfactorily—as the consequence of a subsidy system for American cottongrowers that is artificial to begin with.

One final factor frequently cited, as a cause for Japan to direct her sales efforts our way, is the loss of her traditional markets on the Chinese mainland.

In the current swelling of anti-American sentiment in Japan, some businessmen there have revived pressure on the Government to cut loose from the West and pursue better trade ties with the Communists. That is viewed here as an unlikely development.

Of course, it is in the security interests of the Western World to fill the gap in Japan's markets and, beyond that, to contribute to Japanese growth. It is also in the United States' general objective of greater world prosperity, and its policy of freer world trade.

However, few would argue for the willful sacrifice of American industries, and American jobs in the process. Trade liberals argue that, on balance, exports generate more American jobs than imports wipe out, and that imports provide price competition that permits every American to live better. But the industry that feels hard hit is not swayed by generalities, and maintains that—willful or no—it is being sacrificed.

UNITED STATES DILEMMA

What does the United States do with this dilemma, particularly with regard to Japan?

First, a negative. It is not abandoning its liberal trade policy of 25 years' standing to adopt protection for each industry that feels heat from abroad, even though some who seek protection do get it.

While holding in general to liberalism, the Government has nonetheless resorted to a protective device. It has pressed the Japanese Government and industry to restrain themselves, under a veiled threat that restrictions will be imposed here otherwise. Japan has adopted restraints, but has lived by them less than perfectly, and has relaxed them in succeeding years.

Japan's own attitude presents a formidable block to trade benevolence by others. Ironically this nation that is so successfully invading foreign markets maintains tariffs, quotas, and other import restrictions that are among the world's most rigorous. The Japanese Government has given assurances lately that the barriers will be lowered substantially, but only after intense pressure from Washington, and the lowering it only part way to date.

Address by Patrick A. Tompkins, Commissioner of Public Welfare, Commonwealth of Massachusetts, Given at the Governors' Coonference on the Aging, April 20, 1960, at Concord, N.H.

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. McCORMACK. Mr. Speaker, in my remarks I include an address made by Hon. Patrick A. Tompkins, commissioner of public welfare of the Commonwealth of Massachusetts, one of our outstanding experts in the field of public welfare, which address was delivered at the Governors' Conference on the Aging, at Concord, N.H. on April 20, 1960.

ADDRESS BY PATRICK A. TOMPKINS, COMMISSIONER OF PUBLIC WELFARE, COMMONWEALTH OF MASSACHUSETTS, GIVEN AT THE GOVERNOR'S CONFERENCE ON THE AGING, APRIL 20, 1960, AT CONCORD, N.H.

I am more than delighted to be a participant in this, the New Hampshire Governor's Conference on Aging. Although the topic assigned to me by your distinguished chairman, my fellow State public welfare commissioner, is entitled, "Public Assistance and Services," I shall indulge in both poetic and Boston license to address myself to the problems of the aged, the services needed, and the responsibility of public welfare leadership in recognizing problems and providing services, not alone to the aged individual, but to the aging population as a whole. In the evolution of population changes in this country, as crystallized during and at the end of World War II with increasing and accelerating warning signals by a succession of demographic studies through 1958, the aged as a group began to emerge as a special unique, maligned, misunderstood, frequently exploited, sometimes demanding, sometimes meek, but always a larger minority of our country's population; and, as their numbers grew and as more studies were made, more warnings were issued, dire predictions forecast, yet two inescapable facts impressed the student, the researcher, the administrator, be he an administrator of health, welfare, or insurance, the political leader, and the everyday citizen: (1) The economics of the problem of the aged was of national concern and not soley a local responsibility; (2) the aged as a group are self-sufficient, well-integrated, responsible human beings—provided their economic problems have been resolved.

True, many aged individuals as individuals present problems; the chronic physical maladies for which protection and remedial medical care must be not only initiated but also provided by resources outside of their homes and families; mental illness requiring institutional or hospital care for the protection of the individual and protection of society; special problems of living arrangements with inlaws, the need for available and continuing spiritual consolation, cultural and recreational opportunities, on occasion even part-time or full-time employment, plus healthy hobbies to foster inner and spiritual growth. And for these individual problems, the local community in some measure and with increasing awareness, understanding, and better utilization of existing tools and resources is well equipped to provide.

Each of the succession of studies and reports on the aging problem, whether national in character, statewide, or limited to more provincial or local scopes further crystallized as the No. 1 problem of the aged and two-pronged threat of fear of disease or accident necessitating hospital care and the fear of economic and financial disaster should disease or accident strike. Certainly the high desirability of preventive health care has been emphasized, as has been expanded diagnostic facilities, better, improved, and expanded home-care programs, plus research and demonstration projects for community health services. But overshadowing all of these constructive and desirable observations and recommendations is the special report on hospitalization insurance for Old Age and Survivors Insurance beneficiaries submitted to the House Committee on Ways and Means of the National Congress on April 3, 1959, by the Secretary of the Department of Health, Education, and Welfare. This study and report was, in fact, submitted to the Congress in compliance with a congressional request for such a study known as House Report No. 2288.

Merely as a digression, I think it important to point out that even if preventive health care, home care, and diagnostic facilities were available in all communities, it is highly questionable that the aged person who believes he is in good health can be expected to spend his limited available income when there is no localized or obvious complaint, disease, or injury, particularly in the light of the present high cost of medical services, including the cost of prescribed medication.

The hospital insurance report of the Department of Health, Education, and Welfare made no precise and specific recommendations. Yet, no impartial or objective review of the findings included in the report as to the annual income of persons over the age of 65, the incidence and duration of hospital care for this age group, and the demonstrated longer duration of hospital care for those having no hospital insurance could evade the inescapable conclusion that social insurance for hospital benefits is an absolute necessity now if not long overdue. There are 16 million persons over 65 years of age; 2,500,000 of these have some employment; 8,800,000 receive some old age and survivors insurance; 2,500,000 receive old age assistance. Of the total of 16 million, over three-fifths had income from all sources of less than $1,000 annually—virtually the actual cost of a hospital bill for an aged person at modern-day, inflated hospital costs for a serious illness or accident.

Less than 40 percent of these 16 million aged persons had any form of health or hospital insurance and a large portion of the insurance coverage available was inadequate both as to the per diem hospital payment or the limited number of days of coverage the insurance would provide. More significant, the cost of commercial or nonprofit insurance policies is prohibited when the group contract of the employee in business or industry is continued upon retirement on an individual contract basis. Even more catastrophic is the purchase of two individual contracts for husband and wife out of retirement funds whereas the employee group contract at much lower cost and with higher income also covered the dependent wife. There are and have been pending before Congress for some years legislative proposals for expanding and extending old age and survivors insurance so as to include hospital and nursing home benefits to currently insured beneficiaries. Probably the best known, since it is the original and oldest such legislative proposal, is H.R. 4700 popularly known as the Forand bill. This is a very simple legislative proposal. It provides that the taxable wage base shall be raised to $6,000 per annum, and the tax on the employer and employee alike shall be

increased by one-half of 1 percent in order to provide for hospital, nursing home, and surgical costs of retired persons and their spouses not to exceed 60 days in any one year. It provides for admission to a duly licensed hospital or nursing home upon referral by a physician who is freely selected by the sick person.

So, there is nothing complex and, in fact, nothing new in a sense about such a proposal. As long ago as 1935, the National Congress, exercising the will of the people of this country, established a compulsory social insurance plan to combat the hazards of unemployment, advanced age, the death of the breadwinner, and permanent disability and impairment. There has been a "watch dog" advisory fiscal council which, from time to time, has assured the people of America and Congress that the trust fund out of which the beneficiaries are paid is in sound, solvent actuarial condition. Indeed, it has indicated in no uncertain language that the soundness of Congressman Forand's bill cannot be challenged despite the projected cost of $1 billion during the first year of its operation if the legislation were enacted.

The American Medical Association has charged that the proposal constitutes socialized medicine. Such a charge is spurious when, in fact, there is no fundamental difference between the method of selection of a doctor under this insurance plan or the method of payment for physicians' services than is presently followed by the nonprofit Blue Shield plan or the commercial insurance plans presently operating. In fact, H.R. 4700 and companion bills in the U.S. Senate, sponsored by Senators KENNEDY and HUMPHREY, are, in the final analysis, merely a solvent method of payment of hospital, nursing home, and surgical bills, and more important, no new administrative machinery needs to be created. The OASI trust fund is already established and can absorb this new responsibility. The principles of this legislation have been overwhelmingly endorsed by organized labor, and the individual worker whom you consult is more than delighted to start paying today for insured hospital and nursing home coverage for the days of his retirement when his income is so limited. Also note that the employee pays only when he is working and the contract is noncancelable. How many persons pay for years to Blue Cross or commercial insurance, get sick or disabled once and find their insurance canceled?

The elimination of the high-risk cases of the aging population from present Blue Cross and other nonprofit and commercial health insurance carriers would, in fact, increase the sales attraction of a better health package to the currently employed and younger employees when they are at their earning peak. Equally important is that the insured, in accordance with our social insurance system, would pay not a flat rate premium but one-half of 1 percent of his earnings whether the employee made $2,000, $4,000, or $6,000.

Of course, the extension and expansion of an insurance system, which has become in the last 25 years an American way of life for the American workingman and his dependents, is inextricably interwoven with administrative and political problems. In our democratic system, it is the special prerogative of our elected representatives to differ in philosophy, to compromise so long as principles are not compromised, and to weld a protective fabric against the hazards to security which are ever present in an industrial economy as fast moving as that of America's.

Yet, today, there is ample financial and statistical data to adequately demonstrate that, at least for the aged population over 65, the most demanding inroad on the available limited income of the retired person and his spouse is no longer made by the necessities of food, shelter, and clothing, but, rather, by the actual cost of medical, hospital, and nursing home. For example, in Massachusetts, 45 percent of the old-age assistance dollar is spent for medical need and one-third of that medical expenditure is for hospital care and almost one-half for nursing home care. For 18 months, over 50 percent of all applications for old-age assistance in Massachusetts have, in fact, been referred by and taken at the bedside of the applicant in the hospital or in the nursing home. Though retirement funds from whatever source may meet the basic necessities of food, shelter, and clothing, a hospital or nursing home bill becomes financial disaster and the aged person is forced to the indignity of applying for and receiving public aid. Indeed, the hospital and nursing home administrator is the chief source of referral for public welfare business today.

Unfortunately, there are not studies available as to the pressures and tensions created among sons and daughters who are either legally forced or by pride attempt to assume these catastrophic costs of hospital and nursing care with immeasurable harm to their home and family life and limitation of educational opportunities for their own children.

Again emphasizing the rights of both elected and administrative officials in Government and representatives of interested and organized groups to differ, it appears remarkable that in the light of the report of the Department of Health, Education, and Welfare, submitted to the National Congress on April 3, 1959, that almost 1 year later in testimony at an executive session of the House Ways and Means Committee of the National Congress on the subject of medical care for the aged, the Secretary, testifying specifically on H.R. 4700, the Forand bill, said, "* * * therefore I want to make it clear that as an administration, we will oppose any program of compulsory health insurance." The Secretary continued by stating, "* * * at the same time, I desire to emphasize again that I believe that continued progress in the direction of covering an increasingly large percentage of the aged by voluntary hospital insurance programs will still leave us with serious problems. There will still be aged persons whose policies provide inadequate protection. Also there will still be aged persons who will have no protection but who would be willing to participate in voluntary programs if provided with policies at rates that they could afford to pay. This administration—indeed all thoughtful citizens—are acutely aware of the need for approaching these problems with a sense of urgency."

Still later the Secretary stated, "Before arriving at a final conclusion as to whether the Federal Government can devise within this framework of principles a practical program, it is going to be necessary for us to explore further some complex issues." And still later in his testimony, the Secretary said, "We have not reached a conclusion as to the best manner in which to deal with such basic issues as these. In the effort to arrive at sound conclusions, it will be necessary for us to begin immediately to consult further with experts in Government, with outside experts and groups, and with State officials. It is, of course, not possible to predict the length of time that it will take for these consultations." If this problem must now be approached with a sense of urgency, the implication is clear that, despite the report rendered by the Department 1 year ago and the inescapable conclusions that must be drawn from that report, no sense of urgency had, in fact, existed either during the time that the report was being developed or in the year since it was presented to the Ways and Means Committee. The fact that, since Mr. Flemming testified, a number of alternative measures have been independently introduced by members of both major political parties in both branches of the Congress, suggests that the urgency merits not further study, further consultation with experts both in and out of Government, but rather the enactment of full-scale coverage of all persons over the age of 65 for purposes of hospital and nursing home protection. The Forand bill in the House and the Kennedy and Humphrey bills in the Senate are simple prepaid insurance bills which add to the present basic necessities of life for the aging population a new and more compelling basic necessity of life—hospital and nursing home care. Psychologically, they eliminate the greatest and most poignant threat to the business of growing old, the fear which accompanies advancing age as to imminent illness or accident, and how medical care is to be secured.

There have been so many studies as to the scope of this problem, the need has been so well defined that one of the most eminent of our newspaper reporters, Mr. James Reston, of the New York Times, has in the past 6 weeks devoted six separate and distinct columns to this problem. The Washington Post during the week of March 28 wrote an erudite editorial in support of the Forand bill and stated in part, "* * * We think that President Eisenhower has put his party not only on the unpopular side of this issue but also on the wrong side of it." The editorial ended with the following quote: "Why automobile workers—and wage earners in every other trade and industry—should be enthusiastically eager to pay during their productive years for this kind of protection in old age should be readily understandable to anyone in political life. There is no more compelling aspect of social security."

In summary, the problem of hospital and nursing home insurance for aged and retired employees and their dependents is the great and compelling humane issue of today. It is the great reassurance in terms of services and social security that aged persons want and demand. The substitute plans now before Congress would inevitably double and more than double present public welfare expenditures both in terms of administrative costs and insurance costs for hospital services. The continuance of the means tests would be extended to all who desired to participate and be covered by the voluntary insurance plans. They heap indignity upon indignity and fail to face up courageously to the problem of today. This is the basic service that the leadership in public welfare should espouse and encourage by every means legitimately available. The savings to general revenue funds and expenditures out of public welfare appropriations would be enormous not only today but for challenging years ahead. The American Public Welfare Association of which I am a member endorses H. R. 4700, Mr. FORAND'S bill, or any other bill embodying the principles of the Forand bill. Although I am professionally a product of the "casework school" of social work, my 27 years of administration in public welfare convince me that national social insurance is the best social service for aged people. This particularly includes the Forand bill with its protection against the economic disaster of hospital and nursing home costs.

Foreign Aid and Military Assistance Programs

EXTENSION OF REMARKS

OF

HON. JOHN H. RAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. RAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I in-

clude the following letter which I have received from the commander in chief of the Veterans of Foreign Wars in which he makes a good case for continuing our foreign-aid and military assistance programs:

VETERANS OF FOREIGN WARS,
OF THE UNITED STATES,
Washington, D.C., June 9, 1960.

Hon. JOHN H. RAY,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR MR. RAY: I am taking the liberty of writing you with respect to the President's budget request for foreign aid and military assistance funds. I have recently completed a 10-week world tour, visiting many of the newly emerging nations and have had an opportunity to observe the application and effect of U.S. foreign aid and military assistance firsthand. With some exceptions I was impressed with what I saw.

The breakdown of the Paris Summit Conference and subsequent events reveal clearly that whether we like it or not, foreign aid, and particularly military assistance, has become a most vital issue in our national security program. If the United States fails to provide a reasonable amount of military assistance to other countries the evidence seems rather clear, and is supported by my personal observation, that such aid will come from sources not friendly to the United States.

In past years the Veterans of Foreign Wars has taken a dim view of heavy U.S. outlays for foreign aid although we strongly supported the technical assistance program and recognized the need for some military assistance. It is my considered judgment that if there ever was justification for foreign and military aid, in the light of recent world events, such aid is now justifiable. I sincerely hope you will support the President's request for the necessary appropriations to carry out his foreign-aid program. We should not curtail foreign and military aid funds at this critical time.

Sincerely yours,

LOUIS G. FELDMANN,
Commander in Chief.

The Scientist's Stake in the Kefauver Committee Hearings

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. AUCHINCLOSS. Mr. Speaker, in recent days much has been spoken and much has been written about the activities of the pharmaceutical industry but unfavorable misinformation about its activities, ideals, and aspirations has been noised abroad. This is to be deplored and may we hope that such practices will not dishearten or discourage the devoted and dedicated men and women who have contributed so much the world over to the promotion of health and well-being. I hope the talk given at the Honor Scroll Dinner, New Jersey Chapter, of the American Institute of Chemists, on April 20 in Newark, N.J., by Dr. Max Tishler, president of Merck Sharp & Dohme Research Laboratories, entitled "The Scientist's Stake in the Kefauver Committee Hearings," which is included with my remarks may be read by many. It is factual, informative, and reassuring and makes one proud of our American contribution to the welfare of mankind:

THE SCIENTIST'S STAKE IN THE KEFAUVER COMMITTEE HEARINGS

(By Dr. Max Tishler, president, Merck Sharp & Dohme Research Laboratories)

In accepting the honor scroll this evening, I feel deeply honored and, at the same time, grateful to the officers of the New Jersey Chapter of the American Institute of Chemists. I accept the scroll as a high distinction, with the knowledge that there are many others in this group worthy of this same recognition for their contributions to the profession and to the science of chemistry. In expressing my profound appreciation for the scroll, I want to pay tribute to the many men and women of the Merck scientific community who, during the past 22 years, have given me stimulation and happiness by their dedication and achievements. I also want to proclaim on this occasion my sincere thanks to Mr. John T. Connor whose enthusiastic support and deep understanding of research and the scientific professions have made him an acknowledged leader in the pharmaceutical industry.

Up to a few days ago, it had been my intention to talk to you about "The Chemist in Medicinal Research." I had planned to describe the important role of the chemist in the research team devoted to the search for new methods of controlling disease, and to illustrate his activities by some of the medical accomplishments of the past 25 years. Events of the past week have compelled me to change my subject.

You are all aware of the preoccupation of the Kefauver committee in Washington with the pharmaceutical companies, initially to investigate something called administered pricing and subsequently expanded into charges of collusion, price gouging, unfair advertising and other abuses. This hearing has been given widespread press coverage. When this investigation was scheduled, most of the pharmaceutical companies accepted it as responsible citizens. We believed we had an honorable story to tell Congress and the people and that our contributions to the health and welfare of our Nation far outnumbered our deficiencies. We were prepared for a fair investigation recognizing that our very rapidly growing industry was reaching maturity and that some of the features characteristic of our adolescence needed to be corrected. We were a proud group, since we believed that through the American free enterprise system we had helped to build in the United States over a space of 25 years the greatest health team that the world has ever seen. Achievements in medicinal chemistry, brought about largely through industry's research, had given us in the industry an almost religious confidence in our ability to tackle and solve through research some of the most baffling, unsolved diseases which plague mankind. We had the conviction that our pharmaceutical industry with its research and development know-how was one of the country's greatest assets, particularly in this period when the international image of our scientific superiority is being seriously questioned.

THE COST OF RESEARCH

It is not my purpose this evening to comment on the Kefauver charges of exorbitant prices of drugs to the public. I leave this question to those experts in economics and the business leaders of the industry. However, there is one part in the industry's story to Congress on drug costs which directly concerns research; namely, the cost of doing research and the quality of industry's research.

Research and development expenditures in the drug industry were reported to be about $190 million during 1959 and are estimated to exceed $200 million during 1960. This research and development cost must be paid out of income, for industry has no endowment, no endless cornucopia of wealth. This simple fact of economics is not a serious issue of the Kefauver committee, but during its hearings charges have been made on a number of occasions that research done by our pharmaceutical industry is negligible and tainted. Allegations also have been made by some witnesses that most of the important discoveries in medicinals were made in foreign countries or in nonindustrial laboratories and not in the laboratories of the American pharmaceutical companies. Far from leading in drug research, it is alleged that the American pharmaceutical industry has usually followed and often only after a definite lag. The critics claim that much of the laboratory work done by the pharmaceutical companies is centered on exploiting and marketing of foreign discoveries.

These charges have been demoralizing to those of us who have devoted our lives to research in the pharmaceutical industry. Suddenly, our scientific dedication and motives are challenged. We are dismissed in a manner that makes us appear as charlatans; unscientific, and undedicated.

OUR ETHICS ARE IMPUGNED

I am not a person who is easily led to a point of indignation but at this time I am moved to that emotion, and I believe rightfully so. I am indignant because of the unfair criticism of people whom I know to be dedicated, sincere scientists whose motives are actuated by the impelling desire to help mankind. When our ethics, purpose, and accomplishments are impugned, then I, as a man of science, have not only the right but the responsibility to speak out for the facts. This duty transcends all commercialism. As a member of the Nation's scientific community and as a spokesman for the scientists in the pharmaceutical industry, I must vigorously protest against the irresponsible and degrading criticisms leveled at us.

In making my protest, I speak from my own experience with scientific people in my own company who are earnestly looking for new and better ways to treat maladies and not to create markets. Our scientific people recognize that our research is supported from the income we make and yet they have come to our laboratories from the universities with the conviction that our methods of objective research provide the best opportunities for the conquest of diseases through drug therapy. Basically, within Merck & Co., Inc. with which I am most familiar, our research programs are selected by our research people. The manner in which we prosecute our research and the decisions needed in its operations rest essentially within the research organization. Although our programs of research are approved annually by top management, I can say with complete honesty that never has a research proposal of any magnitude sponsored by our research organization been significantly altered or refused by management or by marketing considerations. It is the people in Merck's research—the chemist, the biologist, the pharmacologist and the physician in charge of clinical research—who are responsible for new drugs; who determine through objective experimentation whether a drug is effective and safe; who decide whether a drug is a worthwhile contribution to the armamentarium of the physician; who conclude whether it is medically suitable for marketing; who judge when it is ready for marketing consideration and who dictate what can be said to the practicing physician. These are the responsibilities given to the research

division by our top management. If a drug does not measure up to the high standards of good medicine, we in research must take the blame entirely.

Actually, during the 10-year period from 1949 to 1959, the Merck Sharp & Dohme Research Laboratories spent $111 million for research. There were years in this period when we did not offer to our marketing organization a single new basic compound for distribution. This was our situation in spite of the number of promising compounds that were being studied in the clinics after long periods of research in the laboratories. When the clinical data for these promising compounds were examined by our medical research people, we concluded that none of these met our standards and concepts of a drug with distinction.

A REVIEW OF ACCOMPLISHMENTS

Let us now review some of the accomplishments of the past 25 years and remind our critics to count their blessings. First, let me quote from a paper which appeared in the Journal of the American Medical Association during 1956, written by Dr. L. H. McDaniel then chairman of the section of general practice of the American Medical Association. In reviewing his 33 years of medical practice, Dr. McDaniel stated: "I remember the reluctance with which I viewed the approaching winter, for I knew that before spring 15 patients, including several close friends, would die from pneumonia. * * * Then we felt helpless, but today, we can walk into the sickroom with confidence, knowing that often a little ampule or vial the size of one's thumb contains drugs that can conquer diseases formerly thought hopeless."

It was not so long ago that the many infectious diseases in addition to pneumonia struck mortal fear within us. Some of us can remember when tuberculosis meant a lingering doom; when septic peritonitis was common and fatal; when bacterial endocarditis was certain death, and when all forms of bacterial meningitis and septicemias were spoken of with fervent prayers. It wasn't so long ago that our knowledge of nutrition was very meager; when pellagra was not uncommon in our country; when pernicious anemia was a killer, when the terms beriberi, scurvy and rickets were part of the layman's vocabulary. Today, our medical students learn of most of these deficiency diseases not from the clinics but only from textbooks.

Prior to the early thirties, the American pharmaceutical companies were enlarged apothecary shops which, in contrast to their European counterparts, did little of what we now call research. In fact, most of the important drugs used in America up to 1935 were the result of research in foreign laboratories. Today, the situation is significantly reversed. The productivity of our research laboratories has profoundly affected medicine in every country. In world affairs, the American pharmaceutical industry has become one of our greatest resources of good will.

Modern research in the American pharmaceutical industry really began in the decade commencing with 1930. During this period Parke Davis, Merck, Lilly, Abbott, and Squibb established research organizations with new concepts and dimensions. They brought together under a single roof scientists of many disciplines, all needed to carry out programs of research from the conceptual stage through clinical evaluation. Men and women of different training—chemists, pharmacologists, pathologists, and physicians—joined together for the first time in seeking solutions to medical problems. This was a new concept of research in our country, for until then research was reserved for the individual investigator in the university and the institute, often isolated and because of this, frequently ineffective. This was the beginning of interdisciplinary research about which we hear so much today in Government-sponsored research programs. It is not uncommon today to find in our research that 50 to 100 technically trained research people have had some part in creating a useful therapeutic agent. No other research organization in the United States devoted to health problems, whether it be the university, the institute or Government laboratories, has this capacity. It is through such organization of research that the American pharmaceutical industry has had such a significant effect on the science of therapeutics.

MIRACLE DRUGS AND SHORT MEMORIES

I don't believe that any of the experts would question the superiority of today's therapeutics over those of 1935. Let us remember that the term miracle drug was not the invention of the pharmaceutical industry. It was the doctor, the public, and the press who almost simultaneously acclaimed the miracle drugs of modern chemotherapy. The trouble is that our memories are short. We have forgotten what it was like before the advent of the drugs we now have. Who would want to turn his back on our present armamentarium and rely solely on the therapeutics of 25 years ago?

Let us look at the record of the American pharmaceutical industry during this short space of 25 years. No one can deny the contributions of the industry in the field of the vitamins. It was largely through its research and development that a number of the vitamins were isolated and characterized and that economical production of most of the important ones originated in this country. From these same laboratories came also such important therapeutic agents as benadryl, the first antihistaminic available to the general practitioner; the first uricosuric agent, benemid, for the treatment of gout; cortisone and its analogues, for the treatment of rheumatoid arthritis and a host of other diseases; diamox, the first carbonic anhydrase inhibitor of medical importance; diuril and its analogues for the control of edemas, heart failure and hypertension; the broad spectrum antibiotics, chloromycetin and the family of tetracyclines; the antibiotics erythromycin and novobiocin; pyrazinamide and isonicotinyl hydrazide for the treatment of tuberculosis; the less toxic and more versatile sulfa drugs; nilevar, the first oral anabolic agent; merprobamate and librium for mental health, and drugs such as cogentin for the control of Parkinsonian syndrome. This is only a partial list and is only one part of the record for the past 25 years.

DISTINGUISHED COLLABORATION

The second part of the industry's record is derived from the collaboration between the scientists of our laboratories and those of the universities, institutes, and hospitals. We at Merck are proud of our collaborations with outside investigators, since six of them had later become Nobel laureates. Now what has this collaboration between the academic and industrial scientists meant? Streptomycin might have remained a laboratory curiosity or its availability as a drug may have been delayed a number of years had not Dr. Waksman sought the collaboration of research and development in the pharmaceutical industry. Insulin in a form suitable for the treatment of diabetics resulted from a collaboration between the Lilly research staff and the discoverers of insulin, Banting, McLeod, Best & Collip. From such collaborations have also come the female sex hormone, estrone; such vitamins as B_1 and pantothenic acid; dilantin for epilepsy; nystatin for fungal infections; the thiouracils for hyperthyroidism; and nalline for the diagnosis of morphine addiction and morphine poisoning.

It is in this area—the collaboration area—that our critics often forget industry's paramount contribution. In some of these collaborations, our contributions are clearly research in nature; in others developmental and still others a combination of both. Unless an organization pursues the development of a new therapeutic agent, the agent is worthless. Unless the physician has the agent available to him in effective dosage forms and useful formulations, his patients must do without it. Until the industry learned how to make an injectable form of vitamin K_1, therapy with Dicumarol, a life-saving method in many instances of coronary thrombosis, was too hazardous for widespread use.

The ability to collaborate and move quickly in research and in development is a priceless attribute of the industry, for one can't put a price on the urgency of saving lives or combating illness and relieving pain. Penicillin, discovered by the British, undoubtedly, would have been delayed for the whole of World War II, had not the American pharmaceutical industry applied its research and development resources when it did. The great rapidity with which Salk's polio vaccine and the Asiatic flu vaccine were made available to physicians can only be measured in terms of people saved.

SOMEONE ELSE'S TEST TUBE

It is senseless for anyone to charge that laboratory discoveries alone constitute the reason for the existence of research and to say that scientists who carry a discovery from someone else's test tube to a useful drug have contributed nothing. Is it correct to say that the German physicists who demonstrated nuclear fission in the thirties should receive the credit for atomic energy? Certainly, everyone recognizes the contributions of those who worked on the Manhattan project. As a matter of fact, the names we best remember in connection with the atomic project are Fermi and Oppenheimer and not Meitner, Hahn, and Strassmann.

The pharmaceutical industry today is characterized by the tremendous influx of new drugs and by an obsolescence of the older ones. As a matter of fact, we have been criticized for this. Why does this constant change of drugs occur? The answer is the intense activity that exists in the research organizations of the pharmaceutical companies. We think of this as competition but actually the motive in research is the intense desire to produce a better drug. There is no drug in existence that is completely satisfactory—that cannot be improved upon from the standpoint of effectiveness, reliability or toxicity. Even pencillin, considered at one time an almost ideal drug, has its failings. Some patients cannot tolerate it because of the dangers from anaphylactic shock. Some physicians are expressing alarm at the growing number of fatalities resulting from infections of penicillin-resistant staphylococci. The need for improved antibiotics is obviously imperative. The need for improved drugs in other fields of therapy is just as important. This is why during the past 10 years so many newer drugs have appeared in the fields of steroid therapy, hypertension, mental, and cardiovascular diseases. You may expect that still more drugs will appear as even better ones are discovered.

A DEDICATION TO SCIENCE

At this point you can well understand why I changed the title of my talk and why I am exercised by events in Washington. I am addressing you this evening on this subject as a research chemist and not as an official of a pharmaceutical company. I am talking to you in the name of scores of thousands of research chemists who have made a career in industry. We have made this our career for many reasons beyond the need for a means of livelihood—a dedication to science, a desire to create and, not least of all, a desire to contribute something of importance to our way of life.

I think this is true in every field of chemical research, whther it be research in heavy chemicals, petroleum, steel, coal,

food chemistry, or the pharmaceutical industry. The feelings of creating and contributing are important factors in the morale, enthusiasm and dedication we bring to our everyday performance of our jobs. Factors such as these spell the difference between inspired work and just doing a job.

If, as Mr. Kefauver and a number of the drug experts who spoke critically of our accomplishments would have us believe, the result of the tremendous research and development efforts which have gone into the pharmaceutical field has been to defraud the public, to swell the coffers of the companies and to exact merciless tribute from the infirm and the aged—it is a sad commentary on the meaning of the thousands of man-years of dedicated effort by thousands of chemists, engineers, biologists, and physicians throughout this country.

AN IRRESPONSIBLE INDICTMENT

Irresponsible attacks on motives and ethics of scientists can be permanently damaging to their morale. Irresponsible indictment of the best efforts of such an important segment of our scientific and technological manpower can have serious consequences in decreasing the sources of scientific manpower and on the youth of our country who see an expression of their idealism in the accomplishments of chemistry, biology and medicine during the past 25 years. Toward these dangers, our critics must take a responsible attitude. Those who have gone to such lengths to degrade the medical accomplishments of the American pharmaceutical industry must be made to realize the extent of the damage they cause and be willing to take the responsibility for it.

I can't believe that some of our scientific critics at the Washington hearings really meant what they said. I question whether the views they expressed represent their overall assessment of research in the drug industry. Could it be that they failed to appreciate the seriousness of giving their views in such a preemptory manner, not reflecting sufficiently on the importance of adequate perspective when expressing their views in the public spotlight?

I had a special reason for bringing this unpleasant issue to you this evening. Having been a member of the American Institute of Chemists for over 10 years, I know of its aims and purpose. Each of us here this evening has deep convictions about the ethics, motivations and dedication which make up the profession of chemistry. We know that if the scientific integrity of one group of dedicated scientists is attacked with impunity then the dignity of all science will become degraded. If one group of scientists can be tarred and feathered without vigorous protest, then we are all slandered.

I hope that I have conveyed to you an appreciation of the seriousness of our situation and the obligations each of us has to defend the rightful position of the research scientist in the industrial and scientific development of the Nation. I also hope that each of you is equally indignant over this challenge to our scientific profession and that each of you will make yourself heard in words and deeds.

Shriners Salute Negro Business

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

[From the New York Amsterdam News, June 4, 1960]

SHRINERS SALUTE NEGRO BUSINESS

Negro business throughout the country will receive the support and encouragement of the Prince Hall Shriners during the week beginning Sunday, June 12, which has been designated as the annual "Prince Hall Shriners Salute to Negro Business Enterprise Week."

Announcement of the weeklong observance came from the Atlantic City office of John Henry Hester, the director of economic education for the Shriners.

Mr. Hester said that during the observances, each of the 15,000 Shriners and 7,000 Daughters of Isis, their ladies auxiliary, will spend a minimum of $25 with Negro-owned enterprises in the 156 cities where the organization's temples are located. This is to be followed up by a weekly expenditure of $5 throughout the year.

In the campaign last year, Mr. Hester declared, "more than $13,000 was spent by Shriners during the campaign" and "thousands and thousands of dollars were spent by other Negro citizens who joined with the Shriners in this worthwhile effort."

The Shriner program "is definitely not a boycott of business owned by all other American citizens but a program designed to help ourselves through cooperative efforts," he said. Government statistics alluded to by Mr. Hester assertedly showed that out of their $17 billion annual total income, American Negroes spent only 1 billion with Negro businesses.

Annual Pennsylvania State Convention, National Federation of Post Office Clerks, Altoona, Pa., June 10, 11, 12, 1960

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. VAN ZANDT. Mr. Speaker, the Altoona local, No. 776, National Federation of Post Office Clerks, was host for the 1960 Pennsylvania State convention of the federation at Altoona, Pa., June 10, 11, and 12, 1960.

The principal event of the convention was the annual banquet held at the Hotel Penn-Alto during which time it was my privilege to deliver the principal address which follows:

ADDRESS DELIVERED BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA AT THE 1960 CONVENTION BANQUET, PENNSYLVANIA FEDERATION OF POST OFFICE CLERKS, ALTOONA, PA., JUNE 11, 1960

It is a pleasure to be invited by the convention committee to attend the annual banquet of your federation.

It is pleasing that your annual convention is being held here in Altoona and that your convention host is local union No. 776, which is comprised of earnest, energetic and highly dedicated fellow employees of the U.S. Post Office Department.

The fact that you have selected Altoona for your convention city for the third year out of the last 4 years is a tribute to your host—local 776 and its entire membership.

The strength and effectiveness of the National Federation of Post Office Clerks is due to the combined faithfulness and spirit of the various locals in Pennsylvania and other States.

The result of such dedicated teamwork is evident in the strength of your national federation in the field of organized effort to promote the welfare of all postal employees.

When speaking of the organized effort to advance the welfare of all postal employees, the recent accomplishment of securing 219 signatures on the so-called Thompson discharge petition—regarding an increase in salaries of Federal employees—was due in a great measure to the activities of the various postal groups—including your organization, the National Federation of Post Office Clerks.

As a matter of fact, the anxiety was so great to sign the petition that a few of us who were absent because of committee work were denied the opportunity of being among the 219 signers.

No doubt all of you know that the bill is scheduled for consideration by the House on Monday, June 13.

Since it will be on the floor under a closed rule—prohibiting amendments—there is no doubt in my mind that it will be approved overwhelmingly.

When the bill reaches the Senate, early action has been promised.

Therefore, the time factor will be favorable as far as a possible veto is concerned.

From my standpoint, it is my intention to support the legislation and this includes overriding a veto, if necessary.

As many of you have heard me say previously, it is the duty of Congress to try to keep salaries in pace with living costs, and that is why I am favorable to the pending legislation.

On an occasion like this, there is a great temptation to wax historical when discussing the postal system and its vast army of employees.

With that thought in mind—there is an old saying to the effect that nothing in this world is inevitable except death and taxes.

I would like to add that there is one other thing almost as inevitable—and surely far more pleasant—and that is the delivery of the mail.

It certainly is no exaggeration to say that the quality and scope of a country's postal service constitutes one of the most important and reliable examples of its culture and civilization.

There are a great many important and useful Government services without which the country would suffer—although it would survive.

The mail service is not one of these because—without it—I don't think we could get along at all.

If there is any one Government function that is absolutely indispensable—it is the delivery of the mail.

Americans have always believed this—as the history of the postal service in this country very clearly proves.

When one considers the importance of the mail, it is not surprising to realize that some form of postal service is more than 300 years old in America.

The first official post office was established in Boston in 1639 by a decree of the General Court of Massachusetts.

A few years later the Virginia Assembly enacted a measure to insure the delivery of letters.

In the early seventies the first scheduled intercolonial transportation of the mail was instituted with a monthly service between New York and Boston.

During the next 10 years or so, several attempts were made to establish additional postal routes in the Colonies.

Some of them failed but one of the most successful was that started by William Penn in 1683.

In this same year a route was initiated from Maine to Georgia.

With the population of the Colonies growingly rapidly, the British Crown in 1691 issued a patent or franchise to Thomas Neale to establish an intercolonial postal system in the New World.

Neale appointed a Scotsman, Andrew Hamilton, to be Postmaster General for America.

Hamilton, whose Intercolonial Postal Union began operations in 1693, was a man to whom all Americans should be eternally grateful.

He was a man of great enterprise and imagination.

Although he was anxious to make money, he was also apparently a strong believer in public service.

Andrew Hamilton was widely respected throughout the entire land.

It is shown by the fact that he succeeded in getting practically all of the colonial legislatures to enact measures, sufficiently alike in their provisions, that an integrated postal system could be set up.

Hamilton's mail carriers had to put up with hardship and difficulties that are almost impossible for us to visualize today.

For example, between many of the settlements there were no roads, so the company had to build its own post roads through the wilderness.

These post roads soon became the accustomed routes of travel for everyone.

It is difficult to overestimate the tremendus role they played in uniting the young country.

Unfortunately, the excellent progress made by Hamilton was not destined to continue without interruption.

In 1710 Queen Anne of England took a more direct hand in American postal affairs.

The right to set postal rates was removed from the Colonial legislatures.

Then followed an increase of 33⅓ percent in these rates—designed to supplement the royal treasury.

This action led to a large deficit in the postal union as use of the service declined.

In 1737 a truly great American began his long association with the postal system.

In that year Benjamin Franklin was appointed postmaster of Philadelphia—a position he was to hold for 16 years.

The Colonies were divided into northern and southern sections for postal purposes in 1753.

Franklin was appointed as one of the two head postmasters for the northern region.

His compensation was based upon the amount of profit the system was able to show.

For several years the postal service lost money, but eventually Franklin's farsighted plans—for extending services and making improvements—began to pay off and to show a substantial profit.

As the tensions between the Colonies and England became more acute, Franklin's sympathies—openly on the side of the Colonies—resulted in his dismissal from the postal system in 1774.

This event further stirred the colonies—and in 1775 the Continental Congress created the first all-American postal system with Franklin as Postmaster General.

The two systems operated side by side for a few months, but in December, the English realized they could no longer continue to operate their service and terminated it.

The postal system has been exclusively American since that time.

The establishment of a Federal post office was authorized by a clause in the Articles of Confederation.

However, as with a great many other legislative matters, the Government under the articles was so weak that it lacked any real power to create and install a mail network.

After the Revolutionary War, under the new Constitution, it was fortunately a different story.

Congress was given the power—which it still retains—to establish post offices and post roads.

Not only was a postal system established, but private posts were abolished, giving the Government a monopoly in this matter.

Other early legislation protected the secrecy of the mail, provided against violations, and set the rates.

The growth and development of the postal system in those early years was phenomenal.

It mirrored and encouraged the vast changes that were taking place in the new United States of America.

In 1790, 75 post offices and 1,875 miles of post roads served about 4 million people.

During Washington's term in office the service grew five times this size.

By 1829 more than 8,000 post offices and 115,000 miles of post roads served a population of about 12 million.

As the years went by the horseback rider and the stagecoach gave way to the steam train as the primary method for moving the mail.

There was the brief but exciting period of the pony express and the times of tragedy, hardship, and peril during the early days of the airmail.

Through the years the Post Office Department has steadily expanded its services to the people as the need for these services arose.

There came postage stamps, letterboxes, registered and special delivery mail, Rural Free Delivery, postal savings, and parcel post together with many other such services.

You members of the National Federation of Post Office Clerks know of these things better than I and I am sure you could easily expand the list.

Although the story of the delivery of the mail and the performance of its other services are in themselves a fascinating narrative, they account for only part of the value that the postal system has been to the United States.

From the very beginning—the mail served to tie together the people of the different Colonies and communities.

This made the dissemination of news and information possible—it awoke people to an awareness of their common causes and interests—it served to stimulate the vision of America as one great, united country—and then to make this vision into a reality.

Today the Post Office Department is a vast enterprise that serves every American.

Of all agencies of the Federal Government—the Post Office and its employees have by far the most direct and frequent contact with the American people as a whole.

This is the sort of opportunity for service that, I am sure, fills each one of you with a sense of real pride.

Along with this pride is the deep feeling of responsibility that is shared by people who know that the work they are doing is important.

I have been in Congress long enough to learn that the overwhelming majority of Federal employees are a loyal, intelligent, and hard-working group of people.

Because I sincerely believe this, I welcome this opportunity to speak to you.

I give you my assurance that as long as I am a Member of Congress, it will be a pleasure to continue to look after your interests as employees of the Federal Government.

Let me say it in another way. It is always a pleasure to be in the corner of such a large segment of our citizenry who are good, loyal, employees of the Federal Government.

Thank you for inviting me to participate in the program of your annual convention banquet.

Remarks by President Eisenhower at the Testimonial Dinner in Honor of Katharine St. George, Member of Congress, Sponsored by the Republican County Committees of the 28th Congressional District, Bear Mountain Inn

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mrs. ST. GEORGE. Mr. Speaker, it is my privilege and honor to place the following remarks made by President Eisenhower at a testimonial dinner given for me on June 4 at Bear Mountain.

The President spoke extemporaneously and these remarks were taken down at the time by a stenographer.

The President was inspiring and the great crowd who heard him were filled with admiration and enthusiam. For me personally it was the happiest moment of my political career.

The remarks follow:

Mrs. ST. GEORGE, Senator KEATING, and my friends, it is indeed difficult, in the circumstances in which I find myself, to discover words that seem applicable to this situation. I am here as a member of the class from West Point of 1915, my 45th anniversary. The members of my class and their wives and their widows, their children and their grandchildren, have been here in this inn, trying with me to recapture something of the atmosphere of 1915, the year we graduated.

You know at that moment, when the first European war had started, we were still cadets, and the world seemed reasonably quiet—indeed, almost leisurely in its approach to every question public or private. We had no sense of urgency or tension. The United States was a long way from this war—and we have been talking about those times, when our great preoccupation really was to find out whether the tactical officers could discover any of the offenses that we were guilty of committing. Fortunately for me, they didn't discover all of them.

Now tonight we meet at a time of bewilderment. I don't like this term, or the using of the term that we are "living always in a crisis." We are not. There is no nation in this world that dares at this moment to attack the United States, and they know it.

But we wonder what is the outcome of every decent, proper gesture we make to those that live in the other camp. They live in a closed society, secrecy of intent—which we try to penetrate, and in my opinion, properly, but we are certain of this: Our problem is not only keeping ourselves strong, and by strong I don't mean merely militarily, I mean spiritually, intellectually, scientifically, economically and militarily; and then we must make certain that all of those people who live with us, in the hope that those concepts of human dignity and freedom and liberty are going to prevail in the world, will stand always by our side in the determination that freedom and liberty will eventually triumph over tyranny.

We have stanch allies. And as a matter of fact, many of the excesses, particularly the ill-tempered expressions of Mr. Khru-

shchev, has really brought the West closer together than I have known it, ever since I have been occupying my present office.

Now I am talking about matters, for this moment, that are not partisan. They are bipartisan. But I want to say this: It is a tremendous satisfaction to me to know that the Republican Party believes in the kind of things that I have tried so haltingly to express to you.

My colleagues here in Government, Senator KEATING, and your guest of honor Mrs. ST. GEORGE, have in every single vote that has anything to do with these important world questions, stood exactly in the ranks, exactly like any soldier would when asked by his commander to do so.

So I want to say to you a very simple word—and I promised my classmates I would only be 5 minutes, and I think I have used 10 minutes already, but I just want to ask you to do this: Look at the records of your Republican representatives in the Congress, do they represent what you understand to be firm, sound, middle-of-the-road Government that refuses to make Government a centralized Government capable of governing your lives in every single item, refuses to accede to the doctrine of collectivity or centralization, or is it the kind of philosophy that says "We want to live in liberty, in freedom"?

This is the kind of thing they have been supporting, and therefore you support it not because of a word: Republican, or because of some particular or special vote. You support it because you believe in what they believe: that the Government of the United States intends to do its full duty by every one of its citizens, but it shall never—in the words of Abraham Lincoln—do those things for the individual that he can do better for himself.

Now I just have a simple request of you. If you believe in the basic principles these representatives of yours, congressional and senatorial, if you believe in those basic principles, then not merely do I ask you that you register and you vote—I know good Republicans will do that, I ask you to go out and work as you have never worked before.

Because I tell you, this kind of policy, internally and externally, is the thing that will keep America strong, safe and sure—for you and every single person that comes behind you.

This is what I hope to do myself, so far as it is proper and the people who will meet within a few short weeks to take over the direction of campaigns—I am ready to do my part.

And I tell you this, it will be an honor to be associated with such people as you are, as you do your part.

Thank you and goodnight.

Anthracite Coal Used To Heat Many New Schools

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Times-Leader of Friday, May 20, 1960, which reports that an increasing number of new schools throughout the northeastern section of the United States are installing automatic anthracite heating equipment because of fully automatic operation availability, dependability, and specific economy over competing fuels and systems:

Proof that anthracite is the modern fuel is evidenced by the increasing number of new schools that are using it as their fuel, reports the Anthracite Institute in its current weekly bulletin.

Automatic anthracite heating equipment is being installed in new schools all over the Northeast, says the institute.

An example of fine performance of automatic anthracite heating equipment is given by the institute in relation to the new Louis E. Dieruff High School in Allentown. Designed for 1,000 students, it has 900 registered at present. There are 31 classrooms, a gymnasium, cafeteria, library, auditorium, swimming pool, and other facilities.

Fire-Jet stokers, using anthracite, were selected as the heating equipment after a survey of the fuel situation by the school board and the architects.

Anthracite and automatic heating equipment were chosen because of fully automatic operation available, dependability, and specific economy over competing fuels and systems.

The heating plant is in operation for an average of 18 hours a day. During the period April 1, 1959, to April 1, 1960, only 850 tons of anthracite of rice size were consumed.

"This is a remarkable performance," says the Anthracite Institute, "particularly when the large amount of extracurricular heating is considered and it is well below the cost of heating with competitive fuels."

The Anthracite Institute, in another section of its bulletin, noted, however, a decline in coal year sales of union produced anthracite. During the 1959–60 coal year, anthracite sales totaled 15,554,000 tons, a decrease of 1,633,000 tons, or 9.5 percent, from the previous year's total.

Commercial union production of all sizes of anthracite from January 1 to May 14, 1960, totaled 5,138,000 tons. This is a decrease of 702,000 tons, or 12 percent, from the like 1959 period.

Rally the People of Harlem To Buy From Negro-Owned Liquor Stores

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following material:

NEW YORK, N.Y.,
June 13, 1960.

DEAR CONGRESSMAN ADAM C. POWELL: As one phase of our "Support Negro Business Week" we call upon you to rally the people of Harlem to buy from Negro-owned liquor stores.

We are submitting herewith a list of these stores. There is one of these stores only two blocks away from every Negro consumer.

Sincerely yours,
CLIFFORD J. STORY,
Potentate.

(Prince Hall Shriners annual salute to Negro Business Enterprise Week, New York Lodge, 454 West 155th Street.)

The FBI National Academy

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. BELCHER. Mr. Speaker, under unanimous consent, I wish to insert in the RECORD a resolution passed by the Oklahoma Chapter, FBI National Academy Graduates, meeting at Enid, Okla., June 1960:

RESOLUTION OF THE OKLAHOMA CHAPTER, NATIONAL ACADEMY GRADUATES, MEETING AT ENID, OKLA., JUNE 5, 6, AND 7, 1960

Whereas J. Edgar Hoover, Director of the Federal Bureau of Investigation, recognizing that the newest developments in police science are the common property of all law enforcement agencies, and further that up-to-date training in police science and techniques is the most effective weapon in combating crime and other enemies of our society throughout the Nation, made available the training facilities of the Federal Bureau of Investigation and established on July 29, 1935, the FBI National Academy; and

Whereas in its nearly 25 years of service to law enforcement over 3,800 ranking officers from agencies in the United States and foreign countries have been graduated from this national academy, thereby extending the training they received in the FBI National Academy to members of their individual departments; and

Whereas the facilities of the FBI Laboratory, as well as the FBI's Identification Division, are available to all law enforcement and have made, and are continuing to make, tremendous contributions to successful local law enforcement; and

Whereas the FBI, through the policies established by Director Hoover, has been a major factor in promoting and maintaining the excellent spirit of cooperation among law enforcement agencies in the State of Oklahoma and throughout the Nation: Now, therefore, be it

Resolved, That the Oklahoma chapter of the FBI National Academy Associates in meeting assembled extend to Director Hoover and the FBI its sincere appreciation for the training which has been afforded through the FBI National Academy to us, and through us to others in the field of law enforcement; be it

Resolved, That the Oklahoma chapter of the FBI National Academy Associates express to Director Hoover its appreciation for his efforts in furtherance of the FBI National Academy and police training in general, as well as for the other excellent cooperative services, including the mutual exchange of information, which have resulted in raising the standards and efficiency of law enforcement in the State of Oklahoma and throughout the Nation; be it

Resolved, That the chapter also express its sincere appreciation and thanks to Special Agent in Charge Wesley G. Grapp and his staff of the Oklahoma City office of the Federal Bureau of Investigation, for extending to this chapter and to law enforcement agencies throughout the State of Oklahoma their training program and numerous other services and exchange of information so necessary to successful law enforcement; and be it further

Resolved, That copies of this resolution be given appropriate distribution to show the opinion of this organization.

Maine Needs Educational Television

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. OLIVER. Mr. Speaker, a letter from the very able and farsighted president of our State university, Dr. Lloyd H. Elliot, sets forth in most logical and detailed manner the need for educational television in the State of Maine. His letter, in my opinion, is a most persuasive and constructive appeal for the support of H.R. 10609.

This legislation would be extremely valuable to the State of Maine; since our State university anticipates a 100-percent increase in its enrollment within the next 10 years. Our State department of education has also indicated, by already making the necessary preparations, that it will give educational television its firmest support.

The enactment of this legislation would enable every State in our great Nation to benefit from this excellent mechanism of communication. Wholehearted support of H.R. 10609 is completely justified.

Dr. Elliott's letter is as follows:

UNIVERSITY OF MAINE,
Orono, Maine, April 6, 1960.

The Honorable JAMES C. OLIVER,
House of Representatives,
Washington, D.C.

DEAR MR. OLIVER: In reply to the invitation extended in your letter of March 25 to prepare a factual statement on the needs of our State for educational television, I am happy to submit the following which will serve as a description of the need, activities, present status, and plans for educational television in Maine.

1. THE NEED

(a) Elementary schools need programs in music, art, and foreign languages, such as are a part of the programs in the more populous States.

(b) Programs for the gifted student would be an invaluable supplement to the curricula in most Maine high schools.

(c) Inservice training programs for teachers could be conducted so as to reach the teachers of the State in an effective way.

(d) With a possible 100-percent increase in enrollment at the University of Maine during the next 10 years, educational television may become a necessary teaching method for resident students. The sharing of television programs with other Maine instiutions is a definite possibility.

(e) There is urgent need for adult education, both in formal courses for credit and in general cultural development.

(f) The size of the State, combined with the fact that the population is widely scattered, places even greater emphasis upon the need for this educational facility.

2. ACTIVITIES TO DATE

(a) The Educational Television Association, a nonprofit corporation with about 1,000 members, has done much to arouse and maintain interest in educational television in Maine. In addition to developing interest in educational television in Maine, the association has leased for a second 18-month period a tower on a mountain near Orono, for possible use by an educational television station.

(b) A music course was organized and supervised by the State department of education during 1958-59. This course was made possible through substantial gifts by the Educational Television Association, the Maine Teachers Association, the Supervisory Principals Association, and the State education department. Two hundred and eighty-seven classes participated in this program.

(c) Two courses, Mathematical Concepts and Science for Space Age, for talented secondary school students, are being offered through the State department of education. These experimental courses, in which 67 schools are participating, were made possible by a grant under the National Defense Education Act, title VII.

(d) College credit courses have been given at the University of Maine and Colby College.

3. PRESENT STATUS

(a) The Federal Communications Commission allocated one VHF and two UHF channels for educational use in Maine.

(b) The Ford Foundation has made a grant of $20,500 to the University of Maine for a thorough survey of educational television in Maine. The survey will give information which is essential to activating a station or stations which will serve most or possibly all of the State.

(c) Although the commercial stations have given generously of their time, it is apparent that they cannot allocate additional time for educational television. Further, the hours offered are not those which can be used advantageously in expanding an educational television program.

4. PLANS

(a) The first objective is to establish a station at the University of Maine in Orono and to develop a network coverage for the entire State as rapidly as funds can be obtained for this purpose.

(b) Because Maine is not an industrial State and because incomes, in general, are only moderate, the problem of securing the funds necessary to establish one or more educational television stations has been a major obstacle in establishing a station.

(c) It is believed that the legislature will consider an appropriation to match funds which may be made available from other sources to build a station, but there is less likelihood that the State will feel that it can appropriate all funds necessary to build and operate such a station or stations.

(d) It has been agreed that any educational television program in Maine should be a cooperative project with other educational institutions and organizations. The State department of education has indicated its interest by expressing a desire to make funds available in school programing.

In summary, it would seem to me that no single development within reach offers as great a potential for the educational program of Maine as does educational television. It is most important that H.R. 10609 be passed at this session if we are to continue to advance educationally in our total educational efforts.

Thank you for giving me this opportunity to put together the facts concerning this facility.

With best personal regards.

Sincerely yours,

LLOYD H. ELLIOTT,
President.

Reactions to Khrushchev Stir Doubts on Patriotism

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following column by David Lawrence appeared in the New York Herald Tribune of June 6. It certainly should have a sobering and chastening effect on us all.

Patriotism today is played down, let us make no mistake about it. It is depicted as childish sentimentality in some quarters, and as an old tribal custom that we have outgrown in others.

The Fourth of July and Memorial Day celebrations are indeed tame and listless compared to those of years gone by. Yet, Mr. Speaker, if the Russians believe that because of our political bickerings we have lost our will to fight and our love of country, they are sadly mistaken.

Our people, by and large, still love their country and are still willing to fight and die for her.

Our people still ask the question, with incredulity:

> Lives there a man, with soul so dead,
> Who never to himself has said,
> This is my own, my native land.

REACTIONS TO KHRUSHCHEV STIR DOUBTS ON PATRIOTISM

(By David Lawrence)

WASHINGTON, June 5.—Time was when in the midst of war neither scribe nor politician ventured to give aid and comfort to the enemy.

Time was when the citizen felt a tingle of emotion go up and down his spine as he sang "The Star Spangled Banner" or saluted the flag.

Time was when the Nation found itself in peril, and nothing else mattered. No sacrifice—even of life itself—was too great to make for the honor of our country.

But things seem to be different now. The President of the United States is insulted and yet some writers continue to furnish aid and comfort to the press of the Soviet Union by denouncing Mr. Eisenhower and holding him culpable for errors he couldn't possibly have avoided and still protect the safety of the American people against surprise attack.

Is the country changing? Is patriotism just an obsolete notion, nurtured only by those of us who have witnessed manifestations of national spirit and pride over a long span of years? Are some of us old-fashioned because we cannot accept the modern cynicism which insists that a President of the United States shall be pilloried by political leaders and by some segments of the press of his own country as Moscow papers reprint every bit of captious and carping criticism?

Is a cold war any different really from the crises that call for nonpartisanship during a hot war? Time was when in wartime a newspaperman practiced "voluntary censorship" and when his conscience kept him from writing anything that might possibly aid the enemy. A cold war and a hot war are no different so far as national danger is concerned. Today the demand is for almost every scrap of information including classified information, and there are newsmen and Members of Congress who insist in all sincerity that they and not the executive branch of the Government—which has the responsibility for our safety—shall be the final judges of what ought to be suppressed or disclosed.

AN AMERICAN FIRST?

Time was when this correspondent used to hear the expression: "I am an American first and a newspaperman second." But today things seem different. No matter how damaging to one's own country, the tendency now is to give the information or comment publicly to the enemy dictator who promptly quotes it in his propaganda speeches.

As America, moreover, approaches a political campaign, partisan writers say that the President should have known in advance of every act to be performed, by every subordinate in the numerous agencies of a big government and that efforts to gather information abroad clandestinely should have been, in effect, suspended indefinitely to the advantage of a gangster regime in Moscow. Immediately Moscow seizes on every such adverse comment, especially when it emanates from the Senate Foreign Relations Committee. Was it too much to ask, as Senator WILEY, Republican, of Wisconsin, did, that a public investigation by any congressional committee on international matters during a crisis be suspended?

Maybe the urge to patriotism is less strong today than winning an election or carrying on a partisan crusade. Maybe we are witnessing the rise of new liberals who espouse the cause of nationalism in the various countries of Africa and Asia, but denounce any nationalism expressed in the United States in behalf of the interests of our own country.

But these misguided "intellectuals," so many of whom in the scientific world especially believe in "world citizenship" as superseding American citizenship, will some day be proved completely wrong. Back in the 1920's after World War I there were demonstrations of students in the colleges against war. They held meetings of organizations calling for the soldiers' "bonus of future wars." It was a satirical effort to put the label of selfishness on the men who had to leave their families and jobs and go to war. But when the United States entered World War II in 1941 this same generation acquitted itself nobly. No better troops ever fought for America than those who battled in World War II.

Grassroots Americanism today resents bitterly the insults flung at the President of the United States. It resents attacks on Mr. Eisenhower in the American press which the next day are parroted and quoted with exultation in the Soviet press.

KHRUSHCHEV CALLED BETRAYER

It so happens that Mr. Eisenhower was the Supreme Commander of Allied Forces in World War II. He helped to save the Soviet Union from the yoke of Hitler. The American people between 1941 and 1945 sent billions of dollars to help equip the Soviet armies. When the war was over, General Eisenhower was received with acclaim in Moscow. But Nikita Khrushchev now says Mr. Eisenhower is fit only to manage a home for children. Recently he called the President a "thief."

It begins to look as if Nikita Khrushchev is resentful of all military men. But he has miscalculated public opinion everywhere if he thinks he can belittle not only the President of the United States but the very general who helped Russia in the winning of World War II.

The Soviet Premier, to be sure, has lost whatever prestige he may have had in the West. He has forfeited an opportunity for effective leadership as a negotiator with the West. He has really betrayed his own country. For the people of the Soviet Union don't want war and when they get all the facts they will not long support a man who acts more like an uncivilized boor than like the dignified premier of a government which possess to represent a great people.

Belmont Abbey College

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. MATTHEWS. Mr. Speaker, the Honorable HUGH ALEXANDER has drawn our attention to a recent honor conferred upon his fellow North Carolinian and our distinguished colleague, BASIL WHITENER, when Belmont Abbey College of Belmont, N.C., conferred upon him the honorary degree of doctor of laws in recognition of his outstanding public service, at its graduation exercises on June 7. We are grateful to Belmont Abbey College for this recognition of our distinguished colleague. We feel that in honoring him, the college has also honored itself.

Belmont Abbey College, one of the oldest Catholic educational institutions in the South, dates back to the October of 1876 when classes were first held upon arrival of the monks of the Order of St. Benedict from the archabbey of St. Vincent, Latrobe, Pa. The September of 1878 marked the official opening of St. Mary's College, as it was then known.

So rapid was the growth of the institution and so thorough the work of the monk-educators that the Holy See elevated the dependent priory to abbatial rank in 1885, and the Right Reverend Leo Haid, O.S.B., was elected the first abbot-president. The college was chartered according to North Carolina State law on April 1, 1886, with all the rights and privileges of colleges and universities in North Carolina.

The abbot-president brought a corps of trained monk-teachers to the abbey. They proved very efficient. The college building was enlarged to more than three times its original size, a cathedral was erected, the library increased and cataloged, laboratories were equipped, and the student body grew. In 1900 the college building was destroyed by fire and rebuilt. Other buildings were added through the years.

The announcement of the change of name from St. Mary's College to Belmont Abbey College was made at the meeting of the alumni association on November 27, 1913.

From 1924 until 1959 the college operated under the presidency of the Right Reverend Vincent G. Taylor, O.S.B., D.D., who was elected in that year (1924) to the post made vacant by the death of the first abbot-president. In 1928, due to the conditions of the times, the college was reorganized as a junior college (with the exception of the philosophy department, which continued to grant degrees to young men studying for the Benedictine Order) and remained such until September of 1952 when it was reestablished as a senior college.

In 1959 the Very Reverend Walter Coggin, O.S.B., Ph. D., was elected abbot. He took the title of chancellor of the college and appointed the Very Reverend Cuthbert E. Allen, O.S.B., the fourth president.

The college is situated in Gaston County, 12 miles from Charlotte, and 1 mile from Belmont. In this center of industry, amidst the beauty of mountain, valley and stream, in a spot 800 feet above sea level, stand the buildings of the abbey.

In striving for the development of virtue and good character in its students, Belmont Abbey College is carrying on the highest traditions of liberal and humanistic education. The true liberal tradition, inherent in benedictine education, has always sought the formation not only of the intelligent man, but of the good man.

In its effort to attain this end, Belmont Abbey College seeks as immediate objectives for its students:

First. The habit of study and reflection in the search for knowledge and truth.

Second. The mastery of the curriculum content, leading to general culture as well as to vocational fitness, for continued study or for industry and business.

Third. The appreciation of the good, the true and the beautiful in nature and art.

Fourth. The development and application of virtuous living.

Fifth. The love and appreciation of physical well-being, and the formation of habits of corporal and mental cleanliness, neatness, and orderliness.

Sixth. The love of cooperative competition and fair play.

Seventh. The practice of tolerant gentlemanliness.

Eighth. The courageous pursuit of American democracy.

Ninth. The persistent following of a conscience made right and virtuous by a sound philosophy.

Belmont is proverbial for its healthfulness, pure water, excellent drainage, and relief of asthmatic allergies and hay fever. The prevailing winds are from the southwest, bringing with them the warmth of the gulf region and keeping the temperature mild and equable. Thoughtful parents, having in mind the physical good as well as the mental and moral development of their sons, will appreciate what such surroundings will mean to a youth who spends his years at the abbey.

Congressional Expense Accounts

EXTENSION OF REMARKS

OF

HON. EUGENE SILER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. SILER. Mr. Speaker, last week I introduced H.R. 12593, a bill seeking to require full disclosure of Government and counterpart funds used by Members of Congress in making their various trips in the interest of our Nation. I hope my bill will be considered in committee and then enacted into law in due season by the Congress.

As one who has never taken a junket or trip at taxpayer expense in the 6 years I have been a Member of Congress, I must say that in my opinion about 75 percent of these congressional trips serve no good or necessary purpose for the benefit of the taxpayers. But if some of these trips do serve valuable purposes, then certainly all of them should have the luxury fat completely trimmed off and should be made to conform to basic standards without bar bills or accompanying wives in secretarial clothing. It is inconceivable to me that I myself should go to the Plaza Hotel in New York and engage a $50-a-day suite at the taxpayers' expense when some of my constituents in southeastern Kentucky have insufficient food, clothing, and medicine for their needs. And it is just too bad that bar bills and booze purchases by Congressmen should ever be saddled upon the taxpaying descendents of those Puritans who came to this new land more than 300 years ago and hewed out an incipient nation with a new concept of freedom and an old concept of integrity. Furthermore, whenever I take my wife on a junket at public cost while camouflaging her as my secretary, then I hope the voters of my district will rise up and whip the unvarnished meanness out of me by a majority of better than a thousand to one.

Mr. Speaker, our country has many needs, problems and troubles on every hand. Yet most basic and bedrock is that need called integrity. We must start out with that element, for without it we are really lost. Integrity is the alpha and omega of both our private and national existence. It is now time to regain our integrity and maybe it is a little later than we think. Every part of our Government must put its own house in good order and we should certainly start with the house of the House. Free bread and free circuses preceded the downfall of Rome. Shall free luxury suites and free night club entertainment for Congressmen be permitted by Congress and will these precede the twilight hours of this country called the United States of America?

The Star-Strewn Class of 1915

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mrs. ST. GEORGE. Mr. Speaker, this year June Week was celebrated at the U.S. Military Academy at West Point in the traditional manner. The President of the United States, Dwight D. Eisenhower, was with his class, the class of 1915.

This class of 1915 was indeed the "Star-Strewn Class" as noted in the New York Herald Tribune editorial of June 6.

THE STAR-STREWN CLASS OF 1915

In June, 45 years ago, a group of young men were graduated at West Point and commissioned as officers of the United States Army. They came out of the military academy into an ominous world: terrible battles were being waged at Gallipoli, in Artois, in Poland; the United States was uneasily contemplating a revolution-torn Mexico on its southern border; among warring nations the conventionally tiny Regular Army seemed even smaller than usual. It was not difficult to prophesy that the class of 1915 would find employment.

It did—in 3 wars. And it served its country faithfully in all of them. Purely as a matter of timing, it would not be surprising to find the class of 1915 winning stars on the battlefields that history provided for it. But one member attained the highest office in the gift of the American people—President Eisenhower; two received the highest military rank and office—Eisenhower and Bradley, five-star generals and Chiefs of Staff; two more became four-star generals—Van Fleet and McNarney; in all, 59 generals, from brigadier to general of the Army, came out of a class of 164. That is a great record for even so effective an institution as West Point.

When one considers the heavy responsibilities these men bore in war and peace, and especially the burdens that have rested upon the chief of all of them, Dwight D. Eisenhower, the petulant explosions of Nikita Khrushchev can seem only childish. There have been complaints, in the services and outside, of the "trade schools"—West Point and Annapolis thus far; the new Air Force Academy will doubtless come in for its share. But certainly the class of 1915 demonstrates that not only military skills but duty and patriotism are inculcated at the Point and that these qualities reveal themselves in the White House as well as in the field. The class of 1915 has deserved well of the Republic, and its 45th reunion supplies an opportunity to say so.

Local Boy Makes Good

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of May 26, 1960, which comments upon the business, philanthropic and public service record of the Honorable Andrew J. Sordoni, founder and president of the Sordoni Enterprises, with main offices in Wilkes-Barre, who recently completed a half century in business.

LOCAL BOY MAKES GOOD

Andrew J. Sordini has proof positive today that he has arrived, that he has made good, that he is an outstanding success. It came last night when he was honored by his home town, Nanticoke. At the annual dinner of the Nanticoke Chamber of Commerce, he received a plaque, congratulating him, as a native son, on 50 years in business.

No man, it has been written, is a hero to his valet. And this has been paraphrased to include his home town, the implication being that familiarity detracts from fame, if not reputation. Mr. Sordoni is one of the notable exceptions to the rule, certifying to the stature he has acquired in a career that took him from the mines where he earned 10 cents an hour to a leading U.S.

industrialist who heads enterprises with a payroll of $50,000 a day.

Nanticoke's pride in the achievements of Andrew Sordoni is understandable. Fortunately, the eminence he has attained in business, in philanthropy, and in public service is such that not only Nanticoke, but Wilkes-Barre, the West Side, Luzerne County and Pennsylvania are able to bask in the shadow of his attainments, with enough room left over for his country which he served with fidelity as a soldier as well as a private citizen.

Characteristically, Mr. Sordoni rose to the occasion last night when he attributed whatever success he may have had to his parents, with special emphasis on the counsel of his gifted mother who taught him to be sure what he was undertaking was right and then do it. That has been the guiding philosophy of Sordoni Enterprises. The distinction Andrew Sordoni has attained in the community, in the Commonwealth and in the country attests not only to the wisdom of his mother, but to his own acumen as a dutiful son in heeding her advice while standing on his own two feet.

Twentieth Annual Labor Mass Sponsored by Building Trades Council of Chicago and Cook County

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. PUCINSKI. Mr. Speaker, recently I had the pleasure of attending the 20th Annual Labor Mass sponsored by the Building Trades Council of Chicago and Cook County, which was celebrated at St. Viator Church in my district.

This annual Mass is dedicated to the members of the building trades council who passed away during the preceding year. I believe Mr. Earl McMahon, president of the council, and his entire organization deserve the highest commendation for arranging this annual Mass, which gives the members of this council an opportunity not only to pay tribute to their deceased colleagues, but also in silent prayer to reflect on the aims and responsibilities of the labor movement.

Mr. Speaker, I am taking this opportunity to include in my remarks today the sermon delivered during this 20th Annual Labor Mass by the Reverend John W. Stafford, C.S.V., Provincial, Chicago Province, the Clerics of St. Viator. I believe Reverend Stafford's inspiring message defines the ideals of the American labor movement, as seen through the eyes of a servant of God, more eloquently than anything I might say.

Reverend Stafford's sermon follows:

SERMON DELIVERED AT THE 20TH ANNUAL LABOR MASS, SPONSORED BY THE BUILDING TRADES COUNCIL OF CHICAGO AND COOK COUNTY, ST. VIATOR CHURCH, CHICAGO, ILL., MAY 7, 1960, BY FATHER JOHN W. STAFFORD, C.S.V. PROVINCIAL, CHICAGO PROVINCE, THE CLERICS OF ST. VIATOR

One of the most touching events in the life of our Divine Lord is recorded in the 21st chapter of the Holy Gospel according to St. John. It was after the resurrection. The apostles were still employed in their labor as fishermen, not yet having become full-time fishers of men. In St. John's chronicle, Peter one day said: "I am going fishing." Six of the disciples, James and John, Nathaniel and Thomas, and two others, said: "We also are going with thee." St. John records simply, as I am sure you have heard often of other fishermen: "That night they caught nothing." As the day broke forth in splendor, Jesus was standing on the beach, and said to them, not without humor, we can reverently surmise: "Did you catch any fish?" Being God and knowing all things He knew perfectly will they had caught nothing. They answered, as have thousands of other fishermen, with a simple "No." Then Jesus told them to cast to the right of the boat. They did, and they were unable to draw up the net for the great number of fishes. At that, John recognized the Lord, and Peter, impetuous as usual, jumped into the sea to swim to His Beloved Master. Soon after, those in the boat landed, to find that Jesus had a fire ready, with a fish on it, and bread. But He asked the disciples for some of the fish they had just caught. And after it was cooked. He served it to them. Thus, our Divine Lord treated His fishermen, His laborers, with one of the most wonderful of this world's gifts, an early morning breakfast on the fish one has just brought in oneself.

This is how our Lord treats His friends: with understanding, with infinite delicacy and respect, with that wondrous personal touch that delights the heart. Although He set up an organization of laborers, His church, to do His work over the centuries, He wants us never to forget that He is the personal God, the personal friend, of each of us.

You men and women in organized labor are convinced, just as was our Divine Lord, that an organization is needed to achieve your ends. The purposes of our Lord's organization were purely spiritual, to guide men to their final purpose in heaven. Nevertheless the organization He founded was to function in this world, and much of the business of this world is also its business, for men must strive to live together in justice and charity and peace and neighborliness if they are to achieve the salvation of their souls. Hence Our Lord preached and enjoined justice and charity, and peace and neighborliness—the laborer is worthy of his hire, and there must be a day's labor for a day's pay. Sharp practices are against His Law, and even if the law of the land may be gotten round, the Law of God written in our hearts and delivered to us by God Himself must be observed. So the principles of Christ are applicable to the business of this world. An organization, established by God, is to continue in the world to assist men to apply these principles of Christ.

So, too, labor recognizes that many of its rights can be safeguarded only by organization. It is a tribute to your faith in the ideal that man does not live by bread alone that you have dedicated this 20th Annual Labor Mass to the members of your affiliated organizations who have died during the past year, and for the spiritual needs of labor. It is also a tribute to your faith in the ideal that man does not live by bread alone that, led by your sponsoring organization today, the Building Trades Council of Chicago and Cook County, you have been most generous in supporting educational and charitable organizations. We of the Viatorians are grateful from our hearts for all you have done to help us educate young men to the Sacred Priesthood. I am sure that the graces of many Masses offered by the Viatorian priests you have helped educate have descended upon you to bring you closer to Christ.

We see, then, Our Lord passing out the personal touch; and we see Him establishing an organization to do His work. The central thought I want to leave with you this morning is the need to make organizational work personal. An organization can be something quite impersonal, almost cold, and even irresponsible. Thus it is a healthy sign for labor as for any organization to recognize that it has spiritual needs. Perhaps the greatest need in our world today is that we do not often enough recognize our need for the spiritual. We hear much today about a spiritual revival, an awakening of interest in religion and in the things of the spirit, a renewed recognition of the dignity of man, created in the image of God and only a little less than the angels. There is clear evidence of such an awakening. But a spiritual revival must be based on a deep realization of spiritual need. It is not awareness of our goodness, but awareness of our weakness, that is the beginning of our turning back to God. Hence when more men begin to see the emptiness of our culture and the weakness of our spiritual values, then will we begin to approach the end of our era of materialism, our era of the worship of pleasure and the things of the body, with forgetfulness that man does not live by bread alone. Many in our world are still underprivileged, deprived of legitimate material needs, underfed in body and without many of the decencies of human living. But all of us, if we have the honesty to look at ourselves, can see our undernourished souls, our weakness of the things of the spirit, our emptiness of God. As we see this need, this spiritual need, more clearly, we shall, with God's help, be moved to revitalize our spirit with the things of Christ. For it is only out of a deep sense of our own emptiness and nothingness that true virtue can arise.

We are praying today, then for the spiritual needs of labor. What does that mean? At an organizational level it means that we ask God to let labor see its problems as well as its triumphs, to continue, humbly and without arrogance the task of bringing Christ's justice and Christ's charity to all those who are themselves without arrogence and humble. At the organizational level please God that labor may continue its splendid work of aiding in the educational, charitable, and religious activities of our land. At the organizational level labor may well become, after the church, the greatest spokesman of our century for the rights of man. And in the view of many, when the history of this century will have been written, it may well be that the headings of the chapters will not be the atomic bomb or the conquest of interstellar space, or any other of the epochal technological triumphs of our age, but rather the raising of millions of men literally from the gutter to hold up their heads in grateful and humble dignity as the sons of God. And in these chapters the story of organized labor in our century will find its place. The spiritual needs of labor as an organization, then, will be to continue to fight for the rights of man under the banner of God. For these needs today we pray.

I venture to declare that, even more important than the spiritual needs of labor as an organization, are the spiritual needs of laborers as men. Our Lord on the seashore did not serve bread and newly caught fish to an organization, He served seven men. The personal touch of Christ is a touching of the hearts and lives of persons. Your spiritual influence as men will be more important than your influence as an organization. The ideals of an organization may indeed be only a reflection of the ideals of Christ, but they are lived realities only in the lives of men. The lives of all of us touch countless lives of others. You are all members of families, with daily chances to be apostles of Christ preaching in your family lives the truths of Christ. We are all

in daily contact with others on the job, socially, at recreation; in all these contacts we act as individuals. We will be able to bring spiritual renewal to others if we ourselves are reborn in Christ. Justice and charity and peace and neighborliness are important mottoes and slogans at the organizational level; at the personal level they must be lived in the lives of each of us. And it is especially for these spiritual needs of labor that we pray today, the needs of each, the needs of one and all, to preach Christ in our lives.

Our Lord treats his friends with understanding, with infinite delicacy and respect, with that wondrous personal touch that delights the heart. He wants us to come to Him, too, in this intimately personal way. He wants us to think of Him as often as we can during the day, not only during our prayers, but during our work and our play. He wants us to speak to Him, not only in gratitude, after sins forgiven in confession, or in the close communion of the Blessed Sacrament; but often during the day, to thank Him when things are going great, to plead with Him for help when things seem to fall apart, to sing to Him in praise whether our hearts are joyous or loaded with sorrow. He wants us to be happy, as He himself is now happy in heaven after His sufferings and death for us on earth; and He knows that the only way we can be truly happy, even in this life of sorrow and trial, is by being close to Him. "Come to me, all you who labor and are heavily burdened, and I will refresh you." This is His invitation to us. And we come to Him simply by bending our wills to His, by doing the best we can with the help of His strength to keep His Commandments. This is the great spiritual need of all who labor, the great spiritual need of us all.

May God reward you for being here today, for helping those who are trying to do God's work; may He reward you for praying for all your faithful departed, and for the spiritual needs of all those who labor. May He keep you all, individually and personally, close to himself forever.

Gen. I. D. White and the Republic of Korea

EXTENSION OF REMARKS
OF
HON. DANIEL K. INOUYE
OF HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, June 10, 1960

Mr. INOUYE. Mr. Speaker, I am inclined to think that, because of the way we are preoccupied with our continuing legislative duties, we sometimes overlook, or fail to recognize events that are occurring in the international field which are of great significance to us.

During the past several weeks the United States has been gravely concerned in a problem of international relations which is most unique and virtually without precedent. I refer to the uprising in Korea. Please consider with me, for a moment, the truly explosive nature of these uprisings. Korea is a country which has, or had, a very strong central government; it has, or had, a large and powerful police force; and the third largest army in the world, well trained and well equipped. In addition to this there is presently within the moundaries of South Korea a formidable battle-ready military force of some 30,000 strong, of a foreign country—the United States.

Under such a condition it is reasonable to assume that any widespread uprising against the established government would afford any group, large or small, an excellent opportunity to demonstrate their antagonism, animosity, dislike, or even slight disfavor, against this foreign military force, or other foreign nationals in their midst. Is it not a most significant thing that not only was there no large-scale demonstration against the United States; the condition was completely the reverse. There has not been reported a single incident, even by a single person, directed against the presence of the U.S. personnel in Korea. No U.S. property, and no private property of U.S. citizens was intentionally destroyed or damaged. No American was intentionally injured although two were hurt by accident and one by mistake. Those Americans who were inadvertently caught in the surge of thousands of demonstrators were not harmed, molested, impeded in any way and upon their being recognized as Americans, some were actually cheered by the crowd. The American flag was fully respected.

How then can we account for this most amazing fact that not one person even so much as raised his voice against the United States. I think I know part of the answer, and I think we should all acknowledge it. You can be assured it was not a coincidence, it did not just happen.

It was brought about primarily by the imaginative planning on the part of our top military commanders in the Pacific area and their ability to recognize and meet the challenge of change as it pertains to our Armed Forces today. As we become more and more deeply involved in international relations, it becomes increasingly important that all of the resources of the United States be utilized to the fullest. These men of whom I speak are fully aware that the Army abroad is one of our most potent influences in the field of international relations.

In the early spring of 1957, a series of unfortunate incidents arose between the Korean people and our military personnel which brought relations to a very low ebb. Pilferages and larcenies were rampant; the Army was forced to commit large numbers of combat personnel to the sole duty of safeguarding our military supplies and our soldiers were being goaded to the point of retaliation without regard to local law. It was a situation that could not continue and demanded alleviation. To that end, Gen. I. D. White, our present Commander in Chief, U.S. Army, Pacific, who was then commanding the 8th U.S. Army in Korea, caused a detailed survey to be made of the causes and consequences of these unfortunate incidents and armed therewith requested a conference with the appropriate Korean officials at the highest level. In the forceful manner of an able field commander, General White made it quite plain to all concerned that the situation, as it then existed, could no longer be tolerated and positive remedial action was required on the part of the Korean Government. He proposed that there be established community relations councils, which councils were to consist of local Korean officials, police personnel, the local U.S. Army commander and members of his staff, and where considered appropriate personnel of the local Korean Army commander's staff. The proposal was readily accepted by the Korean ministers and the program was immediately put into effect. Orders were issued from the Army headquarters to the corps commanders, division commanders, down through the regimental, battalion, company, and platoon commanders, so as to reach not only all echelons of command but to every individual soldier of the command. Better relations based on mutual respect and understanding were to be developed and maintained with the Korean people and the Korean authorities. This was not a collateral undertaking, but a military operation in the truest sense. Correspondingly, similar instructions were issued by the Korean officials. The councils were established, constituted as indicated above, and from then to the present time the great bulk of any misunderstanding, differences of opinion, and so forth, has been resolved without any uncontrollable serious incidents. In other words, by mutual understanding and cooperation, the problems were solved before they were started.

To give additional meaning to this undertaking, it was incorporated into the Armed Forces assistance to Korea program—AFAK. As you may not know certain moneys, at the present time approximately a million dollars a year, are provided to the Army for the purpose of assisting the Korean population in reconstructing their war-torn country and to integrate the efforts of the military and civilians in an all-out effort to stabilize the economy of the country. It was felt that additional good will could be generated by incorporating the Armed Forces Assistance to Korea Program into the Community Relations Program whereby the local Korean officials and people, in coordination with the local American commanders, could have a voice in recommending how the moneys provided to the Army could be used most beneficially in their particular communities. Bear in mind that this program is a most extensive one. Its accomplishments include the construction of some 1,500 schools, 400 civic buildings, 320 public health facilities, 275 orphanages, 250 churches, 121 public utility installations, not to speak of greater amounts of medical supplies, work on bridges, highways, reclamation and flood control projects, and other endeavors beneficial to Koreans in all walks of life. These programs have had a great impact upon the thinking of the Korean people generally. They can now associate good things, such as I have just mentioned, that they presently have, and which they did not have before, with the American and Republic of Korea Armies. They have come to look upon these armies as being a source of good rather than solely as instruments

of force. New meaning was given to the military uniform in Korea and through all elements of the civilian population soldiers are welcomed and respected.

When Headquarters U.S. Army, Pacific, was reorganized in Hawaii and General White was placed in command, there was constituted on his general staff a civil affairs section. The prime duty of this section, under the personal direction of General White, is to assure that all of the capabilities of the Army Establishment are utilized to further the good will and mutual understanding between the military personnel and the civilian communities within the U.S. Army, Pacific area wherein our troops are stationed.

It required a widespread uprising to bring to light the great benefits of such a program. Not only had the day-to-day operations in Korea benefited immeasurably by these efforts, but a great stockpile of good will had been created. It is now history that, when put to the task, this imaginative and energetic program withstood any threat of U.S. personnel. Not to be overly dramatic, but without the foresight of our outstanding military leaders in the Pacific, those who regrettably lost their lives in the Korean uprisings could well have included U.S. soldiers and civilians. To all those who aided in accomplishing this great work, it must be most gratifying; and to us here in the Congress it is most reassuring.

Military Construction Appropriation Bill, 1961

SPEECH
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12231) making appropriations for military construction for the Department of Defense for the fiscal year ending June 30, 1961, and for other purposes.

Mr. GEORGE. Mr. Chairman, the remarks of the distinguished gentlemen from Florida and California [Mr. SIKES and Mr. SHEPPARD], have certainly impressed upon the Members of this body the importance of maintaining a good vigil in connection with projects and undertakings of the Department of Defense.

Of course, Mr. Chairman, it is realized that the legislative branch of Government cannot trespass upon the functions of the Executive, but where so many billions of dollars are expended every year, this committee performs a distinct service to the taxpaying public in policing, to the extent possible, the expenditures of the Department of Defense.

In 1957, the Sunflower Ordnance Works near Lawrence, Kans., was placed on a standby basis. There is over one-half billion dollars invested in Sunflower, which consists of over 10,000 acres, 3,271 permanent buildings, 28 miles of standard gage railroad, 43 miles of narrow gage railroad, and is complete with modern utilities, ample nitric acid, nitrocellulose and nitroglycerin capacity and facilities, and modern equipment. Sunflower is maintained in excellent condition, and is the property of the Federal Government under control of the Army.

This plant was designed and equipped to produce solvent type single- and double-base extruded propelants. It was later modernized to produce triple-base and solventless double-base propellants, and it is presently equipped to produce completely finished extruded grains for many of the military rockets.

With the land and equipment and the excellent labor force available, it seems grossly unreasonable that this plant should stand idle when other branches of the armed services find it necessary to acquire sites and spend millions of dollars on structures and equipment.

The outstanding efforts of the gentlemen from Florida and California, together with those of the distinguished gentlemen from Texas and the members of their committee, have no doubt saved the taxpayers billions upon billions of dollars by their attempts to compel the Department of Defense to use existing facilities instead of acquiring and constructing new ones.

No one in my district, Mr. Chairman, would want to see the Sunflower Ordnance Works reactivated if it is not needed, but when the people of that area read of new construction and new equipment and the great costs incurred they, of course, wonder why the one-half-billion-dollar investment at Sunflower is not being utilized.

I hope, Mr. Chairman, that officials in the Defense Department heed the sound advice of this committee.

H. R. 12263—Amistad Dam and Reservoir

SPEECH
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 12263) to authorize the conclusion of an agreement for the joint construction by the United States and Mexico of a major international storage dam on the Rio Grande in accordance with the provisions of the treaty of February 3, 1944, with Mexico, and for other purposes.

Mr. ASPINALL. Mr. Chairman, I would like to comment briefly on H.R. 12263 and certain aspects of the Amistad project which the bill would authorize. First, let me say that I support this bill and I believe that this is a meritorious development because of the benefits it will produce and because of its importance in this Nation's relationship with Mexico. I understand that we are committed by treaty to participate jointly with Mexico in the development of the Rio Grande including the construction of this project. I have been told that Mexico is ready and anxious to proceed with its part of this undertaking and certainly I believe that the United States should not be placed in the position of delaying this important international dam.

My one concern with respect to this project goes to a matter I have discussed in the House many times. It goes to the question of treating fairly and alike everyone benefiting from our water resources development programs. Recently, when we were considering the Norman project legislation, I pointed out that our water development projects should be treated alike with respect to the payment of interest. I have stated on other occasions that our water resources development programs, regardless of which executive department they come under, should be subject to the same policies and procedures with respect to allocations, reimbursement, and so forth. In comparison with irrigation and municipal water beneficiaries of other Federal programs who are required to repay an equitable portion of the project cost, such beneficiaries from the operations of the Amistad Dam and Reservoir are required to pay nothing. I have heard that they are unwilling to pay. It appears to me that the conservation beneficiaries of this development, as well as those of the existing Falcon Dam and Reservoir, are taking advantage of our treaty commitment to get a free ride.

According to the committee report on H.R. 12263, almost $2 million in primary irrigation and municipal water benefits will accrue annually to the water users in the area; however, under the bill, they will pay nothing. It is difficult to explain to beneficiaries of similar developments, but under other programs requiring reimbursement, why they are treated differently. It is also very difficult, with precedents such as this, for those of us who are responsible for legislation on similar projects under other programs to explain to the sponsors of these projects why we cannot bring legislation to the floor of the House unless they meet certain rigid reimbursement requirements.

In summary, let me say again that I am not criticizing this project because I think it is a worthwhile project and is necessary under our treaty with Mexico. I am disappointed, however, that those who will benefit from the conservation features of this project, by their unwillingness to pay for the tremendous benefits they will receive, are taking advantage of our treaty commitments to construct the project and are placing the financial burden on Uncle Sam.

Stuart Chase on World War III

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. PORTER. Mr. Speaker, in an eloquent and thoughtful letter on social and

economic issues, Stuart Chase writes: "Whoever first presses the button to light the hydrogen suns of world war III will himself be consumed."

His letter to the New York Times, June 7, 1960, should be read by every American citizen, particularly those who are in positions of responsibility. He restates a familiar thesis but does so with his usual flair combining fact and reason with forceful persuasiveness.

His letter especially should be read by those political leaders who believe that a "hard line" is the way to avert nuclear conflict.

Under unanimous consent I am including the text of his letter:

TO MAKE OUR PLANET SECURE—SUMMITS, OLD-LINE DIPLOMACY HELD OUTMODED BY MODERN WEAPONRY

To the EDITOR OF THE NEW YORK TIMES:

You quoted the Peiping Review on May 29, saying that the survivors of a nuclear war (presumably Chinese) would rear a glorious civilization on the ruins of capitalistic imperialism. So why, the Review asks in effect, work for coexistence and East-West negotiations?

The late summit conference broke up before it started. But if it had proceeded on schedule, without preliminary blunders by the United States and subsequent histrionics by Mr. Khrushchev, would it have resolved the question of Berlin, hastened disarmament, banned atomic tests? I think not.

The probabilities of anything constructive coming out of a conference of this design have always been remote. A little relaxation of tension might have been won, but not those firm guarantees against ultimate incineration for which the world hopes.

It is doubtful if old-line diplomacy, urged by some experts—the diplomacy of Metternich, Disraeli, John Hay—would be an improvement, although it would certainly be quieter, without the brassy racket of the mass media. The great diplomats of the past were committed to defend their nation or alliance against all others, the in-group against the out. Always at the end of their bargaining, no matter how smooth the phrasing, lay naked power. Our broadsides are heavier than your broadsides.

CAPACITY FOR DESTRUCTION

But now, in 1960, we cannot use our broadsides. Back of our words lies a futile threat. The United States even in 1958, says Gerard Piel, had stockpiled the power to destroy Russia as a going society 25 times over, while Russia had enough to destroy the United States 10 times over.

Whoever first presses the button to light the hydrogen suns of world war III will himself be consumed. No nation can win a nuclear encounter, for the objectives will be obliterated in the war itself. Suppose that—our patience exhausted, as Hitler used to say—we should decide to fight over Berlin. Within a matter of minutes Berlin is extremely likely to be a radioactive heap of rubble.

Nor would the result be confined to mutual suicide. Fallout from the hundreds of megaton weapons rained on Russia, the United States, and the NATO nations would poison the planet for years. If it did not kill all animals and people in the manner of "On the Beach," it would gravely damage the pool of genes upon which the race depends. When Mao, the tenderhearted fellow, boasts that only 300 million Chinese would be eliminated the first day or two, he neglects the effects of fallout on the other 300 million.

For a conference between East and West to succeed, its delegates must represent all humanity, as well as the homeland. This is not another plea for the brotherhood of man—a plea stanchly resisted by diplomats down the ages; this is a sober, practical recognition of the technological imperative which now grips everyone alive.

Neither summit meetings, in a blaze of flashlights and propaganda, nor the old diplomacy can deal with the monstrous weaponry of today. Where are the Americans, the Russians, the men of other nations who will enter a conference pledged to make the planet secure?

STUART CHASE.

GEORGETOWN, CONN., *May 31, 1960.*

Honoring Its 1952 Commitment, West Germany Moves To Pay Its Citizens for War Losses by Allied Seizure of German Property Abroad

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. ROBISON. Mr. Speaker, to those of us who have had a strong and continuing interest in the problem of vested enemy assets, there has recently been encouraging news from Bonn indicating that the Federal Republic of Germany, honoring its 1952 commitments to the Western Allied Powers, will soon begin to compensate its citizens for losses caused by the seizure, during World War II, of German property abroad by the Allied Powers.

The first indication of this action was a statement made on the floor of the Bundestag on April 7, 1960, indicating the clear intention of the Government to soon begin compensation payments. This was followed by a story by Mr. Arthur J. Olsen in the New York Times of June 3, 1960.

This is indeed heartening news to those of us who have advocated a "sale" rather than a "return" policy for vested enemy assets now held by the Office of Alien Property, Department of Justice. The chief remaining property is, of course, the General Aniline & Film Corp.

Mr. Speaker, this recent action on the part of the West German Government destroyed one of the major arguments against enactment of H.R. 404, H. R. 1345 and S. 1103, by Representative O'BRIEN of New York, myself, and Senator KEATING, respectively.

Under permission to extend my remarks, I include a letter from Assistant Secretary of State William B. Macomber, Jr., reporting the Bundestag statement and the New York Times story of June 3, 1960, which outlines the proposed action and background information:

DEPARTMENT OF STATE,
Washington, May 19, 1960.

Hon. HOWARD W. ROBISON,
House of Representatives.

DEAR MR. ROBISON: I refer to your request for information concerning an exchange which took place on the floor of the Bundestag of the Federal Republic of Germany with regard to compensation for the losses of German citizens arising out of World War II.

According to a report which the Department has received from the American Embassy at Bonn, this exchange took place during the question and answer period in the Bundestag on April 7, 1960. On this occasion, the State Secretary in the Federal Ministry of Finance, Dr. Hettlage, answered a question which had been submitted by Dr. Wahl, a Deputy from the CDU party. The question, which was in two parts, read as follows:

"How far have preparations progessed toward the settlement, as specifically provided in the General War Sequel Law, to compensate persons affected by the loss of their property abroad and when can such proposal be expected?

"Should not an advance settlement be made at least for the benefit of older people over and above what can at present be done in hardship cases?"

The statement in reply made by State Secretary Hettlage was as follows:

"Mr. Speaker, ladies and gentlemen, the question submitted by Professor Wahl concerns the settlement of damages resulting from reparations. The General War Sequel Law has reserved the settlement of reparation damages for future special legislation. Preparations in the Federal Ministry of Finance for such legislation are far advanced. Unfortunately, they are made difficult by differences of opinions between the Ministry and the associations of claimants concerning the legal nature of the claim for compensation.

"The associations maintain that unlike other persons who have suffered damages arising from the war, persons who have been injured as a result of reparations have a claim for full compensation in accordance with the constitutional principles governing compensation for expropriation. The Federal Ministry of Finance, on the other hand, considers that, on legal and political grounds, compensation can be granted to these claimants only in accordance with the principles governing the equalization of burdens. The Ministry of Finance has on several occasions suggested that these legal questions be clarified in a test case before the Federal Constitutional Court. Unfortunately, however, nothing has as yet been done along these lines. It may, however, be expected that the Federal Constiutional Court will make a ruling on these fundamental legal questions within the forseeable future.

"In order to avoid hardship which may result from this uncertainty with respect to the legal basis of the compensation claim of persons having suffered damages as a result of reparations, the Federal Ministry of Finance is preparing directives for a provisional settlement. According to these directives persons of advanced age or persons in economic difficulties shall receive payments on a priority basis. While the general war sequel law provides only for grants-in-aid to old and disabled persons, these persons, under the directives now in the stage of preparation, shall receive noninterest-bearing advance payments, viz genuine compensation in anticipation of future compensation. Conditions and extent of such provisional assistance shall be determined in accordance with the principles governing the equalization of burdens. The 1960 budget will contain the necessary budgetary provisions for such payments."

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

BONN ACTS TO PAY ON WAR SEIZURES—BID TO COMPENSATE CITIZENS INDICATES SLIM HOPE FOR REGAINING ASSETS IN UNITED STATES

(By Arthur J. Olsen)

BONN, GERMANY, June 2.—Eight years after giving its formal promise, the West German Government has now moved to compensate its citizens for losses caused by wartime Allied seizures of German property.

The decision is seen here as a tacit admission that the chances of getting back any of $500 million in assets seized in the United States are poor indeed.

Cash payments to natural persons only will be indirect and paid under highly restrictive conditions. By a rough estimate no more than $50 million can be disbursed in nonrepayable "loans" authorized by an unpublicized May 20 administrative decision of the Federal Cabinet.

The Finance Ministry will be ready to receive applications in about 3 months.

AMOUNT SEQUESTERED IN UNITED STATES

In the United States alone $400 million in German-owned assets was sequestered during World War II. The value of this property—much of it already sold off and the cash disbursed—has since risen to an estimated total of $550 million.

In 1952 the Bonn government pledged to the Western Allied Powers to compensate its citizens for the loss. This was part of a bargain by which the victor nations agreed not to exact war reparations from West Germany.

Although the commitment was reaffirmed in 1954, Bonn instead bent its efforts to obtain return of the sequestered assets.

The United States offered in 1955 as "an act of grace" to give back the holdings of all natural persons up to a value of $10,000. This offer was turned down, however, and the demand for "full return" was pressed on the legal principle of the sanctity of private property.

Sentiment in Washington has since turned sharply against the West German claim. The administration is committed to liquidate all vested enemy assets and use the proceeds to compensate American citizens who suffered property losses abroad during the war.

ADENAUER RAISED QUESTION

Chancellor Adenauer raised the assets question again during his visit to Washington in March. He came home apparently convinced that the full-return demand pressed upon him by West German corporate interests, was no longer realistic.

The Cabinet directive, however, is carefully framed to hold open the door for renewed efforts to obtain the return of seized assets or their equivalent value. Large financial interests have opposed all previous compensation plans—and this one as well—on the ground that West Germany would seem to be giving up the struggle in Washington.

The May 20 directive merely makes administrative changes in the General War Consequences Act, a 1951 law that provides for financial assistance to persons who suffered particular material losses as a result of the war.

It derives from the equalization-of-burdens principle whereby citizens who escaped major war losses are assessed, through taxation, to help their less fortunate countrymen.

The new directive adds to the categories of those entitled to financial assistance individuals who suffered losses abroad from postwar dismantling and—under certain circumstances—from Allied recapture of properties in West Germany.

These persons will qualify for interest-free loans, with repayment required only if a foreign entity makes good the original loss.

Corporations and shareholders in former German corporate assets abroad are excluded.

The directive limits eligible borrowers to natural persons living in West Germany who are in hardship, who have special problems of educating dependents, or who have reached the age of 65.

Lights Up on Broadway

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1960

Mr. LINDSAY. Mr. Speaker, the theater strike in New York is over, which is happy news for everyone. A compromise between the producers and Actors Equity was reached which appears to be fair and equitable.

What has been achieved, however, is a short-range solution. The long-range solution to the problems of the theater industry in New York City remain. They will not be solved without intelligent planning and a deep and continuing interest by the city administration. The theater is one of the chief things that contributes to New York's greatness. Certainly it is one of the reasons the 17th Congressional District of Manhattan, which I am honored to represent, is the most exciting congressional district in the country—at least it is in this particular Congressman's judgment. The 17th has within it most of the Broadway and off-Broadway theaters in New York.

I am pleased in include in the Appendix of the RECORD, along with these remarks, an excellent editorial which appeared in this morning's New York Herald Tribune, entitled "Lights Up on Broadway":

LIGHTS UP ON BROADWAY

Monday isn't one of the most spectacular theater nights of the week, as a regular thing, but many New Yorkers are going to count tonight as one of the big evenings of the season. For the strike is over, even if its effects are not, and all through the theater district actors will be acting and audiences watching and listening—which has been the way with the theater from the beginning of time.

We expect to be hearing about the 10-day dispute that darkened the theaters for a considerable time to come, for the settlement left a good many economic loose ends still to be tied. But these are matters that should be straightened out in discussions among the parties concerned, not through strikes, lockouts, and the other violent manifestations of a labor dispute.

If the Equity strike demonstrated anything, it was that the whole city is immediately concerned with the affairs of the Broadway theater. People who come in, sometimes from great distances, to see a "show" leave money not only at the box-office but elsewhere as well. Besides, it isn't merely an economic matter. New York takes pride in its legitimate theater, for it is the only city in the entire country that has it on a year-round, major scale. Shows have shakedown tryouts in other towns before they come here, and if they're hits in New York, they go out on the road. But New York is what counts, for it's the showcase of America's theatrical culture. We all have a stake in keeping it bright and flourishing.

So tonight at 8:40 a lot of people on both sides of the footlights will be feeling happy. Broadway will go back to being Broadway; off-Broadway to being off-Broadway, and New York to being New York. The lights are on again; let's hope they never go out.

Another Attempt by Department of Agriculture To Weaken Poultry Products Inspection Act Must Be Defeated

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mrs. SULLIVAN. Mr. Speaker, the Members will remember that on May 10 we had a discussion here in the House about certain language proposed in H.R. 12117, the Agriculture appropriation bill for 1961, bearing on the poultry inspection program. As a result of the questions I raised that day in interrogating the chairman of the Appropriations Subcommittee handling the bill, it became obvious that the language in question was legislation on an appropriation bill and would be subject to a point of order the following day. The point of order was raised the next day and the language in question was deleted from the bill, along with some additional funds for poultry inspection which the bill would have contained had the language in question been agreed to.

I could not agree to that language, for it would have drastically weakened the law, and I am glad the point of order was raised in my absence from Washington by our colleague from Michigan [Mr. DINGELL] and was sustained. That action knocked out an extra $500,000 for poultry inspection. I had hoped the Senate would not only restore this $500,000 but add an additional $500,000 besides to cover all of the costs in fiscal 1961 of inspecting all plants engaged in processing of poultry for interstate commerce. About 300 plants engaged in further processing—making soups, pies, and so forth—have been exempted from the law for the past 18 months, but the exemptions automatically expire on June 30 and they must then be brought in under the compulsory program, with the Government paying in full the cost of such inspection just as it does now in all of the slaughtering and eviscerating plants.

Although the Senate did not provide any of the additional money poultry inspection will require in the coming year, the Senate Committee on Appropriations made clear that it was prepared to do so as soon as the formal request for such supplementary funds was forwarded to Congress by the President. So far, the administration has not asked for the additional funds it will need—funds the law now requires must be spent in the coming year on poultry inspection.

The reason no such request for additional funds has been forthcoming so far is that the Department of Agriculture has been attempting in every possible way to avoid the necessity of complying with the law beginning July 1 in connection with further processing operations. First, it sought through the appropriation bill to have language enacted which

would set up an entirely new basis for determining what plants should be inspected. This language would have provided the "out" the Department is seeking in order to avoid placing inspectors after July 1 in the plants processing into soups, pies, and so forth, poultry slaughtered elsewhere. When that effort failed on the appropriation bill, it then urgently requested enactment of an amendment to the Poultry Products Inspection Act of 1957 to give the Secretary wide discretion—permanently—to exempt any poultry plant he chooses from the requirements of continuous inspection. A bill to achieve this purpose, H.R. 11050, was introduced at the Department's request.

It is important to keep in mind that the language of the original law is such that the amendment proposed by the Department of Agriculture in H.R. 11050 would throw the program wide open to mass exemptions. This would be intolerable.

This morning I appeared before a subcommittee of the House Committee on Agriculture considering H.R. 11050 and explained why I feel that the bill should be tabled. I think there is enough interest among Members of the Congress in this matter to warrant my putting this material in the CONGRESSIONAL RECORD Appendix, as follows:

TESTIMONY BY CONGRESSWOMAN LEONOR K. SULLIVAN, DEMOCRAT, OF MISSOURI, BEFORE HOUSE AGRICULTURE SUBCOMMITTEE CONSIDERING H.R. 11050, A BILL TO AMEND THE POULTRY PRODUCTS INSPECTION ACT, MONDAY, JUNE 13, 1960

The bill before you, introduced by the chairman of the House Agriculture Committee at the request of the Department of Agriculture, should be rejected. It is a bill to weaken the Poultry Products Inspection Act by giving the Secretary of Agriculture unlimited permanent authority to exempt from inspection any plant in the country he so chooses, on the vague and variable grounds that inspecting some plants might be impracticable. This is not a proper basis for giving such broad discretionary powers to the Secretary at this time.

A few words are certainly in order at this point about the background of this proposed legislation. The Poultry Products Inspection Act, which we enacted in August 1957, after great study and comprehensive hearings on both sides of the Capitol, provides for compulsory Federal inspection for wholesomeness for virtually all poultry and poultry products sold in interstate commerce. A second feature of the law, one not put into effect anywhere, would permit the Department of Agriculture to set up compulsory inspection programs within major marketing areas to include poultry sold there, including that sold only in intrastate commerce. But we are concerned right now only with interstate shipments.

Because of the fact that this act set up a brandnew program of Federal inspection for an agricultural commodity produced and sold in great quantity throughout the country, and because of the further fact that there was a shortage of technicians trained in poultry inspection work compared to the suddenly increased need for such people—veterinarians and lay inspectors—we provided in the original act that when the compulsory interstate inspection program went into effect generally in January 1959, the Secretary could, at his discretion, and for the convenience of the Government, temporarily exempt individual plants from inspection but only for as long as 18 months, or until July 1, 1960. It was felt that all of the available inspectors would be needed at first in the plants producing the bulk of poultry sold in interstate commerce, but that, as more inspectors were trained and became available, they could be assigned to the temporarily exempted plants, presumably smaller plants including those in somewhat remote areas.

It has not worked out in that fashion. The Secretary used the authority of this temporary exemption provision to exempt all plants engaged in the further processing of poultry products—for instance, those making chicken pies, turkey pies, soups, and so on. Most of the plants engaged in such processing work, incidentally, were so anxious to have inspection that they were willing to pay for Federal inspection during the year-and-a-half period of exemption. That was the only way they could have the right to use the U.S.-inspected-for-wholesomeness seal on their products. They therefore paid to have Federal inspectors assigned to them under the voluntary poultry inspection program run by the Department as a separate activity from the compulsory inspection program.

The bill now before you primarily represents an attempt by the Department of Agriculture to continue the present setup beyond July 1. The Department's reasons are purely budgetary. They feel that the 200 plants now paying to have their poultry products inspected would continue to do so and the 100 which have never bothered to seek inspection would perhaps eventually come in under the voluntary program. The budgetary aspects of this are twofold if the bill now before you were to pass: First, the Department would save the $1 million or so a year it will otherwise need in order to pay for compulsory inspection beginning July 1 in all 300 presently exempted plants; and secondly, it would lose the revenue it now receives from the 200 plants now paying for their inspection work under the voluntary program.

These are not valid reasons, Mr. Chairman, for opening a huge wedge into the effectiveness of the Poultry Products Inspection Act. Note that the language of the original law is such that the bill before you would open up the act to unlimited exemptions by the Secretary, not just to plants now exempt. He could find it impracticable to have inspection in all plants making this or that poultry commodity, or in all plants having fewer than so many employees, or less than so much output per day. It was our purpose in writing the act that all poultry in interstate commerce, except for some few strictly limited specific types of shipments, must be inspected for wholesomeness. There is no reason now to change the act on that point—and certainly not for the mere purpose of some budgetary sleight-of-hand.

The Department has been trying to achieve its exemptions goal this year in several ways. First, it tried to accomplish broader exemptions under the act by some far-reaching language it either suggested or accepted in the appropriation bill for the coming year. After I raised many questions on the floor as to the possible consequences to the program of the proposed appropriation language, and it was established that the language would drastically rewrite existing law on poultry inspection, the language was stricken from the appropriation bill on a point of order. Fortunately, the Senate failed to include in the appropriation bill any similar language to reduce the effectiveness or broaden the exemptions under the Poultry Products Inspection Act. As a matter of fact, the Senate Appropriations Committee ordered the Department to proceed on the assumption no change would be made in the law, and asked the Department to come forward with a supplementary appropriation request to cover the added cost beginning July 1 of inspecting plants now exempted under the temporary provision.

Mr. Chairman, I covered many aspects of this issue in some detail at the time the Agriculture appropriation bill was before the House on May 10, particularly in a series of exchanges on the House floor with the chairman of the Appropriations Subcommittee which handled the money bill. I would appreciate it if you would include in your record at this point my exchanges with Congressman WHITTEN and the subsequent remarks I made at that time in explaining the importance of continuous inspection of poultry, not only at the time of slaughter, but when the poultry slaughtered in one plant is shipped and then made into poultry products in another. The wholesomeness of such poultry at the time of slaughter is no guarantee that the poultry is still wholesome when delivered and processed in another plant halfway across the country.

I hope I have made it clear why this bill should be tabled—defeated in subcommittee—so that on July 1 the Poultry Products Inspection Act will go fully into effect on all poultry in interstate commerce as Congress originally intended and as the law now requires. The Budget Bureau will then have to release funds to the Department to cover the added cost of plant inspections on July 1 and Congress, in turn, will provide these funds through a supplemental appropriation bill. Otherwise, if the present exemptions continue beyond July 1, it will be only a question of time before meat inspection is similarly undermined on this question of further processing. Let's kill this right now.

EXCERPTS FROM DEBATE ON POULTRY INSPECTION APPROPRIATION FOR 1961 FISCAL YEAR IN HOUSE OF REPRESENTATIVES, MAY 10, 1960, IN CONNECTION WITH H.R. 12117, AGRICULTURAL APPROPRIATION BILL

Mr. WHITTEN. Mr. Chairman, I yield 5 minutes to the gentlewoman from Missouri [Mrs. SULLIVAN].

QUESTIONS ON POULTRY INSPECTION

Mrs. SULLIVAN. Mr. Chairman, I asked the chairman of the subcommittee for this time in order to obtain answers to several questions which occur to me about this appropriation bill and its accompanying report, which I think will be of great interest to every housewife.

First of all, on poultry inspection, may I ask if the additional $500,000 provided in the bill for poultry inspection will permit the continuous inspection beginning July 1, as required under the Poultry Inspection Act, of food items processed from poultry? It is my understanding from the officials of the Department that an additional $1 million over the current year's appropriation would be required for this necessary function, and I have seen other figures showing it would cost anywhere from $500,000 to $1 million more. Therefore, the question which I have very strongly in mind is whether the extra $500,000 provided in this bill will be enough to allow the Poultry Division to place inspectors on a continuing basis in all 300 plants now temporarily exempt from inspection because of a shortage of trained inspectors, but which, under the law, must have their products continually inspected beginning with the coming July 1, and at Government expense.

Mr. WHITTEN. May I say to the gentlewoman, it is my personal judgment that what is involved is what we might interpret continuous inspection to be. The committee tried to investigate fully this whole matter. It is to some degree between the Department and the processors as to protecting public health. In no instance have the inspectors in the 200 plants found anything injurious to the public health, but the proc-

essors in turn could use the stamp of the Department as part of their advertising. In fact, 200 out of the 300 do that. They definitely would like to shift the burden of that cost to the Government. The other third would like the Government to give them the inspection free so that they would be on equal terms with the others.

The Department feels, as I understand it from their testimony, that having the little plants continuously inspected is not necessary to protect the public health, but they in turn refuse to give the stamp unless they do that inspection. What we do is say to the Department, "We are giving you that much money. Inspect them to the fullest degree to protect public health, but when you do it, go ahead and issue the stamp."

We thought that was a fair solution of the problem instead of meeting it head on. Whether you have to repeal the law by providing that no funds shall be used, or whether you have a lot of inspections to get the stamp, so far as the testimony is concerned, we thought that this was the best solution we could think of, and we hope we are right.

Mrs. SULLIVAN. Mr. Chairman, if the gentleman will be patient with me the law says all processing plants in interstate commerce must have inspection. About 300 have been temporarily exempted, but beginning July 1 that exemption expires. Now will he please explain the somewhat confusing, technical language on page 17, beginning on line 2, dealing with the poultry inspection program. Does that language change existing law so far as the requirements of the Poultry Products Inspection Act are concerned? If it does not change the law, why put this language in the bill?

Mr. WHITTEN. Frankly, I would take it that it changes the law by giving the Department some say-so about what inspection is necessary to protect the public health.

Mrs. SULLIVAN. If it does change the law, as I also believe it does, is it proper for the Committee on Appropriations to change the requirements laid down for poultry inspection under legislation drafted by the legislative committee on agriculture, and enacted by Congress several years ago?

Mr. WHITTEN. If we ask for a rule and they grant it, we would have the privilege of changing it if we saw fit to do so. But, this is, frankly, subject to a point of order. We think it is better than nothing and this is the best we can do. So we have not tried to override anybody, but we do think it is the best solution that we could think of.

Mrs. SULLIVAN. The law says that all poultry moving in interstate commerce should be inspected, including products made from poultry. This language in the bill on page 17, "*Provided*, That the Department is hereby authorized and directed to make such inspection of poultry products processing plants as it deems essential to the protection of public health and to permit the use of appropriate inspection labels where it determines from such inspection that such plants operate in a manner which protects the public health, and not less than $500,000 shall be available for this purpose," seems to say it would now be up to the Secretary in his discretion to decide which processed products are to be inspected, and under what circumstances the Department should assign inspectors to such processors, and also permits, apparently, some substitute seal to be used to attest to the wholesomeness of poultry which has not actually been inspected.

Mr. WHITTEN. If the gentlewoman will yield to me, I must say I have never been a stickler about jurisdiction. We have so many problems here that if somebody were to handle some of them, I certainly would not object. The Department cannot determine which products are to be inspected, but they can determine what inspection is necessary to protect the public health. But when a legislative committee says that the Committee on Appropriations must appropriate, it looks to me as if some other group has probably stepped a little far. I think they should inspect, but I think it should be for the protection of public health and not for the stamp. But if they say that they have inspected this plant fully and adequately to protect the public health, I do not think they should be permitted to withhold the stamp.

Mrs. SULLIVAN. The point I wanted to call attention to is this: If it is to be only a spot inspection program in plants making poultry pies, poultry soups and other products containing poultry, and yet anything that goes through that processing plant would carry a seal of wholesomeness then I think we are misleading the housewife in allowing that seal to be on the product indicating that it has been inspected when it probably has not been inspected.

Mr. WHITTEN. I do not know where we should end this. But they have been inspecting 200 plants and they have not found anything that would injure the public health and according to the letters that have been sent to me, they say that they pay for it because they want to use the stamp because it is a matter of advertising. I do think if the gentlewoman would go along with this, we can work with this and see if we can resolve the situation. Again I say, only one objection and out it would go.

Mrs. SULLIVAN. But under the law, all these 300 exempted plants will have to be inspected beginning July 1, will they not?

Mr. WHITTEN. Unless the other body should put in a statement that, notwithstanding the legislation, no part of these funds can be used for such inspection. Then the law would be repealed. We do not want to do that. We try to resolve it by saying that they must inspect, but the inspection must be for the purpose of protecting the public health, and when you do inspect, to say so.

Mrs. SULLIVAN. I thank my colleague very much for his frank answers. It is clear to me that the language in the proviso in question on page 17 relaxes the strict requirements of the Poultry Products Inspection Act insofar as that act now requires the inspection of all poultry and poultry products in interstate commerce. The act permitted temporary exemption of some plants from the inspection requirements for the convenience of the Government, because it was not considered feasible to provide inspectors at the start of 1959 for every plant in the country subject to the act. There was a shortage of trained personnel in this field.

So the act as originally passed allowed this temporary exemption for 18 months of plants for which inspectors were not available. The Secretary chose to use this administrative authority to exempt from compulsory inspection all plants doing further processing of poultry into poultry products like soups, pies, and so forth, on the assumption that he would need all the trained inspectors available in January 1959 just to cover all of the slaughtering plants.

The exemptions for the further processing plants expire on July 1. The Secretary has asked Congress to amend the law so that he can continue to exempt such plants. Congress has not done so. In the meantime, many of these further processors—200 out of about 300 exempted plants—have felt it was so important to have their products inspected for wholesomeness by the Federal Government that they have paid out of their own funds to have their products continuously inspected under a voluntary inspection program operated by the Department. Under the law, however, they are entitled to the same kind of free inspection the slaughtering plants receive.

This bill provides an additional $500,000 to the poultry division to provide inspection at plants processing poultry products but the language of the proviso on page 17 gives the Secretary discretionary powers he would not otherwise possess after July 1 to exempt particular plants from inspection. As I understand it, the proviso would permit a spot check inspection program, with a seal attesting to the wholesomeness of poultry products not produced under continuous inspection.

President Eisenhower's Greetings to the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I am presenting herewith the message sent by President Dwight D. Eisenhower to the National Rivers and Harbors Congress. It is addressed to me because I am chairman of the board of this organization, which has already served over half a century in the water utilization program for this Nation. I am sure that all of us are interested in the President's views on the progress of this program:

THE WHITE HOUSE,
Washington, May 24, 1960.

Hon. OVERTON BROOKS,
Member of Congress, Chairman of the Board, National Rivers and Harbors Congress, Washington, D.C.

DEAR OVERTON: Please give my greetings to those attending the 47th annual convention of the National Rivers and Harbors Congress.

When I addressed you in 1954, I said that America would soon come to look upon water as its single greatest resource. That day is fast approaching. In subsequent letters to you I have pointed out that there must be cooperation at all levels of Government and among our individual citizens if we are to advance sound programs in this field.

Good progress has been made, but we must learn to work even closer together and improve our planning—long-range and comprehensive planning. In view of the ever-increasing annual flood damages, we must give greater consideration to flood plain zoning. We must give more attention to the provision of adequate industrial and domestic water supplies for our expanding economy. Moreover, we must take into consideration not only our water resources but also the need for development of other resources. If we follow such a course and provide a sound balance between programs, we can best assure attainment of our Nation's maximum strength and welfare.

Thank you for your past cooperation and support. I am glad to send my best wishes for a productive convention.

Sincerely,

DWIGHT D. EISENHOWER.

Mutual Security Program

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, on May 27, 1960, I placed in the CONGRESSIONAL RECORD a copy of a letter written by the national commander of the American Legion to each Member of the House urging that appropriations for the mutual security program not be cut below the levels which the President and Secretary of Defense deem necessary for our national defense.

This plea has now been joined by the commander in chief of the Veterans of Foreign Wars of the United States and the national commander of AMVETS—the American Veterans of World War II.

I ask unanimous consent that these two letters be inserted in the RECORD at this point:

AMVETS,
Washington, D.C., June 8, 1960.
The Honorable GEORGE P. MILLER,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. MILLER: AMVETS have long advocated a strong mutual security program for our Nation. At the most recent AMVETS National Convention, a resolution favoring a strong, supple, and effective mutual security program as a fundamental element of our foreign policy was unanimously adopted.

We are deeply concerned about reports appearing in the press that the Congress may reduce drastically the funds requested by the President for mutual security. Any cut in this program which plays such an essential part in our collective security program could seriously handicap our efforts to strengthen the free world.

Providing, as it does, military, technical, and economic assistance to 42 nations of the free world, this program is an integral part of U.S. national security. It serves as a major deterrent to the extension of the frontiers of communism. Its scope and effectiveness must not be permitted to lessen because of the failure to appropriate necessary funds.

It is our understanding that the House of Representatives will soon have the opportunity to vote upon the mutual security program appropriation for fiscal year 1961. We of AMVETS solicit your active support of a strong mutual security program. We respectfully urge that you support the appropriation of the funds requested by the President for this essential program.

Sincerely,

HAROLD T. BERG.

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Washington, D.C., June 9, 1960.
Hon. GEORGE P. MILLER,
Member of Congress, House Office Building,
Washington, D.C.

DEAR MR. MILLER: I am taking the liberty of writing you with respect to the President's budget request for foreign aid and military assistance funds. I have recently completed a 10-week world tour, visiting many of the newly emerging nations and have had an opportunity to observe the application and effect of U.S. foreign aid and military assistance firsthand. With some exceptions I was impressed with what I saw.

The breakdown of the Paris summit conference and subsequent events reveal clearly that whether we like it or not, foreign aid, and particularly military assistance, has become a most vital issue in our national security program. If the United States fails to provide a reasonable amount of military assistance to other countries the evidence seems rather clear, and is supported by my personal observation, that such aid will come from sources not friendly to the United States.

In past years the Veterans of Foreign Wars has taken a dim view of heavy U.S. outlays for foreign aid although we strongly supported the technical assistance program and recognized the need for some military assistance. It is my considered judgment that if there ever was justification for foreign and military aid, in the light of recent world events, such aid is now justifiable. I sincerely hope you will support the President's request for the necesary appropriations to carry out his foreign aid program. We should not curtail foreign and military aid funds at this critical time.

Sincerely yours,

LOUIS G. FELDMANN,
Commander in Chief.

H.R. 9786

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. O'HARA of Illinois. Mr. Speaker, as the only Spanish-American War veteran left in this body, I naturally am interested in the enactment of H.R. 9786, which will place on the same basis as other veterans the veterans of the Spanish-American War who are so helpless or blind as to need the regular aid and attendance of another person. It is only fair that such should be the case. I am happy that the Veterans' Committee reported the bill unanimously, and I anticipate its unanimous passage by the House.

There is one provision in the bill, however, that I would call to the attention of my comrades of the war with Spain. It gives the Spanish War veteran the option of remaining under the Spanish War Act, where if totally disabled and needing the regular attendance of a nurse he receives a maximum of $135.45 a month as against $170 under the act becoming effective July 1, 1960. But the option can be exercised only once. That means that the Spanish War veteran, having elected to go under the new pension law, would forever thereafter be under that law and not under the law governing Spanish War pensions. As Chairman TEAGUE has said, his election would be irrevocable.

If the Spanish War veteran is permanently in his present condition of total disability to the extent of requiring the regular attendance of another person, and there is little or no prospect of a change in his financial condition, it will be to his advantage to go under the new law. It will mean to him the difference between $135.45 a month and $170.

If, on the other hand, there is a change for the better in his physical or financial condition he may under the new law end up by receiving a pension less than his Spanish War pension of $101.59.

H.R. 9786 unquestionably will benefit many of my Spanish War comrades, but before electing to go under its provisions I would suggest they consult with the local, departmental, or national officers of the United Spanish War Veterans. The point to bear in mind is that an election once made is irrevocable. Each case must be decided by its own facts and circumstances.

Louisiana's Tidelands

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks I ask to have spread upon the pages of the CONGRESSIONAL RECORD House Concurrent Resolution No. 45 by Mr. Gibbs, of the State of Louisiana. This resolution appeals to Congress to take all measures to restore to the State of Louisiana revenues derived from offshore minerals development. I am heartily in favor of this resolution. It is as follows:

HOUSE CONCURRENT RESOLUTION 45

Whereas the recent decision of the Supreme Court of the United States denying rights of this State to its lawful wealth from the production of oil from submerged offshore lands has resulted in the application of one rule to other States and a different rule to the State of Louisiana, which is clearly discriminatory and based in law upon the justification of ancient treaties which never contemplated the production of minerals from such areas; and

Whereas the result of the drawing of one set of seaward boundaries for the States on the coast of the Atlantic and Pacific Oceans and of another set of boundaries for those on the coast of the Gulf of Mexico with each of the States upon the Gulf of Mexico having different boundaries, has been the allowance to all of the petroleum producing States except Louisiana of all or at least the major portion of the coastal production areas; and

Whereas this discrimination against one of the States is unwarranted in a Nation comprised of States of equal rights and dignity; and

Whereas this particular discrimination against the State of Louisiana causes a discriminatory reduction of revenue to the one State out of all of the petroleum producing States which has the greatest expense to afford roads, schools, law enforcement, judicial process, and the other benefits of State and local government to the petroleum industry and the citizens engaged in making their livelihood therein because of the swamp and marsh coastline of the State which extends across virtually the entire coastline for an inland depth in many areas of as much as 100 miles; and

Whereas the economic burden upon the State of Louisiana of providing the normal and necessary State and local governmental facilities for the petroleum industry and its

employees and equipment, such as roads, schools, and law enforcement, is greatly in excess of the burden of other coastal States having a more accessible coastline; and

Whereas the loss of revenue from petroleum production from the area which other States are allowed to receive, will necessitate the State of Louisiana being unable to provide the necessary facilities for assisting the petroleum industry to expand and develop the petroleum resource of our tidelands, with the resultant loss to the entire Nation of the benefits to be derived therefrom: Therefore be it

Resolved by the house of representatives of the State of Louisiana, the senate thereof concurring, That the Louisiana Senators and Representatives in Congress are hereby urged and requested to take all measures within their lawful powers to obtain the restoration to the State of Louisiana of the revenue derived from offshore mineral development and operations which other coastal States are allowed; and be it further

Resolved, That copies of this resolution be sent to each Louisiana Senator and Representative in Congress.

———— ————,
Speaker of the House of Representatives.

———— ————,
Lieutenant Governor and President of the Senate.

Secretary of Defense

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. BROOMFIELD. Mr. Speaker, the summit collapse has made the matter of our national security of even more interest and I, for one, am thankful for the leadership and strength which has been displayed by the Secretary of Defense, Thomas S. Gates, Jr. His policy of sitting with the Joints Chiefs of Staff has made it certain that our civilian military leadership is intimately and thoroughly familiar with the knotty problems which necessarily arise in an organization as large and complex as our Department of Defense. It has assured that his decisions are based upon a knowledge of all the facts regarding any matter under consideration. And perhaps most important of all—this policy, combined with Mr. Gates' strength of character has resulted in timely decisions in these important security questions. Civilian responsibility and control is a fundamental of our form of government and the Secretary of Defense has done much to enhance this concept.

Under leave to extend my remarks I include an editorial from one of the outstanding family newspapers in the Midwest, the Royal Oak Tribune. Mr. Phillip Miller, publisher of the Royal Oak Tribune, is a knowledgeable and conscientious newspaperman. I commend to my colleagues his reactions to a recent speech by Mr. Gates. I agree with Mr. Miller that it is heartening to find that our defenses are strong—our deterrents to aggression powerful.

The editorial follows:

[From the Royal Oak Tribune, May 3, 1960]

THE SECRETARY OF DEFENSE SAYS

(By Philip F. Miller)

When the Secretary of Defense of the United States speaks at a meeting which you are attending, you pay attention.

When his audience is one of the most critical you can find, a group of working newspapermen, you know that what he says has to be provable fact.

I heard the Secretary of Defense, Thomas S. Gates, speak to such a group the other day. The occasion was the Associated Press luncheon at the Waldorf Astoria Hotel in New York during the American Newspaper Publishers Association convention there.

He stated definitely that the U.S. defenses are strong, that their strength is a powerful deterrent to any nation thinking about making war against us.

He denied that there was any gap in the U.S. deterrent posture, that the country had been overtaken militarily by the Soviet Union, or that it was second best.

The United States, he further said, need not downgrade itself because of the sputnik. In fact, he declared, "The United States can take pride in its nuclear missile progress. The United States has put 18 satellites and 2 space probes into orbit compared with the Soviet's 6, and has 11 now in space compared with their 2."

He admitted that the Russians have developed rocket motors with greater thrust than ours. Therefore they have been able to put larger satellites into orbit.

Part of this is due, he said, to the goal which each nation seemingly has set in its guided missile program. The United States has been able to develop a nuclear warhead which has been much lighter and smaller than originally planned. Therefore the rockets needed to deliver it to any spot on earth need not be as powerful as they would be if the warhead were larger and heavier. Our efforts, therefore, have been to develop intercontinental ballistic missiles of the size needed to boost such warheads. We have been able to go faster along this line because we have worried less about power and more about precision.

On the other hand, the Soviet Union seems to have concentrated on boosting larger payloads and as an offshoot of their military program, has been able to orbit heavy satellites as well.

The United States is not neglecting such possibilities, he declared, but its main emphasis to date has been on the smaller, but nonetheless effective missile system. By this means, he stated, we have assured that there is no gap in missile potential.

Therefore our defenses remain strong and a powerful deterrent.

I'll have to admit that I felt better after listening to the Secretary give his views on how we stand. He is one man who should know.

The Challenge Is Pinpointed

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. IRWIN. Mr. Speaker, in the RECORD of June 9, I commented on the statement of Governor Rockefeller of New York State which I regarded as a remarkable contribution to vigorous and intelligent discussion of the great issues which our Nation faces in this election year.

I said that I felt Governor Rockefeller threw down a forthright challenge which I felt should be read by every American.

In today's New York Herald-Tribune, Columnist Joseph Alsop has written a column which I believe most explicitly pinpoints and evaluates the Governor's statement both as to its immediate and long-range effects.

The column:

NIXON AND ROCKEFELLER

(By Joseph Alsop)

WASHINGTON.—With most of the early returns in, it is now clear that Gov. Rockefeller has both helped and hurt Vice President NIXON by coming into the open against him. The help to NIXON is short run. The hurt is long run, which makes it no less serious.

Before examining how this can be, it is well to look into the origin of the Rockefeller statement that started the storm. The question of how Gov. Rockefeller came to say what he said last week in the way he did and when he did, is still being argued by every politician in both parties. The real answer to the question explains how one and the same statement can have been both helpful and hurtful to the Nixon cause.

In brief, then, the large Rockefeller staff has been divided into two camps, and the Governor himself has been assailed with conflicting advice, for many months past. The point at issue was whether to "speak out" (the phrase used in the hidden argument) or not to "speak out."

In other words, the men around Rockefeller have been arguing about whether the Governor should air his real opinions of the Eisenhower administration's policies. He has long regarded the administration's foreign and defense policies as hopelessly unimaginative and dangerously weak. In the same way, he has always considered the administration's social and economic policies as too narrow and backward-looking.

Every practical political consideration weighed against open expression of these opinions. Most of the Rockefeller staff and virtually all the New York Republican leaders were therefore opposed to "speaking out." But the Governor himself wanted to voice his opinions, precisely because they are deeply, even emotionally held opinions.

And the new Rockefeller public relations adviser, Emmet Hughes, who holds the same opinions with equal or greater fervor, also thought the Governor should say what was on his mind.

In the presummit period, the advocates of silence had a point that held the precarious debating balance true. It was the point that the Governor should not attack the administration in the rear, so to say, when the President was just about to embark on negotiations with the Soviets at the highest level.

After the explosion at the summit, however, this point lost all force. The Governor then issued a short comment which in reality foreshadowed the major declaration he made after his breakfast with President Eisenhower. The intervening time period was largely occupied by further staff debate about the nature and the frankness of the planned major declaration. The question, now, was whether to speak out with complete truthfulness. Rockefeller himself finally decided to mince no words; and so the bombshell was thrown.

Thus the timing and character of the Rockefeller statement are revealed as the results, primarily, of two parallel conflicts.

One was the staff conflict already described. The other was the conflict, in the Governor's own mind, between practical political prudence on the one hand and strong personal conviction on the other.

The sweat and turbulence of these inner conflicts were obviously controling, because no cool political schemer could possibly have done what Governor Rockefeller did. Above all, no cool and crafty schemer would have included in the famous statement the personal attack on Vice President NIXON that got all the headlines. The attack was included because both Governor Rockefeller and his public relations adviser have haunting doubts about NIXON'S character and capabilities, doubts which Hughes long ago voiced in public with extreme asperity.

Once this attack on NIXON was included, and after NIXON had met the attack with great dignity and shrewdness, personalities absorbed everyone's attention. It was all Rockefeller versus NIXON, without regard to the larger issues. The whole Republican Party, already committed to nominating the Vice President, at once rallied to NIXON'S side with cries of fury against Rockefeller. Among Republicans—even among Republicans generally sympathetic to the Rockefeller viewpoint—Rockefeller has suffered badly; and NIXON has been helped thereby.

But this shortrun help to NIXON is more than counterbalanced by another feature of the Rockefeller statement. With undeniable sincerity and real authority, Rockefeller has made the case against the Eisenhower administration policies that the Democrats have been too woolly minded or too cautious to make. It is just the case the Democrats are bound to make in the campaign, especially if their nominee is Senator JOHN F. KENNEDY of Massachusetts. This is the longrun hurt to NIXON. It is painfully felt.

Federal Employee Health Plan

EXTENSION OF REMARKS
OF
HON. FRANK M. KARSTEN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. KARSTEN. Mr. Speaker, I have received a large number of inquiries from Government employees regarding the several health insurance plans being offered those in the Federal service on July 1. Therefore, I have read with interest the series of articles written by Jerry Kluttz and appearing in the Washington Post and Times Herald.

Mr. Kluttz has attempted to analyze the various policies as they might affect both single persons and those with families.

I believe this information will be of help to a great many Federal employees, especially those outside of Washington, in determining the type of policy to which they may wish to subscribe and I include the articles as part of my remarks:

FEDERAL EMPLOYEE HEALTH PLAN—I

VENTURE IS WORLD'S LARGEST GROUP INSURANCE PROGRAM

(By Jerry Kluttz)

Federal and District Government employees, with a major financial assist from Uncle Sam, will share health costs for themselves and their families in a truly cooperative venture to start in early July.

Simply stated, they will contribute fixed amounts into pools, pay an estimated 10 percent overhead to about 40 insuring concerns to manage their moneys and provide health services for themselves and their families.

The result will be the world's largest employer-sponsored voluntary group health insurance program. An immediate benefit will be a sharp decline in the time-honored practice of passing the hat among the employees to give financial help to an unfortunate colleague who is suffering from a costly and bankrupting illness.

An estimated 4 million persons, 1.8 million employees and 2.2 million dependents, including roughly 500,000 in the Washington area, are expected to be covered in the $250 million-a-year project which will be administered by the Civil Service Commission.

More than 2 million regular, full-time employees will be eligible to participate in the vast undertaking, and CSC estimates that 90 percent of them will take advantage of it.

Uncle Sam will pay an estimated $115 million annually toward the cost of the extensive program, up to a maximum of half of the employee's cost, thereby making Federal jobs and careers more attractive by reducing health insurance costs to employees and their families.

The late Senator Richard Neuberger, Democrat, of Oregon, author of the health law which was approved last September, declared at the time that the program would become a "milestone" among employee fringe benefits and one of the most attractive features of working for the Government.

CSC Chairman Roger W. Jones shares the view, declaring that the program is a "significant addition to the attractiveness of Federal employment," and he has expressed the hope that employees will participate 100 percent in it.

The Government-sponsored program will open up new fields and have major impacts on other employees, both public and private, as well as on the health insurance industry and hospital and medical services here and elsewhere.

For example:

Employees will be given a choice of plans, a rarity for any group insurance program, which are usually offered on a take-it-or-leave-it basis. In the process, the health insurance industry and other employers will be given a good idea for the first time of what a large bloc of intelligent workers desires in the way of health coverage.

Other employers and employees are watching the Federal program as it unfolds, particularly those in State, county, and municipal governments.

The Dominion of Canada has set up a health program for its employees, also effective July 1. Bills were introduced this year in the State Legislatures of California and Hawaii to set up health benefits for their employees, modeled after the Federal program.

Other States, counties, and cities as well as private employers have shown an interest in the Federal health venture. New York is the only State that has a similar group contributory health plan for its employees.

Hundreds of employers in the Washington area and elsewhere will be affected by the Federal operation. They have employes who will be covered by the program because either their spouses or parents work for Uncle Sam and are eligible for health benefits as dependents.

Low-pressure methods are being used to explain the program to Government workers, and, if successful, they can revolutionize selling techniques of responsible health carriers.

Each Federal employee will be given a factual brochure on each plan for which he is eligible. CSC has advised employees to make their selections from the facts as set forth in the official documents. The brochures give equal prominence to health costs that are fully covered, partly covered, and not covered. In other words, the shortcomings as well as the benefits of each plan are given equal emphasis, a fresh approach for many insuring concerns.

CSC not only has frowned on, but it has caused some organizations to withdraw material, other than the brochures, which smacked of high-pressure selling tactics by failing to give all the facts to employees.

The Federal program is certain to step up the use of health services, hospitals, doctors, etc.

An estimated 70 percent of the eligible employees now carry some sort of health insurance, much of it for themselves only, and they must pay the full cost. Therefore, the Federal program doesn't fill a complete void.

Nevertheless, many thousands of employees who will get coverage under the Government plan are unable, because of health conditions, to buy coverage in the open market. They are those who have suffered heart attacks and who have chronic illnesses of one kind or another.

Many have had their private policies canceled following payments of large claims by insuring concerns. It follows that those in this poor risk category will make above-average use of medical services.

Furthermore, relatively few employees, probably fewer than 5 percent, carry insurance to cover costs of long and costly illnesses.

Protection against the heavy costs of cancer, heart conditions, polio, and other lingering illnesses that lead to family bankruptcies is one of the outstanding features of most of the approved plans. Employees and their dependents will be more inclined to avail themselves of health services which many of them now avoid for fear of their cost.

Some employees, not nearly as many as were expected, have postponed their retirements to August 1 and later to become eligible for the health program which they can carry into retirement with no increase in costs.

Finally, Congress is expected to approve, next year if not this year, a bill to set up a similar health program for an estimated 415,000 civil service retirees and survivors. The bill has unanimous approval of the Senate and is awaiting action of the House Post Office and Civil Service Committee.

FEDERAL EMPLOYEE HEALTH PLAN—II

NEW FEATURES OF INSURANCE PROGRAM INCLUDE 16-MONTH RATE FREEZE

(By Jerry Kluttz)

Many appealing features, generally new to the health insurance field, are carried in the Federal employee health program which will become effective in early July.

With Uncle Sam blazing the trail, workers in private industry and in other governments will seek similar benefits from their employers. Insuring concerns may offer them at a price, if a public demand develops for them.

These features as well as certain other guarantees and conditions are identical in all of the Federal plans even though the plans vary widely as to benefits, coverage, and cost. They are:

Rates are frozen for 16 months in a time of rapidly rising health costs. They can't be changed before November 1, 1961, even if some of the insuring concerns lose money on them. This means the premiums paid by Federal employees will be better bargains as rates continue their inevitable rise in the health insurance industry.

Employees who retire on immediate annuities after 12 years of service or for dis-

ability on or after the first day the system becomes effective can continue coverage for themselves and their dependents at no added cost and with the same benefits. A recent study shows that health costs of retirees are double to triple those of active workers.

Furthermore, the survivors of retirees will have the privilege of continuing coverage at the same rates paid by active workers. This same benefit will be extended to the families of employees who die while actively employed, provided they're eligible for Civil Service or other Federal survivor benefits which require a minimum of 5 years of civilian service.

In cases where employees die with less than that amount of service, the families will have the option of converting to individual policies with the same insuring firm. In either case, if there is only one eligible survivor, family coverage will automatically be changed to an individual policy.

Uncle Sam will continue to pay up to half of the health insurance cost of both retirees and survivors who are paid CS or other annuity benefits. Retiree and survivor shares of costs will be deducted from their monthly benefits paid from the CS or other retirement fund.

No regular, full-time employee can be denied coverage because of age, sex, race, physical condition, or occupation. The worst possible health risk, says a 70-year-old who has recently contracted cancer and who has a hazardous job is just as eligible as a healthy 18-year-old file clerk. No physical test or standard is required for coverage.

No waiting period for benefits, even in maternity cases. Employees and their dependents will be eligible for limited benefits even if they're hospitalized on the day the program becomes effective.

Maternity cases are one of the single largest causes of hospitalization. The wife of an employee or working wife can be paid maternity benefits if she has a baby on the first day her particular plan becomes effective.

A covered employee who leaves Government service for any reason other than retirement on an immediate annuity will have 31 days to convert to a policy with the same firm that handles his Government policy. This conversion right is guaranteed the employee and his dependents.

Equally important are the facts that the insuring companies can't require either the former employees or their dependents to pass physicals to get the converted policies, and they're forbidden to cancel the converted policies except for fraud, overinsurance, or nonpayment of premium.

The policies, of course, will be more expensive as the Government will not contribute to their cost but they won't cost more than the general public is required to pay.

During the 31 days the former employees will have to convert to individual policies, they and their dependents will have free coverage under the Government system.

Also, if either the former employee or a covered dependent is hospitalized at the end of the 31-day grace period, the benefits of his Government plan will be extended to cover the period of hospitalization, or 60 additional days, whichever comes sooner, all at no cost to him.

An employee who goes on leave without pay will have his coverage and that of his family continued for up to a full year without charge to him.

The insuring company is forbidden to cancel the policy of any employee or any member of his family because of health reasons or because of the amounts of benefits used.

However, the employee may cancel at any time. All he needs to do is to get form 2809 from his personnel office, fill it out and file it with that office. Those who drop the insurance can't switch to another policy or get a chance to buy it again until November 1961.

Family coverage must include the employee's spouse, all unmarried children under 19 and children over 19 who are incapable of self-support because of a disability which began before age 19. A medical certificate for children 19 or over must be filed with your personnel office before they are eligible for benefits.

Most of the plans will offer favorable rates for the continued coverage of unmarried children as they reach age 19. The law does not permit parents and other family members to be covered even though they're entirely dependent on children who are in the Federal service.

Two types of coverage will be offered, one for individuals and the other for families. A "family" consists of one or more dependents. The program offers no lower rate for the parent and child or the employee and spouse, cases of only one dependent. And it doesn't compel an employee with a house full of children to pay a higher rate.

Husbands and wives who both work for Uncle Sam will have the option of either buying individual policies or having the husband or wife subscribe for a family policy; the husband, however, can buy it at a lower cost than his wife who must pay a higher rate because her husband isn't dependent on her. A single employee who marries after July 1 may have his policy broadened to the family type.

If any approved plan is terminated for any reason, all of the employees in it will have the opportunity to join another plan without loss of coverage. The employee who transfers from one agency to another will have coverage continued without change.

The program will be effective for each employee at the start of his first pay period after June 30 or from July 1 through July 12.

The benefits cited above are all costly and they have been computed in the premiums the employees must pay. Many of the liberal features in the new Government program are unavailable to the public and this makes it difficult to compare them with features of other policies.

Federal Employee Health Plan—III

Thirty-eight different programs, including 10 of unions, approved by CSC

(By Jerry Kluttz)

Thirty-eight different plans have been approved by the Civil Service Commisison for participation in the big Federal employee health program to become effective early next month.

They differ widely as to benefits, costs, coverage, and other features.

Regular full-time employees will have a choice of the two Government-wide plans and perhaps others. The service plan is backed by Blue Cross-Blue Shield and the indemnity package by the Aetna Life Insurance Co.

In the Washington area, all eligible employees will have a third choice, a prepaid plan offered by Group Health Association, Inc. Additional information on these three plans and how they function will appear here in articles to follow.

Other approved plans are sponsored by employee unions and organizations with coverage limited to their members, and various local comprehensive health programs which are designed primarily to serve people who live in areas served by them.

The two Government-wide and many of the other plans will give employees a choice of low and high options. The high option in all cases will cost more but it provides broader benefits.

Uncle Sam will contribute as much as 50 percent of the cost of many approved plans. Overall, his share will be approximately $115 million annually, or about 46 percent of the estimated entire cost of $250 million.

By law, the dollar amounts the Government can contribute toward the cost of any plan selected by an employee are maximums of $1.30 for each biweekly pay period for self only, $3.12 for family coverage, and $1.82 for a working wife with a nondependent husband.

Plans which agencies helped to set up earlier for the protection of their employees are being continued:

American Foreign Service Protective Association, which is available to foreign service employees in State, U.S. Information Agency, and International Cooperation Administration. Its plan is underwritten by Mutual of Omaha.

Central Intelligence Agency and the National Security Agency plans, both backed by Mutual of Omaha. (For "security" reasons, these plans are not published.)

Special Agents Mutual Benefit Association, restricted to FBI employees, and handled by Prudential Insurance Co.

Group Health Insurance Board is operated by employees in the Panama Canal Zone and underwritten by Mutual of Omaha.

Besides Group Health Association, Inc., here, CSC has approved 20 other comprehensive plans, mainly in New York City and on the west coast.

Ten union plans have CSC clearance and each sponsoring organization is enthusiastic over them. Their officials hope to use them to increase and stabilize their memberships.

Unions without their own plans are resentful over this tactic. In fact, AFL–CIO's National Association of Special Delivery Messengers has accused the AFL–CIO's Letter Carriers of using its health plan to try to raid its membership. Other unions have protested to CSC over the use of health plans as a recruiting device by competing organizations.

Three other AFL–CIO unions that have plans of their own have joined with the Special Delivery Messengers to accuse the Letter Carriers of a "completely inexcusable raiding tactic" by opening up its membership to "associate members" who aren't letter carriers. Associates would be eligible for the Letter Carriers' self-insured health plan. The four unions have called on AFL–CIO President George Meany to stop the expansion proposal of the Letter Carriers.

It is clear that Congress never intended the plans for other than insuring employees against heavy health costs. It is equally clear, as officials point out, that an employee whose sole interest is in a health plan should consider the cost of union membership which is required before he can buy a union-sponsored plan.

Nevertheless, those unions with solid health programs are sure to become stronger and healthier because of them. If they offer employees a better health package, the unions and their health plans will sell themselves and their memberships will grow.

Since there is no checkoff of union dues in Government, the collection of dues is a constant headache to most organizations. But now the employee's health cost will be withheld from his salary and the union member who buys a union-sponsored plan will want to pay his dues to retain health coverage. This will have the effect of easing union organization and of stabilizing union membership and facilitating dues collections.

But by the same token, unions that offer members below-par health plans could suffer because of them.

In the future, after the 38 different plans have been in operation CSC will publish facts on each of them, such as the percentage of each dollar in premiums paid out in benefits. Government employees are an intelligent group and they would quickly drop any plan, union or not, that pays out below-average benefits.

CSC rules will permit any employee who is expelled or otherwise loses his union mem-

bership and loses his coverage under the union health plan to buy, within 31 days, another plan for which he is qualified.

But an employee who drops his union or any other health plan on his own volition must wait until the first so-called open season, October 1 to 15, 1961, to buy another plan. Switches from one plan to another also can be made at that time. Thereafter, an open season will be held about every 3 years.

These employee unions are offering health plans to their members:

AFL–CIO American Federation of Government Employees, which has over 10,000 members in the Washington area, and it hopes to sign up others before July 1. It has a low-cost plan with Mutual of Omaha as the underwriter.

AFL–CIO's Postal Clerks and Letter Carriers and the independent National Postal Clerks Union each has its own self-insured health plan.

The independent National Association of Post Office & General Services Maintenance Employees, National League of Postmasters, National Rural Letter Carriers Association, and the United National Association of Post Office Craftsmen, plus AFL–CIO's Post Office Motor Vehicle Employees, are all offering members approved plans which are backed by American Standard Insurance Corp. of Indiana.

AFL–CIO's Postal Transport members carry most of their health insurance with the Federal Postal Hospital Association of Kansas City but the association has expanded its operations and it will insure any postal worker.

FEDERAL EMPLOYEE HEALTH PLAN—IV

U.S. WORKERS ASK MANY QUESTIONS ABOUT NEW INSURANCE PROVISIONS

(By Jerry Kluttz)

"The health program is too costly. It's terribly complicated; we're all confused by it. The insurance companies will get rich from it. Why so many different plans? Which plan gives me the most benefits for the money?"

Federal employees and officials alike are making these comments repeatedly and asking these questions as they prepare to enroll in the new Federal employee health program.

Unfortunately, they are not fully satisfied with the explanations and answers they have been given. In this series we are trying to give you a better understanding of the program and to make it easier for you to choose the plan that best suits your needs. But it is not possible to give every employee answers that will entirely please him.

Some of the confusion over the program is based on misunderstanding that can easily be cleared up.

First, there is the general impression that Uncle Sam will pay a flat 50 percent of the cost of every approved plan selected by an employee. This can't happen under the law.

The maximum the Government can contribute is 50 percent of the employee's cost up to these fixed dollar amounts every 2 weeks: $1.30 for self only; $3.12 for self and family, and $1.82 for woman employee and family which includes a nondependent husband. Overall, Uncle Sam will pay about 46 percent of the program's cost.

Second, numerous employees say they were led to believe that the broad and comprehensive health program would cover all, or nearly all, of their health costs.. Some will cover more expenses than others; none will cover all of them, but nearly all of them provide benefits, as cited in Wednesday's article, that no employee now has in any policy he carries or can buy.

A good example of this latter point is the case of a Pentagon employee with five young children. The family lives in Fairfax. This employee's out-of-pocket cost of health services last year took $1,176 from his $8,000 salary. He's bitterly disappointed, he says, because not a dime of this big bill would be recovered under either of the Government-wide health plans.

His $1,176 costs were largely for drugs, glasses, dentists, checkups, doctor's calls, pediatricians, etc. No hospital or surgical costs were involved.

This employee could subscribe to the plan offered by Group Health Association, Inc., and he could get many of the above services from its clinics. But this family likes their doctors and it would be inconvenient for him and his wife to bring their children to GHA's clinic here.

In search of the plan that's best for them, employees are comparing rates and benefits of the two Government-wide packages and Group Health Association in this area. About 70 percent of them now carry some form of health insurance and they also are comparing what they have now with what's being offered.

Naturally enough, the most questions have been raised about Blue Cross-Blue Shield because it has more Federal employees than any other health insurer. It has 55 million worldwide members and nearly 850,000 here, of whom 367,000 are Federal employees and dependents. The Blue rates to subscribers for its Government-wide plan (with Uncle Sam paying part of the cost) are substantially the same as its present charges to subscribers here. But its benefits and coverage are different in its Government-wide plan.

To a smaller extent, simply because it has fewer employee policyholders, similar doubts have been expressed about the Government-wide plan offered by Aetna Insurance Co. on behalf of the commercial insurance industry.

Yet these two Government-wide plans—of the 38 different plans that have Civil Service Commission approval—have had their rate and benefit structures declared to be fair and equitable by experts both in and out of Government.

Rank-and-file employees may get some reassurance from the fact that the hard-working CSC officials who negotiated these contracts also had their own doubts and misgivings regarding them. These officials are charged by Congress with the heavy responsibility of getting the best possible health insurance bargains for Federal employees.

CSC officials haven't relied solely on their own limited judgments in this matter. They retained Wendell Milliman, a nationally known professional health actuary of Seattle, and he concluded, after a study, that both the Blue and Aetna plans were reasonable and fair. Milliman gave CSC this breakdown of each premium dollar:

The Blues will pay 92.7 cents in benefits; Aetna, 90.6 cents. Each will be allowed a maximum of 5.5 cents for operating expenses. The Blues, nonprofit groups, will pay only three-tenths of a cent in taxes while Aetna will pay 2.4 cents. Aetna is allowed two-tenths of a cent as an expense allowance.

The risk charge, or profit, is 1.5 cents for the Blues but that amount will be renegotiated when a reserve equal to a full month's premiums is built up. Aetna's risk charge is only 1.3 cents and it will be cut to 1 cent when a similar reserve is accumulated. It is entirely possible for both outfits to lose money on the plans. But, of course, both hope they won't.

But it is certain that neither can make more money from their plans than the maximum risk charges allowed in their contracts. If smaller amounts are paid in benefits and if operating expenses are under the fixed maximum allowance of 5.5 percent, the insuring concerns won't pocket the excess but it will be used for the benefit of the insured employees through broader coverage, etc. In other words, the two Government-wide insuring concerns will not be in a position to get rich windfalls from their plans.

Many of the other 36 health plans will be subjected to similar restrictions on costs, profits, etc.

Milliman has his own doubts about the program in general and you should know about them. He expressed "serious concern" over having 38 different plans participate in the program which CSC had to approve under the law.

The unknown factors as, Milliman brought out, having made it unusually difficult to fix rates and benefits on a worldwide basis. Neither the Blues nor Aetna know the number of subscribers they will have and if those they do have will be mainly in the low or high cost areas. Admittedly, the numerous plans complicate the program for all concerned.

This concern is shared by others. In fact, there's solid reason to believe that the Government-wide plans could have offered lower rates and better benefits if there were fewer plans. Others feel the Government should discard all the plans and set up its own self-insured program to give its employees the best protection possible at the lowest possible cost. That, however, is an unlikely possibility in the foreseeable future.

Milliman said that the requirement to continue coverage of those who retire after the program becomes effective at the same rates active employees must pay will "substantially increase" the average cost per insured member over present rates.

He observed that employee savings are not uniform under the Government-wide plans. Both the Blues and Aetna based their premiums on the averaging of costs on a national basis. Therefore, Milliman said, the rates are better for employees in high-cost medical areas and less favorable for those in low-cost areas. Costs in the Washington area are regarded as about the national average.

The Seattle actuary foresees higher premium rates even if present benefits remain unchanged. He said health costs are rising from 5 to 10 percent a year and that the rates of the Blue and Aetna plans may or may not be adequate for a second contract period of 12 months from November 1, 1961.

Finally, attempting to protect the best interest of both Uncle Sam and his employees, CSC is setting up a system to require each of the insuring carriers to supply detailed reports.

The facts supplied will enable CSC, it believes, to detect abuses such as overly long stays in hospitals and excessive doctor and surgeon fees.

This information will be made available to employees and it could have a bearing on their choice of plans after the first 16-month period. CSC is well aware that critics of the program believe that the rate structure is too high and that it will have the effect of inflating health costs with little actual saving to the employee. With Uncle Sam footing part of the bill, some doctors and hospitals may be more disposed to increase their charges. CSC not only has promised to guard against any such tendency but both the Senate and House Post Office and Civil Service Committees have given notice that they will investigate reported abuses.

FEDERAL EMPLOYEE HEALTH PLAN—V

OFFICIAL INSURANCE BROCHURES WORTH CAREFUL STUDY BY U.S. WORKERS

(By Jerry Kluttz)

How should you, the Federal employe, go about selecting the health plan that best suits your needs? You can do it but you must spend some time on it.

By now your agency has supplied you with separate brochures on the two Government-wide plans and the prepaid package offered to Washington area residents by Group Health Association, Inc. Union members also have received brochures of plans sponsored by their organizations.

You have until the end of June to make your decision but the Civil Service Commission urges that you register as soon as you have made up your mind so that you may receive your identification card as soon as possible.

The brochures are official; each was prepared by the CSC. Read and study them with care. The brochures relate in simple and direct language the health expenses and services that are covered, partially covered, and not covered.

Bear in mind that the sponsoring firms will be compelled by CSC to stand behind and to pay off every single benefit listed in their respective brochures which are, in effect, contracts with the employees who subscribe to them. So be sure and save the brochure of the plan you buy; it could come in handy in a later dispute over benefits.

On the other hand, you will be wise to be somewhat skeptical of any information you may have received which attempts to sell you on this or that plan by stressing the best points in it.

CSC not only has frowned on but it has forced the withdrawal of some of the material which was put out either by plan-sponsoring organizations or their friends. Such information is entirely unofficial.

CSC also has cautioned agencies not to use case examples to show how a particular plan would pay off. A slight change in the case facts could make any plan look either good or bad.

To sum up, you can't go wrong, be misled or get the wrong impression by studying the facts in the CSC brochures.

No one, not even a Solomon, can look into the future and say which plan is best for you. You will not need any plan if you and your family can be sure of good health.

But CSC has endeavored to help you make a good selection by passing along these suggestions:

Read the brochures thoroughly * * * ask about any statement you think important but do not understand * * * use the benefits in brief pages for reference and to help you make comparisons with other plans.

Consider your present and probable future health needs such as * * * young and growing family * * * health problems of the middle years * * * nearing retirement * * * frequent moves or travel * * * planning to leave this area permanently * * * and, any special known health problem.

Consider each plan's provisions for such items as * * * hospital room and board—how much; what limits; what provisions for more * * *. Doctor's services—what kinds; by whom; at what rates * * *. Maternity care—what hospital benefits; what doctor's care * * *. Other services and supplies—what is included and excluded, to what extent, and under what conditions?

Think about the importance you attach to such features as * * * choice of doctors * * * preventive care * * * locations at which care is provided * * * direct payments by the plan to doctor or hospital * * * coverage of expenses from the beginning of an illness * * * away-from-home and emergency services, and benefits for specific conditions requiring long-term or other expensive care or treatment.

Consider the cost in the light of your conclusions about the above and what you can afford.

Make your choice and enroll promptly.

Personally, I believe that's sound advice. Your study will easily reveal the weaknesses as well as the strong points in each of the plans. And it is not too difficult to spot them.

Incidentally, an official of the Justice Department, an attorney, is demanding the CSC supply the Department with a copy of each of the Government-wide contracts. He wants to read them himself so he can be in a better position to advise his employees on the various features in them.

The official believes CSC should supply each agency with copies of the contracts and that any employee should have the right to examine them.

FEDERAL EMPLOYEE HEALTH PLAN—VI

CHANGES LIKELY IN PROPOSED FEDERAL HEALTH INSURANCE PROGRAM

(By Jerry Kluttz)

Significant changes are brewing in the Federal employee health insurance program even before it officially starts.

Indirectly, they could easily lead to improved retirement and life insurance systems and other fringe benefits for Government employees.

Some of the liberal revisions foreseen in the future include:

Payment by Uncle Sam of a greater share of the cost of the program.

Health coverage of survivors of employees who have less than 5 years of service.

A new program to cover retirees and survivors now on the rolls.

A realinement of the rate structure to include in the family rate working wives who have nondependent husbands.

Wider benefits to include preventive medicine, broader coverage of oral surgery, etc.

The cost of the program to the employee, now an issue, will become even more controversial as charges for health services continue their inevitable rise and as private employers pay a greater share of the cost of health coverage for their employees.

The steel strike settlement, for example, requires the steel companies to pay the entire cost of life and health insurance programs for their employees. A growing number of concerns are paying a greater share of employee insurance costs than the Government is.

A group of career employees and officials, at an informal meeting recently, foresaw the not-too-distant time when the Government will finance the full cost of a life insurance policy that will be double the employee's annual salary, and 75 percent of an even broader comprehensive health plan for the employee and his dependents.

The life and health programs are closely related and modifications for one cannot be made without considering the effect on the other.

Under the present law, active employees, in effect, must pay part of the health cost of retirees, and this cost will rise rapidly as more employees retire. Therefore, the question arises whether the Government isn't obligated to pay a heavier share of these costs. The only alternative is higher rates for active employees.

Congress set the policy in this matter when it wrote into the law that those who retire after the program becomes effective can continue coverage at the same rates paid by active employees even though the cost is several times greater for elderly persons.

The new employee health program does not continue coverage for families of employees who die with less than 5 years of civilian service. In such cases, however, the survivors have the option of converting to individual policies.

The 5-year provision of the health plan has a direct tie-in with the civil service retirement system. Retiree and survivor share of health costs are to be withheld from their monthly benefit checks paid by the retirement fund.

Otherwise, CSC would have no way to collect the premiums. But before any benefit can be paid from that fund the employee involved must have had a minimum of 5 years of civilian service.

The health program will increase the pressure on the Government to lower the 5-year rule for retirement and health benefits for survivors.

One answer is coordination of the CS retirement system with social security's old-age and survivors insurance which provides better survivor protection for short-term employees and their families. The Eisenhower administration, CSC, and OASI all look with favor on this general approach.

If the Forand bill or something similar to it is enacted into law to provide health benefits for elderly social security recipients, the demand for lowering the 5-year restriction for Federal employees will be even greater. That measure has no similar provision.

Furthermore, the wide public and political support to provide health care for the aged makes inevitable the approval of S. 2575, the Senate-approved bill by the late Senator Richard Neuberger, Democrat, of Oregon, to set up a health program for upward of 415,000 CS retirees and survivors now on the rolls. The legislation is before the House Post Office and Civil Service Committee. The administration opposes it in its present form.

CSC has been deluged with mail and phone calls on the health program. Many of them are from working wives who protest the higher rates they must pay for their nondependent husbands. These women say they're being discriminated against because of their sex; that they should be permitted to receive the same Government contribution as male employees.

The appeal by the women has been heard on Capitol Hill where Senator FRANK CARLSON, Republican, Kansas, and Representative DANIEL K. INOUYE, Democrat, Hawaii, are sponsoring bills to allow them to receive the same Government contribution as male workers. CARLSON is optimistic about approval of the bill next year.

Another group also is being heard from—the employee with a single dependent who feels he shouldn't be required to pay the same rate as an employee with half a dozen or so dependents. Group Health Association, Inc., and other insuring groups see their point and hope to be able to offer a special rate for them at the start of the next contract period, November 1, 1961.

Such a program is bound to be improved in time.

For example, officials are confident that the Government-wide plans of the future will stress preventive medicine and will pay a substantial part of the cost of physical checkups, etc.

Several plans that have CSC approval offer preventive medicine features, including GHA in this area. The Health Insurance Plan of Greater New York and Group Health Insurance of New York show that preventive medicine pays off. Their members spend about 20 percent fewer days in the hospital each year than members of different plans.

CSC officials have expanded coverage of oral surgery and mental health near the top of lists of improved benefits they will seek in the second contract.

FEDERAL EMPLOYEE HEALTH PLAN—VII

ANSWERS TO READERS' KEY QUESTIONS ON GOVERNMENT INSURANCE PROGRAM

(By Jerry Kluttz)

Answers to some of your many questions on the big new Federal employee health program:

Contracts for each of the 38 different plans are signed and sealed. Civil Service Commission can't make changes in them during the 16-month contract period. Besides, Congress would have to amend the law to provide some of the liberal modifications being demanded by employees.

Each of the 2 million qualified employees must fill out a registration form. You must either select one of the plans you're qualified for or else go on written record as rejecting participation in the program. The latter is required as proof every employee had the opportunity to enroll.

Reemployed retirees are eligible to participate provided they meet the same conditions as required for other employees. They're ineligible, for example, if their appointments are for a year or less. Also, in order to continue their coverage when they again retire they must have earned a new or supplemental annuity.

The law limits each employee to a single health plan in the Government program; however, numerous employees say they plan to retain policies with outside insuring concerns. Those who do should first study carefully any restrictions on double coverage in their contracts.

The two Government-wide plans, underwritten by Blue Cross-Blue Shield and Aetna Insurance Co., will limit payment of benefits if by reason of law or employment the employee or dependent collects benefits for the same expenses from another policy. Aetna applies this limitation to its entire plan while Blue Cross-Blue Shield has it only on its so-called supplemental benefits.

Examples of how these restrictions could apply: An employee covered by Medicare through her husband who is in the Armed Forces, and an employee whose spouse works in a private industry and who is covered by the dependency provision of the industrial plan.

Other approved Government plans either have different or no restrictions on double coverage. Double coverage doesn't include insurance for the loss of income.

In general, none of the plans will pay for the illnesses or injuries covered by Labor's Bureau of Employees Compensation which administers workman's compensation in Government.

Also, employees who are treated at VA, Public Health, military and other Government hospitals can be reimbursed for only those covered expenses for which they're required to pay.

Two conditions apply to continuing coverage after retirement and they are: (1) You must retire on an immediate annuity after 12 or more years of service or for disability; (2) you must have been covered for 5 years immediately preceding your retirement, or you must have been enrolled in an approved plan from the beginning of the program.

Under this latter provision, an otherwise qualified employee can enroll now and retire the very first day the program is effective, early next month, and have continued coverage at no increase in rates.

Aetna has worked out an agreement with the hospitals to admit, without advance payments, any of its subscribers who display their identification cards. The insurance firm will guarantee payment to the hospitals while it checks on eligibility and coverage. It will also arrange to make direct payments to the hospitals for its clients. The Blues have a similar arrangement of working with both hospitals and doctors.

If you aren't a member now, you can join the AFL–CIO's American Federation of Government Employees and subscribe to its health plan. You can get a copy of the AFGE health plan brochure from either your personnel office or by calling the union's headquarters here.

In studying the Blue plan, bear in mind these two key points: Basic benefits for hospital and surgical-medical care do not have a deductible. The deductible, $100 for the low option and $200 for the high option, applies only to supplemental benefits.

Also, some features of the Blue plan are based on family income. Let's say your family income exceeds the limit, you have an operation and the surgeon charges you $200 more than you're allowed under the fee schedule. The $200 excess is then included as an expense for supplemental benefits and part of it will be paid, too.

The Blues have no direct control over the fees charged by doctors but in most cases, its officials say, the doctors will accept as full payment the amounts set forth in their fee schedules. That may not happen in your case, however.

Group Health Association, Inc., has two health centers, one in the downtown area and the other in Takoma Park. It's planning two others, in the Southwest redevelopment area and in Falls Church. But the Virginia law may be changed before the Falls Church clinic can be established. GHA is hopeful of that being done next year.

But the Blues and Aetna are setting up extensive machinery to administer their Government-wide plans. The Blues are setting up temporarily in Harrisburg, Pa., an electronic processing unit to handle the vast amount of paperwork that will be involved. Eventually, this entire unit will be moved here.

Aetna has 155 claims offices all over the Nation, and it is training people to handle Federal employee claims in all of them. All of the participating insuring groups, in fact, are stressing speedy service to Government employees.

The Blues' fee schedule for the Washington area is correct as printed and distributed to you. This is the only plan where some cost allowances under the cheaper low option are greater than those under the high option.

For diagnostic X-ray of ribs, $12 is allowed under the high and $15 under the low option. For fingers, the allowances are $5 and $7.50, respectively, and for gall bladder, $20 and $25. Officials of the Blues explained the figures were arrived at by averaging the costs of fees charged for those services.

An employee who is separated or divorced can provide for his children under 19 under the health plan even if they don't live with him.

A woman employee will have to cover her separated husband even if she doesn't care to if she subscribes to a family plan to protect her children who live with her. And she will have to pay the higher rate since her separated husband isn't dependent on her.

Should the Interest Rate Ceiling Be Removed?

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. LINDSAY. Mr. Speaker, Mr. Charles E. Walker, assistant to the Secretary of the Treasury has written an excellent article concerning the interest-rate ceiling on new issues of marketable Treasury bonds. Mr. Walker has served as an economic consultant to the Secretary since 1959 and he has taught economics at the Wharton School of Finance and Commerce and at the University of Texas.

Mr. Walker's timely article, "Should the Interest Rate Ceiling be Removed?" appearing in the May issue of the Tax Foundation's Tax Review presents cogent reasons for removal of this restrictive and archaic obstacle to effective debt management. I urge my colleagues to study this matter carefully and under unanimous consent I include Mr. Walker's article in the Appendix to the RECORD:

SHOULD THE INTEREST RATE CEILING BE REMOVED?

(By Charles E. Walker, assistant to the Secretary of the Treasury)

Treasury debt management today is the weakest weapon in the Federal Government's arsenal of financial policies to promote sustainable economic growth, and the Federal debt grows shorter and shorter in maturity. The facts behind this situation are these. A 4¼ percent interest rate ceiling on new issues of marketable Treasury bonds, established in 1918 in connection with a particular financing operation of World War I, has effectively prevented the Treasury from selling more than a token amount of long-term securities for almost a year. Through no choice of its own, the Treasury has had to rely almost completely on new issues of notes, certificates, and bills—securities that mature in five years or less and on which no interest rate ceiling applies.

There are four major arguments for removal of the ceiling. In the first place, forced reliance on short-term financing contributes to further shortening of a marketable debt that is already much too short in maturity. Today, almost 80 percent of the marketable debt matures within five years; this figure contrasts with 50 percent in 1946 and 67 percent at the end of 1952. Most of the shortening in the debt during the postwar period occurred between 1946 and the end of 1952, during which time the Treasury sold only $5.2 billion of marketable issues of more than 5 years' maturity. Since the end of 1952, $49½ billion of over 5-year securities have been marketed. But despite these determined efforts during the past 7 years, the passage of time has moved more and more securities closer to maturity. Moreover, if the marketable debt does not change and no securities of more than 5 years' maturity are issued, the under 5-year debt will swell to 87 percent of the total by the end of 1964.

Debt-lengthening must, therefore, continue to be a high priority goal of Treasury debt management. Otherwise the average length of the debt will grow shorter and shorter, and Treasury refunding operations will occur more frequently and in larger amounts. This will not only tend to disrupt the Government securities market, but will also complicate the flexible administration of Federal Reserve credit policy. The relentless shortening in the public debt cannot be viewed with complacency.

Progressive shortening in the maturity of the public debt has another important implication, which leads to the second major argument for removal of the ceiling. It is universally agreed the unbridled creation of new money to finance government deficits or to pay off maturing issues would result in disastrous inflation. But apparently too few people realize that excessive reliance on short-term issues in debt management can also exert strong inflationary pressures. This is because the shorter the term of a government security, the more like money it is. A 25-year Treasury bond is a true investment instrument, but a Government security maturing within a few days is almost the same as cash. Similarly, a security maturing within a few weeks, a few months, or even a year or two automatically turns into cash within a relatively short period of time. Thus, a large build-up in short-dated Government securities increases the inflationary potential embodied in the Government debt; holders can easily liquidate short-term securities to obtain cash for spending for goods and services, either by selling the securities or by simply letting them run off at maturity.

Federal fiscal and monetary policies have been used effectively in recent months to

contain the inflationary pressures that, although sometimes dormant, are always present in a prosperous economy. But because of the interest rate ceiling, Treasury debt management has actually contributed to the inflationary potential in the economy.

A third major argument for removing the interest rate ceiling arises from the distortions in credit markets that result from confining Government financing to short-term securities. Even though the Government is now operating with a balanced budget, the Treasury must turn over $70 to $80 billion of marketable securities each year. The confinement of so huge an amount of financing to securities of less than 5 years' maturity—and this will be the inevitable result if interest rates do not decline significantly from present levels and the ceiling is not removed—may add unduly to pressure on the short-term market. Thus, short-term interest rates would be higher than otherwise would be the case, and the availability of credit to private short-term borrowers—particularly consumers, small businesses, and farmers, all of whom rely heavily on short-term credit—would be curtailed. Moreover, experience last autumn indicated clearly that such distortions can contribute to severe drain on savings institutions, as customers withdraw money to buy high-yielding securities. This in turn may unduly restrict the flow of savings into home construction and other long-term projects.

Finally, experience during the past year indicates that the interest rate ceiling has caused interest on the public debt to be higher. Knowledgeable market observers estimate that the arbitrary confinement of Treasury financing to short-term securities has caused short-term interest rates to average one-fourth to one-half of 1 percent higher than if the Treasury had been free to spread its borrowing over a wider range. This additional interest, when applied to the $70 billion to $80 billion of securities that must be turned over each year, increases Government spending by some $200 million to $400 million.

CEILING PRESCRIBES MARKET'S AREA

What are the arguments that have been presented by those who oppose removal of the ceiling? The first and most familiar argument is that removal of the ceiling would cause interest rates in general to rise. But if the ceiling were truly effective in holding down rates, it would be logical to expect rates on outstanding Government bonds to remain below the ceiling. During most of the past year, however, such yields have exceeded 4¼ percent.

The fact is, of course, no Government-decreed interest rate ceiling can prevent forces of demand and supply from exerting their effects so long as credit markets are free. Quotations on outstanding Government securities that are the product of each day's free market trading among thousands of holders of Government securities cannot be repealed by Treasury or congressional fiat. If interest rates are to be controlled then the actions of lenders, borrowers, and all market participants must be controlled. But so long as the basic freedom or the marketplace is maintained and direct controls are not used, interest rates—or the price of borrowed money—will continue to reflect changes in the basic forces of demand and supply, including the impact of flexible monetary policies.

Rather than preventing interest rates from responding to market forces, the real effect of the ceiling is to prescribe the area of the market in which the Treasury can borrow. President Eisenhower put the matter succinctly in a special message to Congress last summer. He said, "To prohibit the Treasury from paying the market price for long-term money is just as impracticable as telling the Defense Department that it cannot pay the fair market price for a piece of equipment. The result would be the same in either case; the Government could not get what it needs."

NO GUARANTEE OF BENEFITS TO BANKS

As a corollary to this argument, some of those who oppose removal of the ceiling argue that such action would only serve to enrich the large financial institutions of the Nation. This view is basically in error because interest rates, as noted above, are not determined by Government edict but by forces of demand and supply; in and of itself, removal of the ceiling would not cause interest rates to rise. But even when interest rates do increase, it does not follow that the financial institutions themselves receive all of the benefit. Many of the large lending institutions in this country are mutual in nature, and a substantial portion of the rise in interest rates has been passed on to the saver.

Although commercial banks are not mutual institutions, it is important to understand that their current earnings would tend to fall rather than rise if the ceiling is removed. This is because the vast preponderance of commercial bank loans and investments are of relatively short maturity; for example, the average bank loan is estimated to mature in about 2 years and the Government securities banks hold have an average maturity of only 3½ years. A principal effect of the interest rate ceiling is to force short-term interest rates to higher levels than would otherwise prevail, since the Treasury must arbitrarily confine its financing to the less than 5-year maturity range. As short-term rates rise, including rates on bank loans and short-term Government securities, the current earnings of banks also expand. But if the Teasury could prudently spread its borrowing over a wider maturity range, pressure on short-term rates would be eased, and bank current earnings would tend to be less than would otherwise be the case.

A second argument sometimes made against removal of the interest rate ceiling is that, in so doing, Congress would in effect be relinquishing its historic right to determine the general terms of long-term bonds issued by the Treasury.

To determine general terms of new issues is one thing, but to lock the Treasury firmly into the short-term market is another. Rather than determining the general terms of new bond issues, Congress, in failing to remove the ceiling, is in effect flatly prohibiting any significant debt-lengthening through sale of long-term issues. The Treasury is responsible for the management of our $290 billion public debt; that is precisely where the responsibility should rest. But by insisting on retention of the interest rate ceiling, the Congress is denying the Treasury the essential tools for sound, noninflationary debt management.

REFORMS WOULDN'T HELP

According to a third argument, the interest rate ceiling should indeed be removed, but only if the Treasury first agrees to instituting some so-called reforms in its debt management operations. Such reforms include abolition of the committees of commercial bankers, investment bankers, and others that commonly advise the Treasury with respect to financings; sale of intermediate- and long-term securities at public auction; issuance of bonds with relatively early call provisions; and a signification of the intent of the Treasury to market long-term securities only when interest rates are relatively low. The proponents of these first three reforms maintain that their inauguration would probably permit the Treasury to sell bonds at lower interest rates than now prevail and, as a result, the removal of the ceiling would not be necessary.

The Treasury believes that just the reverse is true. If, for example, the Treasury's periodic consultations with advisory committees were discontinued—a practice, incidentally, that was started by Secretary Morgenthau in 1942—the Treasury would be foregoing the opportunity of obtaining firsthand and expert information on the Government securities market. Its only alternative, therefore, would be to price securities more liberally—to offer somewhat higher interest rates than otherwise—in order to make certain that a particular financing did not fail. This void of information could not be filled by increasing the Treasury's debt management staff; the type of information that is obtained from the advisory committees can only be provided by individuals who operate daily in the Government securities market. By consulting with these committees, the Treasury obtains accurate and firsthand reports on the attitudes of the thousands of potential buyers of Government securities.

Moreover, it is important to emphasize that Treasury officials, in approaching a financing decision, talk to scores of individuals all over the country; in fact, these contacts are maintained on a more or less continuous basis. The Treasury also engages in intensive studies and analysis on its own. By the time the advisory committees are called in, responsible Treasury officials have already carefully considered the many alternatives involved. And in every case. All that the Treasury obtains from the committees, and other contacts, is advice: the final decision is made solely by the responsible Treasury officials.

RATE MOVEMENTS UNPREDICTABLE

Similarly, it is the Treasury's judgment that extension of the auction technique to securities other than Treasury bills in the near future would result in higher—rather than lower—interest rates on Government securities. This is primarily because the market for new long-term securities would be significantly narrowed, inasmuch as many long-term investors would be reluctant to incur the risk of submitting bids in auctions, but would prefer to purchase the securities later in the market.

The case is even stronger that the use of relatively early call features on Treasury bonds would result in higher initial interest costs to the Treasury. An investor will be willing to purchase a new 25-year Treasury bond, callable, say, in 5 years, only if the initial interest rate is sufficiently high to warrant his taking the risk of an early call. Still, call features, if properly constructed, may save interest costs for the Government over the long run. It is primarily for this reason that the most recently offered Treasury bond—the 25-year, 4¼-percent issue sold last month—included a 15-year call feature. By extending the call feature to 15 years—several years longer than prevails with respect to corporate issues—the Treasury believed that the initial attractiveness of the security was not affected.

Although the suggestion that the Treasury market long-term bonds only when interest rates are low appears, on the surface, to have considerable merit, it is important to understand that this suggestion is tantamount to recommending that the Treasury ignore the state of the economy in its debt management decisions. This is because long-term interest rates usually fall to their lowest levels during business recessions. If the Treasury sold large amounts of long-term bonds during such periods, it would run the serious risk of absorbing long-term funds that would otherwise be used to finance homebuilding, State and local government projects, and business capital expenditures. Such a policy would, of course, impede recovery and might even intensify recessionary pressures. Minimization of interest rates, therefore, cannot be accepted as the overriding goal of Treasury debt management.

The decline in interest rates earlier this year—which has since been reversed at least

temporarily by market forces of demand and supply—apparently convinced some people that there was no longer any reason for removal of the ceiling. This view is and was wholly unwarranted. The very decline in interest rates earlier in the year, in contrast to widely held expectations to the contrary, is convincing evidence that interest rate movements are quite unpredictable. The Treasury has no way of knowing which direction interest rates will move in the future, simply because it cannot accurately predict the outcome of the millions of individual decisions which, in a free economy, actually determine interest rates. Interest rates may stay close to present levels, they may go up, or they may go down. Unless they decline considerably from present levels, the Treasury will continue to be locked into the less than 5-year sector of the market.

The problem of the interest rate ceiling is not a short-run, transitory problem, nor should it be approached on a partisan basis. The ceiling, if not removed, can continue to obstruct debt management through many administrations in the future. In the interest of sound debt management—which means in the public interest—the 4¼-percent interest rate ceiling should be removed permanently and as soon as possible.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of June 11, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, June 11, 1960)

The Public Debt and Tax Rate Extension Act of 1960 passed after spirited debate and controversial differences of views. As a member of the Ways and Means Committee, responsible for taxation and the public debt, I participated in presenting and supporting the bill. A temporary $8 billion increase to the permanent debt limit of $285 billion was asked by the administration to keep the Government solvent. The $8 billion replaces the present $10 billion temporary increase voted earlier. (Note—This is not the total debt—contingent liabilities of the Federal Government are not included.) This temporary debt increase is requested rather than a permanent increase in the hope that ultimately revenue will exceed income and a permanent increase will not be necessary. Either type, however, permanent or temporary, is caused by the need for money to pay the bills which Congress has run up. So the effort of some Members to combat increased expenditures by holding down the debt limit is no more logical than refusing to pay your charge accounts when they come due because you don't want to spend more. Reducing the spending in the first place is the way to keep your debts down in personal affairs, business, and government finance. Equally illogical is the proposal by some to reduce the debt by lowering the debt ceiling on the one hand while voting for more spending on the other. It really is not a complicated proposition.

The extension of the Korean taxes (corporation tax, 47 to 52 percent, equaling $2.5 billion annually, and alcohol, wine, tobacco, manufacturer's excises, etc., $1.5 billion annually) including telephone and transportation excises is still a necessary evil and was passed—why? For the same reason—big spending. If we do not pay as we go, that is, impose current taxes to pay for current spending, then we inflate the currency through deficit financing and simply water everyone's savings and salaries—again quite simple. Yet some Members would yield to constituent demands to cut this or that tax, forgetting the tax burden then must be transferred to other areas and people, undoubtedly themselves in another form.

The questions to be resolved are: (1) Should we cut Federal spending? (Answer: Yes—particularly welfare programs); (2) Should we have a tax cut? (Answer: Yes); (3) What kind of tax cut? (Answer: Income tax rate adjustment as well as excise tax cuts); (4) Should debt reduction come first, before a tax cut? (Answer: Yes—out of respect for future generations and sound fiscal policy). We can, should, and must have debt reduction and tax cuts—but they must be real—not political illusions coupled with deficit financing and inflation. We will have real cuts only when people demand them and demand the reduced Federal spending which can make them possible.

Congress (and I'll speak specifically of the House) does its work largely through committees whose function it is to study controversial bills (each committee assigned a specific area of jurisdiction) and to report their findings, for or against, to the House as a whole. Short of this orderly committee process, Members of the House couldn't begin to assemble, each for himself, the information necessary to proper consideration of the hundreds of bills handled at each session. Each committee then is a creature of the House and is normally an invaluable tool in the legislative process. However, it is also possible (as sometimes happens) for a committee to frustrate the will of the House which created it by interminably delaying committee action on a bill in which there is general interest or even by altogether refusing to consider a bill, year after year. To prevent any such crippling of the power of Congress to act when most Members are willing and ready to debate and vote—and after the appropriate committee has had ample opportunity to study and report on a bill—a House rule provides that a bill may be removed from a committee's jurisdiction and brought directly to the floor for argument if a majority (219) sign a "discharge petition." It's a rule which certainly should be invoked but rarely, and one which can pose a moral problem for a Member who may even be against a particular bill but resent a committee's obstinate refusal even to let the House discuss and vote on it.

The home rule bill for the District of Columbia precisely illustrates the point. It happens that I am opposed to this bill for a number of reasons. (1) Washington, D.C., as the National Capital, is the home of the Federal Government. It is not like any other city, it belongs to the Nation, not the residents. (2) It is a shrine of our national history for our people to visit, with monuments and relics to be preserved. (3) It is the residence of many foreign sovereign nations in embassies where the exchange of international rights is involved. Nevertheless, I am equally disturbed over the flat refusal of a subcommittee of the District of Columbia Committee to report out a bill or even to discuss one on a subject in which every Member of Congress has a considerable interest one way or the other. Is the Nation to be governed in this respect by a handful of men on a single subcommittee?

The year's wrap-up of Congress before adjournment (or recess) may well include these major items—minimum wage increase, foreign aid appropriation, aid to education, another housing bill, farm subsidy, and social security revisions.

Communism—What It Means and How It Works

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, May 27, 1960

Mr. MINSHALL. Mr. Speaker, it has been said that "the Veterans of Foreign Wars has often been referred to as an ever-green organization—self-perpetuating—always growing with the seasons." The VFW is kept alive by the succeeding generations of men who have defended our Nation. One such devoted comrade, who has long been active in the affairs of this loyal, patriotic group, is Mr. James Weber, past commander of the Ohio Seventh District. Mr. Weber continues to devote his efforts, and the benefit of his past leadership experience, to the VFW in his present capacity as district magazine business manager.

Very appropriately, at a time when we should remember the price paid for democracy and freedom, the Memorial Day issue of the VFW News contained Mr. Weber's enlightening article on communism. In view of the tremendous influx of communistic propaganda infiltrating our country, I believe, this article is worthy of the attention of my colleagues:

COMMUNISM—WHAT IT MEANS AND HOW IT WORKS

(By James Weber, District magazine business manager, past seventh district commander)

Communism is a never-ending change of face and pace. Its technique is to keep the opposition off balance and confused. Its best jousting weapons are the lie, contradiction, pretension, and utter disregard of truth.

Only one thing is as certain today as it has been since the 1917 Red Revolution and that is—communism never changes its ultimate goal. That goal has always been world domination by any means, false or foul.

No less an authority than Communist Party leader Khrushchev has declared—"If anyone thinks that we shall forget Marx, Engels, and Lenin he is mistaken. This will happen only when shrimps learn to whistle."

So, regardless of their frequently feigned friendship, hearty handshakes and martini horseplay, the Communists are still hard-shelled revolutionaries. Contrary to their seemingly bombastic shattering of the idol Joseph Stalin, they have not foresworn purges, fear-inspiring pressures against captive nations and doublecrossing. In contradiction to their pretended eagerness to substitute aid and cooperation for earlier intolerance, violence, and subversion the Communist leaders are, by their own shrimp whistling declaration, still adhering strictly to the vicious theories of the German propagandists Karl Marx and Friedrich Engels. Furthermore, the Communists still hold reverence for their mummified first president, Nicolai Lenin.

What were some of the things those men advocated? What is it that the Red leaders of today really believe? Here are five examples:

BLOOD—NOT TRUTH

"Communism abolishes all eternal truths"—Marx-Engels.

"Be prepared to resort to every possible subterfuge, trick, and illegal device to conceal the truth"—Lenin.

"The worldwide nature of our (Communist) program is not mere talk but an all-

embracing and all blood-soaked reality"—Pravda, official Communist newspaper.

"Those who cannot coordinate illegal forms of struggle with legal ones are very poor revolutionists"—Lenin.

"It would not matter a jot if three-quarters of the human race perished; the important thing is that the remaining quarter should be Communists"—Lenin.

The only Communist goal is destruction of every democratic, or free people's, government and domination of all nations by enslaving communism.

So, anything else the Communists tell us is merely hogwash slimed over the truth to hide and confuse our understanding of the real Soviet purposes. It has been so for 40 years. It has not been changed and cannot be changed today, tomorrow, or as long as communism exists. Anyone who declares otherwise is either naive or actually peddling the Communist "line."

Communists everywhere are the same. That means in the United States as well as in Soviet Russia or in any of their satellite countries. Communists, wherever they are, recite the same catechism and all get their instructions from one source—Moscow.

Leaders of the Communist Party in the United States are "underground." Our prosecution of the first-line bigwigs put the old boys out of circulation. The second string leaders are now in control. But that doesn't mean the Communists in our country and their so-called "fellow travelers" have ceased to be a threat to the security of our Nation. The Federal Bureau of Investigation says not.

THEY'RE WORKING HERE

J. Edgar Hoover, Director of the FBI, says that the Communist Party in the United States is planning and working intensively on a new crusade to defeat our internal security measures and to convince confused Americans that "the Communist menace is mere myth or hysteria."

Hoover gives some facts and figures. He declares that the hard core of the American Communist Party contains 21,000 members who are using Communist front groups and so-called "pseudoliberals" to achieve its subversive purposes. Also Hoover estimates that there are more than 200,000 additional Communist supporters, or fellow travelers, in this country. He says they are "individuals who vociferously deny any sympathy with communism but who, being duped, espouse Communist causes."

The FBI chief declares that 69 percent of the Communist Party members are in the States of New York and California, the remainder are in scattered urban industrial areas. The Communists are concentrating on infiltration of essential U.S. defense industries. This includes communications, steel, heavy machinery, mining, electrical, maritime, and transportation industries.

The Communists have set up an elaborate interparty check against traitors and spies within their own ranks. Communist investigation committees have been established in each State to keep tab on their party leaders and workers.

What is the technique today? FBI investigators who have infiltrated Communist ranks report as follows:

"The modus operandi of the Communists with front organiaztions is to exercise extreme pains to conceal the Communist character of the front and to give them innocuous or even patriotic sounding names. Then through those fronts the Communists set forth a seemingly good and orthodox program and have as sponsors an array of prominent persons who should know better but do not."

The Attorney General's office adds this:

"The Communist Party in the United States is substantially dominated and controlled by the Soviet Government and Communist International in Moscow. The Communist Party of the United States takes its orders direct from those sources. Throughout its existence the Communist Party (of the United States) never knowingly has deviated from the views and policies of the Government and Communist Party of the Soviet Union."

What would the Communist Party of the United States do in case of open hostilities between this country and Soviet Russia? The attorney explains that all Communists owe primary allegiance to their Red flag. If there should be war between the United States and Soviet Union the Communists in the United States would turn instantly against the military efforts of the United States. They are obligated to support the Soviet Union. Meanwhile the Communist Party teaches its members that they must foment a civil war in the United States as means of establishing a Soviet America—a dictatorship such as exists today in Russia and her dominated countries.

YOU CAN HELP FIGHT

Every loyal citizen can help combat the Communists. Every suspicious act should be reported to the nearest Federal Bureau of Investigation office in full detail. Then let the FBI complete the investigation. Or reports on suspected Communists or subversive activities can be sent to the Americanism Department, Veterans of Foreign Wars, National Headquarters, 34th and Broadway, Kansas City 11, Mo., for relay to the FBI.

Communists are masters at doubletalk. They call their system of government a democracy. They confuse our understanding of that word. They have fooled some of our supposedly intelligent citizens with their propaganda. However, the Communist Party line is clear. Seizure, domination, and enslavement of any nation through intrigue, oppression, and armed control are methods sharply contrasting with our concept of individual rights and government by the people.

What is communism? What is democracy? What would the Communists do to us and how would we live if the Reds should gain control of the United States? What do the Communists think about God? What would they do to our religious freedom if they could? Do the Communists offer us anything better than what we already have?

Those questions are asked frequently so let us compare the two philosophies, item by item. What does democracy give us? What would the Communists actually give us regardless of all their propaganda claims?

REGARDING PERSONAL RIGHTS

Democracy: Guarantees everyone basic rights and freedoms.

Communism: No one has any guaranteed rights. Everyone is subservient to the party but only a few can belong. In the Soviet Union Communist Party members total about 6 million out of the 217 million total population. Everyone obeys the party dictates—or else.

Democracy: Forbids arbitrary seizure of persons, property or search of homes. Fair trial by jury is guaranteed.

Communism: Secret police can search any home, confiscate possessions, arrest, convict and imprison anyone without impartial trial.

ECONOMIC FREEDOMS

Democracy: Says everyone is free to establish and own any kind of business, a home or a farm. An American worker has the right to choose and change his job. He may join a labor union. Through collective bargaining and union contracts he may negotiate his working conditions and wage status.

Communism: "State" controls all business, housing facilities, farms. Government dictates where and when a man may work. It freezes the worker in his job. No labor unions are tolerated. The party determines wages, working conditions.

Eichmann and Israel

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following articles by Roscoe Drummond as it appeared in the New York Herald Tribune of June 12, 1960:

WASHINGTON—EICHMANN AND ISRAEL

(By Roscoe Drummond)

WASHINGTON.—The brilliant feat of detection by the security police of Israel in capturing the long-wanted Nazi war criminal, Adolf Eichmann, who directed the despicable murder of 6 million Jews in the gas chambers of Hitler Germany, is one of the unearned dividends resulting from the creation of the Israeli Nation.

The Jews of the world have had a rightful and powerful incentive to track down this brutal mass-murdered who has been hiding in the back alleys of civilization for the last 15 years.

Had there been no Israeli State, which was brought into being by the United Nations under the leadership of the United States and Great Britain, there would have been no Israeli secret service. Had there been no Israeli secret service, Eichmann would still be at large, haunted and hunted but still mocking the processes of justice.

Eichmann would already have been tried as a major war criminal before the International Military Tribunal at Nuremberg had he not escaped the country after unsuccessfully seeking to burn down the gas ovens (which he built to look like shower baths) and other execution spots where so many were herded to their death. But he eluded the Allies at the time and he has eluded them ever since.

After the Nuremberg legal machinery was disbanded, the Adenauer government brought proceedings against him and he would have been tried by West Germany had his hiding place—or places—been found.

Credit for his capture goes wholly to the implacable perseverance of the Israeli security police.

The boon of Eichmann's capture is not that he will be punished. There is no punishment which will fit either such a crime or such a criminal. The boon is that he will be brought to public trial, preferably in Germany or by an international tribunal, through the due process of law. If he cares to, he can explain himself to his fellow men.

The objective is not revenge. The tide of revenge has long receded and, in any event, there is no revenge equal to the destruction of whole families, old people, young parents and their children, in a plot to extinguish a whole race.

The benefits of the trial which will be on exhibit for the whole world to watch will be:

That historians will then be able to write the authoritative account of one of the most heinous crimes ever perpetrated against humanity so that the facts will be indisputable.

That it will remind many who have forgotten—or chosen to forget—the evil nature of Nazism and teach a new generation some of the facts which have receded into the past.

That it will likely extract from Eichmann himself the necessary evidence which will enable West Germany to bring other Hitler war criminals to successful trial.

Eichmann was no mere agent under orders. He was the foremost architect of the plan to bring about the total extermination of all

Jews in Germany, Austria, Czechoslovakia, Upper Silesia, Poland, Rumania, Bulgaria, Greece and, when possible, France, Belgium, Holland, and Britain. The evil taste of this man is well shown by Ruth Gruber who, on the basis of the Nuremberg documents, wrote in the New York Herald Tribune:

"Eichmann * * * took careful interest in finding the right kind of chemical to be used in the furnaces to kill Jews; how the gold teeth of the victims were to be removed; how the hair of the dead women was to be cut and sent to factories; how the jewelry, watches and currency should be given to the Nazi Reichsbank; and the final burning of the corpses, since you couldn't really bury 6 million people."

How appropriate that Eichmann should be brought from his hiding place by the newly created State of Israel.

Mrs. Norah Robertson of South Eugene High School Recognized as the Outstanding Science Teacher of the Year for All of Oregon and Southern Washington

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. PORTER. Mr. Speaker, Mrs. Nora Robertson, biology teacher at South Eugene High School, has been recognized as the outstanding science teacher of the year for all of Oregon and southern Washington.

She was given a gold award which reads "Mrs. Nora Robertson, who has that priceless quality in a teacher—the ability to awaken a student's intellectual curiosity. 'A good teacher affects eternity.'"

Two of her students, Brian Gannon and Lynn Quam, were honored that same evening in Portland at a dinner sponsored by the Oregon Museum of Science and Industry.

For nearly 3 decades Mrs. Robertson has been teaching. A busy woman she keeps on the go because as Eugene Register—Guard reporter Marvin Tims quotes her as saying, "There is so much to learn and so much to do." Mr. Tims excellent story of June 5, 1960, about this outstanding Oregonian follows under the leave to extend my remarks in the RECORD:

LIMELIGHT CATCHES UP WITH DEDICATED SCIENCE TEACHER—SEHS INSTRUCTRESS IN BIOLOGY WINS "STATE BEST OF YEAR" HONOR

(By Marvin Tims)

You can search a long time before you find a teacher as enthusiastic and dedicated to her work as Mrs. Nora Robertson, South Eugene High School biology teacher.

And her tremendous interest in biology and education in general "rubs off" on her students, awakening them to the many wonders in nature.

A rather modest woman, who doesn't seek publicity, Mrs. Robertson had to stand in the limelight last week, whether she wanted to or not.

PRICELESS QUALITY

She was recognized as the outstanding science teacher of the year for all of Oregon and southern Washington, receiving a gold "Oscar" at a Portland award dinner sponsored by the Oregon Museum of Science and Industry.

Her award read: "Mrs. Nora Robertson, who has that priceless quality in a teacher—the ability to awaken a student'sintellectual curiosity. 'A good teacher affects eternity'."

And two of her students, Brian Gannon, a senior, and Lynn Quam, sophomore, were also at the award dinner as gold medal winners at the recent Northwest Science Fair. They were the only gold medal winners from this area.

Gannon's exhibit in the senior physical division involved carbon 14, and Quam had experimented with irradiated fruitflies.

Mrs. Robertson kept so quiet about winning her award that officials at South Eugene High School didn't learn of it for several days.

A biology teacher in the Eugene school system since 1943, Mrs. Robertson doesn't believe in preparing her pupils "just to go to college."

"I, of course, want my students to attend college, but in teaching them biology I also attempt to instill an appreciation of the world around them. There can be wonderful mental therapeutic value in contemplating the wonders of nature, even in just think of the workings of the inside of a leaf."

SO LITTLE TIME

A teacher for nearly 30 years, Mrs. Robertson has a keen interest in all fields of learning. Over the years she has taught English, history, general science, and other subjects. She has had 5 years of college French and "reads everything I can get my hands on."

But she said there seems to be so little time to keep up to date on the latest developments in the field of science. "My biology students go into the subject in much greater depth than they did a few years ago. This is because everything is becoming more complex. I don't feel like I know anything any more," she smiled.

HALF HER LIFE

Few instructors devote as much time to their work as Oregon's science teacher of the year. She virtually lives at the school, often coming early to feed the many live specimens that are housed around the perimeter of the classroom, and staying after school to assist pupils with special projects or making plans for future class sessions.

Clifford Moffitt, SEHS principal, said last week the work Mrs. Roberston does is "fantastic."

"She really doesn't take a vacation—she seems to devote half her waking life to her work. Her course organization and the work she does in her classroom is probably the best I have ever seen."

Moffitt said Mrs. Robertson understands youngsters and is exceedingly patient and understanding. "Each pupil seems to be her ward and care."

Mrs. Robertson's classroom is filled with displays of remarkable projects her students have completed in recent years. Many of the projects appear to be at the college level.

A quick look around the room will reveal a black widow spider, donated by an enthusiastic former student who felt his teacher would love to have such a specimen, a 3-foot bullsnake, white rates, turtles, snails, guppies, catfish, guinea pigs, algae bread (made by her students from algae taken from the sea), mounted animals—including a racoon, weasel, crow and fox—25 baby snakes, flowers and plants, and a host of other living things.

A SPECIAL STUDY

Mrs. Robertson demands that each of her students complete a term project. "Some of my pupils might think I am a slaver driver, but I have found that often a project will awaken an interest the student didn't know he had."

Mrs. Robertson, who has taught every summer for the past 7 years, says she is going to try to "take off a little time and relax" this summer.

But in the next breath she said she will be working out plans for a special biology class she will teach next fall geared for the superior student.

Those who know Mrs. Robertson well doubt that she will be able to relax very long. And as she has said: "There is so much to learn and so much to do."

Jobless Picture Getting Darker

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following:

Needless to say, the jobless picture is going from bad to worse. As important as figures are, there is a time when the figures will not and cannot tell the whole story. This is true in the pernicious and chronic question of unemployment.

Although we are in the midst of a relatively prosperous period we find unemployment at a rather static level, unemployment in the one and most necessary field of employment, the production worker in the manufacturing industries.

All employment is important, but few jobs can be maintained without production payrolls, in a community, a State, or a nation.

This lesson should have been learned long ago by the theoretical planners who are most responsible for the plight we find ourselves in.

A nation loaded down with national, State, local, personal, and corporate and business debts, with taxes in all levels of Government at a point where they are reaching the breaking point in many of our communities.

Recently a timely article appeared in one of the leading Canadian papers, the Financial Post of Toronto.

It might start some of us thinking if we will take time to read and study the challenging questions posed by the writer.

Some of us find ourselves condemned because we are trying to awaken our colleagues to the great and compelling ned to reevaluate our entire picture of trade and aid.

Basically, too much is made out of dollar balances when discussing trade and aid and little or no attention is paid to man-hours, production losses in the products that mean daily employment as against production of heavy machinery and raw materials.

Helping our friends to help themselves is a worthwhile and necessary national policy. Helping our friends by weakening ourselves is foolish and could be suicidal for this Nation.

The problems our neighbors to the north talk about so freely and intelli-

gently appear to be given the hush-hush treatment here in our country.

Following are a few samples of some items out of one issue of a Canadian paper. One wonders why we are not exposed to more of this type of public information:

JOBLESS PICTURE GETTING DARKER

Here are some remarkable facts about what's happening in the Canadian economy. They are of immense concern to all Canadians. They should give the new Senate committee on manpower clues to why there is high unemployment in the midst of what looks like prosperity.

1. The much-vaunted Canadian standard of living has dropped 3 percent since 1956. Let it be granted that Canada's gross national product has doubled in terms of dollars between 1949 and 1959. And let it be granted that after population increases are noted and price increases taken out, the real per capita gain over the entire decade was still 16 percent. But the big gains came in the first part of this decade and, despite the 1955–57 boom, the real per capita share of GNP began to decline after 1956.

2. Both as a provider of jobs and as a producer of goods, Canadian manufacturing has been losing its earlier share in the Canadian economy. Since 1949, total employment in Canada rose by 19 percent—but the number of jobs in manufacturing alone went up only 11 percent. Overall gain in Canada's industrial output since 1949 was 64 percent—but manufacturing production advanced at the slower rate of 47 percent.

3. The 1955–57 boom in capital spending increased Canada's reliance on the construction industry as a provider of jobs—the very industry where seasonal unemployment is highest. The boom increased Canada's output as gas, minerals, and oil—all low manpower users—and decreased, relatively, the role of manufacturing as a creator of new jobs.

If this country is to develop wise policies to prevent unemployment—rather than distribute charity after grave unemployment becomes a fact—the Senate committee must get down to the exact causes of present ills before it can tell what remedies are needed.

This will land the committee neck-deep in the touchy and hereto avoided problems of commercial policy. It will have to ask: What are we going to do about promoting manufacturing in this country? How, other than by encouraging manufacturing, can we produce enough new jobs to go around? How can we hold a wage and price level that will allow us to compete abroad?

Current unemployment, even if overstating honest-to-goodness hardship, is a clear warning that national policies in the economic sphere are lagging behind the realities of growth and change here and abroad.

The welfare of all Canadians is very much at stake.

Mr. Speaker, I have always maintained that the jobs that create jobs are the production workers and goods producers.

This is even more so today than ever before because our economy is not different in this regard than our Canadian neighbors.

If production jobs fail, the incentive for profit in the service industries dries up and these jobs fall by the wayside.

A grapevine report on this phase is contained in the following article:

Only three activities with predominantly male employment have increased more than the average—utilities, construction, and mining (which includes oil and gas).

Utilities and mining added together still provide substantially less employment than "finance, insurance and real estate." Mining (including workers on oil and gas wells) provided an average of less than 90,000 jobs last year. Utilities provided only 75,000. (That's about 3 percent of nonfarm employment between them.)

Construction is the one that matters. For the last four years it has employed 8.6 percent of all the people with jobs outside farming. This is higher than it has ever been—absolutely and proportionately.

It raises two serious problems:

It is the most seasonal of all occupations. Our heavy reliance on construction in recent years is certainly one of the reasons for the extra-high level of winter unemployment.

It is "parasitic" in partly the same sense as all the service group of occupations. Construction is not, itself, a producer of wealth.

It may either erect a plant that will produce wealth, in which case it is paid for out of the goods which the plant produces.

Or, it may provide better communications, better accommodation or better services—in which case it is paid for, ultimately, out of the wealth that has already been produced.

In both cases, it rides—like the services, the financial and insurance houses and all the other "tertiary" activities—on the back of the industries that produce and sell goods that were not there before.

The only dynamic force behind all these activities is production of goods.

And production depends on sales.

Orthodox economists will say that growth of the office-stool, barber's-chair jobs is the sign of a maturing economy.

But the "tertiary" services—trade, consumer services like barbers and beauticians, insurance, finance and the rest—contributed a larger share of Canada's national output at the height of the depression in the 1930's than they do now. Even in the 1920's they were more important than they have been in recent years.

They weren't much of a sign of maturity then. So we might be cautious about applauding their growth now.

MANUFACTURING IS SLIPPING, BUT VITAL

You can't measure the value of any business by the number of jobs it creates.

Mining and oil now employ 123 workers for every 100 they employed in 1949. But they produce 2½ times as much.

The theory is that such increased productivity creates the wealth out of which we pay for all our improved services. It doesn't have to provide more employment in mining. It provides it in hotels and laundries and insurance offices.

The theory works—at least up to a point, and with a possible time lag.

The oil-based prosperity of Alberta is a clear example.

But mining and oil now represent just over 4 percent (by value) of all the goods and services produced in Canada. They cannot, by themselves, carry the 35 percent which is represented by trade and services (including finance, insurance and real estate).

Whether you look at it in terms of jobs or in terms of production, there is no escaping Canada's dependence upon manufacturing industry.

In jobs: Manufacturing provides one job in every four—nearly four times as many as construction; six times as many as mining or forestry; twice as many as farming, fishing, and trapping taken together.

In production: Manufacturing well over a quarter of all Canada's domestic product; more than twice as much as all the services; nearly twice as much as the distributive trades; four times as much as construction or transportation; six and a half times as much as mining (with oil included).

Yet, both in jobs and in production, manufacturing is losing its earlier share in the Canadian economy.

Now let us see, from some limited figures, what is happening here in the United States of America:

With the return of good weather, jobs rose in April by 1.9 million in a substantially better than seasonal rise. Total employment was reported at 66.2 million, about 850,000 over April of last year. The rise took place chiefly in agriculture, construction, and trade—all seasonal industries. In part, the rise reflects abnormally high retail trade since the job survey was made the week before the Easter holiday. While joblessness dropped more than seasonally by 550,000 to 3.7 million, unemployment was still 5 percent of the labor force.

Concealed in the brighter job picture was a further decline of 100,000 in manufacturing employment to 16.4 million. Reflecting the leveling off of the economy, the factory workweek also dropped by another 0.3 hours to 39.4. The factory workweek now is down 0.9 hours from last year. Reflecting the drop in the workweek, wages of manufacturing workers were down by $1.08 over the month to $89.83 weekly. Commenting upon latest job statistics, AFL–CIO President Meany noted that the unemployment rate of 5 percent is still greater than in February, traditionally the month of highest unemployment.

It certainly should be clear to all of us that production of goods and their sales are the basic ingredients for a prosperous economy.

U–2 Incident

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a letter received by me from a constituent, Mr. Milton B. Shaber, whose comments on the U–2 incident are those of an American citizen much concerned with the handling of the so-called U–2 incident. I think they are worthy of careful thought by the Members of this body. The letter was directed to the President of the United States, the Honorable Dwight D. Eisenhower, and a courtesy copy was sent to myself and several other Members of Congress.

The letter follows:

MILTON B. SHABER,
Detroit, Mich., May 31, 1960.

President DWIGHT D. EISENHOWER,
The White House
Washington, D.C.

DEAR MR. PRESIDENT: The U–2 incident is most unforgivable. I read in Pearson's column when that was proposed 3 years ago, Adm. Arleigh Burke was against it as too risky, but you, Dulles and others overruled his objection. When we are preaching peace all over the world, why was it necessary for you to undertake such a colossal risk; it could have lead to war. No matter what information you gained from this undertaking it could not have been worth the risk taken.

You are not a good salesman. Mr. Khrushchev was cordial and pliable at Camp David, he was in a compromising mood, and any

good salesman knows when a client is in such a mood he follows up as quickly as possible in signing him up. This you might have done by arranging for a summit conference only a month or two after his visit here. By postponing it to May, you have allowed opposition forces in the Kremlin and Red China to work on Khrushchev. You apparently postponed it for political reasons, to bring it closer to election time, with the peace issue involved.

I think the U–2 program will go down in history as our greatest diplomatic blunder of the century, and we will pay dearly for the cost of its consequences for a long time.

The trouble is that you really are a part-time President and not a leader, and delegate too many of your presidential duties to immediate subordinates, who are not very competent.

Yours truly,

MILTON B. SHABER.

Medical Aid for the Aged

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. DONOHUE. Mr. Speaker, despite our vaunted boast of high living standards and Christian concern for the well-being of all our people it remains a fact that the United States is the only major industrial country in the world without some form of national medical insurance for its elderly and retired citizens.

From the overwhelming evidence in the record, contained in economic statistics and the testimony of experts, it is painfully obvious that our aged people are in imperative need of some type of Federal medical aid.

According to Dr. Porterfield, Deputy Surgeon General of the U.S. Public Health Service, out of the 10 million persons in the Nation who have heart disease, 4 million are 65 or older. At any given time, some 750,000 persons have cancer and most of these are persons over 65. Almost 3 million individuals have diabetes and the aged account for the majority. This is also true of the 5 million suffering from arthritis and the 6 million who are affected by related rheumatic disorders. Each of these diseases brings with it the high costs of medical and hospitalization treatment as well as the need for expensive drugs. In considering these dramatic and disturbing figures let us not forget that medical costs have increased 46 percent in the last 10 years.

The economic distress caused by these advanced medical costs is even more impressive when we realize that 74 percent of the aged have income of nothing to $1,000; 11 percent have incomes from $1,000 to $2,000 and only 15 percent have incomes of $2,000 and more. These statistics make us consciously appreciate that illness among the elderly is truly a staggering and discouraging financial burden.

There is no commonsense in any attempt to deny or gloss over this obvious national problem, and the urgent necessity of promptly dealing with it. There are multitudinous bills before the Congress now in recognition of the problem. The administration itself has openly admitted its existence. There remains only the legislative task and duty of designing a measure acceptable to the Congress and the President, which will extend the fullest and most equitable Federal insurance possible to the desperate aged in their gallant fight against the economic distress and discouragement of costly sickness in their declining years.

Mr. Speaker, I earnestly hope this session of the Congress will not conclude until those of us, in the Congress and the administration who have the responsibility, have fully discharged our duty and obligation to the elderly citizens of this blessed and bountiful country.

The Missing Link in the Jet Age

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, I am privileged to extend in the Appendix of the CONGRESSIONAL RECORD the speech delivered by Capt. Eddie Rickenbacker, at Oakland, Calif., on May 17, 1960.

Captain Eddie has had a long association with the metropolitan Oakland area. Early aviation history was made in this area and, naturally, he played a great part in it.

Captain Rickenbacker's speech follows:

THE MISSING LINK IN THE JET AGE

(By Capt. Eddie Rickenbacker, chairman of the board, Eastern Air Lines, Inc.)

It is a great pleasure for me to be with you today, to join again with old friends and to meet so many of Oakland's progressive young leaders whose dedication to the community's welfare is the logical way of guaranteeing the development of this great port city in the future of unlimited jet speed opportunities, which is opening before us.

I am grateful, also, from the bottom of my heart, for the honor you have bestowed on me in this homecoming celebration.

I firmly believe it is a good omen and a promise of an even greater celebration in which we shall join, in the not too distant future, when we achieve the victory in the war for recognition we have been waging so long for the southern transcontinental route.

The continuing crusade we have championed, together, for more than 20 years—to establish Oakland as a key terminal on a southern transcontinental air route—to link together the three fastest growing areas of the Nation, is only one of the causes in which we have fought side by side.

As some of you oldtimers may remember, as I do so vividly, I enlisted in your fighting squadron to win a place for Oakland in the then-still-to-be-born air age, at least 40 years ago. In fact, I might even qualify as one of your recruiting officers.

My first appearance was in a little shiny Junkers monoplane, the first all-metal airplane ever seen in America. My companion was Ed Allyne, who was then president of the Aluminum Co. of America, whom I had induced, much against his better judgment, to take an interest in the development of aviation.

We landed on a strip of sod along the waterfront and one of the first things I did was to lecture my reception committee on the importance of building an airport for Oakland.

Air transportation, I boastfully predicted, was bound to progress and with airplanes, traveling possibly at 200 miles an hour, shuttling men, mail and merchandise back and forth across the country, aviation would change the entire concept of industrial, commercial and personal travel in this Nation of ours and around the globe.

"Don't miss this great new age," I urged. "Get in on the ground floor. Build an airport to match the unique commercial importance of Oakland, and the service is bound to come."

Well, at least I was half-way right. I have just come from an inspection of Oakland's great airport and looked at the plans for its further development. In all sincerity, I can say that it is one of the finest airports of any metropolitan community in the United States today.

However, there is one thing wrong with it. And it proves one-half of my early prediction which has not yet, in proper proportion, come true. The airport is here, all right, and far beyond what any of us visualized in our wildest dreams, but the full measure of service your community needs is yet to be secured.

While waiting to fly across the bay this morning and, as a matter of fact over the past several days when I was trying to figure out the best way to get to Oakland, I thought many times how at least on my first trip in the old junkers, 40 years ago, I came directly to Oakland. That's more than I could do today.

Through the years we have worked together on other projects, all aimed at the progressive growth of Oakland in this age of the air, whose expansion has dwarfed to pygmy size the most optimistic visions we nurtured more than two decades ago.

Now, we stand once more on the threshold of a still greater future. Once again, far beyond the future we envisioned only a few years past, the opportunities ahead will multiply and expand at the rate of jet speed itself.

The crusade in which we are joined today—the crusade to provide direct access to both coasts for the public, commerce, and industry of our great tier of Southern States—to my mind, has most important consequences for the community of Oakland in this fabulous future.

The establishment of Oakland as a Pacific terminal for this southern transcontinental route will go far to compensate your great city for what it has not been able to achieve as our air transportation routes have developed, and will, beyond question of a doubt, fix Oakland's place on the airways of a world transformed by jet transportation.

Oakland, as a terminal seaport, has historical ties with many seaports throughout the world. Oakland, as a terminal airport for the southern transcontinental air route, will have access to all the ports in the world—because of the jet age we visualize, every city, town, and hamlet on the face of the globe will be a port on the vast ocean of air along whose shores every man lives.

My reasons for stressing the importance to Oakland, in this future which is already so rapidly unfolding before us, are obvious, I am sure, to all of you. This southern transcontinental route I first envisioned more than 22 years ago would bridge the only remaining gap in the Nation's network of air routes.

It would link together, directly and for the first time, the three fastest growing areas of our great country—Florida, the South and the gulf coast, and the Pacific—the areas

which have been most handicapped by lack of modern transportation facilities.

During the same period, we have seen transcontinental service across the northern tier of States, multiplied four times to link the industrial, commercial, and financial regions of the Atlantic Northeast, the Middle West, and the Pacific coast. One reason for this may have been the fact that the South was, as the report transmitted to the Congress of the United States by one President expressed it, "the Nation's No. 1 economic problem."

At the price of considerable political censure, I challenge that statement. To me, rather, the South was the Nation's No. 1 opportunity.

Eastern Air Lines has routes that go deep in the South. We pioneered the first air service along the eastern seaboard of the United States. In addition, we concentrated many years of effort and millions of dollars in the deevlopment of a network of air routes to link the communities of our Southern States which have not benefited, relatively, to the same extent as other areas of our Nation, in the development of earthbound transportation. As a result, there is more air service concentrated in the South today than in any other comparable area of the United States.

There was sound reasoning behind this pioneering development. The South, as you all know, has tremendous resources which, for years, had been relatively untapped. In 1938, when Washington was concerned over the economic plight of this great area, I had already detected positive signs of its economic awakening.

It remained for World War II, however, to break through the roadblock of inherent inertia. Because of the vulnerability of our coastal areas, many production plants involved in the national defense were moved into the Southern and border States. Because of the ideal weather conditions, many of our great military training areas were also located there.

A few years before the war, textile manufacturing had begun its march South to shorten the gap between raw materials and the manufacturing machines. This was closely followed by a similar trend in the chemical industry which began its movement to the site of oil production.

With the development of our tremendous missile industry, this, too, is largely concentrated across the band of Southern States from the Pacific to Florida, and on down the South Atlantic, so that in a very real sense, this area of which we speak has become the Nation's first line of defense.

During this period of tremendous growth, the industrial, commercial, and financial alliances—and the community of interest between the cities have been magnified many times. The only thing it lacked was proper and modern air transportation, coast to coast, because, significantly, the North is no longer the financial and industrial master of the South. Its axis runs East and West today.

Superimposed on these three naturally joined areas, the benefits to these areas and to the Nation of the southern transcontinental air service, for which we are fighting, should be obvious. Then, follow that route on the map and the importance of Oakland as a terminal of the southern transcontinental route must also be obvious.

Oakland is the apex of the great industrial empire of the bay area. It is a natural gateway to all the Pacific.

With a direct transcontinental route of its own, through the southern tier of States to Florida and on to Puerto Rico, Oakland will expand eastward as well as westward, because Puerto Rico, the way station between the continental United States, the Caribbean, and eastern South America, is also the natural gateway to the west coast of Africa, and through that rapidly maturing continent, to the southern half of the Eastern Hemisphere.

No one who has even the Biblical mustard seed of faith in the progress that lies ahead of our free Nation, blessed as it is with such an abundance of God's good gifts, and propelled forward by the dynamo of private enterprise, can fail to recognize the importance of Oakland and of Oakland's airport in this tremendous future.

The entire bay area has a great stake in this projection. There is room and the necessity for all to participate.

Many of you, I know, have chafed at the secondary role Oakland has been assigned in the way the Nation's air services have developed through the past 20 years. It serves no useful purpose, in my opinion, to concern yourselves with the past.

What is needed, more than ever before, is to concentrate all of your vision and imagination, your political, and economic resources, as well as your loyal community spirit, upon a future which will have little relation to the past.

We are entering an entirely new era—a jet era. The yardsticks we used in the past are no longer adequate to measure the future. Because of the jet airliners' speed and long-range capabilities, the geographical factors which once dominated the choice of airports, no longer apply.

Just as industry is decentralizing and moving to those areas which provide access to raw material, manpower, and other natural advantages, air transportation in the jet age will inevitably follow the same course.

The productiveness of industry is the bulwark of our Nation's progress and that of the free world. Industry produces not only products, but a density of population. And the jet airplane is ideally adapted to serve the needs of both.

Our jet transports, already flying almost at the speed of sound, and with their most economical and effective operating performance at longe ranges, understandbly will be impatient with intermediate stopping points. The trade routes of the future will follow the seaman's Great Circle, over land as well as the oceans, and will have for their terminal points those areas where industry and population dictate.

The problems this certain development will pose are, indeed, most serious. Centuries of trade route development is involved. The future position and prosperity of many communities will rest on the decisions faced today and tomorrow by our civic leaders who must plan—and fight for—the place their communities will hold in this future of unlimited opportunities.

Through the foresight of your civic leadership, through the aggressiveness of your commercial enterprise, and through the loyalty and devotion of your citizenship, Oakland, with its magnificient airport, is in an exceptional position to capitalize on this future. That main 10,000-foot runway with its clear overwater approaches at each end, is capable of handling the largest jet transports in operation today.

You have on this site ample room for expansion of facilities, for the development of industries closely associated with aviation, and quick access to both concentration of population and of industry. This is a combination of advantages rarely found in areas available for the development of jet age terminal airports.

There is no doubt in my mind that, as this great Bay Area continues to grow, and as the public takes more and more advantage of the speed and convenience of air transportation, the facilities you have now will be needed, and needed badly.

But I would like to direct your attention to one other, and too often forgotten, facet of this development we visualize. That is the importance of what I call an "industrial air terminal."

To date, and for natural and logical reasons, air transportation has concentrated primarily upon the movement of passengers and mail. So rapidly has aviation advanced in this direction that, today, the airlines have superseded the railroads and the buses, as the Nation's primary means of intercity transportation.

You can visualize the future ahead for air travel in the fact that, despite this tremendous progress, less than 10 percent of our Nation's population has yet experienced the comfort and the superior advantages of air travel. Yet, the best analytical brains in our industry and the best students of transportation in industry and Government, have told us, for years, that air passenger transportation represents but one-twentieth of the true potential of air transportation. The key to this expanding future, they tell us, is in air cargo, a phase in which we have hardly made a start.

The carriage of cargo by aircraft, on regular schedules, was initiated in 1946 by our country's airlines. The past year, our industry carried about 2.7 billion ton-miles of cargo in interstate and foreign commerce. We now carry more tonnage in a single week than we did in the entire first year of our service.

The trend in that growth is indicated by the fact that in the past 10 years, while we increased our carriage of passengers 4.3 times and mail 4.1 times, we multiplied our carriage of airborne cargo 38.7 times.

Today, over 5,000 cities are provided with this air cargo service—750 directly, and the rest by truck lines under contract to the airlines to provide door-to-door delivery. We carry cargo by air to 160 foreign ports, as well. Yet, today, only 140 of our civil aircraft fleet of 2,000 airliners are equipped as all-cargo carriers.

By 1965 it is estimated that our airlines will be carrying 7 to 10 billion ton-miles in cargo service. This figure, too, can be multiplied, conceivably, if we are successful in developing a jet-powered air freighter, designed for truck-bed level loading, and capable of carrying freight at 3 to 3½ cents a ton mile. Both the industry and the Government are now studying this subject, because of its great importance for both commerce and the national defense.

Today, 15 percent of our airborne cargo is carried in the same airplanes we use to carry passegers, the remainder is carried in cargo craft converted from passenger airliners. Obviously, this is both limited and expensive. It is like trying to carry freight in the trunks on the passenger cars we drive, or like taking out the seats so we can use the family car as a moving van.

Most of the country's leading airlines are now converting more passenger carrying aircraft for all-cargo service. Eastern Air Lines, for instance, is now completing the conversion of the first five of our fleet of 88-passenger Super-C Constellations into "flying freighters," each of which will be able to carry a net weight of 34,000 pounds nonstop across the proposed southern transcontinental route.

This is but a token start. Reading the handwriting on the wall, many airports are already adding facilities for the handling of airborne freight and cargo, entirely separate from passenger operations. Undoubtedly, as the airfreight industry expands, many other airports will do likewise.

The reason I bring these few facts to your attention is to encourage you to think, to plan, and to work toward a distinctive future for Oakland's airport. Visualize, if you will, the funneling of this area's great industrial output, through this airport, for transportation not only to the key cities of

the United States, but to ports around the world.

This will mean not only greatly expanded passenger traffic through the airport of Oakland, but it will also mean the most productive utilization of the facilities on which you are in such a unique position to capitalize as a terminal on the southern transcontinental route and for which we have labored so diligently.

There is no quetsion in my mind but that the Civil Aeronautics Board must recognize the public's need for this service. There is no need to remind you that the opposition is just as determined today, as it has been during the years past when, despite a clear presentation of the public need, the service was not authorized.

That we have been successful in bringing the matter again to our Government for decision is due, in no small measure, to the determined effort made by Mayor Rishell and your civic leadership, by the port of Oakland, by the board of port commissioners, by the chamber of commerce, and the political and industrial leaders of these areas.

That victory, however, is still to be achieved. We must all, in every proper way and at every opportunity, continue to urge our Government to make a prompt and proper decision in this matter, which is of such importance to this area and to this Nation.

As I said before, we stand on the threshold of a new dimension in progress—a dimension of unlimited opportunity in a future, the form of which we can only surmise at the moment. In my opinion, that for which we are fighting will, in a large measure, determine the place Oakland will hold in that expanding future for aviation.

What lies ahead for aviation?

Any attempt to visualize, within 50 percent of reality, what will be accomplished in the next 50 years of aviation would, in the eyes of his friends, qualify one as a fit subject for an insane asylum.

I can speak from experience because, just 30 years ago, I ventured to predict such a glimpse of what we might expect in the next 25 years. Despite the fact that several of my predictions fell far short of what actually has taken place, my description of multi-engined transports, of transoceanic air services, of wide-ranging, high-flying military aircraft, and yes, helicopters, sounded to many like the outpourings of an unbalanced mind.

Yet, with this popular penalty vividly in mind, I will venture the following predictions for aviation over the next 50 years.

Long before the year of 2010 is reached, military aircraft, both fighters and heavy bombers, will progress from turbo-jet engines at the speed of sound to the more powerful ram-jet and rocket engines with speeds up to 2,500 to 3,000 miles per hour.

These will be the forerunners of nuclear powered fighters and bombers, cruising 50 to 250 miles above the earth, with sufficient range to circle the globe without refueling and will form a perpetual peace patrol.

Even these will be but stepping stones to rocket-driven guided missiles, which are making obsolete our present conceptions of fighters and bombers. Carrying a much further developed and devastating nuclear bomb, these war machines will be controlled electronically, and will require the help of human beings only at point of takeoff.

Speeds of these nuclear-powered guided missiles will increase progressively from 2,500 miles an hour to 25,000 miles an hour, and they will locate their targets with acoustical devices as yet unperfected.

This, I admit, is an ugly picture, but as man develops his ability to engineer these deadly instruments, the need for them will diminish proportionately. In this fact lies mankind's greatest hope since the beginning of time.

Spectacular as are the developments ahead for military aircraft, the advance of aviation as the world's primary means of travel over any appreciable distance will be equally fantastic.

Jet-powered transport planes will progressively graduate from today's giant aircraft with speeds of 600 miles per hour to veritable airliners cruising high above the weather with silent, vibrationless comfort at speeds of 2,500 miles per hour or more. With these, we will be able to cross the American Continent in little more than an hour, span the Atlantic in less than 2 hours, cross the Pacific in scarcely 4 hours, and circle the globe in scarcely 10 hours.

The application of atomic power to transport aircraft will bring to reality, aviation's inherent potential of being man's most economic, as well as safest, means of travel.

Because of the limited weight of nuclear engine fuel, by comparison with the weight of tens of thousands of gallons of the fuel now required for propulsion, the atomic engine will make possible tremendously increased payloads and ranges. This will mean far more efficient aircraft, and consequently relatively lower and lower costs for the traveling public and the shipper.

While these nuclear-powered airliners will link all major cities over the continent and across the world, helicopters for intercity short haul travel will progress from today's reciprocating engines, first to jet power and then to atomic propulsion, increasing in size and carrying from 50 to 100 passengers.

To utilize this advanced means of transportation, all cities of any size will zone building heights in their downtown areas and bridge the streets, to make heliports of adequate size—an ideal convenience for the greatest number of people.

The development of electronic devices and controls will make the operation of aircraft independent of the weather.

The conscious acceptance, by the passengers, of the individual's role in promoting friendship and preserving peace, will be evidenced in a universal passport, used for identification only, and airborne cargo will move freely in response only to the demands of commerce.

Finally, in the span of this next half century of aviation, spaceships will become commonplace for interplanetary travel. With luxurious accommodations for 150 to 200 passengers, they will use power derived from nuclear energy to develop speeds up to 25,000 miles per hour, or better, and will have a practically unlimited range. In fact, spaceships 50 years hence will be semi-self-sustaining planets in themselves.

What lies ahead for aviation? Our progress will be limited only by the limits of human imagination. To make these things and even far greater wonders, man already has the God-given intelligence, and the capacity for the knowledge they will require.

Yet, unless we can anchor our knowledge to moral principles, science may turn out to be not the guide, but the betrayer of humanity. With aviation's development in the hands of men of good will we have, for the first time in the long history of man, the one instrument, which can forever eliminate the barriers of time and distance, of ignorance and misunderstanding which, since time began, have set men apart and against each other.

In terms of human relationships, these advances in aviation mean that the world will grow progressively smaller. Then people of all nationalities will have, within their own hands, the means of meeting and understanding all people, and for eliminating the petty hates and jealousies which breed wars.

Then instead of being the most deadly weapon God ever let man create, the airplane will truly become the Angel of Peace He intended it to be.

Nationalities Day Observance

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 13, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address I delivered on Sunday afternoon, June 12, 1960, at a Nationalities Day celebration held in Prospect Park, Brooklyn, N.Y.:

Mr. Chairman, distinguished guests, ladies, and gentlemen, I am very delighted to participate in this celebration devoted to Nationalities Day. The idea of dedicating this day in honor of the various nationality groups who make up this great Nation of ours is an excellent one. I want to take this opportunity to extend my appreciation and congratulations to the people and the organizations sponsoring this wonderful idea, particularly the Italian Historical Society of America, and to give my support in helping you realize it. I hope that in the near future Nationalities Day will be celebrated on a nationwide scale.

On an occasion such as this, when we commemorate the contributions of the different nationalities toward the makeup of our beloved America, we think of the words of the poet and philosopher, Ralph Waldo Emerson, who said:

"Not gold, but only men, can make
A nation great and strong;
Men, who for truth and honor's sake,
Stand fast and suffer long.

Brave men who work when others sleep,
Who dare while others fly;
They build a nation's pillars deep,
And lift them to the sky."

From its earliest beginnings, America has been a land of immigrants, of people of various national origins. All of us are very proud of the fact that these nationality groups have brought with them to this country the rich heritage of their national culture, along with their passionate love for freedom and human dignity. They have helped build America, physically and spiritually, to its present greatness. They have made wonderful contributions to America in every sphere of activity.

These nationality groups—and I include not only the original immigrant generations, but their children and grandchildren as well—always were and still are among the most loyal, devoted, industrious, and hard-working citizens in our country. They came to this country primarily because of political oppression, religious persecution, economic dislocation, abject poverty, and no opportunity of ever improving their lot in their homeland. Here they found a country which offered them life, liberty, and an opportunity for all. These are the concepts on which this Nation was established. These are also the concepts that have molded the cultures of the nationalities who have poured their strength and their spiritual gifts into the common treasury of America, to build it up and to make it what it is today—the hope and the inspiration of the free nations all over the world.

The "face" of America today is the face of a land which enjoys vast material blessings, a land of plenty, of tremendous agricultural and industrial productivity, of great scientific achievements. It is a land which has reached the greatest peak in political liberty, in economic progress. It is the most powerful nation on earth. In fact, in the long

and turbulent history of mankind there has been no equal to it.

But the "face" of America as we know it today was made possible only by its people, by its own human resources, by the labor they put into it, by their sweat, toil, and tears, by their confidence in themselves—but, most important of all, by their confidence in America and in its future. We and our children do not want the face of America marred or overshadowed by any other concepts or foreign ideologies.

There is a very interesting story told about Leonardo da Vinci, the famous Italian painter, sculptor, and scientist of the 15th and early 16th century. When Da Vinci decided to paint the "Last Supper," he threw all his energies into the work. He labored day and night. He studied the pages of the New Testament where the sacramental feast is described, in order to fully grasp and reproduce the memorable scene. At last his work was finished and Da Vinci invited a few close friends to see it. They gazed attentively at the painting, and then one of them spoke up with great admiration of a golden chalice shown on the table where the Lord and His disciples sat.

"The shape, the color, and the size of this chalice are perfect," he said. "It is the most beautiful object in the picture."

When Leonardo da Vinci heard what he said, he took a brush, dipped it in black paint, and smeared it over the whole canvas. He then said to his astonished friend:

"If what you tell me is true, that the chalice is the most beautiful object, then my painting is a failure. I meant my Master's face to be the chief and most beautiful object."

In a way, each of us is painting a picture of life, sometimes good and sometimes not so good. In painting this picture of our life, some of us will often make the trifles, the petty things, the most conspicuous objects on the canvas. The great majority of the people, however, are able to distinguish between the trifles and the important things in life.

The nationality groups have helped paint the picture of America in its true colors, stressing the importance of its concept and ideals. They have helped to make the face of America an inspiration to all of humanity. They did so because they fully understood the meaning of American ideals, its democratic traditions and institutions, which are precious to them. It is no wonder that, whenever called upon in times of stress, these nationality groups would send their sons in overwhelming numbers to defend America and its way of life. They are ready to do so again whenever the need arises.

If our country is richer and stronger today, if the face of America is that of a land enjoying many blessings, it is due in great measure to the efforts and the hard labor on the part of all these nationalities. It is due also to the infusion of their ideals, their culture, and traditions. It is due no less to the moral uplift of their spiritual strength. All of these have been blended with American democratic life, to give it greater harmony and greater unity of purpose.

America owes a great debt of gratitude to these nationality groups, who have joined their destinies with those of America in order to make it truly a land of freedom and a leader among nations. But they are not looking for special recognition or personal gains. I believe that the establishment of Nationalities Day as an annual observance in recognition of these contributions will serve as a welcome reminder of the part played by the nationality groups in the development of America. No greater glory is required. No greater honor is needed.

I ask you, my friends, where but in a land such as ours could people of various national origins get together at a public meeting like this to testify to the opportunities of the precious freedoms afforded us in America? Where else could people of diffeffrent racial and religious origins, as we represent here today, gather to express our appreciation of the individual liberties and human rights which make life in this country an experience of justice, equality, and happiness? Where but in America could we demonstrate a fellowship that is more than mere tolerance—a partnership in our common efforts for the good of all?

The Scriptures tell us that "As a man thinketh in his heart, so is he." This Biblical admonition reminds us that we cannot think in terms of failure, and then hope to succeed; we cannot think in terms of weakness, and hope to be strong—any more than we can think in terms of doubt, and then have faith. We must think in terms of faith in God, faith in our fellow men, and faith in America. We must think in terms of a strong America, an America that has succeeded in the past and will succeed also in the future.

We are living in a time of great responsibility which has been thrust upon us by circumstances. While America is benefiting from the cultural and spiritual gifts of many nations, freemen everywhere and those behind the Iron Curtain dreaming of freedom are today looking to America for guidance and leadership. All their hopes and aspirations to regain human rights, justice, and a life of dignity are centered upon us. Everything that we do now and in the years ahead will affect all of humanity.

This is a time of responsibility which finds us at the crossroads of human affairs—where one road leads to higher destiny, the other to horrible destruction. Men's minds have succeeded in discovering the secrets of space with their promise of abundance and peace for all mankind, or infinite evil and war. We must make sure that we choose the right road. We must utilize the new knowledge obtained through space exploration in order to bring the nations of the world closer together in new patterns of cooperation. If we succeed in doing that in a spirit of true understanding, then space may become the way to the creation of a world of abundance and peace, making war and the destruction of civilization unnecessary.

Perhaps, you will say, these are heroic dimensions. But these are also heroic times in the annals of human history which require heroic efforts. We have the opportunity to help lift the impoverished and undernourished nations to a better life. But, in addition to the great hunger for food and sustenance, there is an even greater hunger in the world today for freedom and equality. Men are ready to fight and die for the attainment of human dignity. If others all over the world are ready to die for freedom, equality, and human dignity, then surely we can live and work for these ideals with all the talents and the resources we possess.

Whether we like it or not, America has been entrusted with the responsibility of defending Western civilization. The success of that defense will determine not only the survival of our way of life, but even more so the maintenance of the dignity of man everywhere in the world.

To help assure our success, we must attain throughout this country a firm unity of the American people—a unity which comes from understanding, group by group; a unity which comes from an appreciation of the cultural heritage, nationality by nationality; a unity which comes from deep respect for the religious differences, faith by faith; a unity which comes from tolerance and cooperation, race by race. If we can attain this kind of unity—and I am firmly convinced that we can—then America and its way of life will have a strong and solid foundation for the future.

I want to close with the words of a great American pote, Stephen Vincent Benet:

"We have made this thing, this dream,
This land unsatisfied by little ways,
Open to every man who brought good will,
This priceless vision, groping for the stars,
Not as a huge devouring machine
Rolling and clanking with remorseless force
Over submitted bodies and the dead,
But as live earth where anything could grow.
We made it and it's ours.
We shall maintain it. Is shall be sustained."

May God give us the strength to maintain the security of our land and the welfare of our people for many generations to come. And may we have the opportunity to observe this Nationalities Day for many more years and to tell future generations of the great contributions made by all those who preceded us to these friendly shores.

Air Force Fiasco on Bong Airbase Was Unnecessary Waste of Taxpayers' Money; Air Force Gained $30 Million Without Having To Account to Congress on How It Was To Be Spent

SPEECH
OF
HON. GERALD T. FLYNN
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. FLYNN. Mr. Speaker, yesterday, while the House of Representatives was considering the military construction appropriations bill for 1961, which appropriated additional funds so as to make available $1,535,388,956 for the construction of military bases, I spoke on the floor of the House of Representatives and reminded the House of Representatives that we had an obligation to protect the taxpayers of this country from further gross extravagance and waste by the Air Force. The Air Force came to Congress and secured approximately $62 million out of a total of $82 million authorized for the construction of Bong Air Force Base in Wisconsin. The Air Force started construction of the base, and including the cancellation of contracts spent approximately $32 million of this sum. They pocketed the remaining $30 million and did not return it to the General Treasury of the United States. Congress had no further control over these funds; and although they undoubtedly took the matter up with the Armed Service Committee, they nevertheless were the beneficiary of about $30 million which they could use for such purposes as they desire, even though this purpose might be the building of commodious quarters for Air Force officers, which the Congress as a whole would not approve, or for some equally luxurious whim of the Air Force, such as printing pamphlets for its recruits with instructions for the proper way to dress or hold a fork. A similar situation occurred in another air base that was canceled recently and the Air Force became the beneficiary of several million dollars of free money from that cancellation. I

state that it is the duty and obligation of Congress to see to it that any such funds that are not used for construction after they are appropriated should be returned to the General Treasury and not be left for the agency involved to boondoggle in accordance with their desires.

In the case of Bong Airbase, the area involved strongly opposed the installation of the base for the reason that it was being installed in a highly populated, highly valuable, highly fertile, highly industrial area. I personally opposed the base, and supported it only after Air Force officers, in secret mission, assured me that the base was essential for the defense of the country as a whole, and that it was strategically located. The Air Force never secured authority from the FAA to fly planes off the base and squandered $32 million of the taxpayers' money without even applying to the FAA for authority to use the base after it was constructed. The FAA opposed the use of the airbase on the ground that it was unsafe because of other air activity in the Chicago-Milwaukee region, which is highly concentrated with population. The FAA scheduled a hearing, as the work on the base continued, to question the right of the Air Force to use the base after completion. The Air Force apparently feared that the result of the hearings would be adverse and that they would be prohibited from using the base after it was constructed and the entire $82 million spent. The Air Force then, without notice to any elected official from Wisconsin, canceled further work on the airbase. The FAA canceled the hearing and the authorities in charge of the Air Force were saved the embarrassment that they would have suffered if the FAA had denied them the right to use the base after it was constructed. All of this cost the taxpayer $32 million; and the Air Force, in addition to this amount, became the beneficiary of $30 million, which it kept and can use as it sees fit without the approval of Congress to reschedule the use of the money. They, undoubtedly, will take the matter up with the committee that supervises them, but it is improper for the Air Force to have the right to spend this money without congressional review.

The Air Force in canceling the base failed entirely to take into consideration the welfare of the community involved. If they had contacted the elected officials, a great deal of the adverse economic impact on the area involved could have been avoided. They did not contact any elected official, and since the cancellation they have been arrogant and arbitrary in the decisions that they have made and have virtually failed, in any respect, to consider the wishes of the Congressmen from the district or the Senators from the State.

The Air Force has now asked to abandon the base for disposal by GSA. The area has been, for the most part, completely despoiled and is almost a hole in the ground. The topsoil has been removed and the subsoil disturbed. The runway of 14,000 feet is ready for the pouring of concrete. The area involved is close to 9 square miles and takes up to 5,700 acres in the heart of a highly industrial and heavily populated community.

The Air Force could have completed the contracts under construction for approximately $1,631,000 more than the cost of canceling these contracts, yet it refused to do so. If the contracts had been completed, the community could have utilized the area to economic advantage in several ways, but an arrogant Air Force refused to cooperate and virtually failed to discuss the matter with the Congressmen from the district.

The time has come for Congress to impose upon the military the obligation of discussing cancellations of contracts with elected officials prior to cancellation in order that the impact on the community involved may be lessened, and Congress has a duty of seeing to it that funds appropriated for military construction which are not used should be returned to the Public Treasury for recommitment to places where needed. The Air Force, as well as other branches of military, should be compelled to consider the wish and the will of elected officials from the areas involved and should not be permitted to arrogantly do as they please without adequate consideration to the economic effects of their acts upon the localities where the bases are located.

Arrogance and waste, such as has been exemplified by the Air Force in the construction of Bong Airbase, should not be tolerated by Congress, and the proper committee of Congress should thoroughly investigate the entire situation.

Aid Should Begin at Home

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the May 10 edition of the Harvey Tribune, a community newspaper in my district, is, I believe, a most thought-provoking commentary on a subject of grave concern to all of us, and I am including it in the RECORD for the consideration of my colleagues:

AID SHOULD BEGIN AT HOME

Every so often one is confronted by idealistic persons or organizations who are seeking funds for some far away charity.

The further away the need, or the more remote the facts and circumstances, the more idealistic the project sometimes becomes.

The perfect answer to many of these pleas is that charity begins at home. There is nothing more admirable in sending charity 8,000 miles than in putting it to use in this community or in a nearby area where the charity is actually seen.

There are many adults and children in the United States, and in this community, who are in need of charity, or some kind of help, in the way of food, clothing, education, or otherwise. We suggest that those inclined to send their money 8,000 miles think twice before they start it on its journey.

Such money may wind up intelligently utilized, sensibly distributed, and thriftily handled. On the other hand, one really does not know what happens to it at the other end, who gets it, how much of it is drained away along the route, or by unknown sources who handle it at the other end of the line.

Chamber Wins National Honor

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, the ctizens of San Leandro, Calif., are exceedingly proud of their progressive, growing community. Living in an area in which the population growth is near the percentage top in the Nation, they have had to meet this challenge in stride.

A number of factors contribute to their success. There is a fine cooperative newspaper, the Morning News, in the community heretofore published by Abraham Kofman and now under the directorship of Carl W. Schooss.

The active, efficient, and wholesome chamber of commerce headed by John A. Deadrich, with affable and able Frank King as secretary-manager, deserves great credit.

The San Leandro Chamber of Commerce was recently singled out by the U.S. Chamber of Commerce for its fine work by an award of merit. An editorial appearing in the Morning News recites the attainment of this honor and the reasons for it:

CHAMBER WINS NATIONAL HONOR

The San Leandro Chamber of Commerce has won a well-deserved national honor, which was presented to Chamber President John A. Deadrich III at a recent U.S. Chamber meeting in Washington, D.C.

Only five chambers in San Leandro's population class were given this honor, an award of merit in recognition of the local organization's varied community program.

Chamber activities affect us all. The chamber conducts a series of citywide retail promotions that make shopping in San Leandro a pleasant and profitable experience.

The chamber works to improve the city by seeking, and getting, favorable zoning, street and drainage improvements, good overall planning, and the like.

A noteworthy example of chamber effort was the campaign waged in behalf of the recent zone 9 bond issue, which passed by a large margin. The chamber, representing merchants and industrialists, supported the measure along with homeowners and citzens' groups.

The zone 9 election was climaxed this week when the county board of supervisors put the $1,200,000 in bonds up for sale. Bids will be opened at 10 a.m., July 5.

Drainage improvements financed by the bonds will raise the value of western section industrial and residential property, and open the way for more development.

The San Leandro Chamber is not afraid to take sides in controversial political issues, as evidenced by its stand against the school tax increase. A big majority of voters apparently agreed with the chamber, because the tax hike was killed at the polls.

The chamber here has become a vital, aggressive, necessary segment of community life. Besides taking part in the more serious aspects, it devotes energy to making people happy. There is the chamber float, laden with beautiful girls—what could be a better gesture of goodwill?

The chamber meetings with special speakers, such as Congressman GEORGE P. MILLER, Assemblyman Carlos Bee, and other area notables, bringing the regional, State, National, and even world picture in focus at a local level.

The membership breakfasts, the welcome new teachers day, the groundbreakings, the action courses in practical politics, the beauty contests.

U.S. Chamber officials told Deadrich:

"We extend to last year's president, Paul Shepherd, and all chamber officials our hearty congratulations for attaining this recognition—San Leandro Chamber members have every right to be proud of their achievement."

We agree wholeheartedly with these words, and would like to add another special salute to the chamber manager, Frank King, whose vitality and devotion to chamber work have pushed the local group to the top of the national heap.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

WASHINGTON REPORT

(By Congressman BRUCE ALGER)

The Public Debt and Tax Rate Extension Act of 1960 passed after spirited debate and controversial differences of views. As a member of the Ways and Means Committee, responsible for taxation and the public debt, I participated in presenting and supporting the bill. A temporary $8 billion increase to the permanent debt limit of $285 billion was asked by the administration to keep the Government solvent. The $8 billion replaces the present $10 billion temporary increase voted earlier.

(NOTE.—This is not the total debt. Contingent liabilities of the Federal Government are not included.)

This temporary debt increase is requested rather than a permanent increase in the hope that ultimately revenue will exceed income and a permanent increase will not be necessary. Either type, however, permanent or temporary, is caused by the need for money to pay the bills which Congress has run up. So the effort of some Members to combat increased expenditures by holding down the debt limit is no more logical than refusing to pay your charge accounts when they come due because "you don't want to spend more." Reducing the spending in the first place is the way to keep your debts down in personal affairs, business, and government finance. Equally illogical is the proposal by some to "reduce the debt" by lowering the debt ceiling on the one hand while voting for more spending on the other. It really is not a complicated proposition.

The extension of the Korean taxes (corporation tax, 47 to 52 percent, equaling $2.5 billion annually, and alcohol, wine, tobacco, manufacturer's excises, etc., $1.5 billion annually) including telephone and transportation excises is still a necessary evil and was passed—why? For the same reason—big spending. If we do not pay as we go, that is, impose current taxes to pay for current spending, then we inflate the currency through deficit financing and simply water everyone's savings and salaries—again quite simple. Yet some Members would yield to constituents demands to cut this or that tax, forgetting the tax burden then must be transferred to other areas and people, undoubtedly themsleves in another form.

The questions to be resolved are: (1) Should we cut Federal spending? Answer: Yes, particularly welfare programs; (2) Should we have a tax cut? Answer: Yes; (3) What kind of tax cut? Answer: Income tax rate adjustment as well as excise tax cuts; (4) Should debt reduction come first, before a tax cut? Answer: Yes, out of respect for future generations and sound fiscal policy.

We can, should, and must have debt reduction and tax cuts—but they must be real—not political illusions coupled with deficit financing and inflation. We will have real cuts only when people demand them and demand the reduced Federal spending which can make them possible.

Congress (and I'll speak specifically of the House) does its work largely through committees whose function it is to study controversial bills (each committee assigned a specific area of jurisdiction) and to report their findings, for or against, to the House as a whole. Short of this orderly committee process, Members of the House couldn't begin to assemble, each for himself, the information necessary to proper consideration of the hundreds of bills handled at each session. Each committee then is a creature of the House and is normally an invaluable tool in the legislative process. However, it is also possible (as sometimes happens) for a committee to frustrate the will of the House which created it by interminably delaying committee action on a bill in which there is general interest or even by altogether refusing to consider a bill, year after year. To prevent any such crippling of the power of Congress to act when most members are willing and ready to debate and vote—and after the appropriate committee has had ample opportunity to study and report on a bill—a House rule provides that a bill may be removed from a committee's jurisdiction and brought directly to the floor for argument if a majority (219) sign a "discharge petition." It's a rule which certainly should be invoked but rarely, and one which can pose a moral problem for a Member who may even be against a particular bill but resent a committee's obstinate refusal even to let the House discuss and vote on it.

The home rule bill for the District of Columbia precisely illustrates the point. It happens that I am opposed to this bill for a number of reasons: (1) Washington, D.C. as the National Capital, is the home of the Federal Government. It is not like any other city, it belongs to the Nation, not the residents; (2) it is a shrine of our national history for our people to visit, with monuments and relics to be preserved; (3) it is the residence of many foreign sovereign nations in embassies where the exchange of international rights is involved. Nevertheless, I am equally disturbed over the flat refusal of a subcommittee of the District of Columbia Committee to report out a bill or even to discuss one on a subject in which every Member of Congress has a considerable interest one way or the other. Is the Nation to be governed in this respect by a handful of men on a single subcommittee?

Some days ago, I signed the District of Columbia home rule discharge petition in the belief that the House committee had been derelict in failing to vote down or to report to the floor this bill. I believed then, and I believe now, that by obstinately shelving controversial legislation a committee invites discharge efforts by the supporters of ignored bills and thus helps subvert the committee system itself.

Out of my concern for protecting the committee system and my belief that a discharge petition by proponents of the bill is, in this instance, warranted, I joined in the petition. Upon reflection, and after a careful restudy of the history of home rule legislation prepared by the Library of Congress, I have concluded that this action on my part was a mistake. Hence I have withdrawn my name from the petition. I believe still that the petition by the proponents of this bill is, in this instance (and such instances are rare) wholly warranted. But it happens that I do not favor the bill for the reasons stated above.

In view of this belief, whatever my concern over the committee's inaction and however great my desire to protest against it, I cannot but conclude that my signature on the petition which would effectively advance this legislation to which I am opposed, is unwarranted.

The year's wrapup of Congress before adjournment (or recess) may well include these major items—minimum wage increase, foreign aid appropriation, aid to education, another housing bill, farm subsidy, and social security revisions.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Our New Competition

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. VAN ZANDT. Mr. Speaker, on May 19, 1960, Mr. S. T. Williams, president of the Scoville Manufacturing Co., Waterbury, Conn., addressed the Kings County Club award dinner in Brooklyn, N.Y., on the subject "Our New Competition."

Since Mr. Williams' address describes the foreign invasion of America's domestic markets which I seek to correct in my bill, H.R. 9841, sponsored in the Senate by Senator KENNETH KEATING of New York, I am inserting Mr. Williams' address in the RECORD so that Members of both Houses of Congress will better understand the threat posed by cheaply manufactured foreign products:

OUR NEW COMPETITION

It is good to be back in Brooklyn. It is particularly good to be allowed to share in an evening wherein Lloyd Larson is deservedly honored. I have been interested in the health and activity of this association since it was founded, and I have been a card-bearing member through the years.

So I know, firsthand, what Lloyd Larson has meant to the association, and in how much it locally and nationally is indebted to him. And again, it is good to see that the association recognizes the value of this association; and is tonight conferring upon him the award of the Silver Knight.

I do not need to attempt to duplicate the good things that have been said, and that will be said to him and of him on this occasion. Others can do that more eloquently than I. But none can say, with more sincerity than I, "Well done, Lloyd. You are tops as an associate and a friend."

Beyond this, my choice as a speaker may not be a happy one. At least, my choice of a subject is not a happy one—for competition as it exists in the world today is not a happy circumstance for most of us concerned with production in the United States today. In discussing it, I can but little more than hit the high spots; but I will try to stick to my subject and word-paint the picture as I see it. I can't promise to send you home happy—but I may send you home more thoughtful, and action starts with thought.

It used to be that "if a man makes a better mousetrap, the world will beat a path to his door" to buy it from him. From the noise of the Madison Avenue boys of advertising, of radio, and of television, paths these days need a lot of beating and with it all, if today you make a better mousetrap, the Germans improve upon it; the Japs copy it; the World Bank finances its production; Congress cuts the duty and the low price gives it to the domestic and world market. After that, the unions demand more pay and increased unemployment benefits, and go on a strike. That isn't competition—it's murder.

In the past 10 years I have traveled in many countries. Ten years ago many of these countries were but little changed through the years; and if affected by the war, discouraged and tired.

Increasingly has a spirit of universal discontent swept over these countries—whether they be in Asia, in Europe, Africa or in South America. And with this has come to their people a spirit of high adventure of determination and of change. The good Lord only knows whether this is good or bad, but it certainly catches the United States in a heavy backwash.

Previously was this spirit expressed where present, in the emigration to the United States; for the United States was the living evidence of all things desired and all things hoped for. These people came, and in an environment of free enterprise, with minimum government interference, made us what we were at the end of World War II. It was during this period we acquired our Yankee ingenuity, our spirit of enterprise, and our mass markets.

Today the United States is more and more a have-not Nation. Each day we approach nearer and nearer to the point of no return. If tonight I can impress these points upon even a few of you—and you in turn can impress others—perhaps it is not yet too late. Those who govern for us ride with the pack.

Perhaps if enough of us make our feelings known, it will not yet be too late.

Let us not forget that the hair of the dog is no more effective in this hangover of ours than it is for other kinds of hangover. More immigration, as now being authorized; more high wages and fringes; more taxes, more inflation; and more population increases; more subsidies; more Government control are not cures for our illness. The old principles, guided with a real self-interest are needed.

The old saying that competition is the life of trade is still true. But if you are the individual or business on which the competition is focused, the reverse may be true. So our problem as producers is to get and stay on the right side of the competitive situation.

Today that takes a lot of doing. As far as business as usual is concerned, Pandora's box of troubles has been completely kicked open by two World Wars; the airplane, radio and the movies; and the attendant destruction of the neat compartments in which various peoples lived, worked and died. Attendant, and perhaps from these came communism; racial and geographic unrest; an explosive birth rate and a continuing turmoil both national and international.

Doing business as usual under these conditions takes on all of the problems of selling china with the bull still in the shop. Except instead of one bull, there are dozens of them.

Say what you may, this is an exciting and wonderful time to be living—providing you are a congenital optimist. I think I am one, but I must admit I ofttimes wonder what my predecessors used to do with their time. Certainly it was not spent on the things that concern us today, for they did not exist.

Now I do not believe I am going to answer in this talk many of the problems that beset us, but I do want to examine some of the more important ones, and maybe, as I have said, some group thinking and eventual group action may be helpful.

These are the new and enormously powerful forces, crossing all social and geographic boundaries, that have changed our world. They have changed the relationships of peoples and nations, of government and politics, of labor and management, of production and marketing. They have broadened the dimensions of competition and narrowed the capacity of the individual company to meet it.

What are some of these new dimensions? Perhaps the best way I can describe their effect is in terms of the company I know best, in which I have served for 30 years, and which I now head.

The Scovill Manufacturing Co., in which Schrader, with headquarters here in Brooklyn, is an important division, is a diversified company. Its output ranges from brass and aluminum mill products to a multitude of manufactured items. In size, Scovill stands about halfway in Fortune magazine's list of the 500 leading companies.

Founded in 1802, it is a living history of competition, and bears the scars to prove it. It spans the whole period of competition as we know it, which really began with the industrial revolution.

When Abel Porter and associates poured the hot brass into the little 1-pound molds, squeezed the small cast bar in a steel wringer to make a wider and thinner strip, the idea was to make brass for buttons. Buttons had been imported from England. Thus was established the first brass mill in America.

Its competition, once 3,000 miles away, was not long in coming home as others got the idea of melting, casting, rolling, and rerolling into wider, thinner, longer strips. Metal wrought and crafted in a dozen ways, to make a thousand products.

The competition was quick to catch up. Metalworking know-how, and the cost of man-hours in terms of productivity, set the price-profit relationship.

Nowadays, Scovill pours molten brass by the ton into a continuous casting machine from which exudes a ribbon of metal so wide and thick that a 10-foot length weighs as much as an automobile. A similar machine produces round stock.

This is about as far as you can get in producing the most of the best basic metal at the lowest cost. So what happens after that?

Competition. A new dimension of competition. A kind of competition which overwhelms the plain facts of lower production costs, by local price tags, that make a mockery of technology and bulk savings. Plumbers have bins full of imported brass mill products: tube, tees, elbows, all perfectly good, and why not?

As taxpayers we find ourselves in the peculiar position of setting up our own competition. As a nation we have provided technology, manpower, and money to create industrial capacity in friendly nations and conquered countries, which has grown to bite the hand that fed them. It is a cynical reflection that the way to win in progress and world markets is to lose a war with the United States.

Competition, in the new decade, is factored also by labor contracts which seek to share profits without assuming the burden of losses. This is another new dimension of competition, a kind of internal competition, which fights cost reduction but proffers no savings as a result of mechanization.

Competition is now political, industry-wide, worldwide, cutting across all boundaries. For a company like Scovill, it includes not only the normal competition of similar companies in the same market. The new dimensions of competition include also the squeeze between the little local shops, and the growing pressure from the growing combinations of companies which are creating a corporate giantism that stifles competition.

For even the youngest company, dedicated to development, to growth—meaning the accumulation of capital—these new dimensions of competition are a constant threat.

For an older company, the new dimensions of competition present additional problems. To grow big means also to grow old. To accumulate old thinking, old habits and patterns, old limits of what can and cannot be done. The greatest foes of progress are those who know what isn't so, have tried it, and it won't work.

If we are to survive in this admittedly gloomy picture, we will have to remodel our thinking as well as our machines and factories, where possible, and abandon them where not possible. We will have to recognize that the new dimensions of competition are not simply local, or national, or even international. They are also political. For perhaps our greatest competition comes from our politicians, our bureaucrats, and from those we elect in the fond hope they will represent the country's best interests.

Perhaps I am prejudiced. After all, one running a business, trying to make a profit for the stockholders (of which the Government takes more than half before the stockholder gets a look at it—and then the stockholder has to give some real part of his share to the Government); trying to keep the prices down; buy new equipment from inadequate depreciation allowances; carry on a comprehensive research and development program; tool up for new models; and continue increasing labor's benefits or face a strike. Well perhaps I do not come with clean hands and a clear mind, and perhaps in this paragraph, not very good English.

Well let's see what an economist thinks. He doesn't have to face these problems, he just talks about them. I turn to Peter F. Drucker, who writes in the May-June 1959 Harvard Business Review under the title "Realities of Our World Position." He asks, in the subtitle "Are we too blind, too smug, or simply unaware that the conditions determining our world position have changed?"

He starts off: "American public and business policies reflect some basic assumptions regarding our position in the world economy. With some oversimplification, these assumptions can be summarized in the following four statements:

1. The domestic market is the most important market for the American economy; performance in it is a full measure of the performance both of American business and of the American economy.

2. American superiority in productivity and in technological and managerial knowledge is normal. (Some people might even say "God-given," I suspect.)

3. The dollar gap is a permanent fixture of the international economy; foreign countries want as many American goods as they can get—and they want much more from us than we shall ever want from them.

4. Altogether the world economy needs us more than we need it."

He goes on to say that these assumptions are widely considered—by laymen as well as businessmen, labor leaders, and Congressmen—to be self-evident truths, is not inexorable laws of nature. He says "I believe, however, that in fact they not only are dangerously taken for granted but echo much of the complacency with which Edwardian England viewed its place in the world (to the sorrow of Britains ever since World War I). The assumptions are also at best half truths—and rapidly becoming less true all the time."

An almost opposite set of assumptions would, I submit, be far closer to the truth. Also it would give us a better foundation for business and public policies and attitudes and a more reliable yardstick by which to measure our true position in the international economy.

Mr. Drucker then goes on to what he considers a realistic approach to our international business problems. His assumptions are:

1. The foreign (i.e., export and import) market is fast becoming the truly critical market for the American economy.

2. American leadership in productivity and in technological and managerial know-how is not normal but abnormal.

3. Within a few short years—perhaps even less than a decade—the central problem of U.S. economic policy may well become earning enough foreign exchange to pay for imports (and to finance production of needed raw material imports in oversea plants).

4. Altogether, America's position in the world economy is both crucial and precarious.

In support of these four assumptions, he notes that our ability to produce is now dependent on our ability to import a long list of industrial raw materials, materials we either do not produce at all or do not produce in quantities adequtae to sustain our present industrial level. He suggests that a full half of the jobs in our economy already depend in one way or another on our capacity to import.

He comments as follows: "The United States is rapidly becoming a have not country, not because it is poor but because it is rich. "Export or die" may never become our slogan but 'export or decline" is a proper one already. For there is only one way to maintain the ability to import let alone to expand; that is to maintain and expand the ability to export."

"The foreign market, regardless of its size, is therefore already the crucial market for our economy. Performance in it will increasingly determine the ability of the American economy and of American business to prosper and grow." What Mr. Drucker is saying is that the United States already imports a tremendous amount of material that it does not have, and that it must continue to import this material increasingly. Furthermore if we are to stay strong we must process this material, and export those things that we can make increasingly to world markets.

I have already spoken on the second point; namely, American leadership in productivity in connection with our so-called Yankee ingenuity. He ends up his comment on this point as follows: "All this means, of course, that we cannot take our leadership for granted. We must instead assume that other people have brains and use them and that others can do just as well or better whatever we can do."

In commenting on the third assumption, he expresses real concern that under the present conditions the dollar gap may disappear quite quickly. Most economists agree completely with this assumption. In 1958 our country's balance of payments showed an estimated deficit of almost $3½ billion. Last year it was $3.7 billion or 8.8 percent more. Merchandise imports rose from $12.9 billion to $15.3 billion last year, and U.S. exports remained at $16.2, and this latter amount includes the value of our giveaways. When these deficits are coupled with a trend toward a much smaller favorable trade balance, the conclusion is inevitable that we are spending more dollars abroad than we can afford and that we should. This question of balance of payment, which has worried so many other nations since World War II is now coming home to us.

Somehow we must find a means of keeping our products competitive domestically and in foreign markets. We can't do this unless we control and possibly roll back inflationary forces in the United States. Excessive budget deficits, too easy money during boom periods, the wage-price spiral, and the farm price support programs are all elements. So are conditions that hamper productivity.

Other countries establish quotas on imports from the United States, and these should be removed, under threat of establishment of quotas by ourselves. We should correct many things that are bad, such as offshore purchasing under our mutual security program. We should correct the impression that the amount of funds we have available for grants and loans to foreign countries are inexhaustible and we should not be expected to carry more than our fair share of the overall military and economic systems program. Somewhere this assistance should begin to taper off.

So much for what various economists think and various economists have written. Let us take a few for instances. A few short years ago our automobile makers were saying, "The American people do not want a small car—they want big ones. The way we sell them, they can afford them and if anyone wants a low-priced car, there they are in the secondhand carlots. Sure, there are a few people who will buy those foreign market-baskets on casters, but not for us."

Last year the story changed. The foreign cars are established here. Our car makers remind me of the two Texans at a New York cocktail party. Whatever the subject, the Texans always top the story—bigger, better, or whatnot.

Finally the talk turned to midgets. One Texan was confused. He got the other one in a corner and asked "Do we have the biggest midgets in the world in Texas, or do we have the smallest?" In looking over our compact cars I am not sure whether we have the smallest big cars, or the biggest small cars in the world. Anyway it's a change of pace, and I hope we and the world like our new small cars in being or to come.

I am going to spare you from pages of statistics and dozens of charts and diagrams. You can collect your own, but I do wish to give you a cross section of some of them just so you may see the background of my remarks.

Acton Chance, who calls himself "metal-workings private eye" in Steel magazine investigates the case of vanishing taxes.

He gives one example of a domestic company bidding on a Navy ship plate contract. They are underbid by a foreign company and the Navy boast that it has saved $37,000 by taking the low foreign bid. Well what did the country and what did the rest of us save? The direct taxes lost on this deal were $67,000. The foreign company paid no U.S. income tax and the net loss to the United States was $30,000.

He gives other examples. The steel industry lost 1.6 million tons of steel production to imports in 1958 versus 1954. Translated into jobs, it means that there were 14,400 less jobs here in 1958, if we had purchased domestic steel, and continued to maintain our export markets. The automobile industry lost 520,310 units in 1958 versus 1954 due to increased imports and decreased exports. This, Mr. Chance states, means that there were 48,650 fewer jobs here because of this foreign production.

In machine tools there was $31,800,000 lost in 1958 as compared with 1954. Imports were up $7 million, and exports were down $24,800,000. Last year it was even more. This he says means 3,180 fewer job in the United States. The total of these three examples is 66,230 jobs. I assure you that these

are but a minute part of the whole picture, but do show the trend.

Similar comparisons could be made here in our own Connecticut backyards. The casualty lists include clocks and watches, brass mill products, bicycles, rubber footwear, typewriters, stainless steel flatware, sewing machines, fire alarms, zippers, and snap fasteners, to say nothing of textiles.

Comparative wage scales do not tell the whole story. Wages and productivity must be combined. Let no one tell you our workers are consistently outproducing our foreign competitiors. It just is not so, and where it is so, it will not be so for long.

In the steel industry, in 1957, the following comparison in wage scales existed:

United States	$2.91
Britain	.827
West Germany	.694
France	.583
Italy	.55
Japan	.361

In the face of increasing costs all along the line is it any wonder that our steel industry is fighting inflation, and endured a long strike in trying to hold the line. They should have had the support and commendation of every thinking citizen; but an economic battle was settled for political reasons.

The Copper and Brass Research Association has made "A Study of an Industry's Decline Due to Our International Policies." Samples of this study are available for you here tonight. With it is a condensation that "he who runs may read," prepared for those who wish a quick understanding of the situation. I have sent the former to all of our company bankers, and the latter to all of our employees. Copies of these are available from the Copper and Brass Research Association for your similar purposes, if you so desire.

Do I think data of this kind has any effect on our Tariff Commission—our representatives in Washington? No. They are dedicated to continued reduction in duties, to aiding foreign competitors, to promote imports. And they will continue to be dedicated until enough of us do something about it. At long last our Government is making a gesture of promoting the sale of U.S. merchandise through its foreign offices. Week before last one of our commercial attachés in a foreign country told me, "We get bales of literature and peptalks for sale promotion, and we do fine until we bring out the price list." There is no competition in the world as successful as one with a lower price and better credit terms. Or perhaps foreigners will buy from us because they love us?

Sure, in its defense industry has the right to prove injury to the Tariff Commission. It has the right to appeal. But by the time you can prove injury, you are dead. You need no relief then, for you are out of business. And should you get relief, it is but a Smith Bros. cough drop given to a patient in the last stages of galloping consumption.

When the competition you face from abroad has but 3 to 15 percent of the labor content in its products as compared with three times those amounts in your equivalent products; when he has no fringes; benefits from tax refunds on products exported; possesses new and better equipment than you do; has no engineering expense because he copies your products after you have developed them and established a market; where he benefits from long-term credit loans and favorable financing through world banks; what possible difference can a few percent duty increase mean? The chances are that he was already overpriced on his costs and making 40 to 50-percent profit on operations to begin with. We in the United States are pikers when it comes to making a profit, and I know what I am talking about. Our profit generally comes from the last 25 percent of our business—and when we lose that—no more business.

Now what does all of this do to the dollar? Recently I was talking with a French industrialist. He knows all about inflation. It went so far that France recently revalued the franc. It had already been devalued, and is now, I believe, on the way back to a stronger position.

He said: "In France we are counting on a devaluation of the dollar in the early sixties. We do not think it can hold up much longer." It was a shock to me when our dollar became worth less than the Canadian dollar. To become worth less in world markets would be a national admission of calamity. It may happen, but I hope not.

It would mean we could buy less and less of needed commodities, and you will remember I have submitted evidence that we are becoming "a have-not Nation." We have spent Federal money, and keep on spending it as though we believed that the spending need not be paid for. Seventy billion has gone for foreign aid since World War II, and continued foreign aid at the rate of something like $4 billion a year is an important factor in our gold outflow.

Well, I could go on and on, but what to do. There are short range possibilities, and long range possibilities. There are individual industry possibilities and there are national possibilities. I am not going to attempt to cover all of them.

Short range, for any single industry, the program seems to be to meet foreign competitions in foreign markets with foreign plants. This takes jobs away from the United States. But they are going or are going anyway, as far as export markets are concerned, from the United States. For that reason we have two plants in England, two in Canada, one being doubled in Brazil, one in making in Australia, and two underway in Mexico. Possibly others will come elsewhere. We need these foreign plants to maintain our world markets and we cannot afford to lose by default.

Let me affirm that these plants are not planned for import into the United States. Building a backfire to protect your property from a conflagration is one thing. To use these plants for importing to the United States would eventually do the opposite. But it may come by necessity.

Short range planning also includes the dispersion of domestic plants to smaller units in favorable areas in the United States. Domestic competition cannot always be met by old industries in obsolete multi-story buildings, with old organizations operating under rigid labor agreements.

It is worthwhile to modernize, to try to improve output, to try to secure improved labor contracts in the old operations. But there are some clocks you can't turn back and they may have to be slowed down or stopped to wait for time to catch up.

Increasingly must each community, each State, each section of the economy examine itself. That, we of industry and commerce are doing in the Waterbury area. From it we hope may come helpful plans and programs. But these are long range plans and will take courage, intelligence, and time to carry out.

Tax revisions downward and decreased Government spending is necessary. Again must come group understanding and group sacrifices. Some sacred cows must be butchered if we are to endure beneficially. Plans for tax revision should start with plans for less spending and that isn't very popular in certain quarters.

But the thing we need most is a realization of our national and local positions by those who govern for us. That is a matter of public expression; these expressions must be based on a realization of our domestic and international position. That is why I am talking here tonight; that is why others must talk and continue to talk, and that is why I hope each of you will do likewise.

Look at little Finland. Stuck in the side of Russia, bullied and beaten by them, yet asking nothing of others, it endures—it makes progress and it shames us all. Let us take a lesson from Finland.

Let us try to get some of that same spirit and let us individually and in groups write to our representatives and our candidiates that we want less spending, less taxes, less foreign aid except for specific defense, intelligent protection for U.S. industries. Let us recognize that labor has grown up, that unions are here to stay and as a proper part of our economy must take a proper responsibility, a less selfish interest and be subject to equitable laws as are the rest of us.

Let us know what we are voting for and let us make sure that we get it. To do this we must vote. We have seen how tough the Russian philosophy really is. Let's get tough too before it is too late.

If we are indeed rugged individuals, let us resist individually and in our homes the purchase of low-priced foreign merchandise fo rourselves and for our businesses. In the long run, good U.S. merchandise will be in fact the lowest in price, because the dollar we spend at home remains here to keep on working.

We of industry pray, as did the backwoodsman in mortal combat with a bear—"Oh, Lord, I never asked your help before—but I 'shore' need it now. And Lord, if you can't help me, please don't help the bear."

Senior 65'ers Citation to Senator Patrick V. McNamara

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 14, 1960

Mr. HART. Mr. President, the Members of the Senate have been made keenly aware of the current status and living conditions of the 16 million human beings who constitute the aged population of America, thanks to the persistent work of my respected colleague, PAT MCNAMARA, the chairman of the Subcommittee on Problems of the Aged and Aging.

His leadership has been recognized around the Nation, the most recent evidence being the presentation to him of the Senior 65'ers award by the retired members of district 65 of the AFL–CIO Wholesale and Department Store Union. I ask unanimous consent to have printed in the Appendix of the RECORD the citation to the senior Senator from Michigan, on the occasion of the award ceremony, in New York City, on May 25, 1960, in recognition of his contribution to the wider understanding of the needs of America's growing population of senior citizens.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

SENIOR 65'ERS CITATION TO SENATOR PATRICK V. MCNAMARA

In many ways, Senator PAT MCNAMARA speaks for us, the retired members of dis-

trict 65. Perhaps that is because he and we have two very important things in common. He, like us, is a senior citizen and he, like us, is a union member. Before he became a Senator, Mr. McNAMARA was for many years a member and leader of Detroit Pipefitters Local 636.

There are few men in Congress who are better fitted for the work which he has done and continues to do in tackling the overall problems of the aging in our country. One of the best indications of this is his own feeling about older members of the community, which he expressed soon after he became head of the first congressional group ever to deal with the total needs of our older population. He said:

"Let us not be caught in the pitfall of regarding our senior citizens as problems. With years of living to their credit, they have much to contribute in terms of wisdom and experience."

These sentiments, Senator McNAMARA, are the same as ours here in district 65, and we honor you above all for putting this practical approach to work and for the great accomplishments which are the result of that work.

The greatest of these accomplishments is the health-care legislation you have proposed, which has the strong likelihood of soon becoming law. Thus, our country's retired citizens would receive the health care they so badly need, as a matter of right and not as a matter of charity, thanks largely to your efforts.

But we honor you for more than this. With characteristic thoroughness, you have carried out the mandate of your committee by calling attention to the equally crucial needs of elderly persons in the areas of income, employment and housing. Your recommendations for substantial increases in social security benefits; for greater employment opportunities for older workers, and for adequate publicly aided housing for the elderly with low or moderate incomes, have stirred new awareness of our Nation's needs in this field.

The thoroughness you have shown in this work, the leadership you have given to organized groups such as ours and others all over the Nation in the campaign to add life to the years of senior citizens, merit the honor of all Americans. We are happy to be among those expressing a deep esteem of you and your work.

Stupidity or Madness?

EXTENSION OF REMARKS

OF

HON. LAWRENCE BROCK

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. BROCK. Mr. Speaker, the collapse of the recent summit meeting and the events preceding and subsequent thereto have been distressing to all of us, the Members of Congress, the executive branch, and the American public.

Time and history alone will eventually relate the circumstances, the fault, or the blame, if such can be properly characterized, for the incidents which the Soviet Union so conveniently utilized to disperse the scheduled talks dwelling upon peace in the troubled world, dispelling the cold war and lowering the Iron Curtain.

In all this history of international relations, and particularly those involving the very personages of the heads of government, has there been such abuse and vilification heaped upon the head of a sovereign people, as has occurred in the series of irresponsible, vitrolic, and extremely vulgar utterances by Premier Khrushchev of the Soviet Union.

While we, as officials of this Government, and the citizens of this great Republic have the constitutional right to our thoughts and expressions, if you will, as to the rights or wrongs leading to the summit collapse, we should meditate very seriously on the immediate tensions that have arisen out of this situation. Further, this is the time that, "we, the people," should unite and stand fast in support of our Chief Executive and our Government until these tensions subside and the vitrolic and polluted air is cleared.

We should bear in mind that right or wrong, he is our President and this is our Government. United, we stand but divided, we shall fall.

Mr. Speaker, I would call to your attention and to the attention of my colleagues in this House the purpose of an editorial published on June 6 in the Norfolk Daily News, Norfolk, Nebr., a progressive daily with an enterprising editorial staff.

The editorial, entitled "Stupidity or Madness?" is an excellent treatise on the summit and postsummit actions and utterances of one Nikita Khrushchev. It is a courageous piece of writing, one that endeavors to reflect our national thinking on the ultimate results therefrom.

May I, therefore, Mr. Speaker, and with the consent of my colleagues in the House, include these portions of a fine editorial in the Appendix of the daily CONGRESSIONAL RECORD, where it may be available for all to read and give sober reflection to the threat about us.

The article, in part, reads:

The world, or, at least, that decent portion of it which still believes in manners and morals, was gagged by his vitriolic attack on President Eisenhower at Paris following the collapse of the summit meetings. But his freelance repeat performance in Moscow the other day was even worse.

Khrushchev has been so arrogant and ill mannered against the man whose efforts for peace have given the world its great hope that he no longer can be regarded as a responsible leader of a major nation.

The world hasn't seen such a disgusting display of irresponsibility since Adolf Hitler was spouting curses at all who stood in the way of his designs for world conquest.

Immediate war was Hitler's aim. We cannot believe that Khrushchev really wants war. The only conclusion to be drawn is that we are watching the spectacle of a world leader roaring into the winds, cloaked in a mantle of stupidity and madness.

Father of National Flag Day

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 14, 1960

Mr. PROXMIRE. Mr. President, today is National Flag Day, and I am proud to note that the recognized father of Flag Day was born in the village of Waubeka in Ozaukee County, in eastern Wisconsin, and first conceived the idea of Flag Day while teaching in a little country school in that area.

Fourteen years ago today the citizens of Waubeka dedicated a memorial, a most fitting memorial, a flagpole, in the memory of this patriotic American, Bernard J. Cigrand. I ask unanimous concent that a portion of the memorial booklet entitled "The Life and Works of Bernard J. Cigrand—The Father of National Flag Day" be printed in the Appendix of the RECORD.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

THE LIFE AND WORKS OF BERNARD J. CIGRAND—THE FATHER OF NATIONAL FLAG DAY

Bernard J. Cigrand, the nationally recognized father of Flag Day, was born at the village of Waubeka, township of Fredonia, Ozaukee County in the State of Wisconsin, on October 1, 1866.

Undoubtedly inspired by his father, who had always been interested in education and who formed study clubs, became justice of the peace, postmaster and school commissioner, young Cigrand displayed an early interest in American history, a devout patriotism for the land of America, and a great love for the flag of the Nation. Members of his family recall that "he was always reading American history and talking about the flag." And although flags were not too plentiful in those days, the young lad always managed to find a flag to display. Later on, he always had a flag on his desk in school.

It was after he became a schoolteacher at the age of 19 and conducted classes at the little country school at nearby Stony Hill or Schumacher's Hill that Cigrand conceived the idea of observing June 14 with fitting ceremony as the "birthday of the flag," bearing in mind that Congress had officially adopted the stars and stripes as the flag of the United States on June 14, 1777.

In the role of $40 per month schoolteacher, he held the first observance of Flag Day in 1885, where observers recall the small American flag that stood in a bottle on his schoolroom desk. On that day, the graduating students turned in themes he had assigned them on the subject of the American flag. That was the beginning of long years of fervent and devoted effort to bring about national recognition and observance of Flag Day.

In 1886, the young patriot terminated his teaching career and went to Valparaiso, Ind., to begin training for his chosen career in dentistry at Northern Indiana Normal School. In 1888, he graduated from Northwestern University Dental School and in 1891 from Lake Forest University. In 1892–93 he studied industrial, educational, and political economy at the University of Chicago. He had married Allie Needham Crispe, of Chicago, in 1889 and from that union were born six children: Bernard H., Joyce A., Elroy F., Elaine, Virginia E., and Clyde E.

Never once through these years did Cigrand falter in his crusade to have June 14 recognized as a national holiday when Americans might pay homage to the national emblem. He made his first public proposal of the idea in June 1886, through the medium of the Chicago Argus, and he campaigned tirelessly thereafter in newspaper and magazine articles, in books and on the lecture platform, advocating recognition of this memorable day as "Flag Birthday."

In an address to the Sons of America in June 1888, he emphasized the good that would come from a flag holiday and as a result, that organization undertook the publication of a magazine called the American Standard to inculcate reverence for Amer-

ican emblems. Dr. Cigrand became its editor in chief.

In 1894, Cigrand and Le Roy Van Horn, of Chicago, a Civil War veteran, issued a newspaper call to "all persons who desire to commemorate the birthday of the American flag," to attend a meeting in the assembly hall of the Grand Pacific Hotel in Chicago. At that meetoing was formed an Illinois corporation known as the American Flag Day Association, whose purpose was to celebrate on the third Saturday in June and to conduct the exercises in the interest of school children. Cigrand was made secretary of that organization and when he later became president in 1896, he driected that the actual date, June 14, be observed. The association held celebrations in the large Chicago parks and because of the nationwide interest they evinced, the national American Flag Day Association was formed and Dr. Cigrand became its president.

Dr. Cigrand was a lecturer for the Chicago Daily News and was well known for his authoritative lectures on "The Evolution of the American Flag" as well as other historical subjects. Among his best known printed works were the profusely illustrated "Story of the American Flag," and "History of the American Emblems." His other writings included "The Real Abraham Lincoln," "Life of Alexander Hamilton," "History of American Heraldry," "History of Dentistry," "History of Medicine," and "The Cigrand Family Geneology." He was a contributing editor to the Encyclopedia Americana and to dental and literary journals. Among other works, he wrote "The Origination and Meaning of Flag Day" for the Encyclopedia and a widely distributed pamphlet on "Laws and Customs Regulating the Use of the Flag of the United States."

He took up the practice of dentistry in Chicago during 1888 and later practised in the communities of Batavia and Aurora, Ill. He served on the faculties of Northwestern University, the Illinois School of Dentistry, of which he was dean, and the University of Illinois. National recognition for leadership in his chosen profession was evidenced when he was elected and served for several years as president of the American College of Dental Surgery. And he was at one time president of the Chicago Public Library.

Dr. Cigrand served with distinction as a lieutenant in the U.S. Navy during World War I. But the crowning achievement of his life had come at the age of 50, when President Wilson, on June 14, 1916, had issued a proclamation calling for a nationwide observance of Flag Day. Cigrand had also assisted in forming the Pledge of Allegiance to the Flag in 1889 and had later petitioned President Wilson to urge its acceptance by the War Department. On June 14, 1914, the coming wartime President of the United States had echoed Cigrand's sentiments when he said: "This flag for the future is meant to stand for the just use of undisputed national power. No nation is ever going to doubt our power to assert its rights, and we should lay it to heart that no nation shall ever henceforth doubt our purpose to put it to the highest uses to which a great emblem of justice and government can be put." And then he added that the flag "has vindicated its right to be honored by all nations of the world and feared by none who do righteousness."

Bernard J. Cigrand departed this life on May 16, 1932, at the age of 65 years and his body lies at rest in Aurora, Ill., where he had made his home for many years. He left behind for his fellow men an honored memory, a lasting tradition in this national day of recognition for the flag of our Nation and a great inspiration to all the future generations of American men and women.

Biology—A Weapon for Peace

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, Dr. Roger D. Reid, Director, Biological Sciences Division, Office of Naval Research, recently delivered an address on "Biology—A Weapon for Peace."

This is a provocative document worthy of reading, and I am honored to include it as part of my remarks.

The opinions or assertions expressed herein are the private ones of the author, and are not to be construed as official or reflecting the views of the Department of the Navy.

BIOLOGY—A WEAPON FOR PEACE

(By Roger D. Reid)

The basic aim of science is generally, and always should be, human betterment. Although it is unfortunate that scientific knowledge must sometimes be directed to less noble purposes, that same knowledge is often used to improve man's social and economic status. For example, the sciences which produced the holocaust at Hiroshima and make ballistic missiles a reality are the same ones that are giving us a basic understanding of the universe.

We all know how costly it is in time, money, and effort for nations to carry on a race for arms superiority which presently seems to be a progressive stalemate. It is also common knowledge that while the gods of war are growing fat on their diet of hate, greed, and mutual distrust, many millions of human beings are undernourished, underhoused, and have inadequate health facilities, educational, and social opportunities.

Technology has made it possible for about one-third of the world's citizens to enjoy a high standard of living. In the United States we enjoy great comforts and conveniences, overproduction of food, and superior diets. This is not the case in many less-favored countries in which communism finds fertile fields for its seeds to germinate. Science has made gigantic strides in improving the conditions for peoples favored by geography, human and natural resources, but has failed to meet the needs of many others.

Can science do any more? I believe that biology can succeed where, in a humanitarian sense, the physical sciences have not. This will require time, money, thought, and cooperation. With more basic understanding of biology more people will be assured of a fuller life and democracy will prosper.

There is a growing realization among scientists that biology is the most important branch of science today as well as for many years to come. Hans Selye has said, "We cannot afford to concentrate all our attention upon the physical sciences." A. M. Weinberg, Director of Oak Ridge National Laboratory, agrees. He has said: "It seems inescapable that the current preponderance of mankind's scientific effort toward the physical, rather than the biological, sciences is wrong. One of the most important responsibilities of science at large is to redress the balance between the physical and biological sciences, and to direct more of the world's scientific resources along lines which are more nearly concerned with the issues of human happiness."

A prominent Soviet scientist has predicted that the role of the leading branch of natural science will pass in the relatively near future from physics to biology.

Biology has not developed as rapidly as the physical sciences for several reasons. One important reason has to do with the complexity of biological problems and the difficulty of isolating the variables involved. In comparison with the biological sciencce the physical sciences utilize relatively general laws which are clearly and individually demonstrable in rather clear examples. Biology, on the other hand, deals with many complicated and interacting charactertistics of living organisms, many of which cease to exist—or are completely out of context—when singled out for study. Techniques needed for investigating life processes at submicroscopic or molecular levels have only recently been developed by adaptations of physical technology.

Other reasons why biology is retarded have to do with the current fashions that relegate biology to a place of relatively low esteem in science. This results in inadequate support of research on basic biological problems.

By comparing the amount of money available for support of research in the various scientific disciplines it is obvious that only those aspects of the biological sciences pertaining to the relief of suffering and death by disease are in any measure adequately supported.

The United States and many of our friends feel that we lost a great deal of prestige by falling behind the Soviets in the space race. This may be true but is it truly important? The people in India; for example, are not really worried about whose satellite is orbiting the sun or which nation owns the copyright to photographs of the moon's backside. What concerns them is their empty bellies, their bare feet and bodies when winter comes, and the lack of medicine to relieve their chills and fever. Gandhi is believed to have said, "To the millions who go without two meals a day the only acceptable form in which God dare appear is food." Dare science appear in any lesser form? So I say any prestige the United States may have lost when sputnik went into orbit can quickly be regained by solving problems which will insure a more adequate standard of living for the world's underprivileged people.

Although progress in biological sciences has not kept pace with that in other scientific disciplines, we should recognize that a graet deal has been accomplished. On the credit side of the ledger—many of the crippling diseases of man have been brought under control. There is much more to be done to relieve the misery and suffering caused by infectious and metabolic diseases but this is not the only nor even the most basic problem in biology. While scientific progress in the realm of human health has surpassed advances in the control of plant and animal diseases, control of a few plant and animal diseases has made it possible to increse supplies of certain types of food. The application of genetics to agriculture has led to the development of new varieties of plants that prosper under environmental conditions which would have inhibited their ancestors. New varieties of wheat have made it profitable to extend by sevenfold the acreage on which it can be grown in Canada. Similar increases have been possible in Australia and in Argentina. Hybrid corn has increased yields 20 to 30 times over its ancestral Indian maize. Practical plant and animal breeding have produced varieties that yield larger quantities and of better quality with less waste, often in shorter growing time. Indeed, it is now possible to "tailor-

make" plants and animals to meet almost any desired requirement.

Now that we have learned through biochemistry and microbiology that the prime carrier of heritable characteristics is the decxyribonucleic acid component of chromosomal nucleoproteins, and DNA and RNA can be synthesized in the laboratory, the future in this field is most encouraging. Studies on transduction in bacteria have shed light on the mechanism of heredity and in fact may yield new concepts of the causation and prevention of diseases by built-in resistance factors in previously susceptible hosts.

By scrupulous adherence to pure culture techniques, microbiologists have learned a great deal about infection, fermentation, nitrogen fixation, and many other activities of microorganisms. But life is not a pure culture. We must always consider the interactions of host and parasite regardless of the size or complexity of the interacting systems. Many of these associations can be used to man's benefit.

Any consideration of biological systems is incomplete without giving some thought to the tremendous adaptive capacity of living things. Plant breeders have used empirical methods to develop plants adapted to normally adverse climate or soil. To fully exploit the adaptive ability of plants or animals we must try to understand the basic factors in such adaptability. Attempts to do this have been singularly unproductive in the past but with new tools, techniques, and advances in our knowledge of the nature of life itself we should soon be able to explain such things as hibernation, sporulation, germination, metamorphosis, and development of resistance to adverse conditions. These are but a few of the many puzzles of adaptability that have not been solved. For example, what is the "inhibitor" which prevents germination of seeds of desert flowers for many years yet turns the landscape into a sudden blaze of bloom at the first substantial fall of rain? How does the desert horned toad live on an almost water-free diet, and how can the African lungfish remain alive in dried mud for many weeks without elimination of urine? What are the properties of the protoplasm of the slime mold that allow it to be a streaming fluid in one stage and a dry, brittle solid in another? Living things are highly adaptable and by using this characteristic we can expect the biologists to build new plants that can be grown profitably on lands we presently consider submarginal for agriculture because of lack of rainfall, minerals, nutrients, sunshine, and favorable temperature.

Probably the greatest unknown among the many great secrets of life is the mystery of biological energy and energy transformations. In photosynthesis, chlorophyll traps solar energy and converts carbon dioxide and water in the presence of enzymes and cofactors, into glucose and other substances which animals use as a source of energy. The carbon cycle, so simple in principle, yet so complex in detail, is further complicated because we know so little about photosynthesis. Transfer of energy to animals from that trapped in the tissues of plants presents still another mystery. Some clues and partial understanding have recenty been discovered by biochemists working on transfer of energy in bioluminescence. For example, it has been found that one compound essential for energizing life processes, such as transmission of nerve impulses, contraction of muscles, division of cells, formation of optical images, and luminescence of a firefly, is adenosine triphosphate (ATP). In addition to ATP, each process, of course, requires and utilizes its own set of specific enzymes and cofactors.

This leads us to a consideration of the role of important enzymes in all metabolic processes. For example, how are enzymes synthesized? What holds them in check? Why don't the proteolytic enzymes of the stomach and duodenum digest the proteins constituting the tissues in which they come in contact? We have learned by using techniques of radiobiology that enzymes are less sensitive to ionizing radiations when present in resistant tissues. What is the nature of the protective substances in such tissues? Could it be that a simple element like sulfur may hold the answer? And for that matter, where are enzymes stored, when not needed, or what triggers their activity when a demand for them arises? If, as we believe, enzyme synthesis is controlled by genes; what then controls the nature of genes?

Another fundamental problem of biology is that concerned with cell division. Starting with a single fertilized human ovum there occur some 43 successive divisions, giving rise to 10 trillion highly specialized cells, tissues, and organs in the human at birth. What are the waves of determination that regulate embryonic development? Investigations have shed some light on this problem and practical applications of this minimal knowledge makes use of chemicals that regulate blooming in plants and fixation of carbon dioxide in others.

We have recently been hearing a great deal about a world population explosion. We must indeed be concerned over the failure of food production to keep abreast of population growth. However the problem is not insurmountable. It is a problem having biological origins and has some rather obvious biological solutions if we but find and apply them. Perhaps a better understanding of the basic biology of human reproduction will yield information which will make it possible to control populations and to improve humanity qualitatively rather than merely increase it quantitatively.

Through knowledge gained by research in the physical sciences, engineering, and technology have made it possible to plant and harvest more crops. If universally applied, modern agricultural technology could go far toward meeting the food needs of everyone on earth today. To meet the needs of the rapidly increasing population we must intensify our search for means to understand and apply basic biology. It has already been shown that basic biology can be applied to these problems with gratifying results. There can be no doubt that as our knowledge increases the benefits will be intensified.

Aside from the immediate practical problems of establishing and maintaining a desirable balance between food production and population, biology is needed to accomplish the ultimate goal of space science.

If men are ever to journey to the planets and stars, we must know the biological effects of cosmic radiation, extreme temperature variation, weightlessness, meteoric collision, synthetic air, and food-waste cycling. We must determine the biophychological effects of these factors and of disorientation and illusions of space and time.

The powerful engines and intricate devices needed to send and guide satellites and space vehicles to the stars and planets are relatively simply in comparison with the biological systems involved in successful transportation of man on extended trips into outer space.

What then do we propose? Because the problems to be solved have pronounced social and political, as well as scientific implications, attempts to get answers should not be left entirely to individuals or solitary laboratories. Important as individual research is—and it is extremely valuable to scientific progress—we can no longer afford the luxury of leaving biological research to the chance that someone may come up with an essential bit of information. We must define our problems and make a concerted effort to find answers. If this is done on a national or international scale there is no doubt that the results would be most satisfying.

The recent International Geophysical Year yielded much valuable information and proved that the first and most important object of science is the welfare of man. As nations work together toward this objective they find that scientific accomplishment is more important than fighting wars. Because biology promises so much for humanity, coordinated international effort in the biological sciences should prove more effective in developing permanent peace than any other field of science.

I, therefore, propose an International Biological Year—or Decade—because it will take a decade to fully appreciate how biology is in fact an effective weapon for peace.

(The suggestion for a biological decade was first made by this author in an address delivered at the University of Notre Dame, Notre Dame, Ind., May 8, 1958, and is included in the proceedings of the Second Symposium on Gnotobiotic Technology, University of Notre Dame Press, 1960. Pp. 97–104.)

Cuban Editor Urges United States To Fight Red "Hate America" Campaign

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 14, 1960

Mr. MUNDT. Mr. President, some 4 or 5 weeks ago the Senate approved an amendment which I offered to earmark $100,000 to initiate medium-wave Spanish language broadcasts by the Voice of America to Cuban listeners. I felt and the Senate felt we can no longer afford to permit Communist dominated propaganda to monopolize the attention of the people of Cuba.

Mr. President, under leave of the Senate I now call attention to an article written by a Cuban editor supporting this same point of view. The article appeared recently in the Herald of the Dominican Republic. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Herald of the Dominican Republic, June 5, 1960]

CUBAN EDITOR URGES UNITED STATES TO FIGHT RED "HATE AMERICA" CAMPAIGN

(By Chesly Manly)

HAVANA, CUBA.—Some members of the American Embassy staff here are concerned about the failure of the United States to combat effectively Premier Fidel Castro's Communist line "hate America" campaign.

Such misgivings were voiced privately by Embassy staff members in commenting on a column by Carlos Todd, a pro-American Cuban, in the English language Times of Havana, which deplored the "childish and pitifully inadequate" information policy of the United States in Cuba.

"The United States gently lifts its pants to keep from soiling them in the mud of propaganda and leaves a free field to its enemies," Todd wrote. He is one of the editors of the Times.

SOME AMERICANS AGREE

Americans in Cuba, including some members of the Embassy staff, agree with Todd's contention that Castro's slanders should be answered immediately by official statements to the newspapers and radio and television stations, telling the Cuban people what the United States has done for their country.

The revolutionary press might not use the statements but the independent Diario de la Marina, Prensa Libre and Arance, as well as the English language Times and Post, would use them. Todd says they would be used also by radio and television stations.

One Embassy spokesman, apparently reflecting the attitude of the State Department and Ambassador Philip Bonsal, implicitly confirmed Todd's attribution of a "pants lifting" policy to the United States.

EXPLAINS U.S. POSITION

"The question is whether to put yourself in a direct controversy with a person who will not be convinced anyway," he said. "That would be getting on the same level with him. There are other ways of going about it and many things are being done which are not apparent on the surface."

"How many people," asked Todd in his attack on the U.S. information policy, "know of the enormous benefits in dollar exchange accrued by this country by the quota system that gives Cuba the lion's share in competition with other Latin American countries?

"How many people know that if the Americans were to reduce this quota it would make one enemy and nine friends in Latin America—nine sugar producing sister nations that are desperate in their need for dollar exchange?"

One of these sugar producing countries is the Dominican Republic, which sells its sugar on the world market at the world price, while Castro contends that its Rafael Leonidas Trujillo is a protege of the United States in all kinds of conspiracies against Cuba.

The Castro's supporters raised most of the funds for his revolution at mass meetings in the United States; he charges that America supplied arms to Fulgencio Batista, the former dictator, which cost 20,000 Cuban lives, and now harbors "Batistianos" and "war criminals" who are planning an invasion of Cuba.

The United States has restrained the activities of these adventurers and intercepted many shipments of arms intended for use against Castro, but the Cuban people are not told about it.

BUDGET IS $127,000

The U.S. Information Service has an annual budget of more than $100 million for its operations throughout the world and its budget for Cuba is about $127,000.

It has a staff of 26 in Havana and operates 6 mobile units in Cuba.

Todd's column warns:

"There is no law in this country as yet that says that the United States cannot explain its position to the American people—and to explain it without condescension—if the United States does not do so, it is waging a losing battle in the propaganda war that is taking place in this country 24 hours of every day. If the United States does not do so it cannot come crying to the Cuban people to say that it has been misunderstood—to the United States: You are asleep, sound asleep. Khrushchev has already said, 'We will bury you.' He means it in Moscow. He means it in Havana."

Happy Hunting Grounds

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. RIVERS of Alaska. Mr. Speaker, in a release from the Alaska Department of Fish and Game under date of June 8, 1960, we are told of the saga of William Burns, an Alaskan conservation officer with seven league boots, and we are told of such scenery and hunting and fishing along the Gulf of Alaska as would heal the frayed nerves and restore the physical vigor of any Congressman. The colorful reporting of a colorful subject, valuable as a tonic for all of us, prompts me to set forth at this point a major portion of the mentioned release, which is as follows:

William Burns is responsible for the area which embraces a coastal strip bordering the Gulf of Alaska for 300 miles from Lituya Bay to Katalla, and extending east to the Alaska-Canada boundary. As roads are practically nonexistent and the ocean waters too treacherous for patrol craft, he uses a plane to cover the fishing and hunting areas and construction camps. During a busy summer season he makes five or six reconnaissance patrols daily, using sea beaches, river bars, and unwooded strips for landing fields.

Public relations play an important part in the contacts Burns makes during his landings, which may total 25 in 1 day. His duties entail enforcement of the fish and game regulations, salmon stream surveys, game counts, creel and hunting checks, briefing hunters and fishermen on the regulations.

"It is the policy of the department," Rhien declared, "to try to prevent violations before they occur rather than to just make arrests. Arrests signify a lack of cooperation with the conservation aims of the department and a lack of consciousness on the part of hunters and fishermen of the true meaning of sportsmanship and conservation."

Enforcement in Burns' area is complicated by the summer influx of workers for three oil companies, four construction companies, and three White Alice sites along with the normal pressure from sport fishing, hunting, and the commercial fishery which opened for king, red, silver, and dog salmon, May 30.

Many newcomers, Burns said, are under the impression that Alaska is a wide-open hunting and fishing country with an unlimited supply of resources. This attitude keeps him on the hop correcting these erroneous impressions and curbing "Daniel Boone" instincts that don't conform to the regulations.

Like other fieldmen in the Department of Fish and Game, Burns has become a resident of the area in which he serves. Aside from its commercial possibilities, Burns foresees a bright tourist potential for his area. First is the spectacular scenery. The St. Elias and Fairweather Ranges which front the sea along the coast, constitute some of the world's loftiest mountains rising directly from salt water. They spew into the Pacific the continent's mightiest glaciers. One of these, Malispina, now inactive, is the size of the State of Rhode Island.

For the hunter there are brown and black bear, moose, mountain goat, and deer. The deer have been transplanted from further south and are only fairly plentiful at this time. Moose are abundant and the game division estimates there are 1,500 in the Yakutat area. Burns counted 750 on a 5-hour aerial survey. Mountain goats, due to their penchant for dwelling in rugged, inaccessible mountain country, get only light hunting pressure.

Fifteen to twenty hunters visit the area annually to hunt the so-called glacier bear in the rough terrain around the Hubbard glacier. Although it is merely a color phase of the black, its bluish pelt and comparative scarcity make it a prized trophy. Burns reported that in 1959 two were reported taken and, so far this year, five.

Sport fishermen have a choice of rainbow, cutthroat, and steelhead trout as well as king and silver salmon.

Access to the area for hunters and fishermen is afforded by either commercial airlines or by smaller planes which are privately owned or chartered.

Reds Stepping Up Mission to Cuba

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, June 14, 1960

Mr. WILEY. Mr. President, the increasingly close Cuban-Communist ties are a matter of deep concern to the United States and the Western Hemisphere.

In a distubing succession of events, Castro has been "playing footsies" with the Communist bloc.

Following trade agreements earlier this year, about 70 or 80 Soviet industrial, mining, trade and cultural so-called experts are working in Cuba as a vanguard of what is expected to become a major technical assistance program—more likely, an ideological invasion.

The Western Hemisphere, itself, is naturally concerned. However, the Cuban people have an even greater stake in this turn of events.

At tremendous sacrifices, they overthrew what they felt was a dictator. Through the deceptive tactics of Castro—and his Communist cohorts—the Cuban people—if they are not careful—may find themselves subject to a Communist dictatorship too powerful to overthrow by themselves; that is, the Kremlin-dominated communism of Moscow.

Recently, the newspapers have published an increasing number of articles reviewing the way in which the Soviets are invading Cuba, pointing out the dangers, and proposing actions by the states of the Americas to deal with the situation before it may be too late.

At this time, I ask unanimous consent to have three articles printed in the Appendix of the RECORD: First an editorial from the Milwaukee Journal entitled "If Cuba Goes Communist"; second, an editorial from the Green Bay Press Gazette entitled "Mr. K.'s Invitation to Cuba"; and third, an article from the New York Times by Tad Szulc entitled "Reds Stepping Up Missions to Cuba."

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, June 10, 1960]

IF CUBA GOES COMMUNIST

As the Castro regime in Cuba continues its manifestations of hostility toward the United States and liking of Soviet Russia and communism, the dilemma of the American people deepens.

We are sworn, under the Buenos Aires treaty of 1936, not to intervene in the internal affairs of any of our Latin American neighbors. To do so in Cuba, whatever the provocations, would arouse anti-American feeling around the world. It would help to lift the curse of the bloody Hungarian intervention from Khrushchev and Russia.

However, in self-interest and the interest of a free Nation, we cannot allow international communism to take over Cuba, whatever its guise. We cannot let Cuba become an American funnel for Communist infiltration, propaganda, and sabotage.

The problem seems to be coming to a head rapidly. The invitation to Nikita Khrushchev to visit Cuba, the continuation of the intense official campaign of slander, the anti-American activities of President Dorticos during his present Latin American tour indicate that Castro plans no change. Our policy of good will and patience toward the Castro regime is obviously wearing thin. And who can blame our officialdom?

There is a way to deal with this problem, should it reach the crisis point, that might enable the United States to escape the onus that would accompany unilateral intervention under the Monroe Doctrine. It is provided in the various agreements reached with Latin American nations in recent years. It permits joint action in the interest of hemispheric security.

Article 6 of the Rio Treaty of 1947 provides that if the sovereignty or political independence of an American state should be affected by any fact or situation that might endanger the peace of America, representatives of the Organization of American States (OAS) will meet immediately in order to agree on measures to be taken. The OAS charter, signed in 1948, formally provides for meetings of consultation of American foreign ministers for considering urgent problems of common interest.

At Caracas in 1954 the American governments directly condemned the activities of the international Communist movement as constituting intervention in American affairs and declared that the domination or control of the political institutions of any American state by the international Communist movement would constitute a danger requiring joint action in accordance with existing treaties.

President Eisenhower had these agreements in mind in March when he reported to the Nation on return from his trip to Brazil, Argentina, Chile, and Uruguay. He said:

"If a tyrannical form of government were imposed upon any of the Americas from outside or with outside support—by force, threat, or subversion—we would certainly deem this to be a violation of the principle of nonintervention and would expect the Organization of American States, acting under pertinent solemn commitments, to take appropriate collective action."

The Castro regime is moving closer to the Communists. So it might only be caution and foresight for this country to start the machinery to get appropriate collective action if this becomes necessary.

[From the Green Bay Press-Gazette, June 9, 1960]

MR. K.'S INVITATION TO CUBA

When Khrushchev makes his visit to Cuba, possibly accompanied by one of Red China's bandits, Chou En-lai, there may be some evidence as to just how enthused the Cuban people are about the increasing signs that Fidel Castro has been selling them out to communism.

There were plenty of protests when Mikoyan visited Havana and he ran for cover when someone shot off a machine gun. Mikoyan is a realist and he knows he isn't the most popular person in the world. Certainly Castro will have things somewhat better organized for Khrushchev.

In the meantime Castro and the puppet Cuban president, Oswaldo Dorticas, have been slathering on the anti-American sludge. Dorticas, on a South American tour, has been charging that the United States was responsible for the explosion of the French ship in Havana harbor last winter, that American planes are violating Cuban air space, and that all American property owners have been reimbursed for their confiscated property. As the sharp and timely note from the U.S. State Department pointed out, all three charges are lies. There is even evidence that Castro hired the planes flown over Cuba to give him some propaganda ammunition.

There is small likelihood that many Latin American leaders believe Dorticas or are enthused enough about Khrushchev to extend the invitation. In recent months Castro's fiasco of freedom has been apparent to these people. They have regularly turned down invitations themselves to visit Havana, have politely boycotted conferences, and have criticized Castro's attempts to involve all Latin America in his hate-America campaign. It has been as obvious to many of them as to North Americans that the Cuban people are little better off under Castro than they were under Batista. There is just a different group filling both cells and firing squads.

Khrushchev's visit is a direct attempt to take advantage of the Red tinge in Cuba to spread communism to the Western Hemisphere. The United States should continue to contradict Cuban charges against us and stop making any attempt to soothe Castro. And, despite crowds maneuvered like TV audiences, Khrushchev may find his reception in Cuba just as full of chill and disillusion as those he received in Asia during last winter's tour.

[From the New York Times]

REDS STEPPING UP MISSIONS TO CUBA—70 TO 80 RUSSIANS GIVING TECHNICAL AID—TRADE PACTS CALL FOR EXPERTS

(By Tad Szulc)

HAVANA, June 9.—An estimated total of 70 to 80 Soviet industrial, mining, trade and cultural experts are working in Cuba as the vanguard of what is expected to become a major technical assistance group here.

The technical specialists are to advise in the development of Cuban industry and mining, particularly for the industrial plants Cuba is to begin receiving soon from the Soviet Union under the February trade pact. The treaty provides, among other things, the shipment of $100 million in equipment and for technical assistance.

With similar treaties already reached with Poland and Czechoslovakia, still another being negotiated with East Germany and a fifth one that may be arranged with Communist China, Cuba is relying to a high degree on Communist aid for her industrialization program.

CULTURAL GROUP IN CUBA

There is also a seven-member cultural mission, headed by Aleksandr Alekseyev of the Latin-American division of the Soviet Foregin Office here. It is presumed that they concern themselves with political affairs and handle such tasks as the exchanges of visitors, the handling of students to whom scholarships for Soviet universities are being granted, the planning of cultural programs and the supply of Soviet books to Cuba.

With Cuba entering into close relations with the Communist powers, Havana is turning into a busy center for the arrivals of various missions from Communist countries as well as individual Communists from other regions.

Last week 15 industrial and mining experts arrived here and were welcomed by Maj. Ernesto Guevara, president of the National Bank of Cuba and the chief of Cuba's economy.

Sunday a four-person Bulgarian delegation, headed by Angelo Lubomir, Under Secretary of Foreign Affairs, arrived for a 4-day stay.

A nine-man Czechoslovak mission led by Frantisec Krajcir, Minister of Foreign Trade, arrived Monday to complete the treaty negotiations.

M. Krajcir conferred Tuesday with Dr. Guevara and Maj. Raul Castro, Minister of the Armed Forces. This set off speculation in diplomatic circles whether the trade pact with Czechoslovakia might include the sale of military planes and weapons.

It is known that Cuba is especially interested in jet aircraft, and the speculation on an arms deal with Czechoslovakia included reports that a jet airstrip was being completed on the north coast north of Cardenas. One report said Soviet engineers were directing the construction.

MILITARY ADVISERS REPORTED

There are also reliable reports that a small number of Soviet and Czechoslovak military advisers were working with the Cuban armed forces.

The Soviet civilian experts are operating in three independent groups: the cultural team, a commercial mission of about 20 persons headed by Vassily Murkulov, and an industrial team of from 30 to 40 specialists directed by a Mr. Kosariev. The general coordinator is a Mr. Egorov.

A geological-mining team of four men and one woman is operating near the Matahambre mines in Pinar del Rio Province and a larger team is in Oriente Province. They are surveying for manganese, nickel, iron, and aluminum ore.

Geophysicists, geologists and oil engineers are presumably assisting the Cuban Petroleum Institute in oil prospecting.

Double Labor Standards

EXTENSION OF REMARKS

OF

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks, I should like to insert in the Appendix of the RECORD, a transcript on an editorial presented on WCCO–TV News, Minneapolis-St. Paul, Minn. on June 5.

I might say, Mr. Speaker, that I wholeheartedly concur with the sentiments as expressed therein except the portion referring to the understandability of women. I am sure, however, that reference thereto was mentioned facetiously and as a figure of speech rather than in a critical manner.

I should like to call to the attention of the House, Mr. Speaker, that, I have introduced a bill to do just what the editorial says needs to be done—treat postal workers with the humanity and dignity they are entitled to. My bill, H.R. 10101, would allow the employees and their representatives to be recognized as a matter of right—not only as a "privilege conferred grandly from above." The mere fact that they would have the right to be heard, may in itself boost their falling morale.

Mr. Speaker, I trust also that the Congress this week will pass a meaningful salary increase bill, for if ever anyone today is underpaid for what knowledge he must possess, it is the Federal employee. The editorial follows:

Governments are sometimes like women: impossible to understand. One of the things

most difficult to understand about the U.S. Government is its curious double labor standard. And here the reference is to the Post Office Department.

While our Government, through stacks of statutes and numbers of boards, commissions, committees, and offices, takes great pains to protect, defend, uphold and otherwise guarantee the rights of labor in private industry, it consistently denies the same rights to its postal employees.

We are not speaking of the denial of the right to strike. That is general in government service, Federal, State, and local, and there are sound arguments for it.

What appears most inconsistent with an enlightened labor policy is the Post Office Department's attitude toward the unions of its employees. These unions do not exist by the right of the employees to organize. They exist—the Department has repeatedly said—by the sufferance of the department.

There is no collective bargaining in the Post Office Department, but even this would be tolerable if the postal workers were assured they had the right to carry their grievances and their views to either the Postmaster General or to Congress. But the Post Office Department has decreed, in its wisdom, that the employees do not have the right to do this—only a privilege, a privilege conferred grandly from above.

Add to this humiliation the self-evident fact that postal workers are among the lowest paid, anywhere, and reports of falling morale in the Post Office Department become believable.

Absence of Suffrage in the District of Columbia

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, June 14, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Can't Vote Yet," published in the Eugene (Oreg.) Register-Guard of June 6, 1960.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAN'T VOTE YET

It is hard to realize that after so many, many years, American citizens in the Nation's Capital cannot vote and do not have any voice in the affairs of their city.

Presently there are two pending pieces of legislation before Congress pertaining to voting rights. One, which would give residents of the District of Columbia national suffrage, or the right to vote for President and Vice President, is a constitutional amendment that has been approved by resolution in the Senate and now needs to get through the powerful Rules Committee in the House before it can go to the floor there. Subsequently, it would require ratification by two-thirds of the States.

The other would provide Washington with a limited form of self-government. A bill to do this was passed by the Senate last year but it has since been tied up in the House District of Columbia Committee.

In the case of home rule, there are terrific political overtones. The southern-dominated District Committee is fearful of Negroes (now comprising 53 percent of the population) eventually gaining control over the Capital. A petition needing 219 signatures of Congressmen is only 19 short of getting the home rule bill from committee to the floor.

Sadly, however, with adjournment nearing it would appear that the home rule proposal, bottled in parliamentary procedure, will not have much chance at this session. But there is a possibility that the national suffrage amendment might squeeze through. Certainly the nearly 1 million citizens in our Capital should have the right to vote for our national officers.

And in the next session we shall hope that the discharge petition to get home rule to the House floor will succeed. It is a black mark on the Nation that our Capital does not enjoy conditions that the rest of us take for granted.

Voice of Democracy Winner

EXTENSION OF REMARKS
OF
HON. DONALD F. McGINLEY
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. McGINLEY. Mr. Speaker, our great Nation has faced many threats and has been tested in many arenas—but it continues to stand as the bulwark against godless ideologies. Its ability to meet the challenges, I think, is attributable to the freedom of our people.

We need to be really concerned with the future of our Nation if we lose sight of this basic reality. It is comforting to know that the young people of our country do realize this and this knowledge is the assurance that we need that this amazing form of government will continue in years to come.

I have received the speech that won for Linda McPhillips, of Grand Island, the Nebraska title in the Voice of Democracy contest. I found inspiration in the words and a renewed faith in our system of government.

Mr. Speaker, I would like to share with my colleagues this speech and will insert it into the RECORD at this time:

I SPEAK FOR DEMOCRACY

(By Linda McPhillips)

Look at America. How magnificient she is. How powerful is her prestige. How important she is to the rest of the world. America is a democracy.

Where else but in our type of government—our democracy—could the standard of living be so high?

In what country, other than America, could you find the number of spacious homes, automobiles, television sets, telephones, and varied and splendid sources of entertainment and the many paid vacations?

Do I speak as though my love of democratic America is based primarily on materialistic thinking and living?

Then listen well to the testimonial of my love for the spiritual mindedness of our American people. This testimonial is borne out by the ever-increasing number of churches and the ever-increasing membership in those churches. Is this not definitely in keeping with the spiritual ideas of the Founding Fathers of our democracy as they built an infant nation under God? Listen well also to the testimonial of my love for the serious mindedness and education consciousness of our American Nation. This testimonial is borne out not only in the ever-increasing numbers of our public, private and parochial schools, but more importantly, it is borne out in the vastly improved products of those schools.

Do you now think that my love of America is based merely on material things? Listen well again to the testimonial of my love for the great freedom of a democracy. What a consolation to know that I, a simple citizen in a vast nation of millions, can attend the church of my choice; can attend the school of my choice; and above all, can follow a way of life of my own choosing wherein I can best serve my God, my America, and my fellow man.

This love of freedom—a freedom that only a democracy can give—is reflected in a hundred ways and a hundred times each day of our lives:

In a mother's joy as she tucks her child in bed or as she holds him close, knowing he is safe and has no fear.

In the gay, carefree pace of a young boy starting out for a hike in the woods.

In a young girl's thrill when she attends her first formal party.

In a deep satisfaction of a man after a job well done.

In the white, bowed head and the wrinkled toil-worn hands of an old man, folded in prayer.

Thousands of more words, hours more of speaking could not adequately express my love for the freedom of our American democracy.

Do Americans in general love their democratic way of life as I do? A person does not die for a cause in which he does not believe. Proof of their love indeed is the fact that thousands have died to preserve this democratic freedom. An extreme sacrifice is proof of love. I am reminded of a line from a famous revolutionary speech. It began: "These are the times that try men's souls. What we obtain too cheap we esteem too lightly."

"What we obtain too cheap we esteem too lightly."

May I shout it from the housetops and the highest mountain.

I am an American. I love America. I am exceedingly proud to speak for democracy.

Address by James C. Oliver Before the Ahepa Tristate Convention

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, on Sunday, June 12, 1960, at the Ahepa Tristate Convention, Portland, Maine, our distinguished colleague, the gentleman from Maine [Mr. OLIVER], made a noteworthy address which I feel could give inspiration to all of us and which I deem a pleasure to include in this RECORD. The address follows:

Mr. Chairman, it is with a deep sense of humility that I speak here today before you, a distinguished assembly of American citizens of Greek-American extraction.

Yet, it is most appropriate that I, as an elected public official, holding office through the indulgence of a free electorate in one of the greatest, if not the greatest, of all assemblies of freemen, the U.S. House of Representatives should take advantage of this great privilege which you have accorded me to address you, the dedicated members of Ahepa.

For, as your freely elected Representative, here in this meeting assembled today, I take this opportunity to speak to you of liberty and freedom, as fought for and practiced by the ancestors of all of us. I, also, must avail myself of this opportunity to warn you that the threat of loss of freedom hangs heavily over us and, in fact, over the entire world.

Today we face a common foe, not only in Greece and in America but in every section of the world, more ruthless, more cunning, more determined, more barbarously willing and eager to enslave mankind than were the Huns, the Slavs, the Persians, and all the other power-drunk conquerors of the ages.

The Soviets and the Red Chinese, ladies and gentlemen, have never changed their spots. These despoilers of freedom are dedicated to the conquest of peace-loving and freedom-worshipping peoples of the Western World. Their boast that they will bury us is no idle talk. This is no game which they are playing for mere marbles of gain. They are playing in deadly earnest and for keeps. We are fat, we are complacent, we are unwilling to listen to the hard facts and the harsh realities of the world in which we live today.

Your family ancestors in Greece for centuries faced up to the facts of life, as for example at Thermopylae and Salamis. A small and battered slab of marble discovered about a year ago in Troizen, just south of Athens, tells, through its inscription, of the battle orders issued by Themistocles when the Persians were on the march from Sardes, the seat of their government.

This slab and its inscription of fighting words has been described by its discoverer as the Athenian equivalent of our Declaration of Independence.

In truth, this battle order cut in marble backgrounds the crucial victory of the Greeks that followed at Salamis over the greatest empire of that period of history. It gave your ancestors command of the sea. It restored their freedom to pursue their ideals of liberty and made possible their golden age for which mankind has ever since gained the political and cultural inspiration which will never be extinguished.

So, my friends, we know from the past that we must fight for freedom and the heritage of liberty which, in fact, have been passed to us in this generation on a silver platter and which we are destined to lose if we fail to wake up to the threatening clouds which are becoming ever blacker, almost daily.

Then, again, as we refer in rather inadequate words to another episode in the glorious history of your great fatherland, we are once more inspired by the bravery and the indomitable courage of the Greek people and its leadership of the past.

It was 139 years ago when Archbishop Germanos of Patras raised the standard of revolt in his monastery at Kalavryta against the Turks on March 25, and his people joined him in this national struggle against their oppressors, his daring act ushered in a new day for the Greek people. That courageous deed by a stouthearted dignitary of the Greek Church marked a sharp break from the events of preceding centuries when Greeks were subjected successively to the Romans, the Frankish kings and the Turks. That day became the independence day of the Greeks.

We in this country have always held the Greeks in exceptionally high esteem. We have always had great sympathy for them, and have done our utmost to help them whenever we could. In their fight for freedom and independence against the tyranny of the Turks, and especially in their desperate struggle to maintain their independence against fascism, nazism, communism, and all forms of totalitarianism, they have counted upon our sympathy and on our aid. We are proud to say that fortunately we have been in a position to help them and have not disappointed them. And this has been true in the past as it is at present.

In the early days of the Greek war of independence a number of philhellenic groups were formed in this country for the purpose of raising funds and thus extending material aid to the fighting Greeks. A wave of philhellenic enthusiasm swept over America. President Monroe himself was not immune to the contagion of this philhellenism. This is clearly shown in his annual message on December 3, 1822, when he gave some reasons for our interest in the Greek cause. "The mention of Greece," he said, "fills the mind with the most exalted sentiments and arouses in our bosoms the best feelings of which our nature is susceptible. Superior skill and refinement in the arts, heroic gallantry in action, disinterested patriotism, enthusiastic zeal and devotion in favor of public and personal liberty are associated with our recollections of ancient Greece. That such a country should have been overwhelmed and so long hidden, as it were, from the world under a gloomy despotism has been a cause of unceasing and deep regret for ages past. It was natural, therefore, that the reappearance of those people in their original character, contending in favor of their liberties, should produce that great excitement and sympathy in their favor which have been so signally displayed throughout the United States. A strong hope is entertained that these people will recover their independence and resume their equal station among the nations of the earth."

This was an eloquent and welcome explanation. As the elected head of the government of this country, he expressed the feeling of our people. No less eloquent was Daniel Webster, perhaps the most illustrious statesman-orator of his day, when he characterized the Greek War of Independence as part of a greater struggle between the absolute and the regulated governments. He stated that America could not and should not hold aloof from world affairs, and it was time for the people and the Government of this country to take a stand. "As one of the free states among the nations," he declared, "as a great and rapidly rising republic, it would be impossible for us, if we were not disposed, to prevent our principles, our sentiments, and our example from producing some effect upon the opinions and hopes of society throughout the civilized world." "Our side of this question," he added, referring to the Greek War of Independence, "is settled for us, even without our own volition. Our history, our situation, our character, necessarily, decide our position and our course before we have even time to ask whether we have an option. Our place is on the side of free institutions."

There are many fine thoughts and noble ideals in these few sentences of that inimitable orator-statesman, but the core is found in the last sentence, for it reflects the full and free American spirit; our place is, and has always been, on the side of free institutions, erected and kept erect by freemen. And the Greeks were among the forerunners of freemen who founded free institutions and fought for their preservation.

Nor has our expression of sympathy and our show of kinship of ideas with the Greeks been limited to mere words and declarations. It is well known that whenever Greeks have been in trouble, in need of material aid, we have been generous in helping them. This has been particularly true at the end of the First World War, and, of course, more so during and since the end of the last war. Early in the course of that war, when Greece was overrun by the Axis forces, our wartime President, the late Franklin Roosevelt, declared confidently that Greece would be liberated and rewarded for her heroic fight on the side of democracies against the forces of barbarism and darkness. He certainly echoed the true and genuine sentiment of the people of this country when he said: "I am glad to have the opportunity to reassure my friends of Greek origin and Greek birth everywhere that it is the desire of the American Government to help Greece to the utmost of its capabilities."

Our postwar role in Greek affairs, our aid to Greece, both financially and militarily, is rather widely known and I need not dwell upon them in detail. As soon as circumstances permitted, toward the end of the last war, we were more generous in aiding Greece than at any time in our history. In March 1947 when we were asked by the hard-pressed Greek Government for urgent emergency and military assistance, we felt that it was our duty to comply with this request. The then President Truman felt that it was our solemn responsibility to give all we could to save Greece from the tightening clutches of communism. In his message to Congress on March 12, the President declared: "I do not believe that the American people and the Congress wish to turn a deaf ear to the appeal of the Greek Government."

Here again the President was echoing the sincere wishes of our people. We could not turn a deaf ear to the appeal of the Greek Government, even though we had already expended more than $500 million in the form of supplies, lend-lease aid, and under the United Nations Relief and Rehabilitation Administration. Fortunately, we had some more expendable dollars, and we did not seem to mind to add close to $3 billion worth of aid to the Greeks. Yes, the Greeks have deserved well of us. I am indeed glad to say that we were able and willing thus to pay at least a part of our intellectual debt which we all feel humanity owes to Greece and to the Greek genius.

In their enthusiasm for creative things of lasting value, the attainments and accomplishments of the Greeks remain unsurpassed and unequaled. In their fervent enthusiasm for liberty and democracy, they have struggled against great odds, have fought bravely and have guarded their democratic institutions tenaciously. For almost 2,000 years, from 146 B.C. to A.D. 1821, Greece was ruled by the Romans, the Frankish kings, and by the Ottoman Turks. From the Battle of Corinth in 146 B.C. when Greece was overrun by Roman legions to the Battle of Navarino in 1827 when the tyranny of the Ottoman Turks was finally brought to an end in Greece, Greeks lived under alien rule, but during those centuries their spirit of freedom was not extinguished; their dauntless will to fight never deserted them. And the best proof of that was the long, often despairing, and almost endless fight which they carried on for 8 years before they could attain their freedom and independence.

While we are discussing the Greek heritage to the civilization of the free world it would be most remiss of me to neglect a brief reference to the tragedy of Cyprus where the Greek majority have been frustrated for too long in their legitimate fight for this preponderantly Greek area. The gallant struggle, symbolized by the dedicated efforts of that great patriot, Archbishop Markariys, will eventually succeed and the ends of justice will be served. Of this, I feel certain.

Today, my friends of Ahepa, these memorable events of history inspire us to defend our freedom and liberty, eternally, against the impending and potential dangers of totalitarian tyrants.

I should speak, if time permitted, of the great contributions which have been made to America by those in your families who came to our shores and now comprise in every center of population in the United States the core of God-loving, law-abiding, public spirited citizenry, which has helped to make and will continue to help to keep America great.

I would speak, my friends, if time permitted of the cultural contributions which America has gained from the illustrious history of Greece and its people down through the centuries. For these America is profoundly grateful.

But the greatest contribution of all is the philosophy of the dignity of man and of the freedom of the individual. It is for these that freedom loving people all over the world must be the most grateful. It is for these priceless values that we must prepare to fight when threatened. It is for this heritage which our forefathers died to preserve that we will fight to defend against any and every enemy of human self-respect wherever and whenever he shows his ugly head and his rocket rattling belligerency.

In closing, ladies and gentlemen, my friends of Ahepa, may that day never come again when we shall be compelled to fight in defense of these greatest of all assets of mankind, freedom and liberty, but, if, God forbid, it does come then in the philosophy of the song of the Greek heroes of the ages, we shall find this to be our one and only reply:

I may have a rock for my pillow
And only the snow for my cover
But I will never serve as a slave!
Dig a grave for me
Large and deep,
That I may stand with my gun—
Ready to fight.

The Executive Branch of the Louisiana State Government

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. BOGGS. Mr. Speaker, it is my privilege to incorporate at this point in the RECORD a magnificent address recently delivered in Baton Rouge, La., by one of our most distinguished citizens, the former Governor of Louisiana, the Honorable Sam H. Jones. The address follows:

The subject assigned to me is, of course, impossible of accomplishment by any one person. No State government is quite so complex and complicated as our own. It would take a staff of experts many hundreds of man-hours to even approach an explanation that would be satisfactory to either the political scientist or the practical politician. It is therefore flattering that I should be called upon to do the impossible.

Some have generously suggested that certain experiences in my career befit me for the task which I accepted with fear and trepidation. But a closer examination indicates such appraisal is not justified.

The fact that I participated in writing our present constitution does not. For this constitution is certainly the longest of any of the 50 States; it is admittedly the most complicated and puzzling; and it has been characterized by some of the worst "ever struck off at a given time by the brain and purpose of man."

My ill-fated efforts to reorganize the executive branch of the State government back in 1940 would seem to constitute no particular qualifications. For although the legislature did succeed in consolidating 174 agencies into 20 departments and 5 independent agencies, and although the people ratified the idea at the polls, we can legally claim but one distinction: That of establishing something novel in constitutional jurisprudence, namely that constitutional amendments can, themselves, be unconstitutional.

My participation in the crusade to stop centralization of government in Washington, through the Federal Commission on Intergovernmental Relations, was something less than a brilliant success. Since our sine die adjournment in 1955, the National Government has proceeded to move out in all directions, grabbing more power and money on the run, and leaving the States and localities much the worse for the noble experiment that was to correct the evils on all three levels of Government.

But there is a brighter side. There are compensations for failures and setbacks. Even the poet has said: "Sweet are the uses of adversity." Another great man has reminded us that "Failure is usually the beginning of success." and we might profit from the philosophy of patience, so eloquently expressed by Woodrow Wilson when he said: "It is the discovery of what they cannot do and ought not to attempt that transforms reformers into statesman."

I have one qualification for my appearance before you today. I am not discouraged. I am as optimistic about the future of Louisiana now as I was 40 years ago when I began my career. There is much in our heritage, and in the genius of our people and in the wealth of our resources that sets aside and gives our State a special place of preeminence in the constellation of American States.

Never let it be forgotten that the white man came to Louisiana long before he landed at Jamestown and Plymouth Rock. Alonzo Alvarez de Pineda preceded the *Mayflower* by a full century. Narvaez came to Louisiana in 1529, and De Soto crossed the Mississippi in 1541. We had the benefit of the early mixing of the cultures of the Spanish, the Portuguese, the French, and the Anglo-Saxon, which gave to Louisiana the international flavor that exists down to this day. Ours is an older, a broader, a richer civilization than exists anywhere else in the American Union.

Then 150 years ago there came to our land the immortal Acadians to further enrich our Commonwealth. Theirs is an epic which has given a spiritual lift to our people that will never die. Theirs is a saga that will inspire Louisianians and Americans as far down the path of history as men can vision.

We have lived under France and Spain; portions under the rule of Mexico and Great Britain and the West Florida Republic. Our State emerged briefly as an independent nation; then as a part of the Confederacy. For 50 years the Spanish Province of Tejas, or Texas, had its capital well within the present borders of our State. Napoleon was thinking about that part of the larger territory now represented by the State of Louisiana when he referred to its transfer to the United States as the economic and political force which would enable America to surpass in power the British Empire. Finally we came to rest under the Stars and Stripes.

But we brought with us much to enrich the American Nation. We brought many cultures and varied languages and numerous religions. We brought manners and customs and ways of life of far-off lands. History, for us, was written by the Spanish conquistador, by the intrepid French explorer, by the exiled Acadian in his pirogue, and the Anglo-Saxon in his covered wagon. It was written by the pirate, Jean Lafitte; and by the schemes of the Scotsman, John Law, and the Frenchman, Antoine Crozat, in the promotion called the Mississippi bubble. It is still being written by the hillbillies of the north and the Cajuns of the bayous, as well as by the intellectual aristocracy of a State that, in its versatility and distinctiveness, has no peer.

Then, if you have any doubt about the genius of our people, I would remind you of such artists as John James Audubon, the great naturalist, whose fame is worldwide, and of Caroline Wogan Durieux; of such educators as Alexander Dimitry, and Paul Tulane, and William Preston Johnston, and Thomas D. Boyd; of such great engineers as James Buchanan Eads, and Henry Miller Shreve and Lester Alexander. And in the same field I would mention the Spanish architects, who gave us the charm of the world-renowned Vieux Carré; and of James Gallier and Henry Hobson Richardson, whose architectural gems are scattered throughout the North and East.

I would remind you of the experiments of Etienne de Bore and Valcour Aimé, in the culture and refining processes of sugar cane, experiments and discoveries that became a boon to the entire world, and which have caused Louisiana to be the leader in this industry for a century and a half, and to be the trainer of 90 percent of the sugar engineers, chemists, and technicians for the entire world. So also of Louisiana's early business leaders and industrial giants such as Daniel Clark and John McDonough and Judah Touro and Julien Poydras.

In the field of medicine Louisiana, since its earliest beginnings, has been an outstanding leader in the Western Hemisphere. Here plagues were conquered. Here tropical medicine found cures that have benefited all mankind. Here was formed the first State department of health in the entire Union. And here great leaders in medicine and surgery, such as Drs. Stanford E. Chaille, Tobias G. Richardson, Edmond Souchon, Rudolph Matas, and Alton Ochsner have caused their names to be known and revered throughout a grateful world. And there were the illustrious philanthropists such as Almonester, Pontalba, Margaret Haugherty, and Poydras, Touro, McDonough, Tulane, and Edgar Stern.

Onto the field of military battle from the State went such outstanding leaders as Beauregard and Braxton Bragg and Dick Taylor and the "Fighting Biship" Leonidas Polk. And, at this point, we might remind our Texas friends that Jim Bowie, of Alamo fame, was not a Texan but a Louisianian. And still later John A. LeJeune, who became head of the Marines, and lightning Joe Collins, later to be Army Chief of Staff, and Lt. Gen. Troy H. Middleton, classed by his superiors as one of the great generals of World War II, and Claire Chennault, of Flying Tiger fame.

Alcee Fortier and Charles Gayarre lead a long list of Louisiana historians. It would be impossible to name all the literary personalities that have lent fame to our State, but we cannot pass without listing George W. Cable, Ruh McEnery Stuart, Alfred Mercier, Eliza Jane Nicholson, Dorothy Dix, Lafcadio Hearn, and Grace King. Nor should we miss the great musician, Louis Moreau Gottschalk, whose fame and concerts led to every land of the world. Nor the great religious leaders like Abbe Adrien Rouquette and Bishop Leonidas Polk.

In the field of law, so closely connected with government, I would remind you of Louisiana's most illustrious lawyer, Judah P. Benjamin, the "Brains of the Confederacy"; of Francois Xavier Martin, Christian Roselius; of Pierre Derbigny and Edward Livingston, adopted son of Louisiana, two of the authors of the civil code; and finally, of course, Edward Douglas White, who went on to become Chief Justice of the United States, intellectual giants and great leaders who would do justice to any civilization anywhere.

Now come we to the political leaders of the past: The Spaniards DeSoto, Galvez, Almonester, Carondelet and Esteban Miro, who "knew what all must learn as they triumph over adversity, communities only

build above themselves upon the dust of their shattered dreams." There were the Frenchmen LaSalle, the LeMoyne brothers, Bienville and Iberville; St. Denis, De Tonti, Cadillac, and the Marquis de Vaudreuil, who conquered the wilderness and brought culture and social graces to the growing empire of Louisiana. Then came the English-speaking Anglo-Saxons, the Claibornes, the Wilkinsons, and the Livingstons, whose efforts merged Louisiana as a sovereign State into the American Union, the 18th in order of admission.

From that time until the War Between the States the political control of Louisiana alternated between Frenchman and Anglo-Saxon and, as the historian Chambers said, Louisiana became "America's first melting pot." Not only French and English, but Spanish and German whose names and tradition and influence enrich our civilization today; and the Scotch-Irish who came overland from the East in their covered wagons; and later the Slavs, the Greeks, the Italians, and the Jews, whose business acumen did so much to develop the rich American midlands. And many, from many other nations, and religions and climes.

And, it seems to me, this mixture of peoples and ideas, and customs and religions, make for the greatness of our people. History gives us many examples. There was the British Empire which consisted not only of Englishmen, but of ancient Britons, of Romans, of Vikings and Danes and Normans, of Angles and Saxons, of Scots and Picts and the Gaelic of Ireland. The same may be said of the Greek and Roman Empires. Some of the most stable countries of Europe today, are the small states of Belgium and Switzerland, who combine mixtures of French and Flemish, and of German and Italian and of descendants of ancient Romans.

Thus, not only through the bloodstreams of our original settlers, but through the media of our distinctive legal system and our specialized medical achievements, and our versatility of land and resources and minerals, and the almost unbelievable diversity of our agriculture, and our connection with the outside world, by our own superior lines of communication with foreign lands, we have carved for Louisiana, a place in the American Union which has not, and never will be duplicated by another American State.

As an American State we have produced men of great political stature: A President of the United States, Zachary Taylor, a Chief Justice Edward Douglas White; great Governors like Villere and Mouton and Francis Tillou Nicholls, and Henry Watkins Allen; great Senators like John Slidell, Pierre Soule, Judah P. Benjamin and Donaldson Caffery—to name only a few down to the end of the 19th century—lest we travel into the controversial areas of contemporary politics.

If we have been blessed with great leaders and men of genius, we have been even more blessed, by nature itself, with a great outpouring of rich, basic wealth; with fabulous natural resources that make us the envy of our neighbors. As far back as 1850 we were the richest State in the Union, both in per capita wealth and per capita income (including slaves). Seven-eighths of the Nation's millionaires once lived in Natchez, Miss., but made their fortunes across the river in Louisiana. New Orleans was once the Nation's third largest city and for 7 years its financial and banking resources exceeded those of New York City. The commerce, not only of this Nation, but of the British Empire, was largely controlled from the Crescent City.

All this would seem to have been the fulfillment of the vision of the great leaders of the past. Of Father Charlevoix who, in 1721, said: "Rome and Paris had no beginnings so considerable, nor were they under auspices so happy, nor did their founders meet upon the Seine and upon the Tiber the advantages we find upon the Mississippi."

Of Napoleon who looked upon lower Louisiana, with its undeveloped hinterland, as the economic and political force which would enable America to surpass in power the great British Empire. Of Thomas Jefferson who, speaking of New Orleans said that it would "forever be, as it is now the mighty mart of merchandise bought from more than a thousand rivers," and would "in the not distant time leave the emporia of the eastern world far behind."

Of Robert R. Livingston who said, on the occasion of the Louisiana Purchase, "the treaty which we have just signed will change vast solitudes into a flourishing country. Today the United States takes their place among the powers of first rank," further predicting that the purchase will prepare centuries of happiness for innumerable generations of the human race."

There is not the slightest doubt that those of our generation have let the greatness of Louisiana slip; and have failed to properly develop the cornucopia of wealth, resources, and natural advantages that nature has provided. We are the greatest undeveloped agricultural frontier in all of North America. We have been in the past, and we will be again, the leader in forestry, for here we can grow a tree in 40 percent the time required by the climates of the North and of Canada, and we have 16 million acres of land upon which to do this job.

We have seen our mineral wealth grow to staggering proportions; salt deposits sufficient to outlive the span of the Roman Empire; sulphur supplies of almost unbelievable proportions; shell reefs that have been deposited over thousand of years; oil and gas that already place us in second rank among the States, with additional reservoirs in the Gulf of Mexico, competition geologists say, will outproduce the fabulous supplies of the Middle East; waterways, that nature gave us, which cannot be equalled anywhere else in the world; and supplies of fresh water that, daily, flow through our State in quantities greater than is consumed by the Nation, by all its people, for all purposes, domestic, agricultural, and industrial.

Then, too, contemplate our fish and wildlife, the quantity and versatility of which is without equal; a fur-bearing industry that surpasses all the other connected 47 States put together, and a seafoods supply from the Gulf of Mexico and our lakes, bays and inlets that destines we shall be the leading commercial fisheries State of the Union.

We are thus blessed with products and supplies from the forest, and the farm, and the mine and the sea that causes us to be the No. 1 example of economic sufficiency, still largely waiting for its development by the brains and tools of man.

When we repeat the inventory of the wealth which is our, and hear one of the Nation's great developers say: The lower Mississippi Valley has the potential to become the Ruhr Valley of America," we can only conclude that John Law and Antoine Crozat, with their "Mississippi bubble," were merely some two centuries ahead of their times.

Perhaps by now I have convinced you of at least one thing I said earlier. That there is much in our heritage, and in the genius of our people, and in the wealth of our resources, that sets us aside and gives our State a special place of preeminence in the American Union.

Mr. Speaker, the balance of Governor Jones' address was devoted to a penetrating analysis of State affairs of great interest to the citizens of our State.

Former Wilkes-Barre Girl Ace Newspaper Reporter

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that was featured in the Wilkes-Barre Sunday Independent of June 12, 1960, which sets forth the great accomplishments in the newspaper world of Nannette Ryan Milstead, a former resident of Wilkes-Barre, Pa., now of Chevy Chase, Md.:

EX-CITY GIRL ACE REPORTER—NATION'S CAPITAL NEWSBEAT OF FORMER MEYERS HIGH SCHOOL STUDENT

A girl who learned how to write a news story while a staff member of the Meyers High School Elmprint and later went on to become a topflight writer for the International News Service and the Hearst Headline Service is giving up her journalistic career to rear an adopted 18-month-old son.

She is Nanette Ryan Milstead, daughter of the late Mr. and Mrs. Glenn N. Ryan of 392 West Academy Street.

Nanette capped her career as a bylined writer on the national scene by recently being selected for inclusion in the latest edition of "Who's Who Among American Women." She previously was included in "Who's Who in America."

Nanette Ryan Milstead covered the ever-changing Washington scene for the past 10 years. She started her career in the Nation's Capital by first working as a fashion coordinator for style shows staged at the famous Statler and Shoreham Hotels. She then served as an editorial assistant to "Austine," a syndicated columnist and also known as one of the "10 Best-Dressed Women" in the Nation.

The former Wilkes-Barre resident next worked with the Montgomery County News Advertiser and from there she went to the International News Service, since merged with the United Press.

Until recently, Mrs. Milstead was a byline correspondent for the Washington Bureau of 17 Hearst newspapers and the Hearst Headline Service. Her articles on Capitol Hill activities, as well as governmental and national affairs, have appeared in papers from coast to coast. She has also had articles published in Good Housekeeping magazine.

COVERED NATIONAL ELECTIONS

Her assignments have included traveling with Vice President RICHARD NIXON as well as coverage of national elections.

In 1945 Nanette married Charles Howlett Milstead, an ensign in the U.S. Navy. Her husband, a graduate of the University of Maryland and Georgetown University Law School, is associated with the State Farm Insurance Co. The couple has one adopted son, James Dennis Milstead, 18 months old.

Mrs. Milstead has written numerous articles including "College Now—Pay Later" and "Women of the FBI."

The latter article produced the following quote in a letter to her from J. Edgar Hoover, Director of the U.S. Federal Bureau of Investigation:

"DEAR MRS. MILSTEAD: Once again it is my pleasure to express my sincere appreciation for one of your outstanding stories. I am,

of course, referring to the article entitled 'Danger Is Just Routine to Heroines of FBI' which appeared in a recent issue of the New York Mirror."

For the past 4 years, Mrs. Milstead has also appeared in the Congressional Directory under news correspondents accredited to Capitol Hill.

ON THE WASHINGTON SCENE

Until her retirement as a reporter following the arrival of her son, Mrs. Milstead was an active member of the White House Correspondents' Association and the U.S. House and Senate Press Galleries. She is still an active member of the Women's National Press Club where she has personally entertained Senator John F. Kennedy and Mrs. Kennedy, U.S. Ambassador to Spain and Mrs. John Davis Lodge, a former Dominican Ambassador to the United States Manuel DeMoya, Senator Warren Magnuson, of Washington, Senator Kenneth Keating, of New York, as well as many others prominent in national and world affairs.

She has interviewed and met Shirley Temple, Peter Lawford, Myrna Loy, Rudy Vallee, Margaret Truman, Mrs. John Kelly (mother of Princess Grace of Monaco), Queen Elizabeth and the Duke of Edinburgh, Edward G. Robinson, Justice Hugo Black, ex-President Harry S. Truman, Mrs. D. D. Eisenhower, the former Apostolic Delegate Giocnani, and many others of national prominence.

Mrs. Milstead also received special commendations from the former Delegate to Congress, from Alaska, E. L. BARTLETT, now U.S. Senator, and the former Alaskan Governor GRUENING, now the other Alaskan Senator, for her editorial work in promoting the admission of the 49th State.

The Milsteads have resided for the past 6 years at 5116 Bradley Boulevard, Chevy Chase, Md.

What Makes Towns Grow in Kentucky

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "What Makes Towns Grow in Kentucky," which appeared in the June 10, 1960, issue of the Courier-Journal of Louisville, Ky.:

WHAT MAKES TOWNS GROW IN KENTUCKY

It would be useless to try to simplify the reasons for a town's growth. No doubt there are dozens of factors, some of them extremely complex, that account for the unusual population growth of Bowling Green and Hopkinsville during the past 10 years. According to the census reports, these two cities lead all Kentucky towns in rate of growth, Hopkinsville having increased its population by 55.3 percent, Bowling Green by 52.8.

Certainly studies will be made of the two towns, and it will be interesting to know what factors of their economy sparked their vigorous expansion—annexation policies, industrial investment, land prices, building rates, power costs, transportation availablity and nearby farm stability. We suspect, however, that much of the growth can be traced to a fact that is not likely to be revealed by statistical studies: both Bowling Green and Hopkinsville are pleasant places in which to live, attractive towns of sound businesses, good homes and nice people. With admiration just touched with envy, we salute them.

Minimum Wage Legislation

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1960

Mr. WOLF. Mr. Speaker, one of the pressing issues before the Congress at the moment is the question of increasing the minimum wage and expanding coverage under the law.

Just a year ago I received a copy of a letter from one of the prominent businessmen in my State. His very successful farm machinery business in DeWitt, Iowa, attests to his ability and to his far-minded attitude toward his employees. This original letter was addressed to the secretary of the Iowa Retail Farm Equipment Association in response to its pressure letter urging its members to write to their Congresmen and Senators asking them to work against revision of the wage and hour law. Because I feel that this letter is so to the point and because we will soon be debating minimum wage legislation, I include it in the RECORD. I congratulate the Honorable James Reed, mayor of DeWitt, for his helpful, cogent, and pointed comments:

Have been reading with interest your many communications regarding proposed changes in the wage and hour law. While I do not generally question the honesty or sincerity of those opposed to changes in the law, I think the association is in error in taking such a short-sighted position.

I would perhaps state my position better by commenting on the five points made by Mr. C. R. Frederick before the Senate Labor Committee recently:

Point No. 1. A substantial number of farm equipment retailers have an annual volume in excess of $500,000 and that a number of farm equipment retailers own more than one establishment which under the bill would be considered as part of one enterprise.

Answer. Any dealer having a volume of $500,000 or more, who objects to paying a minimum of $1.25 per hour and who is not at least working toward a 40-hour week forgets the fact that the first charge on any business is a decent living for everyone contributing to its success.

Point No. 2. Farm equipment dealers cannot serve farmers on a 40-hour week because farmers' hours are irregular from season to season and in months from Washington's Birthday to Thanksgiving, the farm workweek frequently exceeds 60 hours. And servicing agriculture during that period requires more than 40-hour week.

Answer. Merely because farmers work a 60-hour week it does not necessarily follow that our mechanics should work 60 hours and be paid for 40 hours. This is a real problem but it must be solved if we are to attract young men to the trade of mechanic and hold them after they are trained. Under present wage and working conditions what is there to attract them? With machines and tractors becoming steadily more complicated, good alert mechanics were never more needed and never have there been so few competent ones available. Decent working hours and decent wages by Federal edict might be strong medicine, but that is what it took in the 1930's to force our major suppliers to pay up, and according to recent financial statements they have never had it so good.

Point No. 3. Now hours of employment are adjusted as crop seasons demand to serve the agricultural needs of the particular agricultural area in which the dealer is located. Coverage under the Fair Labor Standards Act would change this and in many cases employes would receive a smaller annual income. Also, cost to farmers would be increased during the longer workweek with extra-time pay to employees.

Answer. Hours may be adjusted but wages very seldom are, since most mechanics are paid a weekly wage and work as required. Dealers cannot adjust wages downward very much in slack seasons because they would lose their best mechanics. As to annual income being less under the proposed changes, Mr. Frederick is completely in error and, moreover, he knows it.

Point No. 4. Frederick stated that original cost of compliance would be economically prohibitive. The detailed recordkeeping which would be required would not be possible without revising bookkeeping systems and employment of additional personnel to keep records.

Answer. Mr. Frederick states that cost of compliance would be economically prohibitive. It would be for some dealers who do not now keep adequate records of labor costs. Chances are they do not keep adequate records of other costs, too, with the result that they wonder at the end of each year why they are not getting ahead. If changes proposed in the wage and hour law would promote better recordkeeping, that in itself would be worthwhile, because a dealer who does not know his costs of doing business is the very worst kind of competition there is, and in our industry the woods are full of them.

Point No. 5. Employer and employee would resent wage-hour investigators checking on businesses to see if firms were complying and unrest would result with poorer service.

Answer. Good employers and good employees would not resent wage-hour investigators checking on businesses to see if firms were complying; on the contrary, they would welcome such investigators.

In summation, I believe that the warrant for starting a business or taking a job is the hope that it can promote happiness: personal happiness and the happiness of those who are truly loved, Profit is a means to so ennobling a goal but not an end in itself. Therefore, I believe that, as an employer, my first responsibility is to see that all who are engaged in it get first a living wage; only then do I feel rightfully entitled to a profit.

In conclusion, I want it clearly understood that I do not support the association in this present endeavor and will notify my Congressman to that effect.

Good News for Pittston, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittston Sunday Dispatch of June 12, 1960, which comments on the great progress made in the Central Pittston urban renewal development program that will cost an estimated $2 million to complete, including Federal, State, and local funds:

IT'S BIG—$2 MILLION BIG, PEOPLE ASKED TO VOICE VIEWS

Pittston received exceptionally good news last week when word was received that the Federal Government had approved plans and set aside funds totaling $1,694,267 for the Central Pittston urban renewal development program. That's not an error folks—it is $1,694,267.

And it also moves the city redevelopment program to the point where the State will contribute approximately another $400,000 to the project. Pittston City will be required to contribute one-sixth of the entire amount to complete the task, but much of Pittston's contribution will be in the form of credits and services. Actually, it figures out that the Federal and State governments will spend $5 to improve Pittston for every dollar spent by Pittston, in cash, credits, or services.

Much work has been done on the Central Pittston urban redevelopment program in Pittston by the planning commission, the redevelopment authority, the executive director, Mr. Edwin A. Sites, and the city council. The latter body must initiate such programs and approve the various proposals.

It can be safely stated that at least 50 major communities in the State, including Wilkes-Barre, would dance a jig with joy, if their programs had advanced as rapidly and as successfully as the Pittston urban redevelopment program.

The approval of the funds for Pittston is a major step in the program—but not the final step.

Now it is time for the citizens to take part in the program by voicing their views—whether they be for or against the program of redevelopment.

The opportunity will come at a public hearing to be held by city council on June 23 at Pittston City Hall. Before city council gives final approval of the city to the program, it is required that a public hearing be held. The Federal Government is interested in how the citizens of the community feel about the redevelopment program and its ramifications. They want the people to be interested, one way or another.

At the public hearing the full details of the redevelopment program will be given to all those who attend the public hearing. So be there as an interested citizen.

For years, Pittston has been condemned in various circles for not making what people considered normal progress in development. Years ago Pittston failed to take advantage of the many benefits that came from WPA projects.

Now, Pittston has something in this urban redevelopment program, and no matter who gets the credit for it, be it city officials or others, it really represents accomplishment—and we've all been anxious for that.

The fund approved is in the form of a loan-grant, but will become an outright grant for the full amount when Pittston has proven its interest and when 25 percent of the work has been completed.

This is the safety-valve phase for the Federal Government. They want community participation—and a desire on the part of the people of the community to improve their community, and enhance it for future generations.

This Pittstonians can do by being present at the public hearing to voice their views on June 23.

The project presently being concentrated on is the central city redevelopment. It is the heart of the entire redevelopment program.

Plans call for razing of many buildings in the central city between Main Street and the river, and also some on Main Street. It provides for extending William Street to the rear of Main Street, for parking lots, for beautification, and for many things badly needed for scores of years in Pittston.

And the nice part of it all is that more than $2 million is coming Pittston's way from Federal and State Governments to do the job.

Isn't it worth the interest of the community?

Ex-Nazi in West Germany

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. KOWALSKI. Mr. Speaker, today, June 14, 1960, Defense Minister Franz Joseph Strauss, of West Germany, has arrived in Washington to ask for long-range missiles and other armaments to strengthen Germany's military posture, already sufficiently enhanced to have aroused uneasiness and apprehension in bordering countries and elsewhere in Europe.

Today, June 14, also happens to mark the 20th anniversary of the first transport of Nazi victims to Auschwitz, the notorious death camp in Poland set up by the Germans during their occupation of that nation during World War II. Four and a half million men, women, and children, guilty of no other crime than being non-Nazi, Mr. Speaker, were murdered in Auschwitz.

Last year, a group of 36 Polish women, known as the Ravensbrueck Lapins, survivors of Nazi medical atrocities suffered at the Ravensbrueck Concentration Camp for Women, were in the United States for long-needed medical treatment and rehabilitation. I was among the privileged Members of Congress who met with them when they visited the Capitol. These heroic women are among the 1,500 survivors of similar Nazi medical crimes, none of whom, I remind you, have yet to receive any pensions or compensation from the German government.

I bring this up, Mr. Speaker, because our policy and decision to rearm Germany and accept her as an equal partner in the Western Community of Nations is based on the hopeful premise that Germany today is different from the Germany of Hitler. In considering Germany's desire for more and more powerful armaments, it might be well for us to reexamine this premise * * * not merely in the light of its past history, but in terms of a Germany which in 1960 includes in its Government many former high-ranking Nazis.

In the spring issue of the Chicago Jewish Forum, a national quarterly, there appears a well-documented article entitled "West Germany and Anti-Semitism." This article contains highly revealing and significant facts about today's so-called New Germany. Its author is Lillian Levy, Washington bureau chief for the National Jewish Post and Opinion, a contributor to the Washington Evening Star, and a journalist with a reputation for reliable and honest reporting. Mr. Speaker, I urge my colleagues to read the following excerpts from this article.

EXCERPTS FROM "WEST GERMANY AND ANTI-SEMITISM"

(By Lillian Levy)

Willie Brandt, mayor of West Berlin, is among those German leaders who attribute the development of neonazism in West Germany to the laxity of the present Government in dealing with known and notorious Nazis and their restoration to respectability and even their appointment to high political office.

Among former Nazis high in the Adenauer government are Gerhard Schroeder, Minister of the Interior, formerly a Hitler stormtrooper; Dr. Hans Bethge, Labor Office Director for North Rhine Westphalia, who was an intimate associate of Heinrich Himmler; Dr. Heinrich Hoehn, a former SS brigade leader, now managing director of the German Society of Economics; Rudolph Enkhaus, Buekeberg County judge, who once dispensed justice as a Nazi military judge; Heinz Reniefaith, a former Gestapo group leader and now mayor of Westerland und Sylt.

To date, Chancellor Adenauer has chosen to disregard complaints against these and other former Nazis, now members of his cabinet.

The laxity of the Bonn government toward former Nazis is perhaps most evident in the treatment it accords those doctors guilty of medical atrocities on concentration camp inmates during World War II.

A list of these doctors, together with the crimes committed, is contained in the files of the Association des Deportés et Internés de la Resistance (A.D.I.R.) in Paris, France.

A.D.I.R. is an organization of former resistance fighters whose objective is to seek compensation for the 1,500 victims of medical atrocities who still survive and punishment for those who committed the medical crimes. Its president is Mme. Genevieve de Gaulle Anthonioz, niece of France's President Charles de Gaulle, who, like her uncle, fought in the French Resistance. According to Mme. de Gaulle Anthonioz, "neither compensation for the victims nor just punishment for the guilty has been rendered thus far by Adenauer's government." She attributes Bonn's failures in this area to the influence of such former Nazis as Herr Globke; Adenauer's Minister of Justice, Fritz Schaeffer, who some months back openly opposed Bonn's program of restitution to victims of nazism; and Minister of Finance, Dr. G. Blessing, who also is outspoken in his opposition to further reparations.

Included in the ADIR files is the record of Dr. Hertha Oberhauser, now a practicing pediatrician in Schleswig-Holstein in an office equipped with the aid of a Government loan. Dr. Oberhauser was sentenced to 20 years at hard labor by the Nuremberg Allied Tribunal for the deaths of hundreds of women and young girls in her care in the notorious Ravensbrueck concentration camp for women and for having assisted in surgical experiments which either killed or crippled those forced to suffer them. Mme. de Gaulle Anthonioz was sent to Ravensbrueck by the Nazis when they captured her and other young women in the French resistence and witnessed Dr. Oberhauser's inhuman medical behavior and its results.

Dr. Oberhauser served only 7 years of her sentence. Upon her release, West German authorities compensated her financially for the years spent in prison. None of her surviving victims * * * have received compensation from the same government.

Dr. Oberhauser resumed her medical practice in Munich; but her license * * * was temporarily withdrawn when the local association of victims of Nazi persecutions protested. She appealed the withdrawal successfully on the grounds that she was not found guilty by a German court but was condemned by a foreign tribunal. She has an excellent practice despite the fact that her past is well known. She lives comfortably in a well-appointed home * * * that con-

trasts sharply with the poor economic circumstances under which her victims exist because of their physical inability to work.

Dr. Herman Pook, a former SS officer, was the author of the order to remove all gold from the teeth of inmates murdered in the concentration camps. An American military tribunal sentenced him to 10 years penal servitude. He was released before serving his full term and managed to be classified as "not duplicated" by Berlin denazification court in 1951. He has since been readmitted to the association of dental surgeons and now practices in a penal institution in West Berlin.

Dr. Hans Bobo Gorgass was sentenced to life imprisonment in 1949 for the murder of the sick and the Jewish children in a hospital to which he had been assigned. The Minister of Justice at Hesse subsequently pardoned him. He now is chief of medicine at a hospital in one of the provinces. Dr. Adolf Prachtl subjected prisoners at Dachai to experiments that, in some instances, led to blindness. He is a practicing gynecologist in Munich. Dr. Hans Eisele is one of the few doctors found guilty of atrocities by a German court and sentenced. He managed to escape to Cairo before imprisonment. According to editorials in German newspapers in July 1958, his escape was managed with either government connivance or cooperation.

Dr. Seigfried Ruff teaches at the University of Bonn and is a medical officer in the Federal German Air Force. During the war, he directed the low temperature experiments for the Luftwaffe on concentration camp inmates. In these experiments, subjects were suspended in icy waters until consciousness was lost and then exposed to bodily stimuli to observe responses. According to Dr. Hubertus Strughold, these experiments, done in the name of German aviation medicine, have dishonored the history of medicine in Germany. Dr. Strughold, now an American citizen and internationally known as the father of space medicine, was a medical officer in the Luftwaffe during the period of the experiments; but he avoided participation in them either directly or indirectly. Now professor of space medicine in the U.S. Air University Command, Dr. Strughold denounced his former country for allowing such criminals as Ruff to go unpunished. He said, "If Germany permits Ruff to practice, the disgrace is hers."

The German Government has preferred to ignore the history of the Hitler era rather than educate against it. It has bitterly resented any public reminders of this past.

"Genocide Day" for Baltic Peoples

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. DERWINSKI. Mr. Speaker, the understanding of current world problems is facilitated by placing them in a historical sequence since the events of the past, when duly documented, are a great aid to us in the consideration of current problems and plans for the future.

Today, June 14, sadly and with a sense of frustration, we make note of what is historically described as Genocide Day. In June 1941 the forces of the Soviet Union conducted mass deportations of Latvians, Lithuanians, and Estonians to central Russia from which area very few ever returned to their homeland. The purpose of these deportations was to complete the consolidation of control of the Communists over these previously independent Baltic peoples. Each of the three Baltic States, Estonia, Latvia, and Lithuania, had a long history of nationalistic opposition to Russian control, inspired, in a great part, by the religious structures of the countries which provided the people additional strength and the will to resist. In the previous period from 1918 to 1940, they made remarkable strides in developing as free nations.

Mr. Speaker, we, in these days of renewed international tensions should reiterate our solemn promise to these brave peoples that the conduct of our foreign policy pledges us to work so that they may eventually regain their freedom from the present oppressive Communist slave regime.

To Assure Care for Aged

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. FORAND. Mr. Speaker, under leave to extend my remarks I include a letter written by J. Douglas Brown, of Princeton, N.J., which appeared in the New York Times of Sunday, June 12, 1960.

Mr. Brown, dean of the faculty of Princeton University, is another outstanding personality who favors health insurance under social security for our aged and points out the flaws in a means test approach to a pressing problem.

His letter follows:

TO ASSURE CARE FOR AGED—AMENDING SOCIAL SECURITY ACT TO PROVIDE SICK BENEFITS SUPPORTED

To the EDITOR OF THE NEW YORK TIMES:

The unwillingness of the House Committee on Ways and Means to recommend an amendment to the Social Security Act to provide hospitalization coverage for aged beneficiaries is most difficult to understand, especially in the light of the long record of statesmanship which that commitee has demonstrated in the development of social insurance legislation in this country. This committee, more than any other, must understand that:

Needs-test medical assistance for the aged will require ever-mounting appropriations, unless counterbalanced by contributory social insurance coverage.

The cost of needs-test medical assistance will create fiscal problems for many States, even if the Federal Government can find ways and means to meet its share of a steadily mounting cost.

There is widespread evidence that the contributors to the old-age insurance system are more willing to pay the costs of hospital benefits for the aged than the general taxpayer is willing to pay higher income taxes.

COOPERATIVE CONTRACT

Contributory social insurance embodies the concept of a continuing cooperative contract between the citizens and the Government, to the mutual advantage of both. Needs-test assistance retains the age-old concept of paternalism.

Paternalism, like colonialism, is a costly and outmoded expression of the desire for superiority over others less fortunate than ourselves. It is an unstable basis for social policy or international relations.

The majority of American citizens appear to want a means of paying their share of the cost of health protection in old age. They need the help of the Federal Government to provide this means. A tested means is readily at hand. They want a cooperative contract, not paternalism, whether that paternalism is implemented by Government or by private individuals.

Should it be so difficult to combine sound economics with sound political philosophy after a quarter of a century of social insurance in this country and far longer experience throughout the world? Must we pay a mounting cost in dollars and human dignity to find out that paternalism is a Victorian relic in an atomic age?

J. DOUGLAS BROWN.

PRINCETON, N.J., *June 7, 1960.*

Who Will Qualify?

EXTENSION OF REMARKS
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. GEORGE. Mr. Speaker, in this election year no doubt many people are dreaming of the man they would like to see occupy the White House—some for selfish reasons and some for political reasons. But the great majority desire an honest man—one who is humble, courageous, sound-thinking, and a gentleman.

The need was never greater for a President who would rid the various Government agencies of those who have lost their sense of moral responsibility—those who do the bidding of the preferred contributors to political campaign funds.

The need was never greater for a President who would use good judgment in the selection of his advisers and his appointees to responsible positions in government.

The need was never greater for a national administration that gives first consideration to the welfare, the happiness, the health, and the safety of the people of this country—to the education of our children, the problems of little business and the farmer, to the aging veteran, and to good and sound relations between labor and management.

In the Ottawa Herald of Thursday, June 2, Mr. Speaker, a good, solid Kansas newspaperman, Lamar Phillips, gave expression to his dreams, and I include his editorial as part of my remarks:

JUST DREAMING

Had a serious talk with yourself lately? This year, one is in order. Something, maybe, like this:

If I could, all by myself, select the next President of the United States, what would I consider in making my decision?

Do I want a Republican? A Democrat?

Do I want a Protestant? Catholic? Jew?

Do I want an attorney? An industrialist? A soldier? A businessman? A politician?

First I think, he should be humble, courageous, a sound thinker, and above all, an honest man.

He should be humble enough to realize that the affairs of so complex a Nation as this are not handled by a single man residing at 1600 Pennsylvania Avenue.

Rather, the affairs must be handled by those minds with which a President surrounds himself in forming his official administrative family.

I would want him to gather about him, for the Nation's defense, men wise enough to set up a proper spy system over the world, and also wise enough to realize that other nations will do the same thing, because they have the same right to do so.

I would want the President to be sound enough in his thinking to realize that all of the knowledge man has been able to accumulate for the business of running a free nation is as close to him as his telephone, but that it is not all gathered together in his own mind.

Should he be Protestant? Catholic? Jew? Better not get into that, unless I want to admit at the same time that the part of our Constitution which talks about freedom of worship, was intended just for William Jennings Bryan's 1910 4th of July oratory.

Should I chose Republican? Democrat? Either way, I hope I would be able to choose a man who would look to the welfare, peace and prosperity of all, and forget, most of the time, whether he was elected by people of one party or the other.

Whether the man I was privileged to select would be Methodist, industrialist, Republican, Presbyterian, Democrat, Catholic, attorney, Holy Roller, businessman or Episcopalian, I would want him to be humble, courageous, sound thinking, a gentleman, and above all, an honest man. And, that is quite an order.

Oh, well * * * just dreaming.

Statement of Dr. M. J. Zucrow Before the Science and Technology Panel of the Committee on Science and Astronautics

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. MOELLER. Mr. Speaker, among the eminent scientists and educators who addressed the Committee on Science and Astronautics at its recent meeting June 2 and 3 with the committee's Panel on Science and Technology was Dr. M. J. Zucrow, of Purdue University.

Dr. Zucrow is acting professor of engineering at the university's school of mechanical engineering in Lafayette, Ind.

Under leave to extend my remarks, I wish to place in the RECORD Dr. Zucrow's statement to the committee:

STATEMENT BY DR. ZUCROW

Mr. Chairman, members of the Committee on Science and Astronautics, and members of the panel, when I was privileged to address this committee on March 25, 1960, I indicated that whether we like it or not we are engaged in a technological race with the U.S.S.R., not only in space, but also in other fields of science and technology. The challenge to our technological supremacy should not be taken lightly, or we may find ourselves lagging behind the U.S.S.R. in other scientific fields as we now lag behind them in space flight.

Dr. R. J. Russell, in an excellent paper, pointed that we lag behind the U.S.S.R. in a planned approach to determining the constitution and physical characteristics of the earth, and he made some suggestions for strengthening our scientific position in the earth sciences. Dr. Revelle discussed the importance of more research effort in the field of seismology, so that methods can be developed for detecting underground explosions. He also pointed out that a change is occurring in the planning of scientific developments in the U.S.S.R. The change is to the system which until a few years ago was predominant in the United States; that is, giving much more support to the universities in conducting research through enhanced support of graduate study. It is with the latter subject that I wish to deal today.

If we expect to expand our activities in science and technology, then we are confronted with a major education problem. I will confine my comments to engineering education, since I have some knowledge in that area of education.

With the advances in scientific knowledge and technology which the future will bring, there will be a great need for engineers who have a basic education in science and the humanities, who have the ability for solving new problems as they arise, and of conceiving new applications for existing knowledge. Although an engineer's education is somewhat similar to that of a scientist's, being based on the sciences and humanities, its objectives are different. It must be directed to equip him so that he will have the capability of applying his scientific knowledge and judgment not only to solving practical problems, but also to developing new knowledge as required for solving such problems.

It does not appear possible to me that the necessary fundamental education of the type of engineer needed for solving the complex problems of the future can be accomplished in a 4-year program. His education will have to be more extensive. This calls for an expansion of our educational facilities and staffs in the field of graduate study, so that an ample supply of engineering leaders will become available for meeting the demands of the future. Every effort must be made to attract and make it possible for the top engineering graduates to undertake programs of graduate study.

Experience has demonstrated that research must be an integral part of a graduate study program in engineering as well as in science. Through research the student learns the true significance of the scientific method, develops his confidence and judgment, and, in addition, contributes to new scientific or engineering information.

The problem is to develop the needed type and number of engineers and scientists required for insuring that the United States has the scientific and technological capabilities for maintaining its world leadership in science and astronautics. To achieve that goal it is essential that there be adequate support of research and graduate study in our engineering schools and universities. Since Dr. Van Allen has presented a written statement in which he discusses this need in detail, I submit my statement as an endorsement of the general ideas contained in his statement.

Dr. Noyes made some interesting comments on the educational system in the U.S.S.R. and corroborated Dr. Revelle's statement of increasing the cooperation of research institutes with the universities.

Remarks of Dr. W. Albert Noyes Before the Panel on Science and Technology of the Committee on Science and Astronautics

EXTENSION OF REMARKS
OF
HON. R. WALTER RIEHLMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. RIEHLMAN. Mr. Speaker, recently our Committee on Science and Astronautics had the pleasure of meeting with the eminent educators and scientists of our Panel on Science and Technology. Among those who addressed the committee was Dr. W. Albert Noyes, professor of chemistry at the University of Rochester.

The committee was fortunate in that Dr. Noyes had just returned from a trip to Russia, including Leningrad and Moscow, where he attended a meeting of the International Union of Pure and Applied Chemistry, of which he is president.

Dr. Noyes gave a fascinating account of his stay in the Soviet Union and his discussions with scientists and technologists in the U.S.S.R. which I wish to draw to the attention of everyone who is concerned about our relationships with the Russian people. Under leave to extend my remarks, I wish to place in the RECORD the statement of Dr. Noyes, which was presented to our committee on June 3.

Dr. Noyes' statement follows:

Mr. Chairman, my trip to Russia was 9 days in Russia, that is 11 days from portal to portal, you might say. I have always been suspicious of people like André Maurois, who visited the United States for a week and wrote a book on the United States.

So you will have to admit that a person who doesn't know the Russian language and who was there such a short time might make very superficial observations which would need to be checked by other people.

My purpose in visiting the U.S.S.R. was to attend a meeting of the executive committee and of what is called the Bureau of the International Union of Pure and Applied Chemistry in Leningrad.

Following that, we were invited by the Soviet Academy of Science to visit Moscow. Unfortunately, this is the time of year when examinations are held and I couldn't stay the full time we were invited to stay in Moscow. I had only 3½ days there.

I came in via Helsinki, directly to Leningrad in a small plane that looks like a DC–3. There were so many people that they had to run it in two sections. It only runs normally twice a week, and the plane I happened to be on was full of American tourists.

I think there were only about 2 people out of the 18 on the plane who weren't Americans. I am sure that most of them weren't on official business, they were just touring around. These were nice elderly men and their wives, the kind of people who have retired and just want to see the world. This is the way they acted and I am sure this is what they were.

During the time in Leningrad, we were mostly in committee meetings, but I can give you a few personal remarks.

In the first place, we were met at the airport in Leningrad by a member of the Soviet Academy. There was no baggage inspection, we went rapidly through customs and immigration and we were treated, in other words, as honored guests.

There was no evident hostility on the part of the hotel employes or the man in the street. They were curious about the States, and boys, as always, who stop you to ask you for chewing gum.

This was after, immediately after, the U–2 incident. In fact, I just left Moscow last Monday afternoon. So it was all after, and in spite of that, when you would smile at a Russian he would smile back.

There were a few incidents which indicated that the scientists may be somewhat worried about the situation. One young man, for example, has applied to come over here for a year of study. And he said: "Well, in view of recent incidents I am afraid I may not be able to come, but I am sorry for this because I very much want to visit the United States for a year."

There was one professor whom I met in Paris, actually, 3 years ago, in Leningrad, and I asked him whether he was coming to the United States and whether he might not give us a lecture on what he was doing. He is an eminent authority in his field.

He said: "A few weeks ago, beyond question I would have said 'Yes.' Now we will say, 'Let's see what develops, I am not sure I will be able to come.' "

This indicates not so much an antagonism which has resulted from the U–2, as an uncertainty as to what the relationships between the Russian scientists and ours are going to be in the months to come.

But I can say I think beyond question that there was no open antagonism, but rather still the real curiosity on which many people commented. They would stop you on the street and ask you why you were there. Since I don't talk Russian, we would have to find a common language. I can handle French and English and German up to a point. And a surprising number of them talked German, so this is the language I know least well but the one we most often used.

I visited, also, the circus, last Saturday night. Scientists have to amuse themselves as best they can at times. One of the clowns was playing around while the scenery was being changed. Suddenly he stopped and looked up in the sky and while I can't understand Russian I can understand Amerikanski, and there was something up there which was American and obviously a plane, and then there was a big bang and some junk fell on the floor and everybody laughed. So apparently, at least some of them can treat the U–2 incident with a sense of humor still.

I think it was supposed to be the U–2. I couldn't understand Russian but it was something American up in the sky anyway that came down.

Anyway, as far as the scientific laboratories are concerned, I saw only two, really. One was the laboratory that deals with plastics, viruses, large molecules, in Leningrad. It is housed in the old administration building used by the czarist government for customs administration. The floor is uneven, the walls are unpainted, it looks awful, and yet inside there are beautiful instruments and they seem to have no dearth of these. They apparently have all the money they need to buy scientific instruments.

The people to whom we talked, I think, were the people they wanted us to see, but they did seem enthusiatsic about their work. They knew what they were doing, and I had the impression that they were exceedingly well trained.

Now, the laboratory I most wanted to see in Russia was the laboratory of chemical physics in Moscow. I put in a request for this and I did see it, and as far as I can tell there were no strings on what I saw.

I did know two or three of the people already. I had met them in Paris in previous visits, and we had a really delightful morning talking just science. There was no political implication as to what we were talking about. The director has the Nobel Prize and others are also extremely competent people.

It is an outstanding laboratory, perhaps one of the best in its field in the world.

That was Saturday, and if you remember Khrushchev gave a speech on Saturday. It was one of his major speeches in the last few weeks. The head of the laboratory had to go to hear Khrushchev, so he asked me to come back to his office on Monday morning.

Well, about 8 o'clock Monday morning as I was going down to breakfast at the hotel, I got a telephone call saying that Professor Seminov and his wife expected me for breakfast. They sent a car for me and I went to his home.

"Well," he said, "This is a special occasion." So he pulled out a bottle of wine before breakfast and said, "We have to drink a few toasts."

This is a tough way for an American to begin breakfast, I can assure you.

But it was very pleasant.

Well, I had about an hour there in his home. It is over his laboratory, overlooks the city of Moscow, with a beautiful view.

Then I went to the university, which is a skyscraper. Most Americans think this is the University of Moscow, but it is only the scientific part of the University of Moscow. The social sciences and humanities are relegated to the old buildings downtown that were built at least two centuries ago.

But the scientific part of the university is this magnificent skyscraper, 32 stories high, surrounded by institutes.

They have about 15,000 students in the University of Moscow, divided into 11 different faculties. About two-thirds of them are in science. Their standards are high.

Just in wandering around the hall you see students from many other countries, particularly Arabs, people from North Africa, people also from South Asia, and many Chinese students.

So I think we Americans need to face the fact that in many ways Moscow is becoming the intellectual center for the peoples of some of these underdeveloped countries. It is a thing to which we need to give attention in our thinking in the next few years, or for the long-range future we may suffer as a consequence.

We have got to be sure that at least our share of these people look toward us and not toward that country for their leadership in the intellectual things of life.

Also, you might be interested to note that in the hotels now these little notices that tell you not to leave your valuables around and all this kind of thing that are customary in hotels are given in Russian, French, German, and Chinese.

They put Chinese on a par with the other three languages in the hotel.

Well, I think I have talked much more than the 10 minutes which I promised to talk. I ought to stop. I will just conclude then by saying that there was no outward, open antagonism toward Americans, a curiosity, rather a feeling that they didn't want war. One must remember that the city of Leningrad was under siege for 900 days, 600,000 people there died of starvation during these 900 days, that they don't particularly love the Germans in that city and while I didn't become pro-Soviet over there I think one should remember that they did suffer during the war and that they don't want war repeated. The man in the street I think makes this evident when he talks to you.

Whatever antagonism there is to the U.S. is, I would suspect, high up and I am ont sure orders haven't gone out to treat Americans well. I believe they expect about 60,000 tourists who will spend some money over there.

There was one minor incident. On the tables in the restaurant of the Astoria Hotel in Leningrad they had flags of several nations, a Soviet flag and American flag or French flag on each of these tables. A French and a Swiss friend of mine sat down at a table where the American flag happened to be. They thought they might get a little better service if they moved this flag over to another table. The waiter came over and said, "Nyet, nyet, we want this flag over here." They apparently were under orders to keep the flag where it was.

Some of the people on the street just stopped me out of curiosity and asked me who I was. Occasionally they would take my blue eyes for being German and not American. Once at least when I said I was an American instead of a German, the face lengthened, but then my questioner got curious more than taken aback and asked me questions about the United States.

The Soviet's scientific equipment were made in Russia. Without having used them myself it is a little hard to say whether their quality is as good as ours, but in at least a few instances I saw machines, for example, on electron spin resonance so-called in this laboratory in Moscow which gave perfectly beautiful pictures of the resonance in organic molecules. Really they were better, I think, than any I happened to have seen in this country. So I would say on the general level you would have to assume their instruments are pretty good, that is the best I could say. As to the standards set by Russian science, one has to mistrust a little bit a person who has been there as short a time as I was. I asked in particular how they chose their professors for the university, because this concerns all of us. No university is better than its faculty and if these men aren't carefully chosen then one has to assume that the university will not maintain its standards.

Well, if a professorship in chemistry comes open at the University of Moscow, the duty of finding the successor is assigned to the faculty in chemistry. So the first thing that is done is to advertise in the newspapers that this vacancy exists. Anybody who has the so-called Soviet doctor's degree can apply for the position, i.e., doctor's degree in chemistry, of course. And this doctor's degree is a much higher degree than ours. They have a "Kandidate" degree which corresponds very roughly I suppose to our Ph. D. But the doctor's degree is given after 5 to 10 years more of work and after a man has published a good many papers on his own. These are sized up. He doesn't pass any examination or have to write a thesis. But he applies for this doctor's degree on the basis of his accomplishments.

So it is a sort of semihonorary degree and there are about 6,000 of these in the Soviet Union in all fields. Anyway one must have this degree to be a professor at the University of Moscow. So the people who apply are examined, i.e. their credentials and careers are examined by the chemistry faculty. The chemistry faculty consists of the full professors in chemistry, plus a few representatives of the young faculty members elected by these young faculty members. Thus people like the assistant professors are represented on the faculty officially. They go over these credentials and, of course, I suppose, they have politics just like our universities have politics, and friendships may mean that there are votes for some people and not for others. So I asked him: Suppose this procedure led to what was believed to be a poor person to be a professor, is

there any safeguard? And he said, Yes, the council of the university reviews this nomination. To his knowledge the council had never turned down a recommendation from the chemists as to the person they wanted, but it can. The rector may overthrow a recommendation.

Then I asked what happens if the recommendation is overthrown. Then it is referred to the chemists of the universities of the U.S.S.R. But essentially they allow chemists to pick chemists. They don't trust some university president or dean who thinks he knows all about 40 fields to do the job. In that sense I think we might well learn something from their procedures.

The salaries for all professors are the same, except that they do go up with seniority, they tell me. That is a salary gradually increases as one gets older. But if one holds an administrative post such as a director of an institute or a deanship then one is paid more.

Professor Seminov, the Nobel Prize winner, is obviously living extremely comfortably. He has a car with a chauffeur, and he has this apartment over his laboratory, which is unpainted but nevertheless has a nice view, and one just gathers that he is comfortably situated.

Someone has asked me as to the equivalent pay of their doctors as compared to our scientific doctors. I think one might have to compare not the pay in dollars, because there are three rates of exchange, as you are well aware. The official rate of 4 rubles to the dollar which nobody uses, the intourist rate of 10 rubles to the dollar which is what we get as tourists and occasionally some of our group were stopped on the street and offered 25 rubles to the dollar on the black market. So you can take your pick as to what the ruble is worth. I think you have to compare rather the pay of a professor relative to that of a workman over there. On that basis I would gather the professor, the good professor, the eminent one, is getting about 10 times as much as the man who would be classified as a common laborer.

What does a common laborer get here, $3,000 or $4,000 a year maybe? There are very few professors getting $40,000 a year; I can assure you of that.

The Russian educational system, in common with most of the systems in Western Europe—this is not peculiar necessarily to Russia—is a competitive system. The boy or girl who is going up through the educational system is compared with his fellows, or sisters, and it is only the good ones who survive and go on year by year into the higher levels and up to the university. It is quite different from our sysem, where with 2,000 different institutions giving bachelor's degrees, if you can't get into a good one you can go to a less good one, provided you have the money. This is not true in the Soviet Union. The students are hand picked. I can only answer your question partially, as follows: I spent last October in the United Arab Republic at the request of our Department of State. And they have had about a thousand students studying in the Soviet Union in the last 2 or 3 years. I talked to some of these chaps. In fact, I have one of them working with me at the University of Rochester, today. There is one thing these boys seem to be proud of: while they were in Russia they were held to high standards. This I think is something we could stop to worry just a wee bit about. Are our standards academically such as to be compared favorably with those over there? I am sure your best students are just as good if not better than theirs, but we have a lot of others, too.

I wouldn't by any means adopt their system. Because some children develop slowly, I think the competitive system weeds them out too early.

Some of our chaps who in the twenties find themselves, catch fire and become fine people. They would have been weeded out in Western Europe as well as in Russia, in my opinion.

I wouldn't adopt their whole system, but I do think we should look at it and take perhaps some of the better lessons we can learn from it. That is all.

With our 2,000-odd institutions we may be scattering our efforts too far. Can we find good faculties for 2,000 places? Isn't it better for the very good student to have a little competition by being with good students? This is the kind of thing we need to worry about, I think.

The girls in Russia are very numerous in medicine, perhaps two-thirds of the people are girls. In physics, it is more like 2 to 1 in favor of the boys, and in engineering I am told it is even higher than that and the vast majority are boys.

Incidentally, without any insult to our friends in engineering, engineering is not deemed to be worthy to be a university subject in the U.S.S.R. It is given in technical schools, but not in the University of Moscow.

The ratio of people in various scientific fields in the U.S.S.R. is very different from the United States.

You probably realize, as I do, that chemistry in the 1920's had a big expansion in the United States. The chemical industry has grown in the last 35 to 40 years since World War I, enormously. So while the figures you give of percentages of people in academic life applies to the whole of science, in the chemistry field, where you have 100,000 people, only 15 percent are in academic life and most of the other 85 percent are in industry.

Now, in Russia they have developed physics, for obvious reasons, nuclear physics, physics of all kinds, so you will find more physicists than chemists over there, if the figures I have are right, and I won't guarantee them.

But they have found that their chemical industry has lagged. So they are making a deliberate effort to train chemists.

I am sure they are doing as much for the basic sciences as for the others, but there is one point they have begun to realize, namely, that a research institute set off by itself apart from the university becomes sterile. They are now combining these research institutes which have been alone, with universities so that the young people will go to the institute sometimes for their research, and so forth.

One advantage of a university is the turnover of young people, of the uninhibited young minds that are not afraid to express opinions. These students are trained for the Ph. D., and then go on. Hence there is always fresh blood coming into a university.

If one isn't careful in a research institute, the people may get old and sterile and become administrators instead of scientists.

This advanced doctor's degree I was talking about is practically similar to the degree in the United Kingdom. Their "Kandidate" degree is much more widely given and is like our Ph. D. here.

Perhaps their particular kind of a doctor's degree that is the semihonorary type is not so necessary in industry, in plants, as it is in the universities. It is just a peculiar trademark which supposedly qualifies a man to become a professor. I don't think it has much more use than that.

They are starting, you might be interested to know, a new city for science. It is roughly in the geographical center of Siberia. They are going to have about 30,000 to 40,000 inhabitants in this city, of whom 5,000 to 6,000 will be scientists.

This Professor Vojevodsky, who was kind enough to show me around the institute in Moscow, was going there. I asked him whether he was going voluntarily.

He said, "Sure, I have a wandering foot. I like to travel now and then. I am glad to move. I will keep a couple of people working for me in Moscow so I can come back occasionally each year."

It is a scientific city from the ground up. It is built for that purpose. I don't know whether they will get to fighting with each other or not. Scientists are individualists, you know, they don't accept orders from anybody.

The Flag Wavers Forget the Past

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 2, 1960

Mr. COHELAN. Mr. Speaker, in the following article, Columnist Marquis Childs adds his own favorable evaluation of the Fulbright enquiry into the U–2 incident. Furthermore, he goes on to underscore what many of us feel to be so very important, namely that such an enquiry, far from weakening the Nation, has in fact been "a service to the Nation." He points up the political significance of the incident and says of the forthcoming presidential election "it will be a sad commentary on the democratic process and the choice of a free people if that choice is posited on the threats and imprecations of the dictator of a totalitarian state, with Americans told they must keep silent because of those threats."

The article follows:

THE FLAG WAVERS FORGET THE PAST

(By Marquis Childs)

No matter how many ways individual members of the committee may divide in their conclusions, the sober, restrained inquiry conducted by Senator J. WILLIAM FULBRIGHT into the shooting down of the U–2 and its consequences has been a service to the Nation.

A great many questions remain unanswered. Despite persistent questioning administration officials did not supply even on an off-the-record basis the reason for scheduling an espionage flight on May 1, a day of nationwide celebration in the Soviet Union—2 weeks before the summit conference was to open in Paris.

But reading between the lines committee members deduced that those directing the flights had become so confident after 4 years of operation that they believed they could detect in advance any spectacular rocket or missile shots the Soviets planned to send up on the eve of the summit. The photographs of Russian installations they were shown convinced the committee of the remarkable achievement of this high-altitude photography. While no one is likely to say so in public, overconfidence, together with lack of any effective high-level direction and coordination, seems to have been a principal reason for the tragic mishap.

There were bound to be questions which could not be answered in public and much of the transcript was necessarily censored. Some of the blank pages resulted not from highly secret evidence but as a consequence of heated exchanges between certain committee members. It was considered in the public interest to strike this out.

A loud and continuous complainer was Senator FRANK J. LAUSCHE, Democrat, of Ohio. He seemed to feel there was some-

thing immoral about any inquiry, and on the day that Hugh L. Dryden of the National Aeronautics and Space Administration testified LAUSCHE went to extraordinary lengths of denunication.

"I want to congratulate the Senator from Ohio on his 4th of July oration," Senator ALBERT GORE, Democrat, of Tennessee, said after one especially fiery outburst.

"What do you mean by that?" LAUSCHE demanded. "I was not delivering a 4th of July oration."

"Why, I thought it was such a fine 4th of July address that I amost stood up and cheered," GORE remarked.

This suggests one of the remarkable aspects of the current controversy—that it is unpatriotic to inquire into or criticize any aspect of the fiasco of the U-2 and its far-reaching political consequences. To do so, the argument runs, is to give aid and comfort to the Communist enemy at a time when unity must be the first order.

Memories are short. In some instances the talk of patriotism first, last, and always comes from those who throughout the Korean war kept up a drumfire of attack on President Truman. They attacked him for getting into the war at all, for the way in which it was conducted and finally for not concluding it as these critics thought it should be concluded. This was in the midst not of a cold war but in a shooting war, with Americans in numbers being killed and wounded every day.

The Republicans in 1952 pitched most of their campaign on the "useless" Korean war and the "Democratic President" who by his blunders had got us into it. In one informal back-platform speech after another candidate Eisenhower said that Asians should fight their own wars and American farm boys should go back home on the farm. The climax came with General Eisenhower's pledge to go to Korea and, so the implication was, bring an end to the war.

The Eisenhower administration did end the Korean war under terms Truman had previously rejected. This was by ceding half the country to Communist control, leaving in the overcrowded southern half such a congested population with so few natural resources that it is doubtful whether the Republic of Korea can ever become a viable nation or, for that matter, can even survive without continuing massive aid from the United States.

The Republicans are at this moment supremely confident that Premier Khrushchev will elect their candidate, RICHARD NIXON, President. They are even a bit smug about it.

Things may turn out this way in November. But it will be a sad commentary on the democratic process and the choice of a free people if that choice is posited on the threats and imprecations of the dictator of a totalitarian state, with Americans told they must keep silent because of those threats.

Million Filipinos Greet President Eisenhower

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. FLOOD. Mr. Speaker, relevant to the visit of the President to the Far East including the Philippines, there appeared a leading editorial in the Journal of Commerce of New York in its issue of Tuesday, June 7, 1960. Under leave to extend my remarks in the RECORD, I include herewith this timely editorial:

A PARTICULAR IMPORTANCE

In a letter to Senator WALLACE BENNETT, Republican, of Utah, last week, President Eisenhower said he attaches "particular interest" to congressional enactment of a 4-year extension to the Sugar Act together with flexible authority for the President to change U.S. quotas for foreign producers.

We should think he would attach particular importance to it. We should think Congress would, too, including the House Agriculture Committee, which just voted a simple 1-year extension of the act, and the Rules Committee, which is now considering what priority, if any, the subject should be given on the floor.

For as matters stand today, what the Agriculture Committee has done has been to vote a handsome dividend for Mr. Fidel Castro, that well-known exponent of the democratic way of life in Cuba, while threatening to deprive the President of something that could prove very valuable to him and to American foreign policy generally in the course of his forthcoming visit to the Philippines and the Far East.

As the law stands today, and as it would stand until the end of 1961 under the 1-year extension of the Sugar Act approved by the Agriculture Committee, whenever any domestic sugar-producing area cannot fill its assigned quota, the Secretary of Agriculture must award a substantial proportion of the shortfall to Cuba.

And right now it looks as though Puerto Rican output will fall short of its quota by 300,000 tons and the Hawaiian crop by 200,000 tons.

So the prospect is that unless Congress as a whole overturns this ill-advised move on the part of the House Agriculture Committee, Dr. Castro's regime will automatically get a bonus of 160,000 tons as a reward for his confiscatory attacks on American business and for his incessant vilification of the United States and its institutions. This assumes, of course, that Cuba could actually supply that much, which is very doubtful.

As we previously remarked in discussing this subject, if anyone has ever demonstrated the need for an extensive overhaul of U.S. legislation on sugar quotas, it is Dr. Castro. It is ridiculous that U.S. controls should be so rigidly fixed that they cannot be adapted to changing circumstances in general, and to deal with as consistently bad an actor as Castro in particular.

But the shortcomings in the present Sugar Act were evident long before the present Cuban regime shot its way into power. President Eisenhower himself called attention to some of these when in signing the present act 4 years ago, he said explicitly that in any further extensions of the act, provision ought to be made to permit the Philippines to enjoy the same proportionate share of increasing American consumption as is enjoyed by other countries.

Not only is the present system too rigid, but its rigidity is fixed in such a way that it discriminates painfully against a country whose steady friendship and cooperation is of the utmost importance to the United States.

It would be one thing to be caught in a situation in which a rigid system of controls permitted no change to be made for a period of years, as might be the case if, say, the Sugar Act had 2 or 3 years to run.

But it is quite another to find the way open to such a change, and then fail to make it. The way is now open, for the 1956 Sugar Act (which was of 4 years' duration) expires at the end of this year, so Congress must deal with it in one way or another during 1960 or the whole quota system will collapse.

But here we face a peculiar situation. Congress has ordered the administration to stop all foreign aid to Cuba—an action we thought and still think unwise because we believe the administration should have more discretion in such matters. Now, the House Agriculture Committee, and some other legislative circles, seem bent on refusing the President the discretionary powers he needs to cut down on the quota bonuses that would automatically go to Cuba under the existing law. Moreover, he is still frustrated in his efforts to achieve a better break for the Philippines, which certainly deserve one.

It certainly doesn't make sense, unless it is expressed in terms of a conviction that Congress is better-equipped than the President to handle the day-to-day twists in our foreign relations, economic as well as political, a conviction from which we heartily dissent.

We very much hope that more responsible quarters in the Senate and House will grasp that "particular importance" of passing a sensible 4-year sugar bill, and of doing so before the President sets off for the Philippines.

On Sunday, June 12, the New York Times carried two articles datelined Havana entitled "Reds Stepping Up Missions to Cuba" and "American Hotels Seized in Havana."

How much more of the Castor regime can the American people stand?

On the other hand, we were told a few days ago by Secretary of State Herter who spoke before the SEATO Council, that further Communist activity in the Far East is likely as an aftermath of the failure of talks at the summit. We have our firm friend and ally, the Republic of the Philippines, with 600 million Chinese Reds breathing down the back of her neck. It is time, Mr. Speaker, that we had a reevaluation of the world situation with respect to the United States and the millions of our friends in the Far East, especially the Republic of the Philippines.

Philippine-American relations have rather been subjected to a rough beating. Long unresolved problems between the two countries have generated irritants which in turn have developed into big thorns in the side of Philippine-United States friendship. Most of these irritants are caused by misunderstandings. President Eisenhower can do much to dispel these misunderstandings.

As a matter of fact, in the statement made by President Eisenhower as his reasons for the trip he stated and I quote:

I am going to these countries: Because with the Republic of the Philippines we have the closest ties of association beginning six decades ago, and because it was in the Philippines many years ago that we launched our first major program to help a developing people achieve a prosperous independence.

PHILIPPINE SUGAR

Every American is aware of the sacrifices of our friend and ally, the Republic of the Philippines made during World War II. The sacrifices of the Philippine sugar industry because of its experience during World War II is even more pronounced when you consider that sugar lands and processing factories were devastated and destroyed. Recovery and rehabilitation were slow because of the shortage of machinery and the lack of cane seeds, work animals, and agri-

cultural implements. It actually consumed more than the proverbial 7 lean years by Philippine sugar producers to attain their prewar position. In the period from 1941–53, the Philippines shipped to the United States only 4,433,591 short tons out of what would have been their share of 12,376,000 short tons. Other foreign sources, principally Cuba, supplied the difference of almost 8 million tons lost by the Philippine sugar interests through no fault of their own. The facility with which U.S. sugar users were able to obtain the sugar supply curtailed by the war in the Fart East is commendable and has been recognized and rewarded. The Philippine sugar industry by the same token should not be deprived of its opportunity to come back to some extent through sharing with other foreign suppliers the increased demand in U.S. sugar consumption.

During 8 years after the liberation of the Philippines, sugar lost its preeminent position as a Philippine export product and ranked second to copra in importance. Today, however, the sugar industry is again on its prewar productive capacity and from now on will provide the country with a source of dollar income of $100 million annually. Moreover, the industry is a major source of revenue to the Philippine Government. According to recent estimates 25 percent of its total receipts is derived from the sugar industry.

Among all foreign suppliers no other country occupies the position of the Republic of the Philippines in its relationship with the United States and no fair analogy might be drawn between United States-Philippine relations and other international connections and loyalties. For more than 50 years the Philippines to all intents and purposes were a part of the United States and the continuing interest of the Government and citizens of the United States in promoting the welfare of the relatively new Government of the Philippines has been manifested in many generous gestures. To detach sugar legislation from a broad program of diplomatic, legislative, political, economic and social collaboration and cooperation, and to adopt standards based on such considerations as the payment of duties, the assistance to other countries in exploitation of agricultural resources or in other respects on an arms length basis affords an anomaly in U.S. official and unofficial conduct.

At this point it may be well again to clarify what seems to be an impression, mistaken though it is, that the fixed Philippine quota of 980,000 tons annually cannot be increased due to the provisions of the Sugar Act and the trade agreement in force between our country and the Philippines. Article II of the Philippine Trade Agreement Revision Act of 1955 specifically provides:

> The establishment herein of the limitation on the amounts of Philippine raw and refined sugar that may be entered, or withdrawn from warehouse, in the United States for consumption, shall be without prejudice to any increases which the Congress of the United States might allocate to the Philippines in the future.

There are many other strong economic and political reasons for including in any revisions which this Congress makes of the Sugar Act for the period commencing January 1, 1961, an increase in the Philippine quota commensurate with other foreign suppliers to meet the annual increased sugar needs of the United States. I shall not elaborate upon them, but point again only to the moral obligation which we have to act in this manner in fulfillment of the promise of the President of the United States reflected in the editorial which I have quoted to the effect that at this very time we would allow the Philippines to share in increased consumption.

The Atomic Years

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. WESTLAND. Mr. Speaker, the Washington Evening Star has been publishing a series of articles concerning the history of atomic energy. As a member of the Joint Committee on Atomic Energy I can attest to the excellent job of the author, Mr. William Hines, the Star's science writer. I believe the article which appeared in the June 13 issue will prove both informative and interesting to the Members of Congress.

The article follows:

THE ATOMIC YEARS—BOMB STOCKPILE OPENS THE DOOR TO MORE NUCLEAR ENERGY USE

(By William Hines)

Two public men have brought into the open the fact that now assures the future of the civilian atomic energy industry: We finally have plenty of nuclear bombs.

Senator JOHN F. KENNEDY, of Massachusetts, a leading Democratic presidential aspirant, recently cited figures that would mean our arsenal now contains the equivalent of 1,250,000 bombs of the type that leveled Hiroshima. This was confirmed in substance by Thomas E. Murray, former Atomic Energy Commissioner when he said we now have more than enough weapons to destroy the world.

Obviously, that many is plenty. Equally obviously, the physical plant created to produce this fearsome array of atomic weapons is too big and too important economically to shut down. Not all the factories in the atomic complex produce items of peacetime use, but many of them do. What is more logical now than to take advantage of this production potential?

ONE HUNDRED AND TWENTY THOUSAND WORK IN PLANTS

The gaseous diffusion plants of Tennessee and Ohio and the men who work in them do not care whether they produce uranium for bombs or for reactors. Processing plants in Washington State and South Carolina can make plutonium just as handily for electric power as for a cataclysm. Mines and mills on the Colorado Plateau turn out uraninite and yellowcake as readily for Shippingport as for Armageddon.

About 120,000 men and women now work for the Atomic Energy Commission in a vast complex of factories and laboratories which the AEC values at $8.1 billion. Most of these workers are on the payrolls of industrial contractors, such as Union Carbide which runs Oak Ridge, but the work is done for AEC.

In addition, probably another 80,000 men and women work in privately operated industrial plants directly connected with the atomic energy business. It is no more than an educated guess, but this private plant investment approximates $2 billion.

AEC DOMINATES INDUSTRY

Bomb production entirely aside, the atomic energy business is close to a billion-dollar-a-year proposition. Thus, although it is only in its infancy, the peaceful atom is already a significant element in the national economy.

At present, and for as far ahead as anyone can see, AEC unquestionably dominates the industry. This will remain the case even if the Commission ever relinquishes its role of No. 1 operator in the field. More important than how much business the AEC does is its primacy over the industry as judge, jury, policeman, licensing agent, and absolute (if benevolent) czar.

Furthermore, the AEC is sole owner of all key atomic materials in the United States. When it releases a supply of atomic fuel to a peaceful user, it does so on a rental basis, at a rate fixed by the Commission. The Commission guards its hoard of special nuclear materials far more closely than any miser ever watched his gold.

This sort of tight control over all things atomic, while understandable and probably unavoidable, accounted in part for industry's early reluctance to get started in the nuclear business. Under AEC rules and pricing policies, it was difficult for a cost-conscious business executive to know exactly where he stood. A good deal of wheedling by the AEC, together with considerable subsidizing was needed to get industry interested.

INDUSTRY GETS IDEAS

But private enterprise is now in the act for keeps, and occasionally it even attempts to shoulder the commission out of some area that looks particularly promising. The AEC is willing to be shouldered but to some extent, but for the present not entirely.

The industry's roster today includes some of the biggest names in American business. Union Carbide, DuPont, General Electric, and Westinghouse are among the principal contractors operating AEC-owned plants with the Commission as their sole customer.

Some of the old-line companies, notably GE and Westinghouse, have gone into the atomic business in a big way on their own. The former has built the largest atomic electric power station now operating anywhere in the world, and the latter holds a letter of intent for a power reactor twice as big.

POWER ENGINEERS JOIN IN

Leading builders of conventional electric power plants have also plunged into atomics, possibly in part to hedge against the fate that befell the buggywhip makers. Two leaders are Combustion Engineering and Babcock & Wilcox, both of which have atomic-energy divisions headed by scientists who got their basic training in the wartime Manhattan District bomb project.

Specialized atomic concerns—actually, autonomous divisions of diversified corporations—have sprung up to share in the promised payoff. Outstanding examples, both in southern California, are the General Atomic Division of General Dynamics Corp. and the Atomics International Division of North American Aviation, Inc.

Around these big atomic operators are scores of smaller concerns dealing in the strange new commodities needed for the nuclear age: Beryllium, zirconium, cadmium, hafnium. Others offer relatively common materials with something new added: High-purity sodium metal in carload lots; boron-free graphite (like the "lead" in a pencil) in accurately milled shapes of high density; seamless, flawless stainless steel tubing of the most precise dimensions.

DISPOSAL AND MONITORING

A few companies are working on a fairly large scale today in activities that had no commercial reality before World War II. One is Crossroads Marine of Boston, which concentrates on packaging and disposal of radioactive wastes at sea. Another is Tracerlab, a concern engaged chiefly in detection and monitoring of extremely small amounts of radiation.

Who needed radiation film badge service in 1940? Today, Tracerlab checks thousands of such badges each week for atomic-industry clients all over the country. Purpose of the badge service is to insure that no worker receives more radiation than the AEC allows. Slight overexposure receives routine notice in a report to the customer; serious overdoses get immediate attention by phone or wire.

Tracerlab also monitors fallout for the Atomic Energy Commission, decontaminates areas befouled by radiation accidents and (original source of its name) prepares medicines and other chemicals containing small amounts of radioactive tracer materials.

A NEW ENTREPRENEUR

A novel byproduct of the atomic age has been the emergence of the big university as a major industrial entrepreneur. This fuzzing of the line between the lab and the factory has been augmented by industry's invasion of the academic field. It is sometimes difficult, at first glance, to decide whether you are standing on a college campus or in the middle of an atomic industrial plant.

Among AEC contractors today, the University of California ranks third in number of employees, and the University of Chicago ranks seventh. The former hires about 9,000 workers at three sites (one in New Mexico) and the latter has about 3,500 at two locations.

Where universities are mixed up in heavy industry of this nature, it is sometimes difficult to tell what role an individual is playing. For example, until his recent retirement as director of the University of California's Livermore Laboratory, Dr. Edward Teller held that post as well as the rank of professor in the university's physics department. Now he is a professor of physics at large on the the university faculty—but remains as associate director of the laboratory.

INDUSTRIAL CAMPUSES

Six hundred miles south of Livermore, by contrast, a long-time associate of Dr. Teller works for a private concern, General Atomic, in far more collegiate surroundings. This scientist, Dr. Marshall Rosenbluth, is paid a comfortable salary principally to think.

One of the things Dr. Rosenbluth thinks about is power—energy—how to release it from the atom, and how to control it. So great is the promise of atomic power that the Government, universities, and private industries are happy to pay good salaries to all the Rosenbluths they can find just to sit around and think.

Words To Tell Our Story

EXTENSION OF REMARKS

OF

HON. JESSICA McC. WEIS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mrs. WEIS. Mr. Speaker, my friend and colleague, the Honorable CATHERINE MAY, of the State of Washington, on May 28, 1960, delivered the commencement address to the graduating class of Marjorie Webster Junior College here in Washington, D.C. Because I feel that this address carries a message of great importance, not only to our youth, but to every American, under unanimous consent I insert it in the CONGRESSIONAL RECORD:

CAN YOU SELL THE TRUTH?

(Hon. CATHERINE MAY'S commencement address given May 28, 1960, Marjorie Webster Junior College, Washington, D.C.)

Graduates, Dr. Webster, Dean Dumas, Mrs. Smart, parents and friends, I am honored to be the speaker for your 1960 commencement. This is an important day in the lives of you young women who are members of the graduating class, and I am proud to share it.

Traditionally, commencement speakers refer to this day as a milestone, a point of departure into a new life. Timeworn as the statement may be, it is very true—this day is the door into your world of tomorrow. And you will go by many different paths on to more education perhaps, many of you into careers, and most of you eventually into marriage and motherhood. Wherever you go, you will have an influence on those around you. You will become the center of an orbit where, very much like a pebble dropped into water which sends ever-widening circles onto the water's surface, your words and actions will reach out to touch the lives of others. And those lives, thereby, will be changed and influenced to some degree. Thus, I feel that my responsibility as your graduation day speaker, is to convey to you, if I can, in the next few minutes some special message, an idea, an inspiration that you may carry away with you today to be used as a contribution to your world of tomorrow.

Now, as members of the 1960 graduating class of the Marjorie Webster Junior College, already you have been well educated and trained to contribute much to the good of society here at home and abroad. To this special knowledge and preparation for your life ahead there is probably little I could add that would not be duplication. But, the other day as I sat in my office trying to string together some thoughts for this address to you, I recalled a meeting I attended in June of last year in London. In particular, I remembered with great clarity sitting in a room with 30 or 40 other people, men and women from many nations, and discussing with them the youth of our countries. Because this was a meeting of the Atlantic Congress where 14 member nations of NATO—in other words, 14 of our free world countries—had sent over 600 citizen delegates to discuss, among other things, how well we were doing in the great war that rages, as you well know, out in that world you are about to enter—the war for men's minds. The war between two great ideologies—that of freedom, as exemplified by our American way of life versus the Communist doctrine. Now, as it happened, as a delegate to this Atlantic Congress from the United States, I was appointed to work on a subcommittee which had as its subject of study a most fascinating and frightening subject—Communist propaganda.

The work of our committee was based on some excellent depth studies that had been made on the extent of the Communist propaganda penetration into our free world countries, as well as our uncommitted countries. The studies presented proven and factual information on the thousands of agents and provocateurs who were trained and sent out by the Soviet into the world to spread Communist propaganda. It presented the actual figures of the millions of dollars being spent by the Soviet on their propaganda program alone. In addition, the material on the extent of the success of Communist propaganda penetration pointed up the fact that the youth of Russia were highly trained as Communist crusaders. A basic aim of Russian education for its youth is to instill in them a burning dedication to the Communist way of life. As a result, young men and women of Soviet countries are extremely effective, convincing and articulate in persuading youth of other nations to their beliefs.

It was then that we started this discussion which made such an impression on my memory. We had just agreed that we should be providing more opportunities for our citizens and our young people to go into uncommitted countries, to youth festivals, to cultural exchange meetings so they might tell the story of freedom.

Then, a delegate from Norway pointed out, "Ladies and gentlemen, I think we are agreed that the doctrine of a free world democracy has far more appeal for humanity than the Communist doctrine. And, I know the young people of my country are just as dedicated to their beliefs as are the young Communists. But, when it comes to telling and selling the great truth of a free way of life I don't think they are prepared. I am afraid a great many of them could not find the words.

"Tell me, is this true of the young people in your countries?"

A thoughtful silence followed his words. Then, one of the other delegates spoke up and said: "I am afraid it's quite true, not only of our youth, but of our adult citizens, too." And, one by one, all of us nodded in serious and even shocked agreement.

I think by now you young women know what message and what idea I wish to try and leave with you today. You see, this episode I have just related taught me first of all something about myself that I had not known. In evaluating how well we Americans do as ambassadors for our country and its free way of life, I was brought to the shocking realization that I myself was sadly lacking in effective word weapons to fight against the Communist ideology. To admit this on behalf of myself, as well as my fellow countrymen, was both puzzling and frightening. Puzzling, because I knew I was a patriotic American, a loyal American, with a deep and abiding love for my country. Frightening, because for many years now we have recognized that the great world struggle in which we are engaged is not alone one of military might. Beyond that, and even bigger than that, is the power of an idea. And our opposition in this struggle is so well organized that they can train and support their spokesmen all over the world while they spread their Red death among the brain cells of humanity.

Since my return from the Atlantic congress, I have brought this subject up for discussion and study wherever I could. I have done this, because it seemed to me that I had no more significant contribution to make my country as a result of this free world meeting than to try and influence the young people of America to prepare themselves to sell the truth better than their elders have done.

Now, in bringing you a few thought-provoking ideas on how you might best do this:

In one group where we were discussing this, a friend of mine said: "We Americans are a funny lot. We have such great dedication to freedom, for others as well as ourselves, that we would fight for it and even die for it, but, by gum, we can't tell others what it is." Partly, I think we can agree, this is because we've had the plain good fortune to be born Americans. We have just always taken for granted the air of freedom which we breathe. There may have been a time when it was apathy, but, with two great world wars in the past, and with the present serious international tension, I

cannot believe this is true now. I am certain that the generation which you young women represent does not look at what's going on in the Iron Curtain countries and say smugly, "This cannot happen here." I think that is perhaps why I have such high hopes that some of the ideas I leave with you will fall on fertile ground. With things as they are today, and as they have been since the day you were born, never has a generation in this country had a heavier burden of responsibility for learning to sell the truth laid upon them.

I can't give you any set words to use for expressing your beliefs, but I think maybe I can try to set up a few thinking guidelines for you.

First, I would sincerely hope that, in the busy lives that lie ahead of you, you would take some time out and search deeply into your hearts and minds for the answer to the question, What do I truly believe? Start with thinking of the basic beliefs which all of the free world countries engaged in this struggle against communism have in common—respect for the freedom of the individual, for the dignty of human nature, and a simple faith in God. Then, go behind these words in a search for their real meaning. Because, at this point, I would remind you of what I hope you already know—that the words of the Communist manifesto are beautiful words, too, apparently offering a wonderful life to those who would follow the creed, unless one went behind them and realized how the goals were to be accomplished.

So, having found the words for our basic beliefs, how then do we communicate to someone else what we in America mean by freedom and democracy, as opposed to what Communists mean by these words? We know that, in the hearts of all men, there is a universal and unquenchable longing for an atmosphere of freedom, for equality of opportunity, and the establishment of human dignity. How can we communicate the truth that these goals can be reached only through nontotalitarian government—with words that are the same words that the enemies of this way of life also use?

One night, when a group of us were discussing this problem, we came up with what I think is a pretty good idea. It was decided that we might start with the material approach to life, because something that everyone understands, regardless of race or language barriers, is hunger and cold and the desire for possessions and good things around us.

Frankly, I have never been exposed to a debate with a dedicated Communist over the virtues of a totalitarian form of government versus democracy, but, since the episode I related earlier in my talk to you, I've put myself through a lot of mental practice as to what I might say if such an occasion should arise. And, by the way, I recommend this mental exercise to you. It's not only challenging, but it's kind of fun.

But, to go back to preparing myself for this imaginary debate, one day I discovered a book that to me provides the perfect approach to telling our freedom story so that anyone can understand its basic truth. That book is called "The Mainspring of Human Progress," and it was written by Henry Grady Weaver. And, after reading it, I decided that I would present my argument as he does by posing a question to my imaginary opponent in this way: Why did men die of starvation for 6,000 years? And, why is it that we in America have never had a famine? For 60 known centuries, this planet we call earth has been inhabited by human beings not much different from ourselves. Their desire to live has been just as strong as ours. They have had at least as much physical strength as the average person of today, and among them have been men and women of great intelligence. But, down through the ages, most human beings have gone hungry, and many have always starved. The ancient Assyrians, Persians, Egyptians, and Greeks were intelligent people, but, in spite of their intelligence and their fertile lands, they were never able to get enough to eat. The Roman Empire collapsed in famine, the French were dying of hunger when Thomas Jefferson was President of the United States. As late as 1846, the Irish were starving to death, and, it is only within the last century that Western Europeans have had enough food to keep them alive. Even in this century, famines have killed multitudes, in China and India and Africa, and, as late as the 1930's thousands starved to death on the richest farmlands of the Soviet Union.

Down through the ages, countless millions, struggling unsuccessfully to keep bare life in wretched bodies, have died young in misery and squalor. Then, suddenly, in one spot on this planet, people eat so abundantly that the pangs of hunger are forgotten. Just think, for 6,000 years, men died of starvation. For 6,000 years, families lived in caves and floorless hovels without windows or chimneys. Then, within a few generations, we in America take floors and rugs and chairs and tables for granted, and regard electric lights, refrigerators, running water, and porcelain bathtubs as common necessities. For 6,000 years, men and women and children toiled desperately from dawn to dark to eke out their meager existence, and then, suddenly, in one place on earth, there is an abundance of such things as radios and TV sets, nylon hose and shower baths, and ice cream sodas and lipstick, and permanent waves. If you just think about it, it's almost incredible. In less than 100 years, Americans have conquered the darkness of night, from pine knots and candles to neon lights and fluorescent tubes, from fireplaces and stoves to automatic burners and air conditioners. We are conquering pain and disease and prolonging life. We've made stupendous attacks on space, from oxcarts to airplanes, and attacks on time, from pony express to telephone and television.

Now, it's true that many of these developments originated in other countries, but new ideas are of little value in raising standards of living unless and until something is done about them. The plain fact is that we in America have outdistanced the world in extending the benefits of inventions and discoveries to the vast majority of people in all walks of life. How did it happen? Well, perhaps the best way to find the answer is to first rule out some factors that were not responsible. To say that it was because of our natural resources is hardly enough. The same rich resources were here when the mound builders held forth. Americans have had no monopoly on the metals. China, India, Russia, Africa all have great natural resources. Crude oil oozed from the earth in Baku 4,000 years ago. And, when Julius Caesar marched west into Gaul, Europe was a rich and virgin wilderness inhabited by a few roving savages, much as America was when the Pilgrim Fathers landed at Plymouth.

Is it because we work harder? Again, the answer is no, because in most countries people work much harder on the average than we do.

Can it be that we are people of inherent superiority? That sounds fine in after-dinner oratory, and goes over big at election time, but the argument is difficult to support. Our own ancestors, including the Anglo-Saxons, have starved right along with everyone else.

Can it be that we have more energy than any other peoples of the world? That's not the answer either, but it's getting pretty close. We are not endowed with any superior energy, mental or physical. But, it is a fact that we in the United States of America have made more effective use of our human energies than have any other people on the face of the globe anywhere or at any time. That's the answer, the real answer, the only answer.

Now, I would remind you that I'm saying all this in my mythical debate with a dedicated Communist in trying to explain what we mean in America by freedom. But, I think you gather that my real purpose is to offer you here today a starting place in your thinking and in your search for words to sell the truth.

Let me lead you down this path a little further, before I set you out on your own. Why does human energy work better here than anywhere else? Well, now the answer here is actually a study in physics with which I won't attempt to bore you. But, as simply as I can tell you, it is that the nature of human energy is controlled by yourself—nothing else can control it. The decision to use your energy to act or not act is always under your own control. And, this leads to two important points. One is that individual freedom is the natural heritage of each living person. And, second, freedom cannot be separated from responsibility. Your natural freedom—your control over your own life energy—was born in you along with life itself. It is a part of life itself. Any time you try to turn the control over to someone else, or any time anyone tries to take the control of your energy from you, something happens. It just can't be used effectively. For centuries, it's been tried. Every conceivable form of authority has been tried. Every conceivable form of unified control that takes this individual's use of his own energy away from him. But, each time, the experiment has failed, because only an individual human being can generate human energy, and only an individual human being can control the energy he generates.

The lack of understanding of these simple basic truths has for over 6,000 years stagnated human progress, kept the vast majority of people underfed, poorly clothed, and embroiled in wars and dying from famine and pestilence.

Don't take my word for it. Just take some time to study world history, going back to the pagan days, right up through all this whole history of all the dictator forms of government that rose and fell over a span of 6,000 years. And, then think of the history of your own Nation, which had its beginning just a little over 160 years ago. As John Gunther once said: "Ours is the only country deliberately founded on a good idea."

I realize that, by this time in your education, you've had a pretty good grounding in American history. But, I promise you that, if you'll spend sometime going back over this rich and wonderful heritage of every American, you'll find it very exciting to find out how every move our Founding Fathers made was with this great idea in mind.

I think with this approach you'll see the history of your country with entirely different eyes. You'll realize, maybe for the first time, that the great fact of our history is that the American Revolution had no leader. To again quote from Mr. Weaver's book—"This fact is the hope of the world, because human freedom is a personal matter. Only the individual can protect human rights in the infinite complexity of men's relationships with each other. Nothing on earth is more valuable than the person who knows that all men are free and who accepts the responsibilities that go with freedom." As I said, the war for American Independence was begun by an individual. He was asleep in bed when someone pounded on his door, and shouted in the night—"The Redcoats are coming." Well, what

could he do? He was not a king or a governor. He was not rich or important. He was just one little man, unknown to anyone outside his neighborhood. Should he take the initiative? Such things usually cleared up. They always had. He must keep calm, consider the practical aspects, think of his family. Most men felt that way. They knew they could do nothing, and they had better sense than to try. And, that night in Lexington, many of them stayed in bed.

But, the unknown individual chose between submission that looked like safety, and rebellion that seemed utterly helpless. He had the courage of his convictions. He got up, put on his clothes, took his gun, and went out to meet the British troops. And, I like to think that he had a good wife there helping him put on his boots, as she said: "This is the right thing, and you must do it, John."

Not acting under orders, not being led, or wanting to be the leader, he stood on his own feet, a responsible, self-controlling person, and fired the shot heard round the world. And, the sound of that shot said that man is a free agent, that government is the servant, rather than the master. You know, it's men like this, and the thousands of others we find in the pages of history—the Washington and Lincoln and Jefferson and Lee—with whom you and I walk today, and we walk because of them carefully and proudly and also humbly, lest we fail them. And, because of this knowledge of our past, with a keen sense of the present and the future, we should each say to ourselves: "I am an American, and therefore, what I do, however small, is of importance."

It just seems to me that, once we grasp this root idea of our freedom, it becomes much easier to explain the tree of liberty that has grown from it.

For instance, words to explain to somebody about the form of government we set up to protect our idea of freedom. "Mainspring" says it this way: "America was to be set up as a republic, which means that the laws would be made and administered by representatives chosen directly or indirectly by the people to protect the interests of all the people. In the last analysis, any government, regardless of what it may be called, must be one man or a small group of men in power over many men. That being the case, how is it possible to transfer the power of the ruler to each man of the multitude? The answer is that it's not possible. The only solution lies in the direction of destroying power itself. The only way in which men can remain free and left in control of their own individual energies is to cut the power of the government to its smallest degree."

The answer was simple, once it was found by our Founding Fathers. The head of a State is a human being, and a human being's thinking and deciding and acting and judging are inseparable. But, in this new American Republic, no top official would ever be permitted to act as a whole human being. The function of government would be divided into three parts:

1. The first part was to think and decide, and it would be called Congress.

2. The second part was to be responsible for getting action. It would be headed by the Chief Executive, the President.

3. And the third part was to serve as a judge or a referee, known as the Supreme Court.

Each of these three parts was to act as a check on the other two, and over the three was set a written statement of political principles, intended to be the strongest check on them all. There was to be government by law, with clearly defined rules of the game, rather than government by whim. The Constitution. The dangers of dictatorship must be avoided for all time to come. No one person or small group of persons must ever be permitted to get too much power, and the minority, even down to the last individual citizen, must be protected against oppression by the majority, or by any organized pressure group.

And these objectives made it possible for our American Revolutionary leaders to draw the blueprints for this new and completely different political structure—our unique form of government, not only in the world of today, but in all time.

I said when I began this that all I would even try to do this afternoon was to offer you a few guidelines to follow on your search for words to sell the truth. My mission is accomplished if I start you on that exciting journey. It is accomplished if I have succeeded in getting you to look at your country and your birthright of freedom with new eyes—eyes that are both critical and understanding, because it is very important that you know that America is far from perfect.

And, I'm sure you do. Otherwise, we wouldn't get from your generation what our country must always have to keep progressing—ideas for a much better world. But, as you find our shortcomings, and think of plans to overcome them, be sure you always ask to what degree are our shortcomings traceable to the form of political structure under which our country was founded—are they due to having drifted away from that concept, and how does our record compare with the records of countries which have tried to operate under the opposite philosophy?

Godspeed you, graduates of 1960, in your world of tomorrow. As students seeking more knowledge, as successful career girls, as happy wives and mothers, and as enthusiastic ambassadors for freedom. If you understand, and believe because you understand, you will find the words, and I guess I don't have to tell you how very important it is for you and the young people of all free world nations to find those words. Because it may well be that, in your generation, this great war for men's minds will be decided. Remember, your battleground is wherever you go. Use your voice, with your heart and beliefs behind it, among your fellow citizen and fellow workers, family and friends, and—very importantly—on the children you raise.

Thank you again for giving me the privilege of sharing this important day with you. You have my congratulations on winning your diplomas, and my very best wishes for your future.

The 185th Birthday of the Army

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. ARENDS. Mr. Speaker, Tuesday, June 14, 1960, marks the 185th anniversary of the establishment of the U.S. Army. The Continental Congress in 1775 established the U.S. Army and since that date the relationship between the Congress and the Army has been both close and cordial.

I wish to extend my heartiest congratulations to the Army on this anniversary of their 185 years of faithful service to our great Nation. In the celebration of this event, marked in our Capitol by a retreat parade at historic Fort Myer this afternoon at 5 p.m. and at the one Army birthday ball this evening at the Willard Hotel, the best wishes of a grateful Nation should be extended to the dedicated men of the U.S. Army who are today continuing to provide for the security of our country by standing firm on the borders of freedom throughout the world.

How Technological Revolution in Agriculture Affects Farmers

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 14, 1960

Mr. WILEY. Mr. President, the technological revolution—with far-reaching effects upon agriculture and other areas—has brought with it both blessing and problems.

Because of this revolution, the worker today in farming, manufacturing and other fields can produce more than his predecessors. As a result, there has been a tremendous need for adaptions and adjustments in our consumption, distribution and commercial patterns.

In a fast-changing age, it is often difficult—for the general public and sometimes for the experts—to keep up with the fast-evolving developments in a specific area.

Recently, the Wisconsin Farmers Union News published an informative article by Peter Dorner entitled, "How the Technological Revolution in Agriculture Affects Farmers." In a constructive way, the article reviews not only the impact of technology upon farming but also its significance for the consumer and the economy. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wisconsin Farmers Union News, June 13, 1960]

HOW THE TECHNOLOGICAL REVOLUTION IN AGRICULTURE AFFECTS FARMERS

(By Peter Dorner)

(The following article is a reprint of a special circular from the "Economic Information for Wisconsin Farmers" series. These publications are prepared by members of the staff of the University of Wisconsin College of Agriculture.—editor.)

It is not news to anyone that agriculture is in the machine age. Neither is it difficult for many to recall when horsepower meant horsepower. The machine process of production has been in agriculture on a large scale only a relatively short time—25 to 50 years compared with 200 years in industry in general.

Agriculture is in a technological revolution. But there is more to this technological revolution than the ever-increasing use of mechanical power and equipment. Many other scientific advances have given farmers materials and know-how to greatly increase production for each acre, each animal, and each man-hour used.

DRAMATIC CHANGES

The accompanying table shows some of the changes in agriculture from 1910 to 1958. The figures indicate how rapidly the machine age hit U.S. farms—most of the big changes have been made since 1940 and 1950.

Trends in agricultural technology

[All figures are for the United States]

	1910	1920	1930	1940	1950	1958
Index of total farm output (1947–59=100)	61	70	72	82	101	124
Index of crop production per acre (1947–49=100)	79	86	75	88	97	126
Index of plant nutrients used (1947–49=100)	23	31	42	48	120	176
Index of man-hours of labor used for farmwork (1947–49=100)	135	143	137	122	90	66
Index of farm production per man						
Index of farm production per man-hour of labor on the farm (1947–49=100)	45	59	53	67	112	188
Persons supported by the production of 1 farmworker	7.07	8.27	9.75	10.69	14.56	22.98
Horses and mules on farms (millions)	24.2	25.7	19.1	14.5	7.8	3.4
Tractors on farms (thousands)	1	246	920	1,545	3,394	4,685
Cropland used for crops (millions of acres)	330	368	382	368	377	357
Grain combines (thousands)	1	4	61	190	714	1,040
Cornpickers (thousands)		10	50	110	456	745
Farms with milk machines (thousands)	12	55	100	175	636	725
Pickup balers (thousands)					196	580
Field forage harvesters (thousands)					81	253

In recent years, livestock production has advanced very rapidly and increases in crop yields per acre have been even more dramatic. In the years from 1947–49 to 1957–59, per-acre yields of sorghum grain increased 75 percent. Cotton yields jumped 54 percent—corn 38 percent—and wheat 37 percent. Per-acre yields of the 28 leading crops increased 35 percent in this period.

BIG POTENTIAL

Even more important is that our farm production potential isn't near exhaustion. Recently USDA estimated that if all farmers applied technical knowledge as fully as the top 25 percent, then one farmworker could supply food and fiber for 45 people. This is double the present figure. In other words, we could cut our farm labor force in half at our current rate of production.

DEMAND FOR FARM PRODUCTS

In view of this fast-growing supply of farm products, what has happened to demand? Let's examine the changing demand for farm products according to changes in: Population, per-person consumption, and exports.

Population of the United States has been increasing at a high rate. We have 180 million people compared to 152 million just 10 years ago. Yet, over the past decade, farm output has increased almost 1 percent per year more than the population has grown.

CONSUMPTION CONSTANT

Per-person consumption of farm products has remained almost constant during this period, and there is no prospect for much of an increase. However, there has been a definite shift toward more meat, milk, eggs, fruits, and fresh vegetables consumed per person, and less potatoes, bread, and starchy or fatty foods.

Exports of farm products, since 1955–56, have increased substantially. Much of the increase has come in surplus disposal operations authorized by Public Law 480.

THE SURPLUS PROBLEM

The net effect of changes in the three demand factors listed above is that we have more supply than demand at prices that provide the farmer with a reasonable income. Farm income is definitely being aided by the purchase, storage, and disposal operation carried on by the Government. But even with this help, net farm income has been declining. The Government's efforts haven't kept up with production.

CCC HOLDINGS

At the end of 1950, price support holdings of the Commodity Credit Corporation (CCC) totaled slightly over $2 billion. Today they total about $9 billion. CCC stocks have increased even though the soil bank program has idled 17 million acres formerly grown in allotment crops of corn, cotton, wheat, rice, and tobacco.

Wheat, corn, and cotton account for most of the surplus. But feed grain surpluses are building up rapidly—increasing from 20 million tons in 1951 to 80 million in 1959. This surplus of feed grain can be a major problem to livestock producers instead of a blessing. When feed supplies are heavy as they are now, feed prices are lower and livestock producers benefit from lower production costs. But low feed prices soon lure more producers into livestock enterprises, increasing production and depressing livestock prices.

"INELASTIC" DEMAND

The surplus may not seem large when expressed as a percentage of total farm production. Recently this surplus has been 8 to 10 percent of total farm production. But demand for farm products has a peculiar and, for the farmer, unfortunate characteristic—it is a highly "inelastic" demand. This means that consumers don't change very much the amount of food they buy when prices change. To sell just a small increase in food on the market requires a drastic reduction in price. Estimates indicate that an 8- to 10-percent increase in food on the market would drop farm prices 30 to 40 percent.

COST-PRICE SQUEEZE

This decline in farm prices wouldn't hurt so much if production costs would drop also. But, while farm prices keep falling, prices of production goods the farmer buys keep rising. We call this widening gap the cost-price squeeze.

The parity ratio is now under 80. A very sharp decline in farm prices would bankrupt many commercial farmers. Even with protection in the form of Government programs, net income from farming has declined in 6 of the past 9 years.

LESS NET FROM GROSS

The continuing cost-price squeeze means farmers are getting less net income from their gross income. In 1945–46, net farm income was 50 percent of gross. In 1959 it was about 34 percent. Farmers are buying more and more of the goods they use in production, instead of producing these goods themselves. And most of these goods are produced by large corporations with enough economic power to withhold supplies and maintain their prices. The individual farmer doesn't have this power.

PRODUCTION GOODS

In 1947–49, labor made up 45 percent of all production inputs in farming—today it accounts for only 30 percent. Machinery, chemicals, fuel, fertilizer, and other such non-farm-produced items make up an increasing proportion of production goods used in farming.

Fifteen years ago, $10,000 of gross sales would yield $5,000 net income. Today it takes $15,000 gross to net $5,000. Thus dollar sales would have to be 50 percent higher today to give an operator the net income he had 15 years ago. And to keep up with his nonfarm neighbor, the farmer would need to double his volume, since nonfarm incomes have been rising rapidly.

CHANGING FARM SIZE

With the possibilities created by the technological revolution, farmers are changing the economic organization of agriculture. From 1949 through 1957, there was a net migration from farming of over 9 million people. In 1948, farm population was 17.7 percent of the total U.S. population. In 1957, it was 12 percent.

Thus we have fewer farmers, and they are living on larger farms. In 1940 the average farm size was 220 acres. In 1954 it was 336. Large commercial farms are getting larger and more numerous, while the number of small commercial farms is rapidly declining. In the 15 years from 1940 to 1955, the number of farms with sales of more than $10,000 about doubled. The number of farms with sales of less than $5,000 was cut in half. The 1959 Census of Agriculture will undoubtedly show these trends are continuing.

USDA ESTIMATES

A recent USDA estimate is that by 1975, the number of commercial farms is expected to decline from the present 3.1 million to 2 million. This would be a reduction of more than one-third in 15 years.

Many farm families have responded to the technological revolution by enlarging their farms. In 1950, only 22 percent of farm purchases were for farm enlargement, in 1959 42 percent were for this purpose.

Declining farm income has also influenced farmers to seek more land to work. Machines make larger farms possible, declining incomes make them a necessity. More and more farm purchases are being financed with credit. In the Lake States, the percentage of all transfers financed by credit increased 12 percent in the past 10 years. An increasing amount of machinery and other production goods are also being financed with credit.

The technological revolution has been a mixed blessing for the farmer. It has lightened his work and given him more productivity per acres and per animal. But it has also created the problem of surplus production with downward pressure on prices and incomes.

THE CONSUMER BENEFITS

The major beneficiary of the technological revolution in farming has been the consuming public. Consumers spend a lower percentage of their income for food than ever before. Furthermore, they are getting many new services with the food, including precooked and conveniently packaged foods.

Even though the retail cost of food is rising, the consumer has fared well because of his improved income position. In 1959, consumers spent 21 percent of their disposable income (net income after taxes) on food, compared with 27 percent in 1947. Price support operations in recent years have run about 5 percent of retail food cost. If we add the Government expenses for price supports to retail food costs, this would make the percent of disposable income spent for food only 1 percent higher, or 22 percent.

FOOD PRICES INCREASING

There is no denying that retail prices of food are increasing. However, this has happened in spite of declining prices at the farm.

Food prices to farmers have generally dropped since 1947, while retail food prices have generally risen.

This means that the prices farmers get for food have helped hold prices to consumers down rather than increase them. The in-

crease in retail food prices has come largely through increased marketing charges. The marketing spread is rising, which means that the farmer's share of the consumer's dollar is falling.

Rising marketing costs aren't the prime evil underlying farmers' problems. These increased costs are reflecting increased labor, packaging, handling, storage, and other costs. Many of these increased costs pay for services that consumers want. But the important fact remains that the rising retail food prices are not due to farm prices.

SAVINGS IN RESOURCES

A final and very important part of the technological revolution in agriculture is the amount of resources, land, labor, and capital, it has saved annually through its more efficient methods of production. A recent USDA report states that this saving "was much larger than all the expenditures of the Federal and State Governments on agricultural research and extension since 1910. Agricultural technology has advanced even faster since 1950. If the agricultural output achieved in 1957—the latest year for which complete figures are available—had been produced by the methods available to farmers in 1939, it would have cost the Nation about $7½ billion more in land, labor, capital, and other resources than the actual cost in 1957."

FBI National Academy

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. DEVINE. Mr. Speaker, later this month, on June 29, the FBI National Academy will be 25 years old.

Director Hoover has again been justifiably honored for his dedicated public service, this time by the law enforcement officers in the State of Ohio, known as the Ohio Chapter, FBI National Academy Associates. The resolution adopted follows:

Whereas the FBI National Academy celebrates its silver anniversary July 29, 1960, and during its 25 years has rendered signal service as "the West Point of law enforcement"; and

Whereas the Academy is a monument to the foresight, perception, and inspiration of its founder, the Honorable J. Edgar Hoover, Director of the FBI; and

Whereas Director Hoover, more than any other citizen of the United States, has dedicated himself to the advancement of the police profession, inspired, taught, organized, and supervised all forms of law enforcement training of which the FBI National Academy is the pinnacle; and

Whereas Director Hoover has set a personal example of selfless service, devotion to duty, leadership unexcelled, moral character of the finest, cooperation extraordinary, loyalty unequaled, and is the epitome of dedicated personal service to the community; and

Whereas the men and women of the FBI reflect and pursue the outstanding example set by Director Hoover with cooperation the theme coupled with harmony in all relationships with agencies small or large throughout the land: Now, therefore, be it

Resolved, We the law enforcement officers representing communities, cities, counties, and the State of Ohio do hereby commend and honor Director J. Edgar Hoover for his many accomplishments with particular merit for his founding of the FBI National Academy on July 29, 1935; and be it further

Resolved, We reaffirm our faith in the principles of democracy, protection of the rights of all individuals, loyalty to the United States, just pride in the FBI; and be it also

Resolved, We pledge our cooperation with all honorable law enforcement officers and in witness thereof offer ourselves and our sacred honor.

Adopted unanimously this 9th day of June 1960, at Reynoldsburg, Ohio, by the Ohio Chapter, FBI National Academy Associates in convention assembled.

STACY HALL,
Sheriff of Franklin County, President.

Visit to the Philippines

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

VISIT TO THE PHILIPPINES

President Eisenhower is scheduled to arrive in Manila early this morning (our time) for the first of his visits to four free Asian countries. It is appropriate that these visits should begin in the Philippines.

For the Philippines are the showpiece of this country's international policies. Under these policies the United States first prepared a dependent people for self-government and then launched them on an independent existence as a new nation. Under the same policies we continue to maintain and develop the warm ties of friendship and mutual cooperation that are rooted in history.

Now our ties are growing even closer because of the Red shadow that looms up over the Pacific from Communist China. The Philippines have been among the first to enroll in collective defense of the area on which their own security depends. A mutual American-Philippines defense treaty was concluded in 1951, shortly after the outbreak of the Korean war, and 3 years later the Philippines became a partner in the Manila Pact which created the Southwest Asian Treaty Organization. They are the hub of the whole Pacific defense structure, in recognition of which they have granted the United States important military bases which President Garcia declares to be an absolute necessity.

At the same time the Philippines are striking out for themselves in an upsurge of national pride that is well merited and natural, though it creates some transitional problems. The new trend manifests itself in the "Filipino First" policy proclaimed by President Garcia, in the drive for closer ties with Asian nations in keeping with the country's geographical position and in some issues raised with the United States. But all Philippine authorities emphasize that this trend involves no diminution of the ties with the United States, and the accuracy of such declarations is demonstrated by the fact that some of the most delicate problems, such as the territorial and time limitation of the bases, have been solved and that the problem of jurisdiction over our Armed Forces is approaching solution. Some problems, such as the Philippine war damage claims, the drive to assure Filipinos a major share in their own economy, and the adjustment of trade relation between the Philippines and the United States remain.

But in comparison with the stakes involved for both countries these are minor problems which cannot interfere either with their friendship or their alliance, and President Eisenhower's visit should do much to strengthen both of them.

Never Had It So Good

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. DERWINSKI. Mr. Speaker, the following editorial from the May 24 issue of the Harvey Tribune, an outstanding community newspaper in my district, is, I believe, a most thought-provoking commentary on a subject of great concern to all, and I am including it in the RECORD for the consideration of the Members of Congress:

NEVER HAD IT SO GOOD

This is a story about a man who could be you. Chances are, he is a lot like you. He works hard and supports his family. Like all of us, he has his ups and downs. Let's call him Robert Gilmore.

Our story starts a long time ago. During the thirties.

At the time, Gilmore had depressingly few dollars. But they were all good ones. They were U.S. dollars—the most prized money in the world.

Time passed.

Gilmore noticed his dollars were getting weaker. They just couldn't do the things they used to do. But it was hard to put your finger on what was wrong.

Because, Gilmore did have a lot more dollars than he ever had before.

By 1960 he noticed it took two dollars to do what one used to do. When he told his friends they said it was inflation.

But the word "inflation" had a distant economic sound. Said Gilmore to himself: "How come inflation is so bad? I never had it so good." And to prove it he counted his dollars.

Now Bob Gilmore was not the smartest man in the country, but he was reasonably thrifty. He had been salting away some dollars. He had two goals: educate his children; quit work.

That's when Gilmore finally learned about inflation.

"Two thousand dollars per year per child. That's $16,000 for my two kids' education. Why, when I went to college in the thirties" Gilmore stopped to think, then added: "I know costs have gone up but this is ridiculous."

Quickly Gilmore priced retirement cottages and groceries on that sunny seacoast he so coveted, just to see if his suspicions were correct.

Clutching his bankbook he cried, "I can't afford to retire. I've been robbed."

Gently he was told that the thing that had done him in was called inflation.

"But," he croaked hoarsely, "I understood a little inflation was a good thing."

Now he knows better.

When will you learn?

The Trail of Hoover's Life an American Heritage—Speech at the Dedication of the Hoover Boy Scout Trail at West Branch, Iowa, Saturday, June 11, 1960, by Congressman Fred Schwengel

EXTENSION OF REMARKS
OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. SCHWENGEL. Mr. Speaker, on Saturday, June 11, I was privileged to be the principal speaker at the dedication of the Hoover Trail for the Boy Scouts of Iowa at Herbert Hoover's birthplace in West Branch, Iowa.

On this occasion it was only fitting that I pay tribute to the wonderful force for good which President Hoover has been, not only in the Boy Scout program, but in the lives of all Americans.

It is my feeling that Herbert Hoover is one of the greatest living Americans and the attributes which have marked his distinguished career provide guidelines for all of us in becoming better citizens and in dedicating ourselves in serving our fellowman.

With that thought in mind, I would like to bring my address to the attention of my colleagues and under leave to extend my remarks, ask that the speech appear in the Appendix of the RECORD.

THE TRAIL OF HOOVER'S LIFE, AN AMERICAN HERITAGE

(Speech at the dedication of the Hoover Trail, June 11, 1960, by the Honorable FRED SCHWENGEL)

This dedication of this Hoover Trail is a historic, meaningful event in the life of this Nation and it will prove to be a picturesque feature of your Boy Scout program.

The appeal of Iowa's countryside is strong, but the citizenship values that we can get from appropriate thoughts during this dedication can likewise be very important.

The combination of the life of Herbert Hoover, the Scout program, and the Iowa woodlands and countryside is a rare and beautiful combination that should give to us a special message of confidence in and hope for the future of America.

It is my desire that we may receive from this dedication a little of what the surroundings of West Branch gave to Herbert Hoover as a boy, and in turn what Herbert Hoover has given to America and the world. He has already testified to the early influence of this community on his life.

I invite you to explore with me for a few moments the trail that President Hoover took through life—a trail that began in this peaceful and charming community.

For centuries before the advent of Herbert Hoover, his ancestors had been Quaker pioneers. The American part of their story started in 1725—half a century before the Boston Tea Party. America was still the red man's country. White settlements, except for the outposts of fur traders and explorers, were scattered only along the Atlantic coast. Trails were important then—not only as routes to adventure, but as the routes of travel—there were no roads as we know them today.

It was in 1725, according to family tradition, that three small boys, landed in Boston from a sailing vessel just in from England. Their father and mother had died during the hard 3-month voyage, and they were taken into religious, kindly, stern New England homes. Papers in their baggage showed their name to be Minthorn and the oldest of the three, William, was Herbert Hoover's great-great-great grandfather—his first ancestor to live in America.

Many trails were followed by the Minthorns and the Hoovers from the eastern seaboard into Maryland, Virginia, North Carolina, Ohio, and eventually across the Mississippi to a spot they decided to call home. The little community in Iowa named West Branch grew quickly. It was not long before there appeared a Quaker meeting house, frame homes, stores, and a blacksmith shop. These were in the midst of some of the most fertile land in America.

West Branch and surrounding settlements never became a metropolis but it did grow into a pleasant, prosperous town and the good Quakers carried their faith into their relations with one another. They did not consider written agreements necessary to bind any business deed—an oral promise was all that was asked. And as the boy Herbert Hoover grew to manhood, his world held high the Quaker tradition of honesty.

The ability to stand and walk erect is the most distinguishing characteristic of man. The best books of travel have been largely views afoot. One gets only passing views and superficial knowledge from automobiles, planes, and trains. There is no other way to acquire a true love of nature or an intimate acquaintance with birds and flowers and rocks and trees. Trails are a necessary laboratory to the study of botany and biology.

The trail also has an intimate social side. It tends to develop comradeship and intimacy. One can walk 10 miles on a trail with less fatigue than would grow out of a 5-mile hike on the concrete.

The boyhood of Herbert Hoover in the atmosphere of West Branch of that time taught him to follow the trail, to stand erect, to dig deeply for the knowledge that lies alongside the path, to hold with high regard comradeship and respect for the dignity of his fellowman, and to let the trail yield beneath his feet as a source of relaxation and introspection.

A great deal of America has been lost to view. It is behind our fences, over our hills, down our old tangled trails. The broadening aspects of exploring, as the Scout well knows, the education to be had from nature at firsthand, the joy one gets from being in the open, all were a part of Herbert Hoover's youth. In later years President Hoover said of the Scout program, "I know of no other form of Americanization that so produces real Americans."

In 1927 in a speech to the Iowa Society in Washington, D.C., Mr. Hoover spoke of the old swimming hole near West Branch under the railroad bridge "which needs to be deepened" because it was "hard to keep from pounding the mud with your hands and feet when you shove off for the 30 feet of a cross-channel swim." He spoke of fishing with his friends in the creek for "sunfish, suckers, and catfish with a willow pole, a line of butcher's string, a cork salvaged from a rubbish heap, an angleworm and a 1-cent hook." He recalled in the wintertime "sliding down Cook's Hill in a homemade sled and thawing our young chilblains with ice water." He remembered the tasty wild strawberries and wild grapes to be had for the picking along the trail he followed; the skating in winter over the frozen swimming hole on a pair of heelplate skates and the collection of fragments of coral, agate, or other bright-colored stones from the ballast along the railroad tracks. Perhaps here is the introduction of Herbert Hoover, the mining engineer.

Apart from these outdoor pastimes and school attendance there was the quiet, gentle, home life, with its family Bible reading at the day's close. But you good people of West Branch know the detailed story of Herbert Hoover better than most.

Herbert Hoover followed the trail across America to Oregon when his parents died. He earned his way through Stanford University, graduating with a degree in geology and engineering. He was employed in mines in several Western States and then in Australia, and held numerous important mining jobs around the world.

It was when World War I broke out, that Mr. Hoover's trail took him to Europe. Thousands of Americans were stranded in London. Herbert Hoover organized resources to help them back home, and then worked to send relief to the overrun population of Belgium and France. His success in this endeavor brought him wide fame and led to his appointment as U.S. Food Administrator ni 1917. He was able to get cooperation from the United States and successfully supplied the Allied food demands. The war over, he headed the American Relief Administration and when that agency was liquidated he raised a private fund for the same purpose.

Ambassador Walter Hines Page wrote President Wilson when Hoover had completed the refugee job:

"Life is worth more, too, for knowing Hoover. * * * He's a simple, modest, energetic man who began his career in California and will end it in heaven; and he doesn't want anybody's thanks."

A Secretary of Commerce under both Harding and Coolidge, Hoover reorganized the Department and sought to maximize its usefulness to business. At the same time he organized several famine relief campaigns. Four years later, in 1928, he was the Republican nominee for President and won the election.

Many of the disturbing factors prevailing in 1929 were international in character while others were manifestations of domestic trends in particular countries. Basically, World War I had thrown the economic and financial organization of the entire world completely out of balance. It was difficult to maintain the balance of economic and financial equilibrium in the United States.

Before he took the oath of office as President, Mr. Hoover stated and I quote that he "conceived the Presidency more than an administrative office; it is a power for leadership bringing coordination of the forces of business and cultural life in every city, town, and countryside. The Presidency is more than executive responsibility. It is the symbol of America's high purpose. The President must represent the Nation's ideals and he must also represent them to the nations of the world."

After 4 years in the White House Herbert Hoover still regarded the Presidency "as a supreme obligation."

A basic tenet of his faith in the American way of life—a phrase which he is said to have originated—was "voluntary cooperation within the community." It included perfection of the social organization, care of those in distress, advancement of knowledge, scientific research, education, and the many phases of economic life.

"This," and I again quote President Hoover, "is self-government outside of government; it is the most powerful development of individual freedom and equal opportunity that has taken place in the century and one half since our fundamental institutions were founded."

Mr. Hoover believed in voluntary cooperation of all the people in all of the Nation's communities, along with a growing sense of individual responsibility, rather than an extension of government into our social and economic life which would find the correct "solution of many of our complex problems."

He once stated before a group of Young Republicans:

"While the inspiration to reform comes from the human heart, it is achieved only by the intellect. Enthusiastic hearts have flooded us with illusions. Ideals without illusions are good. Ideals with illusions are no good."

This advice is timeless, indeed, and we with the complexities of our age could really make something of this earth if we approached the solutions of our problems with high ideals and advanced programs with intellignce and enthusiasm.

Enthusiasm is an earmark of youth. It is an earmark of the Boy Scouts of America. As the Scouts of this area grow in stature to man's estate, it is my fond hope that they will study the life of Herbert Hoover so that they may become intimate with the trail that he has followed throughout his great and good life—a life he has shared with so many with completely unselfish motives.

Mr. Hoover has always been concerned with the kind and sort of men we place as leaders of America's youth. His stamp of approval would be placed upon those leaders who are sterling, clean, genuine—successful men, capable men, leaders in their own field—sympathetic and patient with boys. He has recognized that scouting is more than building a fire without a match along life's trail. That is only a part of the initiative needed to keep America strong.

During Herbert Hoover's term as President of the United States he was honorary president of the Boy Scouts of America. As you know, it is the custom of scouting to confer this honor and privilege upon the President of the United States. He is currently your honorary vice president. It is interesting, however, to glance over our shoulders today and recall a message from Honorary President Hoover which came from his heart in 1929—the first year of his Presidency. I quote as follows:

"I have gladly assumed the honorary presidency of the Boy Scouts of America because the first ideal of our democracy is that each individual shall have opportunity to take that position of leadership in the community to which his character, his ability, and his ambition entitled him; and because the progress of our country is thus directly related to the training in leadership we can give to the youth of the Nation. In meeting the vital need that when the oncoming generation takes over our national affairs it shall be a generation bulwarked with character, the Boy Scout movement plays a most useful part. I wish all success to the boys themselves and to the scoutmasters who lead them, and I commend both to the unwearied support of the public that they so inspiringly serve."

The American Boy Scouts have done millions of good turns, from helping someone to cross the street to saving lives; but the greatest achievement is the millions of better men they have made, or are making of themselves by daily discipline and struggle toward an ideal. I refer especially to that quiet and determined discipline and struggle which Herbert Hoover learned so well from the trails he followed as a boy around West Branch.

Many years ago—it was either in the late twenties or early thirties—Herbert Hoover composed a "bill of rights" for boys which I give you today:

"1. Like everybody else, he has a right to the pursuit of happiness.

"2. He has the right to play that will stretch his imagination and prove his prowess and skill.

"3. He has a right to the constructive joy from adventure and thrills that are a part of an opening life.

"4. He has a right to affection and friendship.

"5. He has a right to the sense of security in belonging to some group.

"6. He has a right to health protections that will make him an inch taller than his dad.

"7. He has the right to education and training that amplifies his own natural bents and that will fit him into a job.

"8. He has a right to a chance in getting a job."

Mr. Hoover has commented that these are not all the "rights" of an American boy, but they are the ones which should be of deep concern to all.

The direction which individuals and nations have traveled has always been of tremendous concern to Mr. Hoover. The direction of the trail that he took through life has continued to keep him active and interested in public affairs through his boyhood days into the present. He was born August 10, 1874, in West Branch, and we now find him in his 86th year, still alert with the characteristics that took him to the White House, to head the Hoover Commission, and again in more recent years as Chairman of a Famine Emergency Committee to serve the food requirements in 38 countries around the globe.

I could do no greater service to you today in the dedication of this Herbert Hoover Trail than to close with the following words from an address prepared by Mr. Hoover in February of this year. He wisely advised America and I quote:

"In looking over the current scene in our national life, if we take a worm's-eye view of the crises and forces which surround us, we may worry that we are approaching the decline and fall of the greatest nation in history. If we take a bird's-eye view, we see the fundamental strength of the American people."

These words of admonition come from one who followed the trail with an aim so high and so clear, with the spirit of the out-of-doors filling his being, that his usefulness to mankind will continue to reverberate for years to come.

Learning from the life and work of men like Herbert Hoover and the training and experiences that shaped their destinies can be very important in retaining and promoting those ideals that made and can keep us the great nation that we are.

The 185th Birthday of the U.S. Army

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mrs. ST. GEORGE. Mr. Speaker, 185 years ago today, on June 14, 1775, the Continental Congress established the U.S. Army to protect the freedom of our Nation. Since this date, the Army has met every test both in peace and in war. Today, in a world unsettled by tension due to threats of war and the ever-present specter of communism, our Army continues to provide for our freedom by guarding the frontiers of the free world.

To celebrate this occasion here in Washington, the Army is holding a special retreat review at Fort Myer, Va., at 5 p.m., to which the public is invited and a One-Army Birthday Ball at the Willard Hotel at 9 p.m.

I rise to extend congratulations to the U.S. Army on the occasion of their 185 years of faithful service to our Nation and to wish them well in all future undertakings.

Lynn, Mass., Deanery, Council of Catholic Men, Urges Religious Liberty for All Creeds

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter received from Mr. Cornelius F. Burke, president of the Lynn Deanery, Lynn, Mass., pledging support to the President, the Congress, and the State Department in efforts to combat communism:

COUNCIL OF CATHOLIC MEN,
LYNN DEANERY,
Lynn, Mass., June 11, 1960.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D.C.

MY DEAR CONGRESSMAN LANE: At a recent meeting of the Lynn Deanery of the Archdiocesan Council of Catholic Men, the representatives of the 29 parishes of Lynn, Saugus, Revere, Winthrop, Malden, Melrose, and Everett, together with the representatives of all interparochial organizations from the above cities and towns expressed deep concern and indignation at the trial and prison sentences imposed on Bishop James E. Walsh, N.M., and Bishop Ignatius Kung, S.J., by the Red Chinese courts. Thirteen other priests, eight of them Jesuits, were tried with Bishop Kung and were given prison terms ranging from 5 to 20 years. These men were arrested in 1955, and were held prisoners until their trial at Shanghai on March 16, 1960, and March 17, 1960.

The charges against these men of God were that they were participants in a counter-espionage group that was "plotting to overthrow the New China." These dedicated disciples no doubt did advocate the overthrow of the atheistic Communist government of new China. Before the Christian world they could never be guilty of treasonous or disloyal acts in the eyes of Almighty God. Being unselfish men, concerned with the spiritual welfare of the Chinese people, they opposed where so many others accepted the Communist godless regime.

Consequently, they encountered the wrath of an atheistic Communist government because they dared to challenge a system which denies man his God-given rights of freedom and equality.

Our interest in the religious liberty of all creeds who are being persecuted in the Red-ruled countries of the world will be a continuing one. We will do all in our power to alleviate their suffering and pray that God will increase their fortitude to valiant resistance.

We desire, therefore, that the Congress of the United States, through our own representatives, be cognizant of our opposition to the recognition of Red China by the United States and also its admission to the United Nations.

We oppose the recognition, or even its consideration, by the United States of any country that attempts to silence or obliterate any religion by persecuting and imprisoning those who love and serve God. They should be compelled to release their prisoners before their application is given consideration.

The Deanery further voted as strongly opposed to any legislative action by Congress that would abolish, destroy, or limit the effectiveness of the House Un-American Activities Committee and the Senate Internal Se-

curity Committee. Further, we hold in abhorrence any action by Communist dominated and controlled organizations that would discredit that honorable and courageous public official, J. Edgar Hoover, or that would in any way curtail or hamper the effectiveness of the Federal Bureau of Investigation in its fight against Communist activities in this country.

It is unfortunate that so many people in the United States fail to recognize the seriousness of this deplorable situation. It is also unfortunate we have in this country those who, either through fear or ignorance, selfishness or false complacency, have associated themselves with known Communist-inspired organizations now operating in this country for the avowed purpose of ultimately overthrowing our democratic form of Government. They would be known as liberals, some as the intelligensia, but they are adherents to a false philosophy, hold distorted values, and are out of step in the parade of democracy. Their presence in our society demands constant vigilance.

We, as Catholic men, pledge ourselves to support in this hour of crisis, our President, our Congress, and our State Department in their efforts to halt the march of this diabolical atheistic force known as communism which, like a conflagration, has swept around the world, enslaving one-third of its people.

For God and country.

Respectfully,

CORNELIUS F. BURKE,
President.

The 100th Small Business Investment Company

EXTENSION OF REMARKS
OF
HON. HOWARD W. ROBISON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. ROBISON. Mr. Speaker, the Small Business Administration recently announced the issuance of a license to the 100th small business investment company under the authority granted in the Small Business Investment Act of 1959.

As a member of the Select Committee on Small Business, I am, of course, interested in this milestone, but I am particularly interested in this achievement because two of the member banks participating in this Small Business Investment Co. of New York, Inc., are located in my congressional district.

All of us who are interested in the small business community and the help which it may receive from small business investment companies hope that the first hundred SBIC licenses will soon be matched and rematched.

Under leave to extend my remarks, I include the press release from the Small Business Administration dated May 27, 1960:

The Small Business Administration passed a major milestone yesterday (Thursday) with the issuance of its 100th small business investment company license. The event took place only 21 months after the Small Business Investment Act was signed by President Eisenhower and little more than a year after licensing of the first company, March 19, 1959.

The law authorizes the Small Business Administration to license, regulate and in certain instances to help finance the establishment of small business investment companies which in turn supply long-term loans and equity capital to small businesses.

The 100th licensee is Small Business Investment Co., of New York, Inc., located at 40 Beaver Street, Albany, N.Y. It is owned by 12 upstate New York banks in Albany, Binghamton, Buffalo, Elmira, Norwich, Rochester (4), Syracuse (2), and Troy. It is the 10th license granted to a firm in the State of New York.

The license was given to the company in an informal ceremony in Albany yesterday by Arthur E. Long, New York regional director of the SBA.

Companies licensed under the new law now have combined assets, including proceeds received and expected from public stock offerings, of almost $80 million, of which slightly more than $10 million was supplied by the SBA in exchange for the subordinated debentures of the licensees.

To date, licensed companies have supplied long-term capital to more than 75 different types of businesses, including small manufacturers of light and durable goods, retailing companies, wholesale firms and service organizations.

Nearly one-third of the companies licensed required no Federal funds, authorized under the act, in establishing their companies. A minimum of $300,000 in capital and surplus is required to obtain a license.

Nearly 200 applications for licenses have been received to date. Besides those licensed, nearly 60 more have received a "Notice To Proceed," tantamount to obtaining a license, upon full compliance with the regulations. SBA Administrator Philip McCallum said:

"The recent increase in the number of licensed companies indicates an awareness of the countless opportunities for private investors to share in the growth potentials of small business.

"Small business investment companies are serving as a catalyst—bringing private capital and small business together and thereby helping to meet the needs of small firms for equity capital and long-term loans."

The upstate New York company will begin operations with $452,500 and plans to supply equity capital and long-term loan funds to diversified small businesses in New York State. No Federal funds are involved.

Charles W. Millard, Jr., executive vice president of Manufacturers & Traders Trust Co., in Buffalo, is board chairman of the new company, and Prentice J. Rodgers, executive vice president of the National Commercial Bank & Trust Co., of Albany, is president.

The company has two vice presidents, Elmer B. Milliman, president of Rochester's Central Trust Co., and Bertram J. Miner, executive vice president of First-City National Bank of Binghamton.

Milton D. Stewart, Albany attorney and special counsel to the New York State Thruway Authority, is secretary, and William N. Posner, partner in a firm of certified public accounts, is treasurer.

Reactions to Khrushchev Stir Doubts on Patriotism

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. BARRY. Mr. Speaker, my good friend, Henry Morpurgo, of Yonkers, N.Y., has drawn attention to an editorial by David Lawrence which appeared in the New York Herald Tribune, June 6, 1960. Mr. Morpurgo felt that Lawrence's article should not be overlooked. I therefore wish to take this opportunity to insert it in the CONGRESSIONAL RECORD:

REACTIONS TO KHRUSHCHEV STIR DOUBTS ON PATRIOTISM

(By David Lawrence)

WASHINGTON, June 5.—Time was when in the midst of war neither scribe nor politician ventured to give aid and comfort to the enemy.

Time was when the citizen felt a tingle of emotion go up and down his spine as he sang "The Star-Spangled Banner" or saluted the flag.

Time was when the Nation found itself in peril, and nothing else mattered. No sacrifice—even of life itself—was too great to make for the honor of our country.

But things seem to be different now. The President of the United States is insulted and yet some writers continue to furnish aid and comfort to the press of the Soviet Union by denouncing Mr. Eisenhower and holding him culpable for errors he couldn't possibly have avoided and still protect the safety of the American people against surprise attack.

Is the country changing? Is patriotism just an obsolete notion, nurtured only by those of us who have witnessed manifestations of national spirit and pride over a long span of years? Are some of us old-fashioned because we cannot accept the modern cynicism which insists that a President of the United States shall be pilloried by political leaders and by some segments of the press of his own country as Moscow papers reprint every bit of captious and carping criticism?

Is a cold war any different really from the crises that call for nonpartisanship during a hot war? Time was when in war time a newspaperman practiced voluntary censorship and when his conscience kept him from writing anything that might possibly aid the enemy. A cold war and a hot war are no different so far as national danger is concerned. Today the demand is for almost every scrap of information including classified information, and there are newsmen and Members of Congress who insist in all sincerity that they and not the executive branch of the Government—which has the responsibility for our safety—shall be the final judges of what ought to be suppressed or disclosed.

AN AMERICAN FIRST?

Time was when this correspondent used to hear the expression: "I'm an American first and a newspaperman second." But today things seem different. No matter how damaging to one's own country, the tendency now is to give the information or comment publicly to the enemy dictator who promptly quotes it in his propaganda speeches.

As America, moreover, approaches a political campaign, partisan writers say that the President should have known in advance of every act to be performed, by every subordinate in the numerous agencies of a big government and that efforts to gather information abroad clandestinely should have been in effect suspended indefinitely to the advantage of a gangster regime in Moscow. Immediately Moscow seizes on every such adverse comment especially when it emanates from the Senate Foreign Relations Committee. Was it too much to ask, as Senator WILEY, Republican of Wisconsin did, that a public investigation by any congressional committee on international matters during a crisis be suspended?

Maybe the urge to patriotism is less strong today than winning an election or carrying on a partisan crusade. Maybe we are witnessing the rise of new "liberals" who

espouse the cause of nationalism in the various countries of Africa and Asia, but denounce any nationalism expressed in the United States in behalf of the interests of our own country.

But these misguided "intellectuals," so many of whom in the scientific world especially believe in "world citizenship" as superseding American citizenship, will some day be proved completely wrong. Back in the 1920's after World War I there were demonstrations of students in the colleges against war. They held meetings of organizations calling for the soldiers' "bonus of future wars." It was a satirical effort to put the label of selfishness on the men who had to leave their families and jobs and go to war. But when the United States entered World War II in 1941 this same generation acquitted itself nobly. No better troops ever fought for America than those who battled in World War II.

Grassroots Americanism today resents bitterly the insults flung at the President of the United States. It resents attacks on Mr. Eisenhower in the American press which the next day are parroted and quoted with exultation in the Soviet press.

KHRUSHCHEV CALLED BETRAYER

It so happens that Mr. Eisenhower was the Supreme Commander of Allied Forces in World War II. He helped to save the Soviet Union from the yoke of Hitler. The American people between 1941 and 1945 sent billions of dollars to help equip the Soviet armies. When the war was over, General Eisenhower was received with acclaim in Moscow. But Nikita Khrushchev now says Mr. Eisenhower is fit only to manage a home for children. Recently he called the President a "thief."

It begins to look as if Nikita Khrushchev is resentful of all military men. But he has miscalculated public opinion everywhere if he thinks he can belittle not only the President of the United States but the very general who helped Russia in the winning of World War II.

The Soviet Premier, to be sure, has lost whatever prestige he may have had in the West. He has forfeited an opportunity for effective leadership as a negotiator with the West. He has really betrayed his own country. For the people of the Soviet Union don't want war and when they get all the facts they will not long support a man who acts more like an uncivilized boor than like the dignified premier of a government which professes to represent a great people.

Watch Out, Someone's Thinking

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gerald W. Johnson as it appeared in the New Republic magazine of June 13, 1960:

WATCH OUT, SOMEONE'S THINKING

(By Gerald W. Johnson)

Some observers have found it odd that while the echoes of the crash of the summit conference were still reverberating, the Republican big guns opened up not, as you might expect, on the front-running Democratic candidate but on a man who, technically, is not even in the race. They blasted Adlai Stevenson, with only a snapshot or two at Senator JOHN F. KENNEDY.

But there was a reason and it showed up conspicuously in Stevenson's speech at Chicago last Wednesday. His speech contained an innocent-looking suggestion that conceals a cluster of barbed hooks. Stevenson said, "Instead of always worrying about what Russia will do next, let's concentrate on what we can do next."

What's wrong with that? Nothing, apparently. Everything, in reality. For the crafty Democrat from Libertyville spotted and neatly blocked the obvious way out for Republican orators. That exit is the simple question, "Well, what would you suggest?" But it is closed, because Stevenson told them. He outlined five steps that we might take, all of them easy to understand and none involving any departure from time-tested American principles.

To detect the hook in this it is not necessary to believe that Stevenson has solved the problem of the cold war. It is necessary only to note that his five steps are all apparently feasible; for when any feasible program is suggested, it is necessary to explain why it has not been adopted. A convincing explanation does not come to mind at once. It requires thought—and there's the rub. For as one does not gather figs from thistles, one may not reasonably expect thought of the Eisenhower administration.

Not long after that administration took over it was suggested in this place that it might end by meriting the comment that a Republican wheelhorse of many years ago made upon President Harding: "Warren lacks mentality." It was a good guess. Not many of the errors that have brought the country into its present embarrassing position can be laid to wickedness. From Charles E. Wilson's failure to conform to the law before presenting himself to take office down to the bungling of the spy plane affair, nearly all have been attributable to sheer lack of thinking, not evil intentions.

Unfortunately, that is a most difficult error to point out effectively to the voters. In 1956 Adlai Stevenson tried in vain; and he would not have much chance today were it not for the fact that events at Paris speak more eloquently than he can—and he is probably the best political speaker now in practice. The catch in it is that by the time lack of mentality has been demonstrated by events the damage is done and what we have on our hands is a repair job, not construction.

Stevenson's insistence on calling attention to this is driving the administration into the very form of activity to which it is least adapted—cerebration. No wonder it is resented, for it is far more deadly than all the charges of influence peddling, of subservience to big business, and of demagogic encouragement of McCarthyism; for mere venality hits the country only in the pocketbook, whereas inability or unwillingness to exercise the brain cells comes under a far more sinister rule—"where there is no vision the people perish."

It follows that knocking off the frontrunner, KENNEDY or any other, is far less important than silencing this fellow who keeps yelling for precisely what the administration can't supply. For though there may be a rational explanation of why we have not taken Adlai's five steps, the fact that we have taken no steps at all is inexplicable.

Stevenson, in fact, has done no more than present the converse of Walt Mason's philosophy: "O human head. Majestic box. O wondrous can, from labels free. If man is craving fame or rocks, he'll get them if he uses thee." Per contra if man or nation consistently refuses to use the "majestic box" what it will get is not what it is craving. Witness the United States of America that, 8 years after the ceasefire in Korea, is still saddled with cold war, which it certainly did not crave.

If this point can be driven home, it will not matter much—from the Republican standpoint—who the Democratic candidate may be, for the Democrats could win with Mencken's Chinaman. Therefore this point must be blunted at any cost. Never mind KENNEDY, or JOHNSON, or SYMINGTON, or any other avowed candiate. Get the man who may not be running, but is ruining every Republican prospect. Get Stevenson.

From the standpoint of conventional politics they are probably right, but even so a doubt lingers. Is conventional politics practical politics in 1960? This deponent sayeth not.

The Challenge of Oversea Service

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mrs. BOLTON. Mr. Speaker, today more than a million and a half U.S. citizens representing both public and private interests are serving the Nation abroad. Approximately two-thirds of this total are members or employees of the Armed Forces and their dependents, while a number are students and teachers studying abroad. American civilians actually working overseas total nearly 100,000, divided about equally between businessmen, missionaries, and Government employees.

Every one of these citizens abroad carries a heavy responsibility for projecting a positive image of the United States to other peoples. Increasingly, such representation requires not only a basic knowledge of local customs and traditions, but also a broad understanding of our own country's history and national aspirations. Unparalleled leadership demands necessitate the entrance of intelligent, informed and alert young Americans into positions of service in Government and private activities abroad.

In a recent commencement address given at Williams College, June 5, Under Secretary of State Douglas Dillon eloquently described the growing need for dedicated service abroad and the challenge it presents. As many recent graduates are considering such possible service and will want to read Secretary Dillon's interesting and informative remarks, I include them at this point in the RECORD:

THE CHALLENGE OF OVERSEA SERVICE

(Address of Under Secretary of State Douglas Dillon, upon receiving honorary degree at commencement exercises of Williams College, Williamstown, Mass., Sunday, June 5, 1960)

Thank you for the gracious welcome you have extended to all of us who are being honored today by Williams College. Since I want to discuss the challenge of oversea service, I can think of no more appropriate setting than this justly famed campus, where there is a perpetual reminder of the five students who met for prayer in the shelter of a haystack in 1806 and dedicated their lives to the church overseas. Out of their dedication was born the American Board of Foreign Missions, under whose auspices thousands of American men and women have

carried the message of America to other peoples as they served their God and their country in far distant lands.

It is for me a particular personal pleasure to be here. In talking to you this afternoon, I claim a special dispensation. For your distinguished president, Jim Baxter, was my faculty tutor at Harvard some 30 years ago, and so must bear a measure of responsibility for me and for what I have to say.

Looking back, I am struck by the profound changes that have radically reshaped the world over the past 30 years:

First, the transformation of the United States from a relatively isolated nation to an active participant in every sphere of international life as a leader of the free world.

Second, the enormous growth of the Soviet Union as a military and industrial force, the passage of Eastern Europe into the Communist orbit, and the emergence of Communist China as a potential power center.

Finally, the collapse of colonialism—which is now clearly a thing of the past—and the achievement of nationhood by scores of new countries, whose leaders are struggling desperately to give independence real meaning by enriching the traditionally barren lives of their impoverished peoples. The full impact of this socioeconomic revolution is most dramatically evident in Africa, where but 4 nations existed 30 years ago—and where there soon may be 29.

These sweeping changes—accompanied by increasingly rapid communications, the fateful release of nuclear energy, and man's adventurous probing into space—have fashioned a world which simply didn't exist when my generation was graduating from college. Today's shrinking universe—the inextricably interdependent world into which you are graduating—makes demands upon us as a Nation and as a people that were undreamt of 30 years ago. If we are to meet today's pressing demands and respond to the formidable challenges of the coming 30 years, we must enlist every resource—human, material, intellectual, and spiritual—at our command.

On the home front, we must strengthen our defenses against possible aggression. We must expand our educational opportunities to enable our citizens to lead more fruitful, more purposeful lives. Special priority must be given to accelerating the growth of our economy along sound, productive lines. Unless we do so, there can be no assurance that the future will bring increasing opportunities for our people. Nor can there be any assurance that we as a Nation can sustain our capacity to meet our international obligations, to counter the Communist threat, or to project to the newly developing lands the image of our system of free institutions as one worthy of emulation in the struggle for nationhood. We must clarify our national goals and promote better understanding by all our citizens of the policies that must be followed to fulfill them. This is especially true in international affairs, which are now the concern of every American.

On all fronts, we must reinforce the free world's system of collective security, so that we and our allies can withstand the mounting pressures of Communist imperialism. In particular, we must continue to provide military equipment and training to nations on the periphery of the Sino-Soviet Empire. For without our help, many of them cannot support the defense establishments they urgently require to ensure internal security and to discourage aggression from without.

We and our stronger allies must exert ourselves to speed the growth of the newly developing lands. These are the areas where most of mankind lives, and where the future course of history will ultimately be decided. The Communists are making massive efforts, through trade, aid, and propaganda, to persuade the peoples of these countries that communism offers them their only hope of rapid progress. But even if the Communist leaders were to suddenly renounce their expansionist ambitions and cease their efforts to penetrate and capture the developing nations, the need for us to help these peoples achieve a better life would still exist. For our free way of life and our prosperity simply cannot survive in a sea of hopeless poverty. The peoples of the newly developing areas must have reasonable hope that the well-being we now enjoy can eventually be theirs to enjoy.

At the same time, we must do everything in our power to achieve rational communication with the Communist world. We must seize any opportunity to reach agreements with the Communists that could bring genuine progress toward peace.

The immense tasks stretching before us make heavy demands upon the talents, training, and good sense of the men and women who represent our country abroad. For the human factor is the overriding factor in determining whether we can meet the challenges that confront us. These challenges place a premium on qualified people—whether they are negotiating with the Soviets, administering foreign aid, telling America's story abroad, or serving overseas with American business, philanthropic foundations, or church missions. We have irretrievably committed ourselves to participation in international activities. No matter how admirable our intentions, no matter how well conceived our policies and programs, their success in the final analysis depends upon people. Therefore, it is of people that I will speak today.
